PUBLISHERS.

INDEX TO VOLUME XXIV.

JULY 5 TO DECEMBER 27, 1900.

A

Acetanilid, Poisoning, 243.
Acetylene, Yield from Calcium Carbide, 427.
Acid, Ananthilic, 652.
Carbolic, Registration of Sales, 376.
Sale, 201.
Carbonic, Not a Disinfectant, 622.
Cinnamic, 652.
Nitrohydrochloric, Keeping Qualities, 237.
Phosphoric, Diluted, Fungus Growth, 237.
Picric, Explosive, 426.
Propionyl-Salicylic, 561.
Sulphuric, Manufacture, 154.
New Process, 149.
Aconite, Collection in India, 421.
Actineon, 586.
Adulteration in Minnesota, 274.
Advertising, Druggists', 117, (Ed.) 195, 199, 703.
Flavoring and Seasoning Agents, 202.
Own Preparations, 235.
Air, Liquid, Commercial Use, 141.
Argon, 699.
Albumin, Manufacture in China, 391.
Alcohol, Coal Tar Hydrocarbons as Denaturing Agents, 65.
Food, 60, 123.
Free, 337.
Manufacture from Acetylene, 446.
Wood, Color, 236.
Alcoholism, Cures, 570.
Alkaloidal Antagonism, 538.
Alkaloids, Absorption by Charcoal, 596.
Estimation, 451.
Almond Meal, 351.
Aloes, Disguising Taste, 539.
Altitudes, High, Hygiene, 292.
Alumina and Calcium Oxide, Combination, 706.
Aluminum Industry, Progress, 446.
Silver Plating, 38.
Uses, 428.
Amalgam, Sodium and Potassium, 428.
Ammonia, Household, 539.
Ammonium Hydrate, 705.
Anaesthol Spalier, 567.
Aniline Dyes Soluble in Fats, 367.
Annatto, 206.
Antifebrin, Distinction from Phenacetine, 371.
Antineon, Locher, 699.
Antipyrin, Examination, 371.
Ants, Secretion, 442.
Apothecary's Oath, 508.
Apprentice, Qualifications, (Ed.) 669.
Apprentices, Drug Store, 171.
Aristol, 639.
Arslar, Infringement of Patent, 627, 711.
Arrow Poison, Wakamba, 62.
Arsenic from Phosphorus, 65.
Asafetida Preparata, 147.
Asbestos, 276.
Association Meetings, Papers, 28, (Ed.) 83, (Ed.) 139.
Pharmaceutical, Why Druggist Should Attend, 593.
ASSOCIATIONS, PHARMACEUTICAL (Clubs, Societies, Drug Clerks, Paints, Alumni, Etc.).—American Chemical Society, 207, 712; American Chemical Society, New York Section, 377, 545; American Pharmaceutical, 162, 187, 694; American Veterinary Medical, 360; Baltimore Retail Druggists, 245, 437; Bay City (Mich.), 693; Bayonne (N. J.), 544, 600; Boston Druggists', 629, 713; British Medical, 201; British Pharmaceutical Conference, 35, 63, 144, 170, 651, 702; British Pharmaceutical Society, 34, 63, 122, 171, 425, 481, 482, 652; Brooklyn College of Pharmacy Alumni, 42, 185, 267, 268, 354, 577, 602, 687, 712; Burlington (N. J.), 406; Camden (N. J.), 605; Chatham (Ga.), 127; Chemists' Assistants' Union, 651; Chemists' Club, 600; Chemists' Defense (London), 34, 651; Chicago Apothecaries' Society, 581; Chicago College of Pharmacy Alumni, 216, 610;

ASSOCIATIONS, Etc., Continued.

DO YOU WANT TO
Study Pharmacy
... AT HOME?

THE ERA COURSE IN PHARMACY offers you the facilities for obtaining a sound pharmaceutical education at a cost of only \$10.00, and it can be followed without interfering with your ordinary duties, or requiring your absence from home.

The instruction is personal, adapted to your particular needs, prepares you for advancement and increases your earning capacity. A splendid preparation for examination by the Board of Pharmacy.

WHAT IS THE ERA COURSE IN PHARMACY? It consists of printed lectures covering the subjects

Chemistry, Pharmacy,
Materia Medica,
Botany, Dispensing
...AND...
Pharmaceutical Technique.

The lectures are systematic, exhaustive, and prepared by well known and experienced teachers. They are sent to you in regular monthly instalments, for Ten Months.

An especially valuable part of the work is the correspondence feature. The student receives printed questions upon all the lectures, his replies are carefully rated, and at stated periods he undergoes a thorough written examination.

**A NEW CLASS IS FORMED
EACH MONTH.** ❁ ❁ ❁ ❁

Ten Dollars covers the entire cost of the lectures, the correspondence work, and twelve months' subscription to The Pharmaceutical Era. If the student satisfactorily completes the work he receives a diploma, without extra fee, at the termination of the Course.

WRITE FOR THE PROSPECTUS, which will give you full detailed information. Address

THE PHARMACEUTICAL ERA,
396 Broadway, New York.

HOW WOULD YOU DO IT?

Did you ever see a price list of proprietary goods that suited you?

Any number of such price lists have been printed, but hardly any two of them are arranged alike, and, while it seems an easy matter, those who have tried it know that there are a great many questions to be considered.

For example, how would you list Paine's Celery Compound? Would you list it as

- (A) Paine's Celery Compound,
- (B) or Celery Compound, Paine's,
- (C) or Compound, Paine's Celery.

We are under the impression that the first style (A) is the best, all things considered, particularly if there are a number of cross indexes inserted.

We would like to hear from our subscribers on this matter, as we are now at work upon our price list of proprietary goods for the next edition of the ERA BLUE BOOK, and we want to arrange it so that it will be most convenient to the majority of our subscribers.

By the way, our subscribers can assist us in making this price list of proprietary goods more complete if they will call our attention to any article which they fail to find in the last edition of the Blue Book.

Please let us hear from you, and kindly address your communication to

EDITOR, THE PHARMACEUTICAL ERA,
396 BROADWAY, NEW YORK.

WHAT NEW YORK STATE WANTS.

The importance of the action taken last week by the New York State Pharmaceutical Association relative to higher education and professional requirements cannot be overestimated. The association has placed itself squarely, emphatically and unanimously on record as wanting graduation from a reputable college of pharmacy established by law as a pre-requisite to examination by the Board of Pharmacy of all applicants for registration as licensed pharmacists. It wants this requirement to be soon established.

New York is not the first State to take action of this particular nature, but it is the first to demand a measure to answer definitely the question, What is a reputable college of pharmacy? It proposes to have the regents determine what qualifications are to be required for entrance to the college, and, further, would place the college under some sort of State supervision which will guarantee the maintenance of the proper educational standard.

The significance of this step is at once apparent. It is the key to the whole problem. When, and not until the colleges are properly regulated, will the diploma be worth what it should be, and not until then is it possible or even desirable to insist on the diploma as a board of pharmacy examination pre-requisite. When the diploma shall represent always the same minimum quantity and quality of attainment, the difficulty vanishes.

The Empire State has done itself proud, and taken a very broad jump forward in professional advancement.

HERE'S LUCK.

The agony is over, and New York State has completed its new all-State Board of Pharmacy. The selection of the five members from the middle section of the State was a great surprise to that type of individuals who never can foresee the future signs of the times, but it was the logical result of existing conditions and sentiment. The old board, the old school, is superseded by the new school, young men imbued with the spirit of progress, with the college education idea, directly exemplifying the growth in the past few years of the belief that in a new order of things in education lies the success of the pharmacist of the future. The old board did well, the new must hustle to beat the record. Le roi est mort; Vive le roi.

ARRANGING FOR SHORTER HOURS.

Some one, presumably a drug clerk, though he is too bashful to sign his name, sends us some samples of cards intended to fill the requirements of stores in different localities where it is desired to comply with the new law in this city providing for the betterment of drug clerks conditions and hours. One of these cards is as follows:

THIS PHARMACY.

OPENS AT 7 A. M., CLOSES AT 9 P. M.
DAILY EXCEPTING

SATURDAYS.

OPENS 7 A. M., CLOSES 11 P. M.

NIGHT CALLS RECEIVE PROMPT AT-
TENTION AT ANY HOUR FOR
ANY THING.

NIGHT CHARGES INVARIABLY 25c., IN
ADDITION TO DAY RATES.

The other cards submitted differ from the above merely in the hours of opening and closing. If the store is opened a half hour later in the morning, it closes a half hour later at night, but the total number of hours per day is the same. Our correspondent believes that by adopting such a schedule no extra clerks will be required, and by giving the clerks one full day off in each week, beside every other Sunday, and allowing each clerk one hour for meals at noon and night, the law would be entirely complied with, to the benefit of both clerks and employers. Regarding the innovation of charging 25 cents extra for night calls, he believes this would pay for the trouble and tend to discourage unnecessary night calls. The extra fee would go to the person who answered the call, be it the clerk or the proprietor. It would cost the public less than would be charged by a physician under the same circumstances.

There is a very positive desire in this city to observe the requirements of the new law, and many druggists are doing their best to put its provisions into effect. Conditions here are so varied, however, that the problem is by no means an easy one. The above suggestion seems to be a practical one, and is worthy of consideration.

THE EFFECTS OF DRUG HABITS.

We very frequently see in the newspapers alarmingly sensational accounts of the prevalence of drug habits among the people. Where there is much smoke there must be at least a little fire, and it is undeniable that these habits exist in startling degree. Legislation may be tried to lessen or remove the evil, but if past history goes for anything, it is to show that restrictive legislation is always a failure. No permanent, general good can be accomplished save through education of the public regarding the soul and

body-destroying effects of the morphine, cocaine and other drug habits. So long as the people demand these drugs there will always be some one to furnish them, law or no law. We cannot have too stringent laws, however, but beyond them all let the people be told what will be the inevitable results of addiction to these habits.

In a paper recently read before the Kentucky Medical Association the writer spoke very strongly upon this subject. He said that the abuse of opium leads to reckless views of life, that they who use it have little remorse for crimes, that it engenders mendacity, dishonesty of speech and of action, weakening of religious responsibility, diminution in respect for age, law, authority and conjugal relations, laziness, self-indulgence, conceit, garrulousness, mischief-making, comparative imbecility and shrewdness in getting opiates for needs. The nervous system, alimentary tract, kidneys and liver lose their functions until the sufferer's life goes out. Cocain has the direst consequences, as those who use it earliest develop the paranoiac type of insanity and the effect persists for months after withdrawal. Opium is for pain and cocain to increase pleasures and stimulate failing energy. Doctors should try to stop the practice, and are culpable if they ingraft the habit; if the patient is given opium he should be kept in ignorance of its use, for when once well established, the habit is almost incurable. Smoking of opium is the least injurious form.

CANADIAN EXAMINATIONS.

It has often been asserted that the examinations in Canada and Great Britain of those wishing to enter upon the practice of pharmacy are more severe than the applicant for the same privilege in the United States undergoes. The examinations in England are, it must be admitted, much more difficult, but the system of instruction in England is almost entirely of the private enterprise nature, being thus much inferior to the college training in the United States. A comparison of the examination questions, however, shows very much in favor of the English candidates, they being obliged to have much more knowledge of mathematics and languages. When it comes to Canada, though, the difference in examination requirements is not very noticeable. In this issue we print a recent set of questions employed in the Major and Minor examinations at Montreal, and doubtless many in the States will be interested in looking them over. As a whole, these questions are by no means so severe as the majority of our State boards of pharmacy propound.

A NEW ESSENTIAL OIL.—Perrier has described the oil obtained by distilling the green leaves and twigs of chrysanthemums, which he found yielded 0.16 per cent. (Bull. Soc. Chem.) It is a greenish oil with an odor of mint and chamomile, of sp. gr. 0.932, and refractive index 1.4931. It is very insoluble in alcohol and contains a stearoptene (probably one or more of the paraffin hydrocarbons), esters and aldehydes.

OUR LETTER BOX.

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors.

Please be brief and always sign your name.

THE GRADUATION PRE-REQUISITE.

Editor Pharmaceutical Era: I have noticed recently in the Era some agitation in reference to graduation from a college of pharmacy being made a prerequisite to examination before the boards of pharmacy.

In considering this I would like to state that of course it is very natural for the pharmacist who is not a Ph. G. to dislike the idea very much of making the college of pharmacy diploma a prerequisite to the different State boards. He will immediately say that we are not in sympathy with the young man who is working hard to gain a knowledge of this noble profession and is not able to take a course so as to graduate, and who no doubt deserves worthy consideration, but we must in the first place consider the good of a theoretical as well as a practical pharmacist. There are a great many of the best men of our profession who have come up in this way, getting the practical side first, and have found it very necessary to graduate. Their desires were to come up to what should be the standard, which is a diploma from a reputable college of pharmacy.

It is, of course, very necessary that we should have reputable colleges, and to remedy this the pharmacists of the United States have got to look into the matter and see that all colleges of pharmacy are made reputable. To do this we will have to have a certain standard and so much probation when entering college. To show the injurious effect to pharmacists that have gone through college and to those who expect to graduate, and if from a reputable college have all branches of pharmacy taught them thoroughly. E. g. There are in nearly all cities of size certain places where a young man, and some little doctors who don't know enough medicine to pass an examination, can go to the men who are in charge and pay them the small sum of \$10, thinking that they can learn it all in two months, the usual term. They will have given them by one of the men of this institution a number of questions which will be learned in this time, and the applicant will very probably pass the State Board. Now, whether the head of this cheap institution stands in with one or all of the board I don't know, but I do know of this kind of a place and have seen the applicant before the examining board. Now if the writer from Georgia and the one from Virginia will compare the course of two months with the two courses of nine months each and three years probation before entering college, I think that he can see very plainly where the good of a college of pharmacy comes in. I would like to see in the near future a law making a diploma from a reputable college of pharmacy a prerequisite to board examination.

McW. MILNER, Ph. G.

Atlanta, Ga.

INDEXING PATENT MEDICINES.

Editor Pharmaceutical Era: I am of the opinion that proprietary goods should be listed as named, i. e.:

Paine's Celery Compound.

Hinds' Honey and Almond Cream.

Liquid Peptonoids, Arlington Chemical Co.'s.

and not under the names of manufacturers, as you have it in your Blue Book. In the above instance I had to look a long time before I could find the price of Liquid Peptonoids. I did not know the maker. When the name of the maker forms part of the name of the proprietary preparation, then and then only should it come first, as is the case with Paine's Celery Compound and Hinds' Honey and Almond Cream. Scott's Emulsion and Hood's Sarsaparilla I think should be listed under the head of Emulsions, Scott's, and Sarsaparillas, Hood's, etc.

A. L. MORGAN.

Camden, Ark.

Ophelia East Side, wanting some cologne, soliloquizes: "Ah me! Is it he loves me not, or loving me he hath not the price? Verily, man's affection and impecuniousness passeth woman's understanding."

Editor Pharmaceutical Era: A list of proprietary goods to suit everyone is an impossibility and I believe a list containing A, B and C would be the most serviceable in this day and age of "hustle."

ADAM B. HECKERMAN.

Port Royal, Pa.

Editor Pharmaceutical Era:—In regard to the arrangement of an index, I find equal use for one like "A" and for another like "C." I believe the only way to make one catalogue sufficient and complete is to combine all three.

Plymouth, Mass.

LOUIS FINNEY.

Editor Pharmaceutical Era: I think most of the trade look for articles listed as (B).

N. S. KIRK.

New York, N. Y.

NATIVE DRUGS.—The collection of native drug plants in the United States, considered from a purely financial standpoint, aside from medical and humanitarian aspects, involves the expenditure of millions of dollars annually. The commercial extermination of some of the most useful species is already threatened, and doubtless others would be found in the same condition were the facts known. The price of one native plant, ginseng, our exports of which average more than half a million dollars annually, has more than quadrupled in the past thirty years, so that its cultivation has now become profitable. It is clear from this and many similar cases that the native drug industry is capable of either decline or improvement, according to the way in which we handle it. The Pan-American Congress recently submitted to the Secretary of Agriculture a proposition to co-operate with that department of the Government in a technical and statistical investigation and classification of our native drug plants. By accepting this proposal the Department secures the cordial assistance and support of an influential association of learned physicians. The scheme will furnish a basis for the remunerative employment of much land and many people, and stimulate the great and growing trade in drugs between the countries of North America and South Africa. To this end the Secretary urges the appropriation of \$10,000 to enable the Department to co-operate in the investigation.

Ointment Hydrogen Dioxide.

Hydrogen dioxide (2.15 per cent.)	20-40 grams.
Lanolin	20 grams.
Simple ointment	10 grams.

THE PHARMACEUTICAL ASSAY OF DRUGS.*

By E. M. HOUGHTON, Ph. C., M. D.

Owing to the great interest manifested on the subject of the pharmacologic assay of drugs during the past year, it seems to me advisable to consider some of the fundamental principles underlying such practice, hoping thereby to call forth a free discussion on the question. We have come to believe more and more that with few exceptions substances produce specific pharmacologic action because of their chemical affinity for certain kinds of protoplasm. I employ the word "pharmacology" as meaning "the study of the changes induced in living organisms by the administration in a state of minute division of such unorganized substances as do not act merely as foods" (Cushny). Since the function of the various parts of the animal body depends upon the lability of the protoplasm of the cells composing them, we naturally infer that, when some other substance combines with this protoplasm the normal physiological processes will be altered. This supposition is strongly confirmed if we remember that when the brain is under the influence of caffeine, mental activity is quickened, the caffeine brain protoplasm being less stable than in the normal condition. Chloral produces the opposite action, thought becomes sluggish and sleep supervenes, the brain protoplasm having become more stable. If strong solutions of caffeine are applied to muscle fibres removed from the animal body, or if they be injected into the intact muscle of the living animal, rigor mortis results. According to Furth, the myogen is transformed into myogenfibrin. Less concentrated solutions increase the irritability of muscle and allow more work to be accomplished in a given time, hence the rational use of substances containing this principle.

Small doses of strychnine increase the reflex excitability of the central nervous system, larger doses may so excite the activity of the nerve cells that the slightest stimulation is followed by a tetanic convulsion. The larger the amount of drug administered the greater the deviation in the functional activity from the normal. Numerous other similar illustrations might be cited which determine this truth. The function of a given organ is altered in degree but not in kind when under the influence of a drug.

The reflex action of the nerve cells, in the normal condition or under the influence of strychnine remains a reflex act. "In other words, the action of drugs is quantitative and not qualitative, the activity of living matter may be changed, but the form which the activity assumes is unchangeable" (Cushny).

Every physician of large practice has come to recognize that the amount of drug prescribed determines the degree of reaction of his patient within certain limits, provided his remedies are uniformly active. There are often exceptions to this rule, but they can usually be satisfactorily explained if sufficient attention is given to the details obtaining in a given case. The physician applies drugs for therapeutic purposes, consequently it should be remembered that the most important cause for variation in his results is due to the differences in the disease process or processes present in individual patients. The toxins produced by bacteria in an infectious disease may be much more poisonous in one case than in another, as has been thoroughly proven by animal experimentation.

Idiosyncrasy is another important factor to be considered, but this is often the result of some anatomical or physiological variation, a knowledge of which we are not usually able to obtain without considerable trouble.

Individual susceptibility depending upon variations in race, sex, climatic conditions, environments, etc., likewise is of much importance.

All these influences must be and are remembered by the successful physician, and all must be remembered by the pharmacologist. The pharmacologist, however, deals with the influences of drugs upon healthy animals, and can vary the conditions of his experiments at will, and by appropriate methods can obtain exact records of the reactions of various organs to the influence of medicinal agents, consequently his data upon which to base an

opinion are very much more exact than those of the therapist.

From the physician's point of view in the manufacture of pharmaceutical preparations, uniform pharmacologic activity is of far more importance than chemical purity or pharmaceutical elegance. Thanks to chemistry, it is now possible to satisfactorily determine within certain limits the quality and quantity of most inorganic substances and many of the organic substances employed in medicine.

There are, however, other instances, especially the preparations or the active constituents obtained from plants, where it has thus far been found practically impossible to obtain a complete knowledge by this means of the active constituents present.

In certain of these cases it has been thought advisable to determine the amount of total alkaloids, but this kind of an assay does not necessarily enable us to guarantee that the pharmacologic properties are the same in different samples, since it is a well-known fact that where a plant contains several active constituents, all may have the same qualitative action when administered therapeutically to patients or to susceptible animals, but differ largely in their quantitative effects.

Again, in other instances, a plant may contain several alkaloids the action of one or more of which is practically the opposite of the other contained constituents, and again a determination of the total alkaloids will lead us far astray.

In still other instances it is practically impossible to make an assay, since the active constituents contained are of such a delicate nature that decomposition occurs when they are subjected to the most careful manipulations. Unfortunately to this group belong some of the most important and active drugs used in medicine, chief among them being the heart tonics, ergot, Indian cannabis, etc. Yet thus far we have not been able to throw the safeguard of a reliable chemical assay around them and the physician must grope in darkness and in danger.

Owing to this condition of affairs it seemed to me several years ago highly desirable to attempt to gauge the active properties of these drugs by a method entirely different from those heretofore employed. After much experimentation I found it was possible to measure their influence upon certain of the lower animals. Owing to the brief time at my disposal I shall not enter into the details of this work as I am getting them in form for publication later.

I have frequently stated that whenever there are known methods of chemical assay for a given drug which give reliable indication as to the pharmacologic activity, these should be employed instead of experiments on animals, since it should ever be the endeavor of scientists to be as humane as possible and to resort to animal experimentation only when other means are not available to learn the truth sought. Also, because chemical assay is much less expensive and requires a great deal less time for its accomplishment, but I do not admit that pharmacologic assay is less accurate than a chemical assay in certain instances.

The greatest care should be exercised in selecting types of animals to be employed, since different species react very differently to the same drug. The influence of morphine upon dogs is much like that upon human beings, while cats and guinea pigs react in much the same way to morphine as they do to strychnine. Exhaustive experiments only can determine the kind of animal best suited in a given case. After the proper type of animal has been selected, attention must be paid that they are of the same weight, variety, fed on the same food, approximately the same age, etc. The conditions obtaining during the time of the test should be exactly the same and the animals should all be kept under the same environments, which should be as nearly as possible that of the normal; however, it is necessary to observe extraordinary precautions to insure best results in certain cases such as keeping the animals for several days on special diet, etc.

A large number of animals must be employed and an average of the results determined in order to obtain a knowledge of the pharmacologic reaction of a normal animal to the drug. In the case of the heart tonics, if frogs are employed and the minimum fatal dose per gram

*Read before the American Pharmaceutical Association at Richmond, Virginia, May 9, 1900.

body weight be the basis of strength, two or three dozen may be necessary for each assay. Indian Cannabls will require half a dozen dogs or more, etc.

The mode of administering the drug is of much importance also; with frogs, the ventral or dorsal lymph sacs offer an easy method of introducing the poison. Rabbits are not suitable for the administration of drugs per stomach, as the accumulated material in the organ will require days for it to become digested, hence the rate of absorption will vary greatly in different cases. The hypodermic method often is useful. In all instances the mode of administration offering the greatest rapidity and certainty of absorption of the drug with the least inconvenience to the animal should be selected. In every instance the action of the drug should be compared with the action of a standard sample, the strength of the standard sample being determined from the data obtained from an examination of a large number of preparations obtained from various samples of drug and should represent the average strength of the several preparations. If these points are observed when conducting a series of tests upon animals, uniform results will be obtained within certain limits. The limitations will vary with different drugs, which also holds true with a chemical assay.

The results obtained thus far from the use of animals in determining the strength of medicinal agents are well known in the case of anti-diphtheritic serum. The assay of this remedy, which has proven of such marvellous value in controlling diphtheria, has always been based upon the results obtained from experiments upon animals. Several methods are in vogue in different parts of the world, some of which are more accurate than others for fixing the strength of the serum; however, in the several methods employed, with one exception, it is necessary to determine first of all the poisonous properties of the diphtheria toxin. Several portions of diphtheria toxin are each injected into a test animal and the minimum fatal dose found. Ten times this quantity of toxin is then measured into each of several glass capsules containing various amounts of dilute antitoxin. The contents of each capsule is then injected into a test guinea-pig.

A portion of the animals never become sick; others are sick and lose in weight, while the remainder die, the condition of the animals varying in ratio with the amount of serum administered. Ten times the smallest amount of serum protecting the animal from ten times the fatal dose of poison is called an antitoxin unit. Some have accepted this method of assay, but rejected the pharmacologic assay of drugs, claiming the former is pathologic. Speaking from over five years' experience in testing by animal experiments both classes of substances I am of the opinion that the criticism is not well founded on facts.

The poisonous constituents of plants are elaborated by the protoplasm of aggregated vegetable cells, while the active constituents of diphtheria and other toxins are elaborated by the protoplasm of isolated vegetable cells. Hence a toxin is comparable to a preparation of nuxvomica, etc.

The variation in the results obtained from an assay of antitoxin is much greater than in the case of a pharmacologic assay of certain drugs, since various influences, as light, heat, etc., cause a gradual loss in the strength of the toxin and antitoxin, while preparations of drugs are sufficiently permanent to allow us to keep a standard with which we can compare the product being assayed. The assay of the antitoxin is based upon the reaction of three main factors, all of which are variable, namely, the test animal, the toxin and the antitoxin, while in the case of most drugs only one variable factor is present (the test animal), since the preparation usually remains constant.

Eczema Cream.

Lanolin	1 ounce
Powdered tragacanth	25 grains
Zinc oxide	2 drams
Alcohol	1 dram
Water	4 ounces

Make a muclage with the tragacanth, alcohol and water, and with a portion rub the zinc oxide to a smooth cream. Incorporate the remainder of the muclage with the lanolin, and finally mix with the zinc cream.

MANUFACTURE OF CARBORUNDUM AT NIAGARA FALLS.*

The method of making carborundum was discovered after careful research and a long series of experiments in which the inventor, E. G. Acheson, found that carbon and silicon could be made to combine to form the remarkable abradant which during the last ten years has entered so largely into the industrial arts. The earliest experiments consisted in forming a mixture of carbon and clay and subjecting it to a high temperature produced by the electric current. An examination of the mass after it had cooled disclosed some minute crystals of a dark blue color and of extreme hardness, and in a test of these particles it was found that their abrading action was very marked. Early in the investigation it was found that the silicon of the clay was the important factor in the formation of the crystals and subsequent investigation led to the development of the process of manufacture which forms the subject of the present article.

As to the efficiency of carborundum compared with other abradants, it has been difficult to carry out exhaustive comparative tests; but it is stated by the manufacturers that it possesses eight times the efficiency of emery, weight for weight. That is to say, one pound of carborundum will polish eight times as much surface as the same weight of emery and will do it in about half the time. The diamond is the only material which exceeds it in hardness. Its specific gravity is 3.12.

It is not fusible at the highest attainable heat and it is insoluble in any of the ordinary solvents. It is composed of carbon and silicon in equal atomic proportions, and by weight thirty parts carbon to seventy parts silicon. Pure carborundum is white in color, although in the commercial manufacture the crystals are produced in many shades and colors, the prevailing colors being green, black and blue. Crude carborundum, as taken from the electric furnace, usually consists of large masses or aggregations of crystals. Grain carborundum is produced by crushing and grinding crude carborundum, treating it with acid and separating it by sieves into grains of various sizes.

The crude materials for the manufacture of carborundum are sand, coke and sawdust. Part of the coke is reduced to kernels of a certain size to be used as the "core" of the electric furnace, while part of it is ground to a fine powder to be used in making the mixture or charge of the furnace. The mixture is made up of 60 per cent. of gritty pure sand containing 90 per cent. of silica with 40 per cent. of coke. A certain amount of coarse salt is added, and sawdust in sufficient quantity to make the mixture porous as soon as the sawdust shall have burnt out in the operation of the furnace. The furnaces are built of loose brick in the form of an oblong box, measuring 22 feet by 7 feet by 5½ feet. The ends are built up very solidly with a thickness of about two feet, while in the centre of each end is a terminal which is built up of twenty-five carbons, measuring 4 inches square in section and 30 inches in length. The outer ends of the carbons are inclosed in a square iron frame, to which is screwed a plate bored with holes, through which are passed short lengths of ¾-inch copper rods, one of which fits tightly in holes drilled in the ends of the carbon. Each end plate is provided with four laterally projecting copper bars ¾ of an inch thick by 4 inches wide, to which the cables conveying the current are bolted. The side walls of the furnace are first built up to a height of about 4 feet and it is then filled with the mixture of coke, sand, salt and sawdust until it is rather more than half full. A semi-circular trench with a radius of 10½ inches, reaching from end to end of the furnace, is now hollowed out in the mixture and in this trench is placed a core of the grains of coke, which measure, by the way, from ¼ to ¾ of an inch in diameter, the bottom of the core being a little above the level of the bottom row of carbons. A new core requires about 1,100 pounds of coke, and after this amount has been placed in the trench the top is rounded off so as to give the core a cylindrical shape. When it is finished we have extending from terminal to terminal, through the centre of the

*Greater portion of a paper recently appearing in the Scientific American.

furnace, a cylinder of coke 21 inches in diameter and 14 feet long. The brick walls are then carried up to their full height of about 5 feet and the mixture is packed in around the core and heaped up to a height of about 8 feet above the floor of the furnace room.

From this point on the work of turning the mixture into carborundum is performed entirely by the electric current, which is supplied from the Niagara Falls Power Company and has a pressure of 2,200 volts. This, of course, is too high for the purpose and the current is first transformed at the carborundum works by a transformer of about 1,100 horse-power which brings the current down from 2,200 to 185 volts. By means of a regulator it is possible to vary the pressure of the current as thus transformed between 250 and 100 volts. Current is conveyed to the furnace by two copper conductors having a sectional area of 8 square inches each, while heavy cables connect the main conductors with the plates on the terminals of the furnace. For the first half hour no apparent change occurs in the furnace, but when the current has been on for three or four hours the side walls and top of the furnace are enveloped by burning carbon monoxide gas. At the end of four or five hours the top of the furnace subsides and fissures form, from which pour out the yellow vapors of sodium. At the end of thirty-six hours the current is cut off and the furnace, whose temperature is supposed to be between 6,000 degrees and 7,000 degrees, is allowed to cool. The side walls are taken down and the outer mixture, which has not been changed by the fierce heat, is raked off until the outer crust of amorphous carborundum is reached. This is broken away, exposing an inner crust of amorphous carborundum, and after this has been taken off the crystalline carborundum is exposed.

The cross section of a carborundum furnace now presents a remarkable appearance. In the centre is the core of coke, which has lost its crystalline appearance and is now a pure carbon, the impurities having been all driven off by the fierce heat engendered in the furnace. Around the core is a cylindrical shell 10 or 12 inches in thickness, composed of beautifully colored carborundum crystals, the yield from a single furnace being about 4,000 pounds. Outside of this is a comparatively thin shell, 3 inches in thickness, which constitutes the inner crust of amorphous carborundum, and beyond this is an outer crust of amorphous carborundum, which latter ends abruptly in the unchanged mixture. The unit consists of several furnaces, but only one furnace is operated at a time, taking the whole 1,000 horse-power of electric current for thirty-six hours.

The carborundum crystals are next taken to the crushing mills, after which the material is put into large lead-lined tanks and treated for three days with diluted sulphuric acid to remove impurities. From the circular tanks it passes to a long trough where it is washed with water to remove the finely powdered carborundum, which is carried by the water down through the settling tanks. Here the fine powders are collected, and from these are made the so-called "flowers" and the hand-washed powders. After the water has been drained off from the sulphuric acid tanks above mentioned, the crystals are shoveled out, dried and graded on long, inclined, shaking screens. There are twenty grades of crystals from No. 8 to No. 220, the numbers indicating the meshes to the linear inch of the screen through which the crystals have passed.

In the greater part of the carborundum goods put on the market the vitrified bond is used. The carborundum is mixed with a certain proportion of kaolin and feldspar and the mixture is then placed in moulds and subjected to hydraulic pressure. The moulded wheels, disks, stones, etc., are taken from the press and placed on supports known as "bats," which are made of baked clay. The bats are placed in clay "saggars," which are built up in columns within the kiln until they reach its roof. Here they are baked for about six days, during which time the feldspar fuses and serves to bind the carborundum into a solid mass. When wheels are removed from the kiln they are too rough for service and they have to be placed in lathes, trued up with rotating, chilled steel disks, and the central hole bushed to the proper size.

The wheels are tested to 50 per cent. over their working speed. The operator who does this testing makes a sworn

statement to this effect, a certificate of which is pasted on each wheel. The wheels range from tiny dental wheels 1-16 of an inch thick and 1/2 of an inch in diameter up to wheels 6 inches in thickness and 36 inches in diameter; and just here it may be noted that to obtain the cutting material in a 36-inch wheel involves the expenditure of energy amounting to 1,250 horse power hours.

In the process of making carborundum paper, the paper is first printed on the reverse side with the maker's name and other data. From the printing roll it passes to a bath of liquid glue and then beneath a V-shaped hopper, from the bottom of which a fine stream of powdered carborundum falls upon the glued surface. It is then looped up onto a series of racks where it is hung to dry. When the drying is complete it is wound into rolls or cut up into sheets ready for the market.

The uses of carborundum are as numerous as the industries which call for the use of powerful abrasants. Watchmakers have found that it may be used in place of diamond, as it performs equally good work at less cost. Mounted on cloth or paper it is used in finishing the soles of shoes. It is used in the plate glass industry and in the manufacture of pottery and porcelain, while in the heavier work of roll and car wheel grinding it has proved that the greater cost of the material as compared with emery is more than offset by its superior abrading qualities.

SCOPE OF INVESTIGATIONS ON THE FOOD AND NUTRITION OF MAN.

Investigations on the food and nutrition of man include the study of two branches of the subject, which, though quite intimately related and both valuable, are nevertheless of importance in different ways. One branch of the subject comprises a study of the chemical composition of different food materials, an investigation that is purely analytical, but a necessary preliminary to the investigation in the other branch of the subject, which comprises researches into the laws of nutrition and the economic and sociological application of the subject. The former has to do with simply the chemistry of food, while the latter has to do with the physiology—the physics and chemistry—of the nutrition of man, together with its economic and sociological application to people of different classes in different places and under different conditions.

From the first many investigations have been made which studied food incidentally in connection with some special problem; for instance, the effect of some drug. Mention should be made in this connection of the experiments of Professor Chittenden, of Yale University, on this and similar lines. This work is still carried on; the earliest results were published, however, some twenty years ago.

Some very interesting experiments have been made by earlier American investigators on the effect of muscular exertion on the production of urea. One of the most noteworthy investigations of this nature was made by Dr. Flint in 1871 with the professional pedestrian Weston. The earliest study of dietaries which the authors have found was made by J. S. Gould, published in 1852, entitled "Report on the Food and Diet Suited for Almshouses, Prisons and Hospitals." These are only a few of the investigations which might be cited.

A considerable part of the early work in the study of foods in this country was analytical, along the line of the chemical composition of different food materials. A not inconsiderable amount of such work was done between the years 1840 and 1860, most of which, however, is of interest to-day chiefly from a historical standpoint. The greatest accuracy of the work done at that time was in the determination of the elementary composition and the inorganic compounds of the food products. A considerable number of analyses were carefully made in an attempt to learn the proximate composition also; but accurate and reliable methods of organic and analytical chemistry had not yet been fully developed, so the results are comparable only in a general way with those of analyses which have been made according to the so-called "Weende" methods, which were devised and came into general use about 1864. Since that time it has been pos-

able to carry on systematic investigations of food materials from the standpoint of their nutritive values as determined by their chemical composition.

A considerable amount of investigation of materials used as food by man has been for many years and is still being carried on by the Division of Chemistry of the Department of Agriculture. Clifford Richardson made a large number of analyses of specimens of American flour and the bread made from them, and of fresh vegetables and other materials. Prof. H. W. Wiley, the present chief of the division and his associates have also made a great many analyses of cereal grains and their products, canned foods, meats and other materials. A great deal of study of the composition of food materials has been made by Prof. Wiley in the prosecution of his investigations of adulteration of foods. A considerable number of analyses of foods, especially dairy products, sugars, fruits and vegetables were made elsewhere in this country prior to the establishment of the experiment stations. This work has been continued and materially extended by the stations, and co-operative inquiries are now being prosecuted in different parts of the country under the auspices of the Department of Agriculture. In these investigations Prof. W. O. Atwater has done some notable work.

(Written for *The Era*.)

PHARMACOPOEIAL REVISION.

Object and Result.

By WM. B. THOMPSON, Philadelphia.

To establish by conclusive and determinate tests a grade of condition, or of a state and quality, of drugs and chemicals which will best adapt them to their respective therapeutic uses, as well as to establish a uniformity of production, and then to adopt such grade as the official standard or requirement, has been the purpose of the constructors and revisers of the United States Pharmacopœia. Steadily and gradually as more thorough and intimate knowledge progressed, and applied science and improved method were adopted, quality and purity have attained to higher degrees. Such has been the cardinal purpose of the periodical revisions, and not, as some have erroneously supposed, merely to eliminate the old, unused or effete, and to introduce the novel, new and more recently discovered products of nature and art.

If any error has been committed in establishing unattainable or impracticable standards it has obviously been on the side of a right intention, and if the degree of excellence required has not been wholly reached, the official dictum has stimulated effort and produced result. Consequently we have better drugs and more exact chemical products, and we have also a dissemination of knowledge through practice and observation which is better able to recognize in these the required conditions. These facts have an increased and most important significance, when we consider that the so-called galenicals, the vegetable drugs and the varied preparations made therefrom have now become the products of manufacturing enterprise and establishment, and that the distributors, the apothecaries, now derive their supplies almost wholly from these sources.

When the manufacture of the preparations of the Pharmacopœia was likely to become in the future, as it has now in reality become, a large commercial business, there existed a reasonable fear that in competitive strife the instincts of conscience might yield to the seducing attraction of profit; thus would quality be sacrificed to expediency. Such, however, has not been the fact, and there exists to-day a far better class and grade of products, to be readily found and procured through the open channels of commerce. This was not possible under the previous order of things, when the pharmacist of the retail sphere was the sole maker and dispenser. Not that there was an intentional culpability, but because of the fact that standards had not been so authoritatively and definitely established, and compliance was less possible due to the variable and diverse qualities of drug supply and chemicals as procurable through the trade sources. A most important end to be secured is to establish such standards as it is known can be attained, and compliance must follow.

In all products, whether natural or artificial, better qualities than commercial supplies can be had by creating demand and according a proportionately increased price. In chemicals there exists inseparable and unavoidable contaminations which may be beyond correction, but purification means augmented cost and value which must be conceded.

Therefore, if drugs become more expensive commodities in the market, it is traceable to one known cause and that is that they are better in quality and yield better results under the skill and science of manipulation. The most authoritative and essential use to which medicine can be applied is as the prescribed agent of the physician's command or order. All other use, whether of individual want or of domestic practice, is voluntary, and the quality taken at risk of variability. But the physician must have it exact. Therefore he is, primarily, most interested in standardization and uniformity. The manufacturers have wisely comprehended this and have been impelled to put forth products under positive and definite claim, which claim may readily be verified. All active drugs of definite alkaloidal constituent have been grouped into one general, recognizable class, and so exact have the processes of determination and analysis become that a measured quantity of a fluid or tincture will induce the same constitutional effect as a fraction or fractions of the respective contained alkaloid administered directly. This must be taken as an advance in pharmacology and in therapeutic adaptation. At the same time unattainable products have been so modified that they shall not be wanting in the property of definite and accurate medicine.

EXAMINATION QUESTIONS, MONTREAL, APRIL 16, 1900.

MAJOR EXAMINATION.

Materia Medica and Toxicology.

- 1.—Ipecac, Nux Vomica, Ergot, Digitalis, Pareira. Give their source, habitat, natural order, preparations with proportions and metric doses.
- 2.—Paraffin, Cetaceum, Camphor. Give their sources, distinctive physical characteristics, properties, uses and preparations and their point of fusion.
- 3.—Define an astringent, a carminative, rubefacient, hypnotic, diuretic. Give three examples of each with their doses.
- 4.—What are the best antidotes and modes of treatment in cases of poisoning by the following: Cyanide of Potassium, Ergota, Aconite, Ether, Fowler's Solution, Belladonna, Nux Vomica, Iodine and Oxalic Acid.
- 5.—Give the alkaloids, in their order of importance, contained in the following substances: Ipecac, Cinchona, Nux Vomica, Digitalis and Opium. Give their imperial and metric doses.
- 6.—What is Terebene, Iodoform, Santonine? Give their physical characteristics, sources, and doses.

Botany.

- 1.—Describe the difference between a symmetrical, a regular, a complete and a perfect flower. What is chlorosis (or deduplication)?
- 2.—What is pollen? Describe it. Do all plants produce pollen? Name examples.
- 3.—Describe fully germination. What are the favorable conditions, and state the chemical and physical changes which take place.
- 4.—State what you know about grafting. What changes does it cause in plant and trees? Is Hybridation a result of grafting? What is it?
- 5.—What are calculeated leaves and perfoliated leaves? Give a short description of a succulent or fleshy leaf. In what climate are they found, and why?
- 6.—State what you know of the manner of reproduction in cryptogamous plants.

Chemistry.

- 1.—Peroxide of hydrogen. How is it prepared? What are its properties? How would you estimate its value and what are its tests for purity?
- 2.—Spt. Aetheris Nitrosi. Make the equation of the chief reaction in its preparation according to B. P. process. What are its tests for purity? How would you estimate its value? State the precautions necessary to preserve it.
- 3.—What do you understand by series of hydrocarbons? Name one member of three different series, with formula; also write the formulae of the principal derivatives of one of them.
- 4.—Show by graphic or rational formulæ, the relation existing between Pyrocatechin, Resorcin and Hydroquinone, and give the systematic names of these bodies.
- 5.—How would you proceed in an examination of urine? How would you detect Albumen, Glucose and Blood?
- 6.—Upon what principles are Volumetric Solutions made? What are their advantages?

Four grams of Sodium Bicarbonate are neutralized by 50 Cc. Vol. Sol. of Sulphuric Acid (semi-normal): what percentage of Sodium Bicarbonate does it contain? Show the calculations.

Pharmacy.

1.—What quantity respectively of Liq. Ext. Bellad. titrating 6 per cent (6-10 per cent.) must be employed for making 10 ounces Ext. Bellad. Alcoholicum. B. P., 20 ounces Tr. Bellad. B. P. and 16 ounces Ung. Bellad. B. P.? Give processes for making these three preparations.

2.—What are phenacetin and acetanilide? Give their physical characters, uses and doses. By what test would you distinguish one from the other? Give also for each one test for identity.

3.—How is Cherry Laurel Water prepared? What is its active constituent and strength? Give and explain the process for titration.

4.—Ac. Lactic, B. P. How is it produced and what is its strength? Give its principal chemical character of purity.

5.—Salol and Menthol. What are they? Give their principal physical and chemical characters for identity and purity.

6.—Give and explain B. P. mode of assay for Opium.

MINOR EXAMINATION.

Chemistry.

1.—What is Dalton's Atomic Theory? Give the three laws of chemical combination by weight.

2.—Hydrometers, Barometers, Thermometers. What are they? According to what physical laws do they act?

3.—What is a unit of heat? Specific heat? Latent heat of fusion? Of vaporization?

4.—What is an oxidizing and a deoxidizing substance? Give an example of each and state in what pharmaceutical or industrial operation they are utilized.

5.—Complete the following equations:

6.—One litre of air weighs 1.293 gram. What shall be the weight of one litre of O, density 1.1056, same temperature and pressure? One litre of H weighs .089578 gram. What shall be the weight of one litre of N. Show calculation.

Pharmacy.

1.—Define crystallization. What is its object and under what circumstances is it produced? What is meant by the terms: Amorphous, isomorphous, dimorphous, polymorphous?

2.—What is clarification? What are the agents employed? Explain their uses and action.

3.—Explain what is atmospheric pressure. Is it always constant? How is it determined? Explain the influence of its presence or absence upon certain pharmaceutical processes.

4.—What is the weight of distilled water contained in a cubic metre at 60° F.?

5.—What quantities in minims and in Cc. respectively of Liq. Strych. HCl. B. P. should be employed in each of the following prescriptions?

R 8 ounces—each teaspoonful to contain 1/125 grain of strychnine.

R 240 Cc.—each teaspoonful to contain 1/2 Milligram of strychnine.

Calculate 4 Cc. to each spoonful.

6.—Give composition and mode of preparing the following:

Syr. Ferri. Phosp. cum Quin. et Strych.; Syr. Pruni Virg.; Tr. Chlorof. et Morph. Co.; Ung. Zinci. Oleat.

Materia Medica.

1.—Give the formula proportions of the active ingredients and the dose of: Pil. Saponis Co.; Pulv. Opil. Co.; Tr. Myrrh; Liq. Arsenicalls; Mistura Sennae Co.

2.—Belladonna. Give its source, parts used, its B. P. preparations, with proportions and doses. What are its medical properties?

3.—Hydrastis, Camphor, Araroba. What are they? Give their preparations. What are their medicinal properties?

4.—Name five (5) tinctures prepared with 90 per cent. alcohol and two (2) with 60 per cent. alcohol. Give proportions, medicinal uses and doses of each, imperial and metric.

5.—Opium. What is it? Give its habitat and active principles. Give the official preparations and doses.

6.—Gelatin, Eserine, Glycerine, Podophyllin, Butter of Cacao, Thymol and Apomorphine. Give the source, use and dose of each.

Dispensing.

1.—Give names in full and their meaning of the following abbreviations: Q. S.; P. P. A.; Sig.; S. O. S.; S. A.; aa; t. i. d.; Ft. Mas. divide in pil x ii.

2.—What is meant by incompatibility? Is there more than one kind? If so, name them and give examples.

3.—What is a saturated solution? Will a saturated solution take up another salt into solution? Explain the physical or chemical changes which may occur when a solution of Iodide of Potash in distilled water is prepared and also one of caustic soda?

4.—What is an excipient? Name the best excipient for each of the following: Pot. Iodid.; Creosote; Argent Nit.; Argent Ox.; Quin. Sulph.; Pot. Permang.; Ichthyol and Rhubarb.

5.—You have the following prescriptions to dispense:

R Hydrarg. Oleat. 2 % 5vi.

Ung. Zinci ad 5vi.

M: ft. Ung. Sig. Ut dict.

R Solution Hyd. Perchlor. 1-2000 5vi.

M: ft. Lot. Sig. The lotion.

Your stock consists of Hydrarg. Oleat. 20%; Liq. Hydrarg. Perchlor. B. P.; Zinci Oxid. and Adeps Benzoat. How would you prepare them? Give the quantities you would use.

6.—Critique the following prescriptions and point out any incompatibilities and their nature. Write the directions in English and French:

(a) R Tr. Nucis Vom. 3vi.

Sp. Ammon. Arom. 3iv.

Tinc. Card. Co. 3iv.

Aq. ad 3vi.

M. ft. Sig. 5ii. t. i. d. ex. aq. Stat. P. C.

(b) R Liq. Arsenic 5ii.

Liq. Strych. 3i.

Tr. Aurant. 3ii.

Sp. Chlorof. 3ss.

Aq. ad 3vi.

M. Sig. Coch. Mag. quartave die.

(c) R Ol. Morrhuæ 5i.

Sacch. Alb. pulv. 5ii.

P. Acacia 5i.

Ess. Gaulther. mxx.

Ac. Phos. dil. 5ss.

Aq. ad 5iv.

M. ft. Une cuill à thé après chaque repas.

(d) R Sod. Bicarb. 5ii.

Bismuth. Alb. aa. 5ii.

Sodii Bromid. 3i.

Sp. Ammon. Arom. 5ss.

Tr. Card. Co. 5vi.

Aq. ad 5vi.

M. ft. 1/5 eme toutes les trois heures.

SELECTED FORMULAS.

Yellow Dressing for Leather.

Water	162.5	parts
Borax	5	parts
Aniline "leather brown," water soluble.....	1	part
Orange shellac	15	parts
Ammonia water	1.25	parts
Distilled water	1.25	parts

Bring the water to a boil, add the borax and dissolve, and to the solution add, a small quantity at a time, the aniline color (which should be free from iron). When the water is boiling actively add the shellac, a little at a time, stirring vigorously while doing so. Let boil for ten or fifteen minutes, pour off into a clean vessel, and allow the mixture to cool down. Mix the ammonia and water, and when the mass is quite cool, stir the mixture well in. Other colors (water soluble) may be used instead of the leather brown, a little experimenting showing the amount to be employed.

Russet Shoe Polish.

The Liquid.

Beeswax, yellow	2	ounces
Linseed oil	3	ounces
Oil turpentine	10	ounces
Dissolve by heat of a water bath and add Soap shavings, hard yellow.....	1 1/4	ounces
Dissolved in Hot water	14	ounces

The Paste.

Beeswax, yellow.....	1	ounce.
Palm oil	1	ounce.
Oil turpentine	3	ounces.
Melt on a water bath.		

Infant's Soothing Syrup.

Oil of anise.....	1 1/2	dram
Oil of fennel.....	5	minims
Ammonium bromide	30	grains
Alcohol	1/2	ounce
Distilled water	2	ounces
Syrup, enough to make.....	16	ounces

Dissolve the oils in the alcohol, add the syrup and water in which the ammonium bromide has been dissolved, and let stand over night. Then filter through kaolin.

Quinine Tooth Powder.

Prepared chalk	825.0	grams.
Orris root, powdered.....	100.0	grams.
Sugar of milk.....	100.0	grams.
Saccharin	0.25	grams.
Pumice stone, powdered.....	25.0	grams.
Magnesium Carbonate.....	25.0	grams.
Tannin	20.0	grams.
Quinine hydrochloride	5.0	grams.
Oil of rose.....	1.0	gram.
Oil of peppermint.....	5.0	grams.
Oil of ylang ylang.....	5	drops.
Oil of bitter almond.....	5	drops.

Lip Salve (Sticks).

Oil sweet almond.....	1 ounce
White wax	4 drams
Spermaceti	2 drams
Perfume	q. s.
Carmine	q. s. to tint.

Heat the almond oil with the carmine, and strain, then melt the wax and spermaceti; mix in the warm oil, add the perfume and pour into molds. Wrap in tin foil when cold.

Blackboard Staining.

Shellac	8 ounces
Lampblack	1½ ounces
Ultramarine	3½ ounces
Rottenstone	4 ounces
Pumice stone	4 ounces
Alcohol	4 pints

Dissolve the shellac in the alcohol and add the other ingredients in fine powder. Shake well before using.

Violet Tooth Powder.

Precipitated chalk	1 pound
Florentine orris	4 ounces
Castile soap	1 ounce
Sugar	1½ ounces
Extract of violet	1½ ounce
Evergreen coloring	q. s.

Dye the chalk with the evergreen coloring to the desired shade before mixing.

Moth Essence.

Capsicum	100 grams.
Oil of turpentine.....	50 grams.
Alcohol (96 per cent.).....	900 grams.
Macerate for 8 days, express, and to the solution add	
Naphthalin	25 grams.
Camphor	25 grams.
Oil of cloves.....	10 grams.

Let stand for some time, then filter. Sprinkle on paper and place between furs, etc.

Orange Bitters.

Orange peel	1 ounce
Preserved citron peel.....	½ ounce
Gentian	½ ounce
Cascarilla	½ ounce
Alcohol, diluted	5 ounces
Water	15 ounces

Macerate for a week and filter.

Brocq's Ointment.

Salicylic acid	3 parts
Ichthyol	10 parts
Tar	10 parts
Pyrogallie acid	6 parts
Lanolin or vaselin.....	100 parts

Used in the treatment of obstinate psoriasis.—(N. Y. Med. Jour.)

Balsamum Tranquille, Dieterich.

Infused oil of belladonna.....	500 grams.
Infused oil of hyoscyamus.....	500 grams.
Ethereal oil of absinthe.....	1 gram.
Oil of lavender.....	2 grams.
Oil of rosemary.....	2 grams.
Oil of thyme.....	2 grams.

Powdered Dentifrice.

Willow charcoal	25.0 grams.
Cinchona bark	12.5 grams.
Sugar	25.0 grams.
Oil of peppermint.....	40.0 grams.
Oil of cinnamon.....	20.0 grams.
Tincture ambergris	20.0 grams.

Russian Moth Essence.

Tincture of capsicum.....	50 grams.
Tincture of colocynth.....	50 grams.
Alcohol	100 grams.
Camphor	20 grams.
Carbolic acid	2 grams.

Oilum Carminativum.

Infused oil of chamomile.....	20 grams.
Oil of caraway.....	10 drops.
Oil of cumin.....	10 drops.
Oil of fennel.....	10 drops.
Oil of peppermint.....	1.2 grams.

Linimentum Hydroxylamin.

Hydroxylamin hydrochloride	0.1 gram.
Glycerin	50.0 grams.
Alcohol (90 p. c.).....	50.0 grams.

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Queries from Non-Subscribers and Anonymous Correspondents Not Answered.

Non-subscribers and anonymous correspondents will please note that the object of this department is distinctly stated in the rules at the top of this column. The Question Box is conducted solely for the information of subscribers and their clerks who are invited to make full use of its columns. Non-subscribers are not entitled to consideration, however. We cannot spend our time and devote space to answering queries from individuals who do not give us any support.

Stiffening for Sailor Suits.—(F. M. E.) asks "what substances or preparation can be applied to sailor suits (such as are worn by children) to stiffen and dry them within an hour and make them ready for shipment."

We are informed that no special preparation is used by manufacturers for this purpose beyond the usual process of ironing. Laundrymen sometimes add borax to starch, believing it to assist the starch by making the cloth stiffer after ironing. Rubbing over the right side of the starched article with powdered white soap before ironing has also been recommended. Just how valuable these suggestions may prove remains for you to determine by experiment. Meantime we should be glad to publish in these columns the reports of any of our readers who have had experience along these lines.

Cheap Liquid Bluing.—(A. M. C.) Try one of the following: (1) Dissolve anilin blue (G. B.) in cold water. (2) Dissolve indigo sulphate in cold water and filter. (3) Prussian blue, 5 ounces; oxalic acid, 1¼ ounces; water, 10 fluid ounces. After solution is effected dilute as much as desired. Sometimes the coal tar blues are used, chiefly in the form of solution, usually of 1 to 1½ per cent. strong. These dyes are strong bluing material, and being in the form of solution, are not liable to speck the clothes. Their properties depend upon the particular dye used; some are fast to acids and alkalies, others are fast to one but not to another. Some will not stand ironing, while others again are not affected by the operation. The soluble or cotton blues are those most favored. These are made in a great variety of tints, varying from a reddish blue to a pure blue in hue, and are distinguished by such brands as 3 R, 6 R, etc. Occasionally the methyl violets are used, especially the blue tint. Blackley blue is very largely used for this purpose, being rather faster than the soluble. It is said that a 1 per cent. solution of this dye is usually strong enough. Unless care is taken in dissolving these dyes they are apt to produce specks, which is not desirable.

Antiseptic Solution.—(A. S.) We cannot give you the formula for Isterine. Under the title of "Liquor antisepticus," the Formulary of the Cincinnati Academy of Pharmacy gives the following: Dissolve 8.5 grams of sodium bicarbonate and 13 grams of boric acid in 300 Cc. of water. Dissolve 17 grams benzoic acid, 3 grams thymol, 2 grams menthol, 1.34 grams oil of gaultheria, 0.6 grams oil of eucalyptus in 400 Cc. of alcohol. To the alcoholic solution add 9 Cc. tincture baptisia and mix well. To this solution add the solution first formed and enough distilled water to make 1,000 Cc. Filter if necessary. This solution is said to be an excellent antiseptic for local application and wound dressing. It may also be used internally in one-half teaspoonful doses well diluted with water.

Seller's Antiseptic Solution.

Dissolve ½ ounce each of sodium bicarbonate and borax and 10 grains each of sodium benzoate and sodium sal-

cytate in 64 fluid ounces of water by the aid of heat. In one fluid ounce of alcohol dissolve 5 minims of eucalyptol, 5 grains thymol, $2\frac{1}{2}$ grains menthol and 3 drops oil of wintergreen; mix with the solution first formed, add $4\frac{1}{2}$ fluid ounces of glycerin and enough distilled water to make 8 pints. Allow the mixture to stand for twenty-four hours and filter.

Manufacture of Perfumery.—(L. D. P.) We doubt the practicability of attempting to manufacture perfumery from tube roses, roses, water lilies, locust flowers, sweet peas, etc. Not all of the flowers named are used in perfumery, the odors simulating them being made up from other substances, as you may ascertain by consulting almost any work on the manufacture of perfumery. In outline the methods used for the extraction of plant perfumes depend entirely upon the nature of the flowers employed. Among these may be mentioned: "Distillation," performed by heating flowers with water in a boiler and condensing the vapors produced, as in the manufacture of the oils of neroli, patchouli, geranium, lavender, caraway, etc. "Maceration," in which the flowers are immersed in melted grease, the charge being renewed ten or fifteen times at intervals of twelve to forty-eight hours. The product is either used as pomade or digested in alcohol, which takes up the perfume, making an extract. Lard and tallow thoroughly purified are generally used. To make perfumed oils, olive oil is substituted for the fat. "Eufleurage," or absorption, in which the flowers are placed on thin layers of grease spread on panes of glass in frames, the flowers being renewed from day to day. This process is a very delicate one to operate and is said to give the finest results. Various chemical processes have been proposed, though they have not hitherto superseded the methods named to any great extent. A method is also employed in which the perfumes are extracted by solution in very volatile liquids, such as ether, chloroform or carbon disulphide, which may afterwards be readily volatilized at a low temperature in a vacuum. Before proceeding to experiment on the extraction of perfumes from native flowers we suggest you procure a copy of some good work on the subject. Piesse's "Art of Perfumery" and Deite's "Manufacture of Perfumery" may be recommended.

Ethereal Antiseptic Soap.—(A. C. C.) We cannot give the formula for Johnson's ethereal soap. A formula for an ethereal antiseptic soap is given in last week's Era, page 637. Here is another: Mix 36 Cc. oleic acid with 16 Cc. 90 per cent. alcohol in a flask and pour in a solution of potassium hydroxide (1 in 1), 7 Cc., or until a neutral solution of soap is formed, using phenolphthalein as indicator. Then add 0.1 Cc. of potash solution in addition, so that the reaction may be just alkaline. Set aside to cool and finally add methylated ether (0.720, s. g.) enough to make 100 Cc. When finished the solution may be set aside and decanted from a slight deposit which usually forms. The commercial oleic acid has been employed and is said to be sufficiently good for the purpose. To make the potash solution, take 100 grams of potassium hydroxide in sticks, add 55 Cc. of water and dilute the resulting solution to 100 Cc. This solution will neutralize about 5 times its bulk of oleic acid, but since commercial oleic acid and caustic potash are not absolutely constant in composition it is necessary to determine the point of neutrality each time a batch of soap solution is made. Considerable heat is developed by the neutralization of the acid, hence it is advisable to set aside the alcoholic solution of soap till cold before adding the ether.

The method of using is as follows: Pour over the surface to be cleansed sufficient of the solution to well moisten it—for the hands 5 to 10 Cc. is sufficient. Immediately rub it in vigorously, and continue until the solvent has evaporated. Next moisten with just sufficient water to produce a thick lather when the surface is well rubbed and kneaded with the hands or a brush, finally rinsing with a copious supply of water. Perfuming agents in the form of essential oil, terebene, etc., may be added if desired to mask the slight odor left upon the skin. 0.2 to 0.5 per cent. of an essential oil like lavender or about 1 per cent. of terebene is sufficient. If used in larger proportion than this they retard the production of the lather.

Roup in Poultry.—(X. Y. Z.) The following description of the disease and methods of treatment is abstracted from a work on the diseases of poultry. The first symptoms of roup are those of a cold in the head. Later on the watery discharge from the nostrils and eyes thickens and fills the nasal cavities and throat, the head swells and the eyes close up and bulge out. The odor from affected fowls is very offensive. It is contagious by diffusion in the air and by contact with the exudations from sick fowls. To disinfect houses and coops burn sulphur and carbolic acid in them, after turning the fowls out and keep closed for an hour or two. Pour four ounces each of turpentine and carbolic acid over a peck of lime and let it become slaked, then scatter freely over the interior of houses and coops and about the yards.

For the first stages, spray the affected flock while on the roost or in the coop with a mixture of two tablespoonfuls of carbolic acid and a piece of fine salt as big as a walnut in a pint of water. Repeat two or three times a week. Or, if a dry powder is preferred, mix equal parts of sulphur, alum and magnesia and dust this in the nostrils, eyes and throat with a small powder gun. The nasal cavities should be kept open by injecting with a glass syringe or sewing machine oil can a drop or two of crude petroleum. A little should be introduced also through the slit in the roof of the mouth. Give sick birds a dessertspoonful of castor oil two nights in succession, and feed soft food of bran and corn meal, seasoned with red pepper and powdered charcoal. The following treatment is also advised: Hydrastin, 10 grains; sulphate of quinine, 10 grains; capsicum, 20 grains. Mix in a mass with balsam copaiba and make into twenty pills; give one pill morning and night; keep the bird warm and inject a saturated solution of chlorate of potash in nostrils and about 20 drops down the throat.

A "roup powder" may be prepared from one of the following:

- | | | |
|-----|--|-----------------------|
| (1) | Potassium chlorate..... | 1 ounce |
| | Powdered cubebs | 1 ounce |
| | Powdered anise | $\frac{1}{2}$ ounce |
| | Powdered licorice | $1\frac{1}{2}$ ounces |
| | Mix a teaspoonful with the food for twenty hens. | |
| (2) | Ammonium chloride | 1 ounce |
| | Black antimony | $\frac{1}{4}$ ounce |
| | Powdered anise | $\frac{1}{2}$ ounce |
| | Powdered squill | $\frac{1}{4}$ ounce |
| | Powdered licorice | 2 ounces |

Mix and use as in the foregoing.

Pills for Roup.

- | | |
|--|---------|
| Calomel | 1 grain |
| Antimonial powder | 1 grain |
| Powdered licorice | 1 grain |
| Balsam copaiba, q. s. to make pill mass. | |

For one pill. One twice a day to each fowl.

The liquid you describe as "smelling like crude carbolic acid and making a white or milk-like mixture with water and used as a disinfectant" is probably one of the commercial creosols, possibly creolin, which forms a milky emulsion or mixture with water.

THE GERM THEORY ESTABLISHED.—The great contest over the germ theory of disease was settled by the experiments reported in 1876 and 1877, and the way was open to apply this great discovery to practical medicine. What a revolution in medical thought and practice has resulted can only be appreciated by comparing the text of medical works of twenty-five years ago with that of the present day. There were some individuals, however, who could not understand the difference between positive and negative evidence, and who did not for years fully grasp the fact that the germ theory was established. These persons continued to raise objections, and some of them are still telling us that investigators have gone mad over bacteriological studies, and the whole structure which they have raised during the last quarter of this century is doomed to crumble and disappear. Such objectors can have little effect upon the progress of science at this day, since every student has learned that a fact once established by positive evidence is as solid as the mountain and endures for all time; yet, many will die without accepting the germ theory, just as numerous contemporaries of Harvey died disbelieving the circulation of the blood, but the recorded facts and the demonstrations of the germ theory will stand, as Harvey's discovery has stood, and it is as fruitless to inveigh against them as to attempt to sweep back the rising tide with a broom.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of
Era Readers.

FOREIGN.

China.

Interest now centers in the relief of the foreign ministers in Peking. It is said that they are safe, but are practically prisoners. Admiral Seymour's expedition has been compelled to return to Tien-Tsin after hard fighting with Chinese troops. He could not reach Peking.

The Chinese troops are armed with the most modern guns, using smokeless powder, and the soldiers fight with fanatical determination. They have been trained by European officers and are far better fighters than the troops that fought Japan in the recent war.

The battleship Oregon ran ashore last week on an island about 35 miles north of Chee Foo, and it is feared that she will be a total loss.

One hundred and thirty pirates and Boxers were beheaded at Canton last week by Li Hung Chang's order, to terrorize law-breakers. Li is to remain at Canton by order of the Empress.

It is evident that German Government expects the disturbances in China to last for a long time, as all volunteers joining the naval battalions for China have been pledged for service until the autumn of 1901.

Brigadier-General Adna R. Chaffee has been ordered to China to command the American land forces there. General Chaffee won considerable distinction in the campaign in Cuba during the war with Spain.

Admiral Remy is to supersede Admiral Kempf in command of our naval forces in Chinese Waters.

To meet the pressing demand of Admiral Remy for officers for the ships of his fleet it is expected that Secretary Long will have recourse to the authority conferred by Congress upon him in the matter of enlisting the services of retired officers.

South Africa.

Active Boer guerrilla operations are reported from a dozen points in the Orange River Colony.

Boer official reports from Machadodorp aver that part of a British convoy was captured on June 23d near Winburg.

Both the burghers and foreigners who are arriving at Lorenzo Marquez profess a strong belief that it will take from three to six months to subdue the Boers.

A consignment of a foreign firm that passed through Lorenzo Marquez last week, marked "Dutch cheese damaged," proved to contain army boots for the Boers. It passed customs with unusual dispatch, and the British Consul is making representations to the Portuguese Government.

The condition of the British army hospitals in South Africa is reported to be scandalous, and a Parliamentary committee is to investigate the charge.

The Boer envoys sailed from New York for France last week.

It is officially announced at Cape Town that no British troops will leave South Africa until the Boer war is over.

Transvaal officials who were interviewed at Machadodorp last week, by a correspondent of the London Daily Express, asserted their determination to hold out to the last.

Lord Roberts reports the gradual pacification of the Western part of the Transvaal, and the surrender of a Boer force under De Villiers to Sir Charles Warren, who announces the end of the rebellion in Cape Colony north of Orange River.

The Philippines.

The demand of the Filipinos that the friars be expelled from the islands before they will lay down their arms seems likely to cause considerable trouble, for the treaty of peace with Spain provided that all ecclesiastical bodies should be protected in their rights, so that the friars cannot be expelled without violating the treaty. Any such movement too would probably cost the party in power the vote of a large part of the Catholics in this country, so the friars will probably remain. The Filipinos declare that they will never submit until the power of the friars is broken.

The receipts of the Philippine Treasury during April were \$786,367, an increase over the previous month of \$155,595.

The non-sectarian College of Primary and Secondary Education, the first institution of its kind not under control of the priests, was formally opened in Manila last week, and five hundred pupils were enrolled.

Nine of the insurgent leaders were released in Manila last week upon taking the oath of allegiance to the United States.

The United States cruiser Baltimore, with Admiral Watson on board, has arrived at Saiz, on her way home from Manila.

Other Foreign News.

The revolution in Colombia is still active. A telegram from Colombia says the situation at Cartagena and Savanilla is very grave, that fighting is going on, and that the foreign residents are leaving hurriedly.

A dispatch from Valparaiso, Chili, says that the Magellan Straits will be connected by wireless telegraphy with the rest of the Chilean Republic.

The Committee on India Famine relief in New York announce that the sum subscribed is \$102,530. The monsoon prospects in India are favorable. Besides the immense number of deaths from famine, Calcutta is claiming more than 10,000 victims a week in Bombay alone.

The Government of Hayti has adopted the gold standard, and made the American gold dollar the unit of value.

A permanent automobile exhibition will open in Berlin this week. Applications for space have been so numerous that an enlargement of the original area was necessary.

Severe fighting between the British column engaged in the relief of Camassie and the Ashantee rebels is reported, the British suffering a reverse.

A cabinet crisis in Spain is said to be imminent.

DOMESTIC.

Politics.

Gov. Roosevelt, of New York, the Republican candidate for Vice-President, will spend most of the campaign on the stump, probably in the West and Southwest. The Prohibition National Convention in Chicago last week nominated John G. Woolley, of Illinois, for President, and Henry B. Metcalf, of Rhode Island, for Vice-President.

The Minnesota Republicans have nominated S. R. Vansant for Governor. The Michigan Republicans have nominated Col. A. T. Bliss for Governor. The Maine Republicans have nominated John B. Hill for Governor. The Vermont Republicans have nominated W. W. Stickney for Governor. The Illinois Democrats have nominated Samuel Aleschler for Governor.

It is announced from Lexington that Gov. Beckham will call an extra session of the Kentucky Legislature to repeal the Goebel Election law.

The equal suffrage amendment was defeated at the recent Oregon election by a vote of 28,492 to 26,265.

Other Domestic News.

The Government has placed an order with the Bethlehem Steel Company for seven 10-inch and four 12-inch breech-loading rifles and fourteen 12-inch breech-loading mortars for the Orient.

The Chicago Railway Ave. says the total railway mileage of the nation is about 160,000, and that construction on fully 500 roads is in progress. The track laid from January 1 to June 30 will be about 1,654 miles. Texas leading and New Jersey and Maryland bringing up the rear.

A new canal route across the Isthmus of Panama, about thirty-five miles southeast of the Panama route, has been discovered, where a level tide-water canal, with excellent harbors at both ends, can be built at much less cost than by either of the other routes.

The strike situation in St. Louis is much quieter. Cars have been running on many lines. The strikers have abandoned violence, and are trying to set up a general boycott against persons who use the cars.

The St. Louis Police Board has ordered the discharge of the posse comitatus.

The Tennessee Supreme Court has decided that women cannot practice law before any of the courts of Tennessee. Two judges dissented.

A tornado passed over Eutaw, Ala., June 25, and did a great deal of damage. The Baptist Church was demolished and the Presbyterian Church and Female Academy were wrecked.

Two hundred persons are believed to have lost their lives, and over three hundred more were injured, in the fire which destroyed the North German Lloyd Steamship Company's piers in Hoboken, New Jersey, Saturday afternoon, June 30. The flames spread with great rapidity and set fire to the steamships Sabo, Bremen and Main, which were destroyed. The Pacific of the Hamburg-American Line was badly damaged, while the monster Kaiser Wilhelm der Grosse was badly damaged. The property loss is estimated at \$6,000,000.

Rear Admiral Philip, who commanded the battleship Texas in the bombardment of Santiago during the Spanish-American war, died June 30.

The Secretary of the Navy has authorized the following names for the new battleships and cruisers: Battleships—Virginia and Rhode Island, armored cruisers—Maryland, Colorado and South Dakota; protected cruisers—St. Louis, Milwaukee and Charleston.

Secretary Long has approved the findings of the Naval Board recommending that three of the five new battleships shall be built with superimposed turrets.

The charges of conspiracy against the New York Ice Trust have been dismissed by the Grand Jury.

Forty persons were killed in a railroad wreck near McDonough, Ga., the night of June 23.

Estes G. Rathbone, the suspended Director of Posts in Cuba, has been removed from office by Postmaster-General Smith.

TWENTY-SECOND ANNUAL MEETING

...OF THE...

New York State Pharmaceutical Association.

NEWBURGH, JUNE 26-29, 1900.

Without fear of disproof, it may be asserted that the annual meeting of the New York State Pharmaceutical Association during four days of last week was the most notable and significant of the twenty-two yearly gatherings of that body. It was a success from keel to main truck, attendance large, accommodation and entertainment larger, harmony of sentiment and importance of work largest, in superlative degree. Direful predictions were not realized, optimistic prognostications received fullest substantiation.

Headquarters, the Palatine Hotel, was crowded Monday night. When the first session opened Tuesday morning, the attendance was larger than ever before in the association's history, and before final adjournment the number present had been augmented to almost startling proportions. As for the work accomplished, let the formal story of the proceedings tell its important character.

OPENING SESSION.

Tuesday, June 26, 10.45 A. M.

President Wm. Muench, of Syracuse, introduced Mayor Wilson, of Newburg, who very gracefully welcomed the visitors to the historic city and couched his greeting in language its own evidence of sincerity and heartiness. Clay W. Holmes, Elmira, waxed eloquent in response, and found a foeman orator worthy of his steel in the venerable Isaac Chapman, chairman of the local Entertainment Committee, who, following, outlined the programme for the week's entertainment. This so stimulated W. H. Rogers, of Middletown, that he almost burst in exuberance of feeling and language in accepting with both hands and for all present the hospitalities tendered.

THE PRESIDENT'S ADDRESS

was next in sequence, and calling Mr. Hirsman to the chair, Mr. Muench spoke as follows:

To the Officers and Members of the New York State Pharmaceutical Association:

It seems but a short time since we exchanged greetings in the Capitol City, and yet our meeting in this historic place tells us that another year has been added to our existence.

From general information received, it has been a year of success to all those of our profession who paid close attention to business and who displayed sufficient knowledge, theoretical and practical, to economically and profitably manage a pharmacy. This satisfactory condition is mostly visible in localities where good local organizations exist, where fraternal feeling has completely wiped out petty jealousies and combined effort has been brought into action. It is a matter of congratulation to notice that druggists everywhere seem to have a better understanding of the effect of organization. City and county associations can be formed more readily than in former years, and I would recommend that those members in whose localities no association exists set out and consult with their neighbors for the purpose of organizing. This is the age of organization. Experience has proven what a power and influence it yields. We have acted singlehanded and in a disorganized manner too long, and have accomplished but little. Now that we know where our strength lies, let us profit by the information and in the future act in unison on all questions of importance. Such action will surely bring us a betterment in our condition and place us before the public in a better light. We must become more aggressive in the demands of our rights and seek to bring about such changes as shall seem just and proper to accomplish success.

The N. A. R. D.

The National Association of Retail Druggists held its first annual meeting at Cincinnati, Ohio, and in accordance with the resolution of our last convention, delegates were selected from members of this association who paid

their own expenses or who were representatives of local organizations which paid their expenses. I am pleased to state that we had a very creditable representation in the following members: Felix Hirsman, Thos. Stoddart, Judson B. Todd, Thos. Dalton, Wm. Muir and Wm. C. Anderson.

I also was present, but was prevented by poor health from taking a very active part in the proceedings, and asked Vice-President Hirsman to represent me. I have requested him to report the action of the Cincinnati meeting and I am certain he will do it in an intelligent manner and with his known eloquence. Personally, I am favorably impressed with the N. A. R. D.; I believe it will inspire confidence in the ranks of the retailers, and it will receive such assistance as they can give financially and otherwise to make it a telling factor in bringing about a more complete and satisfactory understanding between the retail and wholesale trades and the proprietary medicine manufacturers of the country. I would bespeak your kindest consideration for the N. A. R. D., as that organization, if properly sustained, will certainly better the condition of the retailers throughout the entire country.

The Stamp Tax.

We all agree that the War Stamp Tax Law is not only an obnoxious, but also a very expensive luxury for druggists, and the N. A. R. D. through its Legislative Committee has taken the initiatory steps to abolish this burdensome law. Thos. Stoddart, our most esteemed friend and an active member of this association, has most wisely been appointed chairman of that important committee, and he has most zealously labored for the repeal of the Stamp Tax Law. He worked systematically and well, calling to his aid representative men and associations from every part of the country and made a splendid effort to convince the Congressional Committee of the needed repeal of this law. Mr. Stoddart will no doubt honor us by giving more detailed information upon this very interesting subject at one of our sessions. I recommend that some action be taken by this association to aid and assist the efforts of the national body to procure the repeal or modification of the Stamp Tax Law.

The All-State Pharmacy Law.

For twenty years past this association through its representatives has endeavored to secure a pharmacy law for the entire State, and although the Legislative Committee was composed of the very best and most active men, all attempts to secure the much coveted law failed, not because the legislators were so much opposed, but more on account of the difference of opinion existing in our own ranks. It seemed that this State was destined for some time to come to continue in the old channel with several laws and as many boards of pharmacy. It is a pleasure, therefore, to be able to announce to you the grand result of the active work done by your Committee on Legislation during the session of the legislative body at Albany, and that we now have an All-State Pharmacy Law, an achievement which is a most agreeable surprise to everybody and welcome news to all. With many misgivings of the result, your Committee on Legislation introduced into the Legislature in the early part of the session the All-State bill through Assemblyman Hill, of Erie. The bill was properly shaped by our learned ex-president, R. K. Smither, and Assemblyman Hill, on the lines as proposed by this body at the Albany convention, and allow me to state right here that the passage of the bill is due to a great extent to intelligent compilation and the great influence of the introducer, Mr. Hill. When a hearing was ordered I called upon the members of the committee to appear in Albany to influence the Committee on Public Health to make a favorable report upon our bill, asking them to trust to the future for reimbursement of their expenses. Mr. Smither, Mr. Richardson and myself were the only members present; the other members at the time could not leave their posts of duty. How well we succeeded is proven by the favorable report of the committee and the passage of the bill in the Assembly. We had no trouble, after allowing slight changes to be made, in getting the Senate Committee on Public Health to report our measure favorably, and not until the final passage of the bill was about to be accomplished did we find it necessary to bring special influence upon Senators Armstrong, of Rochester, and Krumb, of Schoharie. By overcoming their objections the bill passed and went to the Governor for his signature. I immediately called upon the various boards of pharmacy, associations and men of influence to bring pressure upon the Governor to sign the measure. Thanks to the prompt

compliance with my request, the Governor signed the bill and his signature was no doubt secured because of the unanimous request of the profession.

When the bill was introduced into the Legislature it was the opinion of the pharmaceutical press and many members of the association that it would never become a law and it would be unwise to spend much energy, time and money; even members of the Legislative Committee expressed themselves in a similar manner, but I would not allow myself to be derelict in duty nor become discouraged and made the best fight possible without money. With the aid of Brother R. K. Smither, and the influence of Assemblyman Hill, we brought to a glorious finish an undertaking which year after year heretofore had failed under much more favorable circumstances. This grand result must be gratifying to all the pharmacists of the Empire State. The new law may not be all we desire, but let us give it a fair trial and I am certain we will find it a great improvement upon the law now in force.

New State Board of Pharmacy.

The uniform pharmacy law is now an accomplished fact and with it comes a great change in many particulars. The members of the new State board for the Central District will be selected at this time, and the election is at the same time. All those licensed druggists who live within the boundary of the Middle or Albany district are entitled to vote. Those of the Eastern or Western Sections have no right to take part in this election; they have their separate elections for their respective districts. The druggists of the Middle Section will therefore call a meeting by themselves and take such action as the law prescribes. Large powers being vested in the State Board of Pharmacy by the new pharmacy law, it is of the greatest importance that men of high qualifications and sound judgment should be selected to fill these responsible positions. I would give timely warning that in the selection of these men no pharmaceutical politics should be resorted to. Again I say, resort to no pharmaceutical politics. Such a procedure would be an injustice to those who have labored so long and faithfully for the establishment of this law, and it would disgrace our profession to a far greater extent than any State politics could possibly do. This new law conveys large powers to the new State Board of Pharmacy, and it is expected the members will exercise their authority with the greatest discretion and judgment. The new law with its restrictions and requirements should be carried into effect in a moderate manner and with such mild remedies as will be appreciated by pharmacists and by the general public. To execute the provisions of the law in a harsh and despotic manner would create a feeling of opposition which might bring about serious conflicts and a desire to overthrow in future legislation what we have accomplished during the past year.

The Present State Board of Pharmacy.

Our State Board of Pharmacy, as created by the Pharmacy Act of 1884, is about to complete its labors under the present law and it is becoming of us at this time to give it a parting salute. Those of us who have watched and closely followed the excellent work of the members no doubt are unanimous in the verdict that they have accomplished much to elevate the standard of pharmacy by judiciously licensing men who, after a creditable examination, deserved to become members of our profession. Considering the many weak points in the law and the continuous lack of funds to properly prosecute violations, the members of the board have achieved marked success and proven themselves very efficient. They have attempted time and time again to amend the law so as to strengthen it without imposing greater hardship on druggists, and also to provide an adequate fund to enable them to better carry out the work, but no success followed their efforts and they gladly supported the "All-State" bill, knowing that it would give better and more complete service. The association can point with pride to the great work accomplished by the five true and noble workers and say to them: "Well done, good and faithful servants."

Education.

Much has been said about the proper educational standard and requirements of pharmacists in late years, and the time seems to have come when more decisive action shall be taken and when the qualification of the future pharmacist shall be more accurately defined; at least efforts will be made in that direction with what success remains to be seen. In our own State and association an effort has been made to bring about an authoritative act to force college education upon aspirants to our profession. These attempts have always met with strong opposition, and favorable progress has not been made. The most justified argument is that the pharmacist is not sufficiently protected by the laws of the State to pursue his profession scientifically and profitably at the same time. In the higher execution of his calling, and for which he is especially expected to acquire so much college education, he is prevented largely from securing pecuniary benefit by the physician. It is a well established fact that 95 per cent. of the physicians practicing medicine in the State of New York supply 90 per cent. of their patients directly with medicines, ignoring the pharmacists almost entirely, and I want to go on record as stating that to dispense medicines to patients is the natural privilege of the pharmacist and it should be made his exclusive right secured to him by law. Let the learned pharmacist be the only medium through whom medicines are supplied

to the sick; let the pharmacist be protected from infringement upon his profession, and then require him to get a college diploma before he can become an applicant for examination by a board of pharmacy. I am in favor and would recommend that January, 1905, be the time set for the requirement of a diploma from a recognized college of pharmacy and that a law to that end be introduced. My reason for deferring the time of operation of such a law lies in the desire to do justice to those who have entered their apprenticeship to become pharmacists and have not the necessary funds to go to college, but who may be high school graduates and fully able, by the aid of a course in pharmacy as offered by the Era or by the Preceptor of Chicago, to educate themselves and pass creditable examinations before the board. All the laws we have heretofore made tended to heap hardship upon us, and I think the time has come when we should not only look out for the people, but also for ourselves by manfully demanding such protection as we are by law and justice entitled to.

During my term of office I have appointed various delegations to represent this association at the meetings of associations in other States and the American Pharmaceutical Association, and I trust we will hear from them during some of our sessions.

The several standing committees I have no doubt will give us very interesting reports, entertaining and beneficial alike.

I have recognized our traveling friends upon the list of delegates, believing them to be entitled to such recognition by virtue of their labor in the interest of our association, and because I look upon them as our natural source of increasing membership.

Collection of Dues.

The treasury of the New York State Pharmaceutical Association seems at all times in need of a better supply. As our membership increases but slowly, and members are rather slow in payment of their annual dues, we must look about for special methods to overcome the existing evil. To bring about a better system of collection, I would recommend that one or more collecting agents be appointed in every city and town where there are five members and upwards, and that it be the duty of such agent to call upon all the members in his jurisdiction once a year prior to the annual convention and collect the dues. Such agent must be a member in good standing in the association and his compensation should be 10 per cent. on collections made. This I judge would keep the members paid up and give us a good balance in the treasury and we would then have no cause to drop members from the roll book on account of non-payment of dues.

To help the treasury along most effectively I further recommend that the different boards of pharmacy be requested to contribute money sufficient to pay for printing our annual proceedings, each to be assessed alike, and after this year the amount should be equally divided and charged to each section. This does not seem to me unreasonable, inasmuch as the druggists at large are greatly benefited by the active work of the State Association.

The Volume of Proceedings Too Elaborate.

I would suggest to the Executive Committee and Secretary of the association to make the proceedings of the association less elaborate until such time as the supply of money will justify the large outlay for that purpose. It must be admitted that the artistically compiled matter and general appearance of our last year's issue is highly creditable to our very able and faithful secretary. But when we consider the large expenditure and compare it with our income we must, as business men, come to the conclusion that economy must be practiced in this particular.

Members of the Association Should Select Place of Meeting.

The Constitution, Article VII., states that annual meetings shall be held at such time and place as the association from year to year shall select.

The Constitution, Article X., states that every proposition to alter or amend the constitution shall be submitted in writing and received at an annual meeting, and may be voted for at the next annual meeting, etc., etc.

Such being the fact, I hold that a simple motion to empower the Executive Committee to select time and place is a clear violation of our Constitution. I would therefore advise that the regular code of procedure be followed in the future and a committee be appointed in the early part of our meeting to select place or places, and to report in one of our sessions, say immediately after the election of officers, so that the next place for the annual meeting shall be lawfully decided by a vote of the members, who are alone entitled to make the selection.

The Secretary as a Member of the Executive Committee.

The secretary of our association is, according to our constitution, an ex-officio member of the Executive Committee, and I hold, as such, he is entitled to all the rights of a member of said committee. Roberts' "Rules of Order" states: "If the office is under the control of the society then there is no distinction between the ex-officio member and the other members." The secretary and the Executive Committee are certainly under the control of this association, and hence my ruling during the year that the secretary is entitled to vote as an ex-officio member was correct.

But since the votes of the members of that committee might result in a tie vote or dead lock, I would recommend that Article VI. of our constitution be so changed that it will read on the second line after the word "number," "Without vote."

The Welfare of the Association.

In the foregoing I believe I have touched upon every matter of importance to this assembled body, and I expect that you will take such steps as in your wisdom the welfare of the association demands. I am in the hope that our gathering in historic Newburg will be one of great harmony and eminently successful. Let us lay aside all personal disagreements and work steadfastly for the benefit of all concerned. To do this to-day and to do it in the future we must act in good faith towards each other and stand ready to acknowledge that the association has not been created to carry out personal spites, but on the contrary that we are here for the benefit of the association. Let us strive onward and upward in the educational and commercial branches of our calling. We need perfection in both to gain that high standing we are clamoring for—to become professional men and financially successful.

I thank you for your marked attention, and wish to impress you with the thought that all I did during the last year was meant for the best, and best only. I trust you will enjoy yourselves while here and return satisfied that you have graced this annual meeting with your presence.

At a later session a Committee on President's Address was appointed, consisting of Oscar Goldman, New York; A. Paradis, Brooklyn; W. G. Gregory, Buffalo; C. W. Holmes, Elmira; A. B. Huested, Albany.

P. W. Ray, of the Executive Committee, reported forty applicants for membership, and, according to custom, their names were posted until the following session before ballot on their admission.

Secretary J. B. Todd, of Ithaca, presented his annual report as follows.

SECRETARY'S REPORT.

If the secretary should be called upon to give each official year a distinctive name, the past one would be christened the "Credential year," as in addition to the usual number issued, the N. A. R. D., U. S. P. Revision and Pure Drug Congress came in for recognition, not to mention the earlier meeting of the A. Ph. A. Many personal letters have been written to Washington in relation to the stamp tax and Food Congress, to which favorable replies were received. Official notice has been received from Secretary Wooten of the N. A. R. D., that the per capita tax has been increased to fifty cents on all members of the association who are in good standing.

Since the annual session of this association and incidental entertainment of those in attendance seem to demand four days, making the sittings more numerous and discussions of greater length, it very naturally requires more pages in the secretary's report to properly record the proceedings. In order to prevent unnecessary publication, your secretary would suggest that the Executive Committee be specially instructed regarding the discontinuance of the deceased list of members and such other matters as may be thought a burden to the report.

The following pharmaceutical journals have been received: The Bulletin of Pharmacy, The New England Druggist, The Drug Reporter, The Montreal Pharmaceutical Journal, The Pharmaceutical Review, Meyer Bros. Druggist, The Western Druggist, The Druggists' Circular, The American Druggist, The Wisconsin Druggists' Exchange, The Practical Druggist, Merck's Market Report, The Pharmaceutical Era, Drugs, Paints and Oils, The Spatula, The Rocky Mountain Druggist, Drug Topics, The Pacific Drug Review and The National Druggist. I must also acknowledge the receipt of catalogues from the colleges of pharmacy in this and many other States, including several alumni journals and reports. The report of the Albany Session was sent to the secretaries of other State and Territorial associations, including those of a national scope or character. In most instances the courtesy was reciprocated.

Permit me to say that the work of the secretary and treasurer is very much hampered by members who fail to supply the proper address, and it is to be hoped that this conspicuous notice will serve as a much needed reminder to prevent further confusion.

The expenses of the office have been as follows:

Salary and expenses of stenographer at Albany	\$126 25
Printing of proceedings.....	419 78
Postage on same.....	85 00
Postage on official notices and programmes	85 00
Total amount for other kinds of printing of various kinds.....	64 88
Engrossing certificates.....	7 50
Postage on same.....	2 40
One year's insurance, ending July 1, 1900.	5 00
Expenses of secretary at Albany.....	36 72
Trunk Line Association.....	11 00
General postage, express, telegraphing, electros, etc.....	51 16
Salary of secretary.....	300 00

Total.....\$1,125 19

An itemized list of the above is in the hands of the Executive Committee for examination and audit.

There have been an unusual number of deaths, and several have been dropped from the roll for non-payment of dues, while the resignations are four less than last year and two in excess of the year previous. The death list includes the following: Wm. Bromell, Brooklyn; Saml. Brown, M. D., New York; Geo. Craig, Pleasantville Station; W. R. James, Medina; Geo. H. Noble, M. D., Cairo; Wm. E. Strachan, Brooklyn; J. C. Van Scooter, Dunkirk; J. B. Russell, New York; A. G. Smith, Ellenville; H. J. Grose, Albany; Geo. M. Lathrop, Cherry Creek; Edward Wells, Madison; Chas. H. White, Ithaca; C. L. Williston, New York; A. B. Wooster, Syracuse.

The total membership at date of publication of proceedings was.....799

There have since died.....	15
There have since been dropped.....	26
There have since resigned.....	9

Total 50

Leaving a present membership of....749

Two gold badges were sold during the year, and several applications for membership have been received and the funds all turned over to the Treasurer.

Respectfully Submitted,

The report of Treasurer T. W. Dalton, Syracuse, showed the following financial condition:

TREASURER'S REPORT.

Receipts.

Cash on hand last report.....	\$885 00
J. B. Todd for sale of badges.....	4 50
L. E. Johnson, certificate.....	1 00
Pabst Brewing Co. (Best Tonic offer).....	10 64
Applications for membership.....	109 50
Dues to date.....	1,209 00
	\$2,219 73

Expenditures.

1899. Paid drafts as follows:	
May 29, favor of Thomas Stoddard Legislative expense.....	\$53 85
June 29, Favor of Judson B. Todd.....	130 00

----------------------------	----------

\$2,219 73

The report was referred to the Executive Committee for audit.

It was announced that, according to the requirements of the new All-State Pharmacy Law, a meeting of the registered pharmacists residing in the counties in the middle section of the State would be held at 1.30 P. M. to elect five persons to represent that section on the new State Board of Pharmacy.

Session adjourned.

THE NEW PHARMACY BOARD.

There were at least 150 present when the special meeting was called to order at 1.30. S. S. Van Saun, of Warwick, was elected chairman, and J. B. Todd, Ithaca, secretary. There was evident from the start a determination on the part of the partisans of the present State Board to delay the formal election until greater strength could be secured for this ticket. This was opposed by the majority. C. W. Holmes asserted that the published statement in the Era that the election would take place June 26 was wholly without authority, but when the representative of this paper explained that the published statement was made at the written request of a member of the old board, who urged it especially, Mr. Holmes' argument lost its force. The members voted very emphatically to proceed at once with business and not be delayed by political strategy. Messrs. Rogers (Middletown) and Best (Albany) were appointed tellers. Two printed tickets were placed in nomination. One was the present State board, consisting of A. B. Huested, Albany; C. H. Haskin, Rochester; F. L. Norton, Delhi; J. C. Smith, Plattsburg, and E. S. Dawson, Jr., Syracuse. The second ticket bore the names of George H. Merritt, Newburg; Warren L. Bradt, Albany; J. C. Smith, Plattsburg; Charles B. Sears, Auburn, and B. M. Hyde, Rochester.

In the balloting only licensed pharmacists in the middle section were allowed to vote, their names being checked off by Secretary Dawson on the official register of the State Board of Pharmacy. There was some splitting of tickets, but when the tellers reported, the new ticket was found to have been elected.

Eighty-five votes were cast, and of these the successful candidates received: Merritt, 54; Bradt, 56; Smith, 76 (candidate on both tickets); Sears, 59; Hyde, 52, and these gentlemen were declared duly elected.

Clay W. Holmes then declared that the election was clearly illegal, and that he would take steps to have it so proven, but failed to state the grounds for his opinion. Adjourned.

SECOND GENERAL SESSION.

Tuesday, June 26, 4 P. M.

The reading of the minutes was followed by the posting of nine new applications for membership. The forty applicants posted at the previous session were then proposed for election.

R. G. Eccles, of New York, jumped up, and, referring to the disgraceful pharmaceutical politics which has recently agitated the druggists of Greater New York, said he had been told that an attempt would be made to so influence the election as to secure the principal offices for New York City members. He then offered a formal resolution that no new members should be elected until after the election of officers had been held. He said he proposed in this way to test the sincerity and honesty of the New York City delegates. The president ruled that the resolution was clearly out of order, and there arose a storm of protest and denunciation of Mr. Eccles' action. But he would not be squelched, and when balloting on the new members occurred, there were found five black balls. Then was confusion worse confounded. Mr. Eccles' attempt to use the State Association to wash the dirty linen of New York City local bodies did not meet approval from a single speaker, all characterizing it as a most improper proceeding. Finally, after long wrangling and attempts at various ways of electing the new members, all obstructed by Mr. Eccles, he withdrew his objection, and the election was held in the usual manner.

The president appointed as Committee on Credentials, William Muir, W. H. Rogers and R. E. Smith, and these soon reported proper credentials for delegates from a number of pharmaceutical organizations, and several of the delegates spoke briefly in recognition of their introduction.

Felix Hirshman reported as delegate to the annual meeting last year of the National Association of Retail Druggists. The session then adjourned.

THIRD SESSION.

Wednesday, June 27, 3.45 P. M.

After reading of the minutes and posting four applications for membership, R. K. Smither, Buffalo, read the report of the Legislative Committee. This was a detailed statement of the work of the committee in relation to the several measures affecting pharmacists introduced into the State Legislature during its last session, but dwelt chiefly upon the progress of the All-State Pharmacy law up to its final signature by the Governor. The report suggested a vote of thanks to Assemblyman Hill for his efforts in behalf of this bill, which was accorded, together with similar recognition of the committee's work.

The Executive Committee presented the resolution adopted by the Louisiana Pharmaceutical Association relative to the movement to secure better rank and pay for the apothecaries in the several branches of the United States service (published recently in this journal), and this resolution was later formally adopted by this association.

George Reiman, Buffalo, reported as chairman of the Committee on Commercial Interests. During the past year very little apparent abatement of the cutting evil has been secured and the report seemed to indicate a feeling on the part of the committee that the proprietors are not in real sympathy with and sincere in their avowed desire to help the retailers. Still, great things are hoped from the work of the N. A. R. D. The increase of the use of proprietary specialties among physicians was referred to, and doctors were urged to discourage them as much as possible and make more use of the U. S. P. preparations. It was hoped and believed that the burdensome stamp tax would be repealed at the next session of Congress, and it was urged that a special delegation should be selected to work for this result. In commenting on the All-State Pharmacy Law it was deemed highly necessary that provision be made for the commercial education of apprentices. The committee believed the time not yet here, but near, for the college diploma as a prerequisite to board examination and a committee of three was suggested to provide means to make this proposition operative in three years. The report was referred to the Committee on President's Address.

R. K. Smither hoped no legislation on the diploma question would be attempted for at least a year to come. He seemed quite disposed, as heretofore, to belittle the whole matter, but as discussion on this question developed later in the session and he found not one supporter, he was apparently converted and even went further than any of the rest in the other direction, proposing and securing the adoption of a resolution which marks the greatest progress in pharmaceutical education ever taken in such an organization. This will be again touched upon in this report.

Delegates to various other pharmaceutical associations then reported. F. P. Tutbill, delegate to the New Jersey Pharmaceutical Association, told of the great discourtesy shown at the last meeting of that organization to visiting delegates in denying them the privilege of the floor and the N. Y. S. P. A. at once adopted a resolution that no delegates would hereafter be sent to New Jersey. When the committee now reported having received additional credentials, the emphasis of the just-mentioned action was driven home and clinched by most heartily inviting the New Jersey delegates present to accept all courtesies of the present gathering and J. C. Gallagher, of Jersey City, was especially honored by a rising vote of special privilege.

R. G. Eccles, having left for home immediately after his experience of the previous day, no report was received from him as delegate to the recent Pure Food and Drug Congress at Washington.

After a paper by George Reiman on "Out-door Poor Relief in the City of Buffalo from the Pharmacist's Point of View" had been read the Committee on President's Address reported. The president's recommendations and remarks relative to the N. A. R. D., stamp tax, All-State Pharmacy Law, work of the old board, and that the president and secretary be ex-officio members of the Executive Committee were all approved. The president's suggestion in the diploma prerequisite matter was also approved, save that the time when this should become

operative should be made 1903 instead of 1905. The proposition that the newly-created State Board of Pharmacy pay for printing the proceedings of the association was not favored. And now the fun was on in earnest. All the orators of the association were present prepared to take the longest flights, and many of them got well started in impassioned speeches. But a most startling and unexpected condition quickly developed. There was to be no fight. Up-the-State and New York and Brooklyn, the college men and the practical druggists, did not range themselves in battle ranks, in opposing files. Very different from a year ago; all were of the same mind, harmonious as cooing doves; all wanted the same thing and that was the college diploma as preliminary to board examination. The only difference was on the question when it should be.

To be brief, two or three hours of discussion finally crystallized in the adoption of a resolution offered by Mr. Smither providing that the new Legislative Committee shall prepare for presentation at the next annual meeting the draft of a bill which shall include the diploma prerequisite (operative in 1905), shall require regents' examination for entrance into colleges of pharmacy, and that a method be devised for some form of State control over the standard of the colleges.

The latter sections of this resolution were generally considered most important steps toward the attainment of a higher and better educational and legal pharmaceutical standard.

Adjourned.

FOURTH SESSION.

Thursday, June 28, 9.45 A. M.

The minutes were read, four applications for membership received and Committee on Time and Place of next meeting appointed.

A resolution was adopted thanking the Governor for signing the bill increasing the rank and pay of the hospital stewards in the State militia.

Prof. G. Michaelis, of Albany, read the report of the Committee on Adulterations. The general average quality of drugs in this State was found better than heretofore and gradually improving. The report urged work to secure the passage of the Brosius bill, as State measures were useless without Federal legislation. If the Brosius bill passes there will be no further need for this committee in this association. A tabular statement was given showing the character of a large number of articles examined during the past year. A large part of the report consisted of abstracts from the annual report of the chemist of the United States Department of Agriculture. Then came the

ELECTION OF OFFICERS.

The cohorts were out in large force, but here again the anticipated fight did not come off. Harmony prevailed. Only one ticket was in the field and every member thereon was unanimously elected without mention of opposition candidates, save in the case of the Executive Committee, and even there the contest was only friendly and healthfully stimulating. The final result of the vote was:

President—Felix Hirsman, New York.

First Vice-President—Thos. Stoddart, Buffalo.

Second Vice-President—J. F. Van Nort, Elmira.

Third Vice-President—Clarence Miller, Newburg.

Secretary—J. B. Todd, Ithaca.

Treasurer—T. W. Dalton, Syracuse.

Executive Committee—J. A. Lockie, Buffalo; A. C. Searles, New York; Frank Richardson, Albany.

C. O. Douden, of Brooklyn, hospital steward of the Forty-seventh Regiment then in camp at Peekskill, gave a short talk expressing satisfaction at the passage of the bill elevating the stewards in the State service and urging that the rumored effort to repeal the law be opposed in every legitimate way. The Legislative Committee was instructed to watch for and oppose all inimical legislation of this sort.

In view of the fact that the 1901 meeting of the A. Ph. A. will not be held until after the next meeting of the N. Y. S. P. A., no delegates will be appointed to the former body until after June next year.

The president was empowered to select not more than seven delegates to the annual meeting next September

of the N. A. R. D., and, if necessary, the expenses of one of these delegates will be paid.

NEXT YEAR'S MEETING.

The committee on time and place of next meeting reported that invitations had been received from Saratoga, Ithaca and Buffalo. The last named city was recommended, the recommendation was adopted, and at the following session some time between June 29 and 30 was decided upon, the exact date being left to the local committee for settlement. Adjourned.

FIFTH SESSION.

Friday, June 29, 10.30 A. M.

Members were late in assembling, and during the entire session not more than a score were present. The minutes were read and adopted. Adjournment was taken for a minute, to then reconvene and elect two new members.

The secretary read a telegram announcing the death the previous day of F. L. Hewitt, of Rochester, who served as vice-president two years ago. In recognition of this loss and in testimonial to the memory of this deceased member, the association adjourned for a brief period.

On reassembling, the reports of the Committee on New Remedies and of the State Board of Pharmacy were read by title and referred for publication.

The Committee on Pharmacy and Queries announced several papers: "Prescription Incompatibilities in Every Day Practice," by W. J. Robinson, New York; "Shop Notes and Dispensing Hints," W. A. Dawson, Hempstead; a paper by C. S. Ingraham, Elmira, requesting establishment of a standing committee on formulas; "Tendencies in Pharmacy," A. B. Husted, Albany; "Botanical Nomenclature," W. A. Bryan, Brooklyn; "History of the New York State Pharmaceutical Association," C. W. Holmes, Elmira. All these papers were read by title and referred for publication.

The Executive Committee's annual report was very brief. It stated what business had been conducted during the year and announced that membership in the N. A. R. D. would be continued.

The installation of officers was not an imposing ceremony, as, of the new incumbents, only the president-elect, the secretary and the treasurer were present. Each said he would do his best in the service of the Association.

Wm. Muir proposed a vote of thanks, which was put in flowery language and added to by Secretary Todd, to Isaac Chapman and his associates in the local committee, to "Mine Host" Bain and estimable wife of the Palatine Hotel, to the ladies of Newburgh, the local press, the sheriff for putting the court room at command for the meeting place, to the travelling men and to every one beside who had contributed in any way to the pleasure and success of the convention.

Adjourned sine die.

THE ENTERTAINMENT.

In the first place, the treatment received from proprietor and Mrs. Bain, of the Palatine Hotel, was entertainment in itself. Never before has the Association been treated so royally at a hotel. But the local committee had arranged a program which kept everyone on the jump all the time. It seemed as if refreshments of various kinds were being handed out at intervals of not more than an hour during the entire week. One couldn't turn around without having a tender of lemonade, claret cup, ice cream, or something of the sort.

There was a trolley ride of twelve miles to Walden to inspect a knife factory, stopping on the return at Orange Lake for refreshments. There were the usual president's reception, with dancing and refreshments; a progressive euchre party with handsome prizes, also dancing and more refreshments; a half-day's trip on the river, visiting West Point, witnessing the machine-like drill by the cadets, and, remember, music dancing and refreshments on the boat, both ways. Between times there were visits to

Washington's headquarters and other points of historic and natural interest, and bowling parties every day. The star event, however, was the banquet Thursday evening. Mr. Bain outdid himself on the menu and the toast-master and speakers covered themselves with glory in their several capacities. There were more than 200 banqueters; Wm. Munch was toast-master, and the toast list was this:—"Our Association," Felix Hirshman; "The Fraternal Idea," Col. G. A. Cantine; "The Man Who Pays

the Freight," Major W. H. Weston; "Pharmacy," W. G. Gregory; "The Druggist," S. H. Carragan; "Our Commercial Travelers," R. K. Smither. It was 3 a. m. before the last one went to bed.

When Friday noon and final adjournment came, every one was completely tired out and many digestions were ruined, temporarily at least, but each individual person said the 1900 meeting was the best in all respects in the history of the Association. And so it was.

THE DRUG NEWS.

New York and Vicinity.

MR. CANDLER ON THE WITHAM IDEA.

Asa G. Candler, of Atlanta, Ga., president of the Coca Cola Company and a wholesale druggist for many years, was a member of Bank President Witham's excursion party which visited New York last week. In the party were seven of Georgia's handsomest women and seven cashiers from Mr. Witham's thirty-two banks. Mr. Candler took the opportunity on Thursday, when the Witham programme had nothing on it but "go where you will, do as you please, but tote fair," to call on many of his old friends for no other reason than to fill them with the enthusiasm for Manager Witham's advanced ideas, with which he is bubbling over. Mr. Candler recounts the Witham idea time and again, with apparently the same display of enthusiasm and heartfelt sincerity as when it was new to him. This is evidence that he believes in it himself; his efforts to get others to do likewise are as successful as Manager Witham's philosophy has been. Mr. Candler believes that young men should have a chance to display their ability; he thinks there is no more suitable way than to reward effort in this direction with distinction and honor in the home of the young man. His idea is that a young bank cashier in a little Georgia town is far the superior of a young man who leaves his native environment and comes to a large city to be hidden in the vortex of business life. His belief extends a trifle farther; it reaches into the personality of the young man, and as the provision in the party of the seven beautiful women supplied for the companionship of the seven young cashiers would indicate, it transcresses the threshold of the home. Mr. Candler is a sound thinking man and his logic is broad and generous, as this indication of his ideas more than verifies. He is Southern to a degree, but full of the essence of goodness. Mr. Candler returned to Georgia with the party last Friday morning.

NEW YORK RETAIL DRUGGISTS ELECT OFFICERS

The New York Retail Druggists' Association met at its rooms, 98 Forsyth street, Friday evening and elected officers. The members also unanimously declared in favor of sending a circular letter to all druggists in Greater New York setting forth the objects, aims and actual work the society is accomplishing. The meeting was called to order at 12.30 o'clock by Julius Hammar. The minutes of the previous meeting were read and approved. Some discussion arose at the last meeting over the opening of a drug store on Grand street, it being said that one of the partners in the concern was not a pharmacist. A. Bakst was made chairman of a committee to investigate and he reported that he had consulted with Sidney Faber in the matter and that the latter had said that anyone could be a part owner of a drug store as long as his name did not appear on the sign or labels as a pharmacist. The report was accepted and it was decided to make a further investigation in the matter. A. H. Solotaroff, chairman of the committee to prepare a form of application, read his report, which was adopted. The attention of the society was called to the fact that a number of its members were furnishing prescription blanks to doctors, and the secretary was instructed to warn these members to desist from the practice. The next matter taken up was the election of officers. There were two candidates in the field for president, W. Tul-

chinsky and J. Weinstein, the present incumbent. Mr. Tulchinsky declared to the members that in view of the faithful service of President Weinstein it was his desire that he should be re-elected and he would withdraw from the contest if Mr. Weinstein should be unanimously chosen. Such action was taken. The other officers elected were: First vice-president, A. Bakst; second vice-president, L. Lurie; treasurer, J. Bakst; financial secretary, A. H. Solotaroff; recording secretary, L. Marmor; sergeant-at-arms, J. Bockshitzky; trustees, S. Lifshutz, C. H. Bernstein and C. Resnik. Two names were proposed for membership, and the following committee, to which propositions will be referred for recommendation, was elected: N. Kruskal, L. Marmor and M. Nesselson. It was decided to send a circular letter relative to the workings of the society to all retail druggists in New York; to have the constitution and by-laws, together with a preamble, read at the next meeting of the society and to have them printed. The work of revising and printing was entrusted to J. Bockshitzky, L. Marmor, J. Weinstein, A. H. Solotaroff, A. Goldman and N. Kruskal. A motion to have cards displayed in drug store windows stating that no postage stamps would be sold after 8 o'clock was tabled. When adjournment was taken it was decided to meet but once during the months of July and August. The receipts of the meeting were \$20.

NOTES.

—A case that may develop interestingly to the trade was brought to light at Paterson, N. J., recently, by the acquittal of Harris Jacobs, proprietor of a drug store at 168 River street, on a charge of allowing an unlicensed clerk to sell poison. Jacobs' accuser is Dr. Abram Glickstein, who alleged that he had purchased poisons from Jacobs' son, a minor and an unregistered clerk. In his defense Jacob hinted at conspiracy, saying that Dr. Glickstein, Justice Campbell Johnston and one of the witnesses, Frank Devers, had conspired to injure him. Mr. Jacobs' boy, in the trial before Justice Johnston, swore that Glickstein had helped himself to the poisons after the junior Jacobs had refused to sell them. Devers, it was said, had loitered about the place until Glickstein entered the store and then had purchased a glass of soda water that he might be a witness against Jacobs. Jacobs intends to investigate the matter in a thorough manner.

—Among those who have visited the trade during the last week were: W. Ellis, Media, Pa.; J. Van de Leyster, Chicago, Ill.; W. C. Bouldin, Oakland, Tex.; C. A. Werner, Saginaw, Mich.; F. A. Austin, Denver, Col.; A. H. Cohen, Milwaukee, Wis.; W. H. Morrison, Philadelphia, Pa.; S. H. Saries, Mt. Kisco, N. Y.; C. C. Lane, Boston, Mass.; E. R. Post, Newburg, N. Y.; W. H. Koetter, St. Louis, Mo.; B. M. Hyde, Rochester; M. S. Iseman, Georgetown, S. C.; G. F. Harvey, Saratoga; T. A. Fosselman, Butte, Mont.; W. F. Goetz, St. Joseph, Mo.

—Henry Thayer & Co., of Boston, have recently established an office in Philadelphia at No. 12 North Eleventh street. Messrs. Moore & Brennan are the managers. F. O. Lamb will open a branch store for the firm some time next month at Denver, Col. Wm. C. Jewitt has recently joined the forces of the firm and will travel in the State of New Jersey. F. L. Stuart, formerly New York City salesman for the company, has been transferred to Eastern New York.

—The week which ended June 30 has been the only one this season in which the man at the soda fountain has had to do any great amount of work, and then he paid up for his vacation, and with interest, too. One down town drug store located near the centre of stuffy offices where the air is as dry as soap bark, dished out the somewhat astonishing number of 3,500 glasses on Monday. The following days the business is said to have been even larger.

—A large party left the rooms of the Drug Clerks' Circle 235 East Broadway, on the morning of June 24 for Schutzen Park, Glendale, L. I., to enjoy the annual outing of the association. Dinner was served at the park and dancing enjoyed during the day. The Committee of Arrangements consisted of the officers of the club: President Zeitlin, Vice-President Lurie, Recording Secretary Nevelson, Financial Secretary Sovel, Treasurer Pickardt.

—Henry F. Sasse, druggist at No. 1064 First avenue, this city, is enjoying a vacation in Europe. He left Thursday, June 21, accompanied by his sister, Miss Sophia Sasse, on the steamer Frederic der Grosse. They go direct to Berlin, where they will remain for some time. Mr. Sasse also intends visiting Sweden and will stop at the Paris Exposition, returning to this country some time in October.

—Charles Seliger, formerly manager of the Mott avenue pharmacy at 399 Mott avenue, Manhattan, opened a model drug store at 416 Mott avenue, June 16, which will be known as the Cedar Park Pharmacy. In Mr. Seliger's case blessings come in pairs, for on the same day he opened his store Mrs. Seliger presented him with a ten-pound boy.

—The arrival last week at Tampa, Fla., of the last of the fleet of "sponge fishers" with immense cargoes, gives evidence that the "catch" this year will greatly exceed that of other seasons. It is estimated that the "takings" of the entire fleet will reach \$250,000.

—Over a million dollars' worth of drugs and chemicals were brought into this port during the week ending June 23. This large amount was undoubtedly due to two consignments of kauri and shellac, the former being valued at \$126,016 and the latter at \$131,202.

—In the Era of June 21 it was stated that Max Zagat had opened a drug store at Ninety-sixth street and Fourth avenue. There is no drug store at this place, but Mr. Zagat did purchase a drug store at Ninety-first street and Madison avenue.

—A. H. Solotaroff, a druggist at 71 Broome street, has about completed extensive improvements in his store which will give him considerable more floor space. The change was made for the accommodation of an increased business.

—Dr. W. G. Gregory, professor of pharmacy in the Buffalo College of Pharmacy, and lately chosen a member of the All-State Board of Pharmacy from the Western Section, renewed old acquaintances in town last week.

—John J. Benson has opened a store at the southeast corner of Ninety-second street and Lexington avenue. Mr. Benson was formerly with W. B. Tongue, who is located at the northwest corner of the same street.

—Another new store has already been added to the already large number on Third avenue. It is located at No. 1861, and its proprietors are Kogan Bros., who also own a store at 155 Harrison avenue, Brooklyn.

—The Pacific Coast Borax Works, of Alameda, Cal., has closed its refineries at that place and will do the work hereafter in this city. The reason for removal is attributed to an advance in freight rates.

—Mr. Eisentrager, who owns drug stores at 104th street and Third avenue, and 104th street and Madison avenue, and 112th street and Fifth avenue, will leave shortly for Europe for a two months' vacation.

—Max Wustrow, druggist at 265 East Broadway, and who also owns a store at 26 Eldridge street, formerly managed by Henry Herr, has relieved Mr. Herr and will conduct both places himself.

—Joseph Gevrowitz, druggist at No. 86 Rivington street, New York, sailed last Thursday on the Fuerst Bismarck for Europe, where he will enjoy a two months' vacation.

—Oscar J. R. de Rochemount, New York manager of the E. L. Fatch Company, Boston, Mass., was married Tuesday evening to Miss Anna Dierig.

—W. S. Mercereau, of Schieffelin & Co., has gone to the Adirondack Mountains to spend the month of July with his family, who are summering there.

—Charles Veprovsky has recently purchased the drug store at 1450 First avenue from Emil Roller. Mr. Roller owns a drug store at 864 Ninth avenue.

—Sigmund Hirsch, of Henry Nordlinger & Co., will leave shortly for a visit of several weeks at Schroon Lake, in the Adirondacks.

—S. Nauheim, druggist at Fifty-ninth street and Lexington avenue, is confined to his home with rheumatism.

—Julius Hammar has succeeded L. Marmor as manager of the Associated Drug Company, on East Broadway.

—C. H. Brooks, traveling salesman for Connecticut and Rhode Island for William R. Warner & Co., is in town.

IN AND ABOUT BOSTON.

A Drug Clerk Who Sleeps with at Least One Eye Open.

Boston, June 30.—On the morning of June 28, at about 4 o'clock, an attempt was made to break into the drug store of W. H. De Merritt, at No. 735 Huntington avenue. Two men broke the glass in a rear window, and as this fell into the back office with a crash, it readily awakened the clerk, H. J. Mahan. He at once grasped the situation, when he saw an arm stealing in through the broken window to unlock it. He took his revolver, went to the window and fired several shots at the men, who scampered away as soon as they discovered that some one had been left in charge of the store. Mahan feels sure that he "winged" one of the men, for, as they ran off, one of the pair appeared to be injured in his shoulder. Besides, traces of blood were found trailing behind them. The police have notified hospitals to be on the watch for a man with a bullet hole in his shoulder.

NOTES.

—John R. Hudson, head clerk at Henry Canning's pharmacy, corner of Green and Chambers streets, has returned to his accustomed duties at this store, after an enjoyable wedding journey to New York and Philadelphia. Mr. Hudson, who was married early in June at South Groveland, Mass., to Miss Helen Molloy, has been with Mr. Canning for five years or more. Mr. Canning, who for more than a quarter of a century has sung in one church in South Boston, Sunday after Sunday, took an active part in the wedding service. A solemn nuptial mass was celebrated, during which Mr. Canning sung a solo, "Veni Creator."

—On the celebration of the 125th anniversary of the Battle of Bunker Hill, at Charlestown, a prettily decorated place was the old-time pharmacy, at the corner of Elm and Bartlett streets, kept by Guilford D. Brown. He was born in New Brunswick forty-two years ago, but for more than a score of years has been a resident of the States. He has had a drug store in Charlestown for nine years, and two years ago became the manager of a successful branch pharmacy in Cambridge.

—The Massachusetts Board of Registration in Pharmacy held examinations at its headquarters in the State House on June 25, 26 and 27, when out of forty-eight candidates who were present, only seven successfully passed the examination and were granted certificates, as follows: George A. Miller and Orville H. Low, Boston; J. Searle Holland, Charlestown; Louis A. O. Goddu, Winchester; Peter J. Moran, Clinton; Frank E. Wood, New Bedford, and James T. Carter, East Weymouth.

—The New England Association of Chemistry Teachers is doing excellent work for its members. The secretary, Herbert G. Shaw, and president, Rufus P. Williams, regularly issue printed bulletins of books on general chemistry, physiological chemistry, physical chemistry, new apparatus, recently published books and like general information.

—Following the recent convention of pharmacists at Newburyport, several druggists who attended the meeting in that city were pleasantly entertained by T. B. Nichols, of Salem, where they stopped over as they passed through that city on their way home. Mr. Nichols is treasurer of the association.

—James Ferrin, who is now the proprietor of the drug store formerly owned by Ferrin & Fausnaught, is making

a success of the business. His former partner, James C. Fausnaught, is living in Colorado, where he was obliged to go because of pulmonary trouble.

—D. M. O'Brien, a Rockland druggist, is acting as local agent of a committee to receive contributions for the India Famine Fund, and he will forward to the Committee of One Hundred in New York any sums donated to this charity.

—After ten years as superintendent at Houghton & Dutton's large store in this city, W. D. Quimby has severed his connection with that house to become the head of the W. D. Quimby Pure Food Company.

—Owing to an accident from which he lately suffered, Edward H. Gardner, a pharmacist of South Boston, has received the benefit of an accident insurance policy, which he carried with a company in this city.

—A new drug store at Woburn is that of George E. Doyle, on Main street, which has been finely fitted up especially for his purposes. It is most centrally situated, and in a position to catch much trade.

—A fire in the cellar of the store of the Sommer's Drug Company, at Quincy, this week, caused considerable alarm, but little damage. The department soon had the fire out, with only a small loss.

—After an illness or about a fortnight, Chester L. Estes, a druggist at Beverly Farms, is out and attending to business once more.

—Mark P. Fisher, a drug clerk at Roxbury, has been given a position in Spiller's pharmacy, at North Abington.

PHILADELPHIA.

Druggist Balliet Drowned.

Philadelphia, June 29.—Howard P. Balliet, proprietor of the drug store, Sixteenth and Brown streets, was drowned in the surf at Atlantic City, on the afternoon of June 25. Mr. Balliet had been at the shore since the previous Saturday, having made the trip to the sea for the purpose of acting as groomsman at a friend's wedding. As the day was warm, Mr. Balliet and an acquaintance, Miss Sadie Decker, resolved on a bath. While in water breast-high, the undertow of a huge comb carried them beyond their depth. Balliet could swim, but in the heavy surf the girl's struggles were too much for him. Life guards rushed to their assistance, and one of them reached the girl just as she was sinking. The guard dived repeatedly in the fruitless attempt to find the unfortunate man, but was soon compelled to return to the beach exhausted. About an hour afterward, Mr. Balliet's lifeless body was washed by the remorseless ocean into the midst of a group of bathers. It was at once taken ashore, but all attempts at resuscitation failed. The drowned man's parents in Bethlehem, Pa., were notified. Mr. Balliet was a P. C. P. man, class of '99, and in 1900 obtained the degree of Doctor of Pharmacy. He was very popular in his classes, and greatly esteemed by his business friends.

NOTES.

—The employees of the H. K. Mulford Company, manufacturing pharmacists of this city, held their annual picnic at the Vaseline Farm of the company, Glenolden, Pa., Saturday, June 23. A special train left Broad Street Station in the morning, carrying more than 300 excursionists. The events of the day comprised various outdoor sports and were followed by dancing. After a luncheon the afternoon was given over to special events, such as high kicking, running broad jump, 100-yards dash, etc., and bicycle racing. Handsome prizes were given to the girl contestants. The exciting event of the day was a baseball game between two rival teams of the employees known as the "Nonpareil" and the "Resolutes," the latter winning the game by a score of 12 to 7. The winning team was presented with a beautiful solid silver loving cup, to be kept and competed for each year by succeeding rival teams. After the game supper was served, and the excursionists returned to the city well pleased with the day's entertainment.

—The factory of Robert M. Green & Son, soda water and fountain manufacturers, was damaged by fire on Wednesday to the extent of \$60,000. Fifty men were

thrown out of work, a large amount of valuable marbles and onyx destroyed, and the whole plant was saved from total obliteration only by the prompt and satisfactory work of the fire department. The first alarm was turned in at 2 a. m., and it was two hours before the conflagration was under control. The loss is covered by insurance.

—A suburban entomologist has discovered that formaldehyde is a sure destroyer of the Buffalo bug. This insect is, in this locality, rapidly giving the moth points in destructiveness. It eats any textile fabric, silk, linen or wool, and has defied all known methods of annihilation. Method: Close your apartment or closet, and generate your gas from either methyl alcohol or solution of formaldehyde.

—T. V. Kennedy, of the Smith, Kline & French Company's city force, is doing the continent and British Isles. He sails on the 6th of July for American waters, and will bring with him a sixty-mile-an-hour French auto, with compartment for typewriter and stenographer, a split-second Geneva watch, plenty of health and the resolve to break all records in the drug visiting line.

—James Buckman, Eighth and Green streets, president of the Philadelphia Wholesale Drug Company, will spend his holiday in the far West, Colorado, the Yellowstone, winding up in Alaska, with probably a personal inspection of the Yukon. Mr. Buckman will take his family, and expects that the trip will occupy three months.

—E. G. Brugler, of No. 2002 Tioga street, is now the proud possessor of a Blue Grass Kentuckian and a rubber-tired runabout. The vision frequently materializes on the Philadelphia Speedway, the River Drive, gratuitously distributing dust to all the field.

—After a year's absence in Europe, E. S. Powers, formerly at Fifteenth and Montgomery avenue, has returned to this city, and will shortly equip and open a pharmacy on Twelfth street, opposite the Reading Terminal.

—Since the advent in his home, six weeks ago, of a splendid boy, Charles B. McLaughlin, of Camden, has been the recipient of an undiminished and merited stream of congratulations.

—Druggist R. H. Lackey, Fifth and Lehigh, is booked for a month, with his family, at one of the popular New Jersey coast resorts.

CINCINNATI.

Cincinnati, June 28.

—Louis Roessler, the druggist at No. 1206 Main street, was held up and robbed just as he was preparing to close his store about midnight, June 25. Mr. Roessler had put the sales for the day in a safe in the rear part of the store when three men entered and asked for five cents' worth of sweet spirit of nitre. Mr. Roessler started to fill the order, when one of the men roughly seized him, and, pointing a pistol at his head, commanded him to keep quiet, while the other two opened the cash register and rifled its contents, which amounted to about \$6, mostly in small change. Had the robbery occurred a few minutes earlier the thieves would have secured a larger sum of money.

—M. C. Dew has opened a new drug store at McMillan street and Kemper Lane, Walnut Hills. The store is one of the handsomest in the city, the counters are of white marble, the fixtures pure white, the walls and ceiling are frescoed and the ceiling is studded with incandescent lights. The opening of the store on June 25 was a great success, handsome souvenirs were distributed to the 500 guests invited and flowers were given to all visitors. The crush in front of the store required the efforts of several policemen to keep them in line.

—The Druggists' Bowling Club played a match game of baseball at Covington, Ky., on Friday, June 22, against the Covington druggists and doctors. Although the game was hotly contested, the Cincinnati druggists won the game, making eight runs in the ninth inning, and finishing with the score 18 to 15. The Covington druggists will play a return game on Friday, June 29, at Bond Hill, the regular outing of the Druggists' Bowling Club occurring on that day.

—Dr. George F. Hermann's drug store was sold at public auction June 27. Dr. Hermann has tried for some time to dispose of his store, but there were no buyers, and he concluded to sell in this way.

—Peter Herman has sold his drug store at Cedar Grove to B. F. Black, formerly of Bengal, Ind. Mr. Herman intends to remain in the drug business, and is looking for a good location to open a store.

—It has just leaked out that Lorentz Spitzelberger, the well known clerk at Ford's Pharmacy, was married to a young lady from Chicago on June 5.

—E. H. Keeshan, at Third street and Broadway, has been confined to the house for the past two weeks with inflammatory rheumatism.

—Edward Voss, the druggist at Twelfth and Vine streets, is rejoicing over the arrival of a daughter.

DETROIT.

Parke, Davis & Co.'s Employees Go Abroad.

Detroit, June 28.—Parke, Davis & Co., Detroit, have established in their laboratories a new position, that of chief pharmacist, and to which they have called Prof. Frank G. Ryan, formerly professor of pharmacy in the Philadelphia College of Pharmacy. He will have jurisdiction over all technical questions relating to pharmaceutical subjects. The creation of this new position has grown out of the necessity of sending several of the company's employes abroad, thereby making many changes in the working force. The London laboratory has been calling for more room for some time, and during General Manager Warren's recent trip to England, new property for the plant was secured in Hounslow, a suburb of London, ten miles from the city. An office building, five stories high, was also secured in London.

From time to time during the fifteen years of the existence of the London branch, expert drug makers have been sent over from the Detroit laboratories. Several women are among the number. The recent increase of the plant at Hounslow demands that more be sent. Already Assistant Foreman Wrench, of the pill department, has gone, and he is now at the head of the pill department there. Next week J. E. Doane, assistant superintendent of the Walkerville laboratory, will go to fill an important position. W. F. Whelan, now of the sales department, Detroit, will soon leave to assume charge of the traveling salesmen in England, and the Misses MacIntosh, expert operators with the pill-making machines, will sail soon for the purpose of instructing the London employes in the use of the machines, which have been sent from Detroit, along with a lot of other latest improved drug preparing machinery. Other changes in the force are in anticipation.

NOTES.

—Just to vary the monotony of always winning out a game, the Michigan Drug Company's baseball team allowed the Deltas, of Detroit, to beat them last Saturday, by a score of 3 to 1. Saturday, June 30, the druggists will play the team of the Buhl Malleable Company.

—H. E. Perry and W. M. Anderson, both with the Michigan Drug Company, are about to open a cigar store on the corner of Campau and Monroe avenues. They will not sever their connection with their present firm, but will hire their "side line" run for them.

—Detroit druggists are supplying their quota of June weddings. On June 27, Dr. C. A. Dutton, the Myrtle street pharmacist, and Miss Adelaide Vincent were made one. On the 28th, Druggist A. P. Breitenbach, of Champlain street, was married to Miss Marks.

—A. M. Reed, formerly in business at Campau and Monroe avenues, Detroit, is talking of going to Houghton, Upper Peninsula, to open a drug store there. The field is said to be a good one.

—Druggist George J. Weisinger, of Detroit, has met with a severe loss in the death of his only child, a bright little boy of seven years. Brain fever was the cause of death.

—Frank E. Bogart, house buyer for Farrand, Williams & Clark, has gone East on a three weeks' vacation to his old home.

CHICAGO.

Chicago, June 28, 1900.

—The coming meeting of the Illinois Pharmaceutical Association at Chicago Beach Hotel, Chicago, will be a brilliant success. An ample sum of money with which to entertain the visitors is already assured and druggists are invited to come and bring their families.

—The members of the Chicago Veteran Druggists' Association enjoyed an excursion down the drainage canal on June 28. They took along refreshments and had an elegant time. Hon. T. N. Jamieson was the host.

—Chas. E. Weckler has given up his drug store at Wabash avenue and Twentieth street and has moved the stock to his new store at Thirty-first street and Cottage Grove avenue.

—Ed. F. Mallory, Western representative of Lazell, Dalley & Company, of New York, has gone to Columbus, O., to attend the convention of the United Commercial Travelers.

—George R. Baker took a short trip to Wisconsin this week. Mr. Baker is remodeling his Ashland block store and making it one of the few really fine drug stores in Chicago.

—W. S. Gardner, who formerly owned a drug store at Robey and Lake streets, has gone on the road in Iowa in the interests of Morrisson, Plummer & Company.

—James A. Davidson, the well-known wholesale dealer in druggists' sundries, is taking stock this week preparatory to the summer and fall campaign.

—On June 11 a girl was born to Mr. and Mrs. E. A. Harke. Mr. Harke owns the drug store at Forty-seventh street and Princeton avenue.

—Herman Fry will soon put new fixtures into his store at Halsted and Fulton streets. They are being made by the L. A. Becker Company.

—E. M. Hagerty has succeeded W. F. Corning as city salesman on the Northwest side for Peter Van Schaack & Sons.

—T. F. Wilhelm, the well-known druggist of Winterset, Ia., visited the Chicago jobbing houses this week.

—Robert H. Van Schaack, of Peter Van Schaack & Sons, has gone to Wisconsin to rest and catch fish.

—A. A. Lenocker, of Oakland, Ia., was in Chicago this week.

ST. LOUIS.

Phases of the Boycot.

St. Louis, June 28.—St. Louis druggists, some of them, are rising up in arms against unreasonable boycott demands. It was reported in the dailies that Carey Bros.' Drug Co., Twenty-third and Cass avenue, had refused to fill a prescription for a lady who was boycotted because she rode on a transit car and refused to allow her to use their 'phone. On investigation this proved to be a canard, a member of the firm stating that they filled the prescription and is still selling the family medicine. He says he knows there is a boycott against the person in question, but that under no circumstances would the firm refuse to fill a prescription for any sick person.

Five women are going around in South St. Louis asking druggists not to buy goods of one of the largest wholesale drug houses in the city because one of its officers was seen riding on a transit car. The funny thing about it is that the son of one of these ladies is in the employ of the very house she is trying to boycott.

A Brave Druggist.

St. Louis, June 27.—Many disgraceful instances have occurred during the street railway strike in which saloonists and others have refused to shelter women who were attacked by unruly mobs because they found it necessary to ride on a Transit Company car. In striking contrast to such brutality was the humane conduct of Druggist Florence B. Scholtz, Fourteenth and Angelrodt streets, last night. Miss Mary Murray, of East St. Louis, came over to summon the Murray's family physician, Dr. Phil. Scholz, Druggist Scholtz's brother. She was not familiar with the strike situation and boarded a Benton-Bellefontaine car. She left the car and started to walk to

the drug store, but had hardly reached the sidewalk when a crowd of boys and girls gathered and began yelling "seah." This aroused the neighborhood and men and women turned out all intent on doing physical violence to the unoffending young lady. She ran to the drug store shrieking for help and both Druggist Scholz and his brother recognized her, closed and barred the doors and telegraphed for the police, who speedily came, dispersed the crowd and saw that Miss Murray was safely on board a bridge car for home.

The action of the druggist involved more than is apparent perhaps to a person not in touch with the situation here, as it will undoubtedly involve an attempt to boycott him by the unreasoning strike sympathizers in the neighborhood.

NOTES.

—Three men entered the drug store of Bruno Lehmann and ordered him to throw up his hands. He didn't do it and started to the back of the store, when one of the men fired a shot. Mr. Lehmann's uncle, who was in the rear of the store returned the compliment and there was a perfect fusillade of shots fired, Mr. Lehmann's uncle being shot in the arm. No other casualties occurred and one of the robbers was finally arrested.

—Harley M. Dunlap, of Battle Creek, Mich., has instituted suit against the Willbrandt Surgical Manufacturing Company, of St. Louis, in the United States Circuit Court, alleging that the St. Louis firm has infringed on an improvement in atomizers on which he holds letters patent. He asks that the defendants be restrained from further manufacture and that the profits arising from the sale of the atomizers be paid to him.

—Frank Zimmerman, formerly in charge of the drug store of Fleming & Hoch, Nineteenth and O'Fallon streets, will open a drug store of his own in about two weeks at Twenty-first and O'Fallon streets. Mr. Zimmerman has been succeeded at Fleming & Hoch's by Harry Kauffman, who has been at the firm's main store on Washington avenue, and whose place there is now filled by Mr. Whitney.

—The climax of advertising genius has been reached by a St. Louis manufacturer of an insecticide and who offers to pay \$10 in gold for the "best written bona fide testimonial" of their specialty.

—Ed. Wolf, of the Wolf-Wilson Drug Co., has returned from Manitou Springs, Col., where he went with Mrs. Wolf. On his return Mr. Wilson left on a short vacation.

—E. W. Gallenkamp, druggist of Washington, Mo., was married recently to Miss Ida Berger and the happy couple are now en route to Germany on their wedding trip.

—Dr. N. D. Barradall, now a druggist at Denison, Tex., but formerly a resident of St. Louis, was married at Denison, June 23, to Mrs. Mary Drake.

—Milton Culbertson, city salesman for Moffitt-West Drug Co., will be married June 30 to Miss Kathleen Petty, an accomplished young lady of Liberty, Mo.

—M. H. Smith, druggist of Manchester, Ill., who was recently burned out, has bought a new stock of drugs preparatory to resuming business.

—Allen & Austin, druggists, South McAlester, I. T., will open a branch store shortly.

Medico-Chirurgical College of Philadelphia.

The 1900-1901 session of the Medico-Chirurgical College of Philadelphia School of Pharmacy begins October 1. The course consists of two terms of seven months each, leading to degree of Graduate in Pharmacy (Ph. G.), and a post graduate course leading to degree of Doctor of Pharmacy (Ph. D.). The course is thorough and practical, two-thirds of the time being devoted to work in microscopical, pharmaceutical and chemical laboratories. Students of pharmacy have free access to the medical and surgical clinics, as well as the various branches of medical teaching of the Medico-Chirurgical College.

Ross's Lime Juice.

Ross's Lime Juice is bottled at Leith, Scotland, and is sold by Wm. A. Ross & Bro., who are importing agents.

High Grade Store Fixtures.

It is evident that the M. Winter Lumber Company, Sheboygan Wis., are determined to lead their competitors a merry chase for first place, if they are not already a little ahead of the procession. Their catalogue of modern store fixtures is notable not only for its size, but for the information it contains. They send it to any druggist who is willing to send 25 cents for it, and claim that it will pay to have it, whether anything is needed in their line now or not, as it is filled from beginning to end with valuable ideas, suggestions and prices. Asking 25 cents for a catalogue is another of their original ideas. They claim that a catalogue that is worth paying for will be kept and not thrown away, and that a druggist who really wants to keep up to the times will not hesitate to pay for such a catalogue. If any one finds that it is not worth what they have paid for it, he need only notify them to that effect and their money will be refunded. The catalogue is a 240 page book, 7½x11 inches, and the contents are divided into three parts for easy reference. The M. Winter Lumber Co., have fitted some of the finest stores in the country and are well known for practical ideas, original designs, first-class workmanship and finish. We take pleasure in calling attention to their full page advertisement in this issue.

Peck Cash Registers.

This well known register is now manufactured by A. J. Henry & Co., Camden, N. Y., who have purchased the entire stock and are now offering their latest improved cash and credit device at a great reduction. They want local agents, and are offering special inducements to them. They also manufacture paper for all kinds of cash registers, and want to open up correspondence with druggists all over the country, to whom they will be glad to supply full particulars, prices, etc.

A New Filter.

Rheinstrom Bros., Cincinnati, advertise in this issue the Multiple Perfection Filter made under the Karl Kiefer patent. They claim that this filter is the simplest, most complete and economical in the market for the filtration of extracts, wines, waters, syrups, in fact, all liquids. It is rapid, perfect and durable, and it can be repacked in five minutes. They will be pleased to send a catalogue to any one interested.

Fourfold Liniment.

The Era has had much to say about this well known proprietary preparation. It is not a stranger to most of our readers, particularly throughout the Eastern States, where it is to be found in almost every drug store. It has won the favor of druggists because the manufacturer has steadily refused to sell to aggressive cutters or department stores, and has done what he could to maintain the advertised retail prices.

Merck's Chemicals.

It cannot be denied that the pharmacist who dispenses Merck's chemicals wins the favorable influence of physicians, for the name Merck on the label is a guarantee of purity and reliability. We take pleasure in calling attention to their advertisement in this issue, and particularly to some of the new chemicals which are there set forth.

Phosphate of Soda.

The Thompson Chemical Co., of Boston, have an extremely attractive advertisement of this chemical in this issue. They are the largest producers in the country of Phosphate of Soda, and solicit inquiries from large buyers.

Rubber Goods.

A \$10 lot of special rubber goods for \$1 or \$2 is what the G. Holzhauser Estate, Newport, Ky., advertise on Page 4.

VISIT TO THE MILES MEDICAL CO.

Handsome and Commodious Laboratories.

The visit of the Indiana Pharmaceutical Association to Elkhart as guests of Miles Medical Co. was decidedly the most important feature of the meeting at South Bend. Each member in attendance at the meeting was presented with a card reading "Admit bearer to special Inter-urban car, South Bend to Elkhart and return, and to lunch in Elkhart, Friday, June 15, 1900. Dr. Miles Medical Co." The reverse of the card contained the following:

PROGRAMME.

10.45 A. M., sharp, leave South Bend.
11.20 A. M., arrive at Mishawaka.
11.35 A. M., arrive at Osceola Power House.
12.00 M., arrive at Elkhart.
12.05 P. M., ride through the city.
1.00 P. M., luncheon at Century Club.
2.00 P. M., inspection Dr. Miles Medical Co. laboratories, Main, Franklin and Second streets.
3.00 P. M., return to Mishawaka and South Bend, via Inter-urban Special.

This programme was carried out to the great satisfaction of the guests and hosts alike.

The luncheon at the Century Club was a most delightful affair, the long ride having given the visitors that appetite which is the best of sauces. The club is one of the handsomest buildings in the city, and few clubs even in the largest cities are more tastefully fitted up than is the Century Club, of Elkhart.

The main feature of the visit, however, was, of course, the laboratory, where the Dr. Miles' remedies are prepared, which is one of the most complete in the United States. It occupies nearly one-half block and has light on every side. It is built of beautiful pressed brick with ornamental front and has large windows and art glass transoms on the first floor.

The members of the association entered the main entrance in the northeast corner and passed over the mosaic floor in the vestibule, up six stairs into the main office, covering 6,000 square feet of floor space, in which are located twenty-six clerks, with desks, typewriters, map cabinets, card indexes and all the necessary paraphernalia for conducting a large business and keeping track of a large corps of traveling salesmen. In connection with this office are large fire proof vaults and a private office.

Shipping Room.

Passing out of the office into the shipping room the guests observed large piles of medicine ready for shipment to all parts of the world. This shipping room contains nearly 4,000 square feet of floor space and is divided into two parts, one of which is entirely fire proof. Here is kept the main portion of manufactured stock ready for shipment to various warehouses, jobbers and retailers throughout the country. Here is found a time clock of the latest pattern for keeping account of the 150 employees. The large shipping doors, which are on a level with the bed of the trucks, attracted special attention. From this shipping room there is an average of one carload of goods in and out each working day throughout the year.

Press Room.

The press room has a cement floor, on which the presses get the most solid kind of a foundation. Here are four large Miehle two-revolution cylinder presses, which have an average speed of about 120,000 finished eight-page papers every day of ten hours, 720,000 per week or 37,440,000 copies per year. These are cut, folded, pasted and stitched on the six folding machines, two cutting machines and two wire stitchers.

Passing down into the engine room, which is really on the first floor or occupies a half basement and is located in the court between the two wings of the building, the party entered a room containing two 75 horse-power boilers, large Corliss engine, 125 horse-power capacity; dynamo for lighting and transmission of power; deep well pump which supplies pure water for the entire plant and also for the large tank in the tower on the top of the building. Adjoining this is a complete machine shop, carpenter shop, saws for making boxes, bottle washing apparatus, knife grinding machine, etc.

Passing out of the engine room into the main portion of the building and bottle storage rooms, which have a capacity of twenty-five carloads of bottles, the party noted the large coal bins, where the company can store eight carloads of coal at one time.

Compounding Department.

Taking the elevator up to the fourth floor, the visitors reached the compounding department. This department is furnished with power from a motor which gets electricity from the dynamo in the power room. The tablet making machinery here is taxed to its utmost at present and is to be enlarged. It now has a capacity of 200,000 dozen Pain Pills per annum. The compounding room proper on the left is of the very latest pattern; all of the machinery is of the newest and best possible type that money can buy. The medicine is made in large steam jacket kettles and dropped into the tanks on the floor below, where it is stored and filled.

A number of the visitors now went up the middle stairway and out on the roof, and a few of the more athletic climbed the thirty-five foot ladder to the top of the tower, which gave a view of the city of Elkhart that is unsurpassed, it being the highest accessible point in the city. The roof of the tower is 115 feet from the pavement.

Passing on down through the compounding room to the third floor, the guests came to the tank room, which contains four 1,500 gallon tanks for the storage of medicine. This wing of the building was made entirely fireproof, with cement floors, which are five inches thick. There is no wood in this portion of the building, except the window casings and doors.

Mailing Room.

In the mailing room, on this floor, are employed about eight months of the year twelve young ladies to mail an average of about 10,000 circulars a day. A statistical visitor figured out that this is an aggregate of about \$20,000 to \$25,000 for one cent postage each year, and concluded that it was no wonder that he had some demand for Dr. Miles' remedies.

LABORATORIES OF THE MILES MEDICAL CO., ELKHART, IND.

Box Department.

In the wing on the third floor over the press room is located the paper box and tubing department. The visitors noted some special machinery in this department for making tubes for Dr. Miles' Pain Pills, and also observed a number of young ladies mounting the pictures for the window displays. The scoring machines for making pasteboard cartons are also here.

Job Press Department.

The second floor contains the composing and job press department, where there are at present four job and color presses, and the guests were informed that the company had just ordered an automatic press for this department which will have a capacity equal to all of the presses installed on this floor. The firm set up all of their own matter and have a stereotyping department, where they make all the plates for newspaper advertising. This department has used up 300,000 pounds of metal in the last six months for newspaper plates and bases.

Advertising Office.

The newspaper advertising office, which is located directly over the main office, was then visited. Here are checked all the advertisements in the newspapers. The house has advertisements running in 12,000 daily and weekly papers, covering the United States from Hawaii to Maine and from Florida to Oregon. This department is a little world of its own, and is one of the most important features of the institution. It is not as showy as some of the other departments, but it is a very expensive luxury.

The visitors were finally conducted down stairs, back into the main office and left most favorably impressed with the institution of the Miles Medical Co.

MONTREAL.

—The annual meeting of the Pharmaceutical Association was held in June at Laval University, Quebec, and it was one of the most poorly attended meetings for years past, due to the scarcity of Montreal delegates and the disinterestedness of the Quebec graduates. Alex. Robert, retiring president of the association, occupied the chair, and after the usual routine business was concluded, the election of members of the council followed. Out of thirteen aspirants, the following were elected for two years: J. Contant, S. Lachance, Alex. B. J. Moore, L. McNichols, J. A. Picotte and J. C. Sutherland; these with R. W. Williams, C. J. Covernton, J. E. Tremble, A. J. Laurence, Henry Willis and J. E. Dube, will compose the council for the ensuing year. The president, on behalf of the association, presented Alex. Larue with a bronze statue of Mercury, for the very valuable assistance he rendered the association during the recent presentation of different cases before the Legislature, and also as a slight token of esteem on the occasion of his marriage. The annual banquet of the association was held the same evening at the Chateau Frontenac. Alex. Robert, whose speech was one of the items of the evening, presided. Among the guests were Hon. L. P. Pelletier, who responded to the toast "Canada," and Alex. Larue, who replied to "Our Guests." Pharmacy, Medicine, the Ladies, the Press and Sister Associations were duly proposed and responded to. Alex. Moore's voice was heard to advantage in "Drinking," after which Dr. Stewart kept the audience in roars of merriment with his rendition of "The Waterfall." The following were the Montreal delegates present: Alex. Robert, S. Lachance, E. Muir and J. E. Tremble. The wholesale trade were represented as follows: Lyman Knox & Co., J. Knox; Evans & Sons, Limited, Messrs. Moore & Kane; Lyman Sons & Co., Messrs. Gebhart & Brimms; Kerry, Watson & Co., W. Macdonald; The E. B. Shuttleworth Co., Fred Wooley. The success of the entertainment was in a great measure due to the efforts of Harry Willis, Quebec.

—The delegation from Ontario, composed of W. A. Karn, of Woodstock, president of the Ontario College of Pharmacy, and Henry Waters, of Ottawa, chairman of the Educational Committee, did not succeed in having the question of reciprocity in diplomas between the two colleges settled while in town. A committee from our Pharmaceutical Association was appointed to meet them and discuss the subject. It was decided that the time was not ripe for interchange, and it would not be in the interest of the Pharmaceutical Association of the Province of Quebec to accept at present any outside diploma, the feeling here being that Ontario would have everything to gain and nothing to lose. The visitors spent a very enjoyable time, and left for home with best of feelings toward their Quebec brethren for the manner in which they were received.

—James Cooper, Jr., bookkeeper for Evans & Sons, has resigned his position after fifteen years' service with the firm. On the eve of his departure his fellow employees presented him with a splendid case of cutlery and a Morris chair. The presentation was made by A. B. Evans, the managing director.

—D. S. Baxter, M. C. P., '98, formerly with H. R. Gray and now head clerk for H. Willis, of Quebec, has joined the band of benedicts. With his bride he paid a visit to Montreal on a wedding tour, and received the congratulations of a great many of his former fellow students.

—The Ontario license department is on the lookout for druggists who, it is reported, have made a practice of dispensing liquor at the soda fountain. It will be a sorry day for any culprit who is foolish enough to do so, as he will in all probability leave himself open to a heavy penalty.

—Evans & Sons, Limited, have just added a complete photographic department to their regular business. Retail druggists are taking quite an interest in photographic goods, and several in the city have a complete assortment, which they find a very paying side line.

—The annual meeting of the Retail Druggists' Association, held in Quebec, was anything but a success. The

Quebec druggists show little or no sympathy or interest in the society. Only one Quebec man was present, the remaining five being Montrealeers.

—L. R. Barillon has disposed of his pharmacy, at St. Denis and St. Catherine streets, to T. E. Gagner, M. C. P., '99. He will continue the proprietorship of "Baume Brumal" and "Life Pills."

—J. E. Morrison has been unanimously appointed to the chair of materia medica and pharmacy at the Montreal College of Pharmacy, to succeed the late Dr. T. D. Reed.

—C. E. Scarff met with a severe accident quite recently. While boarding a street car he slipped and sustained a fracture of the arm.

—W. H. Reynolds, Wellington Medical Hall, has moved out to his summer residence at Lake St. Louis.

—R. Carscallen, West Hastings, has been visiting friends in this city for the past few days.

—L. Bernard has returned from a fortnight's holiday, spent in New York City.

PENNSYLVANIA PHARMACEUTICAL ASSOCIATION.

Philadelphia, June 30.—The 1900 meeting, or convention, of the Pennsylvania Pharmaceutical Association was in every particular a great success. It was held at Ebensburg, Cambria County, in the heart, or better still, the lungs of the Alleghenys, on the Pennsylvania Railroad, above Cresson and west of Altoona. Philadelphia was well represented by about thirty retailers, wholesalers, scientists and their wives. The annual election on Wednesday resulted as follows: President, S. K. Hammond, West Chester; vice-presidents, Prof. C. B. Lowe, Philadelphia; C. J. Griffiths, Johnstown, Pa.; Executive Committee, Sigmund Heinisch, Lancaster; Cyrus Jacoby, South Bethlehem; George A. Gorgas, Harrisburg; local secretary, D. J. Thomas, Scranton. The following papers were read: "Manufacture of Zinc Ointment," by J. S. Patton, of York; "White Wax," by H. B. Maisch, of Philadelphia; "A New Powder Folder," by R. M. Wills, Washington; "What is the Best Course to Pursue to Suppress the Sale of Proprietary Medicines on Which there is No Profit," by J. S. Patton; "Anti-Nostrum Prescriptions," by L. Emanuel, of Pittsburg; "Shall the Pharmaceutical Press be Throttled?" by C. J. Thomas; "Book-keeping by Druggists," by D. H. Level, of Philadelphia. Some of the leaders of Philadelphia pharmaceutical thought were greatly enthused over Prof. Remington's address on "The Commercial Training of the Pharmacist," Prof. Moerck's simple method of "Estimating the Volume of Gas in Sweet Spirit of Nitre and Peroxide of Hydrogen" and Prof. C. B. Lowe's timely sketch of affairs in South Africa.

The sports had their inning on Wednesday afternoon, the usual baseball, wheelbarrow and foot races under the practiced handling of the Entertainment Committee, the "Three B's"—Barrows, Busch and Bransone—being more than successful if not instructive. Altogether it was a large and educational meeting. The papers were up-to-date and were followed with evident interest. An important result of the convention was the acceptance of the president's plan to appoint representatives of the association as county chairmen for the purpose of keeping the officers in touch with the association in matters affecting the welfare of its members. The president's address was very able and full of good suggestions and was referred to a committee consisting of Messrs. McIntyre, Stiles, Roland, Patton and Cliffe.

This committee recommended that a bronze medal be awarded annually for original papers presented on new formulas, new processes and new or improved pharmaceutical instruments or appliances. It also called attention to the fact that the association by resolution is committed to the principle of graduation from a recognized college of pharmacy as a necessary preliminary to registration in the practice of pharmacy in the Commonwealth and recommended that the initiation fee and annual dues be not changed, but continued as at present. A supplementary report by the same committee on the communication from the National Association of Retail Druggists stated there were 160 members liable to the per capita tax of fifty cents. Next year the association will hold its annual meeting at Onconta Hotel, Harvey's Lake, above Wilkesbarre.

PATENTS

Trade-Marks, Designs, Etc.

PATENTS.

Issued June 12, 1900.

- 651,346.—August Dziuk, Hannover, Germany. Making cyanids.
 651,396.—Ernest A. G. Street, Paris, France. Production of chromium oxid.
 651,420.—John G. Haglock, Sterling, Ill. Automatic mucilage bottle.
 651,432.—Albert Baumgarten, Freeport, Ill. Lemon squeezer.
 651,453.—Daniel Vorlander, Halle-on-the-Saale; H. S. A. Holt, Ludwigshafen, and H. Weissbrenner, Halle-on-the-Saale, assignors to Badische Anilin and Soda Fabrik, Ludwigshafen, Germany. Making idoxyl bodies.
 651,497.—Walter F. Ware, Camden, N. J. Nipple holder.
 651,536.—Herman Stern, Cleveland, O. Detergent.
 651,538.—Wilhelm J. Teufel, Stuttgart, Germany. Abdominal bandage.
 651,569.—Henry Howard, Brookline, Mass.—Commercial production of pure carbonic dioxide.
 651,647.—Isabella M. Bird, Stanton, N. J. Nursing bottle holder.
 651,717.—Jacques L. Kessler, Clermont-Ferrand, France. Apparatus for concentrating sulfuric acid.
 651,747.—John Cederstrom, assignor to United States Aerating Fountain Company, Buffalo, N. Y. Siphon filling device.
 651,777.—Fred. H. Brown, Chicago, Ill. Electrotherapeutic apparatus.
 651,798.—John H. Elspass, Pueblo, assignor of one-half to R. Hughes, Denver, Col. Pulverizing mill.

Issued June 19, 1900.

- 651,942.—James Wheeler, Ilfracombe, England. Obtaining pyrobutulin.
 651,951.—Franz Niemann, Basle, Switzerland. Preparing remedial serum.
 652,119.—Rudolph Knietsch, assignor to Badische Anilin and Soda Fabrik, Ludwigshafen, Germany. Making sulphuric anhydrid.

Issued June 26, 1900.

- 652,253.—Thomas B. and F. A. Duncan, Newberg, Ore. Thermostat.
 652,286.—John F. Myers, Sodus, N. Y. Clinical thermometer.
 652,309.—Henry Blumenberg, Jr., New York, N. Y. Battery compound.
 652,345.—Francis C. Cartier, Paris, France. Disinfectant.
 652,450.—Israel Balagur, Atlanta, Ga. Non-refillable bottle.
 652,456.—Melchior Boniger and J. Lagutt, assignors to Chemische Fabrik, vormals Sandoz, Basle, Switzerland. Blue triazo dye and making same.
 652,471.—Andrew J. Chase, Boston, Mass. Storage and shipping device for liquid air.
 652,519.—Thomas A. O'Callaghan, Worcester, Mass. Artificial sponge.
 652,545.—Josephine A. Mitchell and W. C. Rand, Lewiston, Me.; said Rand assignor to said Mitchell. Tellurian.
 652,662.—Edmund C. Burr, San Francisco, and J. W. Atkinson, Santa Maria, assignors of one-third to J. C. H. Stut, Oakland, Cal. Discharging mechanism for measuring tanks for carbonators.
 652,663.—Edmund C. Burr, San Francisco, assignor of two-thirds to J. C. H. Stut, Oakland, and J. W. Atkinson, Santa Maria, Cal. Sulfuration tank.
 652,683.—Thomas A. O'Callaghan, Worcester, Mass. Apparatus for making artificial sponges.
 652,686.—George Perry, New Orleans, La. Weed-killing composition.
 652,687.—Nathaniel P. Pratt, Atlanta, Ga. Apparatus for making sulphuric acid.
 652,688.—Nathaniel P. Pratt, Atlanta, Ga. Apparatus for making sulphuric acid.
 652,689.—Nathaniel P. Pratt, Atlanta, Ga. Apparatus for making sulphuric acid.
 652,690.—Nathaniel P. Pratt, Atlanta, Ga. Apparatus for making sulphuric acid.

TRADE MARKS.

Registered June 12, 1900.

- 34,767.—Medicated Necklaces. Herman Heymanson, Chicago, Ill. The word "Magic" and the representation of a baby's head with a necklace around the throat.
 34,768.—Liniment. Clark Stanley, Providence, R. I. A portrait representation of the registrant surrounded by four twisted snakes.
 34,769.—Herb Tablets. George Washington Slaughter, Montreal, Canada. The word "Rival" and the representation of a letter "S" within a diamond.
 34,770.—Headache Tablets. Henry C. Zeamer, Lancaster, Pa. The word "Campaign."
 34,771.—Medicinal Compounds for certain named diseases. Ernst Gustav Michel, Marble Falls, Texas. The word "Casnet."
 34,772.—Certain named medicinal antiseptic preparations. John Wyeth & Brother, incorporated, Philadelphia, Pa. The word "Thyptol."

- 34,778.—Artificial sweetener. Merck & Co., New York, N. Y. The word "Garantose."
 34,788.—Chemical solutions for certain named purposes. Creamery Package Manufacturing Company, Chicago, Ill. The word "Viscogen."

Registered June 19, 1900.

- 34,796.—Braces, trusses and bandages. The Natural Body Brace Company, Salina, Kan. The word "Natural."

Registered June 26, 1900.

- 34,817.—Hair dressing. Salamon Hudes, New York, N. Y. The word "Extoller."
 34,818.—Eye water. Howard Bros., Buffalo, N. Y. A portrait of Dr. Petit, beneath which is an eagle with spread wings surmounting the representation of an eye, and three interlocking links.
 34,819.—Eye salves, eye water and pile remedies. Howard Bros., Buffalo, N. Y. A portrait of Dr. Petit.
 34,820.—Liver Pills. John G. McLain & Son, Wheeling, W. Va. A facsimile signature of A. S. Todd.
 34,821.—Preparation for treating skin diseases. Eczemol Chemical Co., Minneapolis, Minn. The representation of a panel of approximately elliptical form having a screw head at each end.
 34,822.—Remedy for cancer. Johnson & Jones, Fredericksburg, Tex. The representation of a hand with a spot thereon.
 34,823.—Remedy for epilepsy. Johnson & Jones, Fredericksburg, Tex. The representation of a woman standing with uplifted arms in front of a bush or shrub.
 34,824.—Medicated bougies. Thompson & Pape, Cincinnati, Ohio. The representation of a pencil or crayon and the letters "P. D. Q."
 34,825.—Medical preparation for certain named diseases. Myros Chemical Company of Baltimore City, Baltimore, Md. The word "Imunas."
 34,826.—Certain named surgical devices and furniture. Actien-Gesellschaft fur Feinmechanik, vormals Jetter & Scherer, Tuttlingen, Germany, and New York, N. Y. The word "Aesculap."
 34,827.—Substitute for leather and india rubber and a cement. The Kingscote Company, Limited, London, England. The word "Wolft."

LABELS.

 7,633.—Title: "Rhubarb Syrup." (For rhubarb syrup.) California Rhubarb Remedies Co., San Leandro, Cal. Application filed May 15, 1900.
 7,634.—Title: "Rhubarb Compound." (For rhubarb compound.) California Rhubarb Remedies Co., San Leandro, Cal. Application filed May 15, 1900.
 7,635.—Title: "Ben-Travata." (For a medicine.) Ben Travata Chemical Company, Parkersburg, W. Va. Application filed May 19, 1900.
 7,636.—Title: "Digesta." (For a medicine.) Stratford F. Corbett, New York, N. Y. Application filed May 14, 1900.
 7,637.—Title: "Thoro." (For a medicine.) Thoro Medicine Company, Minneapolis, Minn. Application filed May 21, 1900.
 7,638.—Title: "Stomach-Oids." (For a medicine.) J. H. Sencindiver, Baltimore, Md. Application filed May 22, 1900.
 7,639.—Title: "Soap's Pile Cure." (For a medicine.) Home Remedy Co., Houston, Tex. Application filed May 21, 1900.
 7,640.—Title: "The Old Homestead Liniment." (For a liniment.) J. W. Burnley & Co., New York, N. Y. Application filed May 19, 1900.
 7,656.—Title: "Dr. Pepper's Phos-Ferrates." (For a beverage.) Artesian Manufacturing and Bottling Company, Waco, Tex. Application filed May 22, 1900.
 7,657.—Title: "Aqua Lithia." (For a beverage.) Artesian Manufacturing and Bottling Company, Waco, Tex. Application filed May 22, 1900.
 7,658.—Title: "Kopp's Dead Shot." (For an insecticide.) Joseph D. Kopp, Shamokin, Pa. Application filed April 17, 1900.
 7,659.—Title: "Hann's Sure Cure for Hog and Poultry Cholera." (For a medicine.) Mortimer Hann, Harrison, Ohio. Application filed May 24, 1900.
 7,660.—Title: "Vitone." (For a medicine.) Edward S. Burnham, Charleston, S. C. Application filed May 14, 1900.
 7,661.—Title: "Old Wyandotte's Remedy." (For a medicine.) C. Conwell Sykes, Chicago, Ill. Application filed October 28, 1899.
 7,666.—Title: "Sweet Marie." (For chewing gum.) The Chas. W. Huff Company, Pittsburg, Pa. Application filed March 2, 1900.
 7,667.—Title: "Shasta Water." (For mineral water.) Mt. Shasta Mineral Springs Company, San Francisco, Cal. Application filed May 28, 1900.

STATE OF TRADE.

Satisfied with Existing Conditions.

New York, July 3.—Quiet conditions have prevailed in the departments of the wholesale market and the volume of general business was further curtailed by the coming of the legal holiday, but there has been no abatement of steadiness and holders show no anxiety concerning the future. On the contrary, they are apparently satisfied with existing conditions and are confident that the coming season will bring an improved demand and a general revival of activity. Opium has shown no improvement and the market for this leading commodity remained exceedingly dull with the tone weak, owing to low demand and corresponding inactivity at primary sources of supply. Smyrna advices are to the effect that the crop has begun to arrive and is offered at a concession from the quotations for old, but very little interest has yet been manifested by buyers.

The quinine situation has not changed materially. Manufacturers continue to quote on the old basis, while the holders have in some instances modified their quotations slightly and have made sales of several round lots in concession from previous quotations. Pill manufacturers were the principal purchasers and the Java variety received the larger share of attention, mainly on account of its relatively lower cost. There was an auction sale in Batavia on Thursday last, when about 100,000 lbs. were sold and the average price is said to have been lower than that of the previous sale, but some holders think that their advices are to the effect that there was no important variation in values. The shipments of bark from Java continue light, and it is expected that the sale in Amsterdam will be comparatively small.

Among the essential oils, anise and cassia are firmer, the influence of improved conditions in foreign markets and the uncertainty which prevails regarding the situation in China, which is the primary source of supply, have moved more freely and holders have advanced quotations fully 10 cents per pound on both varieties. Pennyroyal also shows increased firmness, the demand for consumption having been fairly active as usual this season of the year. Cubebs is tending upward in sympathy with an advancing tendency in the berries. Clove oil is very scarce and leading manufacturers have advanced quotations fully 50 cents per pound. Beechwood oil is firmer and 10 cents per pound higher from first hands. Cassia buds are in better supply, and with the increasing demand light and unimportant the tone of the market is easy, and importers have reduced quotations 1 cent per pound. Cuttlefish bone shows a steadily improving tendency owing to continued unfavorable reports regarding the new catch, late advices from foreign markets being to the effect that the yield will be about one half of last year's.

Among the roots continued weakness is shown in golden root and senega, quotations for both having further declined under the influence of free offers of new from primary markets. Jalap is firmer and some holders have advanced quotations 1 1/2 cts. per pound, but others are unwilling to sell to a limited extent at old prices. Bay ash berries are very scarce and values are higher. Guaiacum has been in better demand and the depleted stock is firmly held at advanced prices. Beeswax is firmer and light spot stocks and reported scarcity in product districts.

Not Much Illness, but Business Pretty Good.

Boston, June 30.—This week brings to a close a month of pretty good trade. The weather for the most part has been favorable to trade, and many warm days have helped largely the sales at soda fountains. For the last few days business at several prominent stores has been reported to have been good, though there has been much illness in the community. There is found no special feature in the market to distinguish this from previous ones just passed. The general line of chemicals and drugs shows no notable change in price of trading or prices. Dyestuffs may be summed up in like manner. Cologne spirits and alcohols are in good demand, without material change in quotations. Waxes are only fairly sought.

Business no Worse than Usual, and no Cause for Complaint.

Philadelphia, June 30.—Business is no worse than usual at this time of the year. The retail pharmacist is not crowded and has money enough to take trips to the country and to attend conventions, so that from outside sources there is no cause for complaint. There is no change in any of the important staples, imported to, or manufactured in this market. Ginseng, if it can be had at a staple, is lower on account of the troubles in the Orient. The heavy chemical people are up to their ears in work, and have been for some time past, and are just advised among them to entertain the most hopeful view of the future. We are to be on deck in the East, whether the way the cat intends to jump, or, for that matter, the Lion or the Bear. The South Jersey concerns have passed a most satisfactory season. The furnaces have maintained fires since the opening of the season. Prices have been higher and orders thicker, and

ABBEY'S EFFERVESCENT SALT

is as staple in a drug store as quinine. Its rapid rise in popular

and professional favor has been phenomenal, and is due solely to its merit and the methods used to market it.

Progressive druggists everywhere should take advantage of our increased

advertising campaign for 1900, and push sales.

THE

Abbey Effervescent Salt Co.,

9-15 Murray Street, NEW YORK, N. Y.

Sold in three sizes retailing at 25c., 50c. and \$1.00 per bottle.

Trade List on Application.

the outlook for the next heat is still more encouraging. Wages are up, and there is a great demand for labor in this industry.

Improvement in Baltimore.

Baltimore, June 30.—A decided improvement was noted in the local jobbing drug trade this week, while the out-of-town business left much to be desired. Intensely hot weather prevailed nearly all the week, and there was a run on soda water and other thirst-quenchers as a consequence, to the benefit and profit of the retailers, who found it difficult at times to cope with the rush of customers. The manufacturers of pharmaceuticals are still kept fairly busy, the demand for the various lines of goods being entirely satisfactory. With the exception of the sharp competition, all the conditions appear favorable for a profitable business, and the feeling which prevails among manufacturers as well as dealers is one of confidence. The movement of heavy chemicals appears to be of liberal proportions.

Fountain Supplies Selling with a Rush.

Chicago, June 28.—Business has been very good thus far this week. The advent of warm weather after so long a season of unusually cool weather has stimulated some lines of trade into marked activity. Fountain supplies are now selling with a rush. The demand for staple goods and sundries is normal. Collections are good, and orders, both city and country, are fairly brisk. Manufacturers are not so busy as they might be, owing to the fact that this is the vacation and convention season, when all are resting up and preparing for their fall campaigns.

Fountain Supplies Booming; Money Reported Easy.

Detroit, June 28.—Soda water supplies have boomed this week, thanks to the great heat. Otherwise the wholesalers and retailers are not doing a rushing business. Manufacturing chemists claim that the amount of trade they have this year is exceptional, especially during a Presidential year. All the laboratories of the city are running with full force, although these are supposed to be the very dulllest thirty days of the year. "Men are not talking politics quite so much as usual so far this year," said one of the manufacturers to-day, "and so our travelers are able to do more business with them." Everywhere money is reported easy.

Retail Trade Quiet; Collections Poor; Jobbers Doing Quite Well.

St. Paul and Minneapolis, Minn., June 28.—The soda water trade has been about the only cheerful feature of the retail business this week. The weather has been very sultry right along, endowing man, woman and child with a thirst implacable. Collections remain poor—more so, in fact, than at any time the past year. The jobbers declare that their work is not showing the falling off which they have been expecting, and which invariably comes at this season. The largest wholesale house here had received and filled 6,700 orders from June 1 to June 26, which is certainly doing quite well. No price changes have occurred, that is, on strictly Western products, and this is strange in view of the prospective semi-failure of the flax crop. In consequence of this, linseed oil, flaxseed and ground oil cake are morally certain to increase in price considerably, in due time.

Country Trade Quiet; City Trade Shows Some Improvement.

St. Louis, June 27.—Country trade is quiet, the farmers being all busy with the harvest. City trade is beginning at last to show some improvement. The weather this week has been ideally hot and has boomed soda water sales.

Stearns' Headache Cure.

Every druggist to whom fourteen cents is worth more than five should remember that Stearns' Headache Cure is the one which pays to sell. Stearns' sells easier than the others because people know it is best, and it pays you a better profit because the Stearns people are willing to divide up and make good profits possible for their customers.

KILMER & CO'S. LABORATORY BURNED.

Binghamton, N. Y., July 1.—The laboratory of Dr. Kilmer & Co., manufacturers of proprietary remedies, was destroyed by fire at 1 o'clock this morning. The fire was discovered in an alleyway adjoining the main building and before the fire company located across the street could get to work the flames had spread to the interior. The buildings covered half a block and were constructed of wood and brick. So fierce was the fire that in half an hour they were reduced to ashes. Only a portion of the front wall is standing. An adjacent house, with its contents, was destroyed, and two adjoining barns were burned. The loss is estimated at \$500,000. The fire was of incendiary origin and detectives are investigating. Mr. Kilmer says that the laboratory will be running in ten days.

MARKET REPORT.

NEW YORK MARKET.

New York, July 3.—A continued fair business is in progress, but the movement is wholly routine in character and the limited number of fluctuations reported are mainly the result of advances or declines in cost prices, the market being without new feature of more than ordinary interest.

OPIUM.—There are no developments of consequence in this leading article and the market remains quiet with jobbing quotations nominally steady at \$3.35@3.50 for 9 per cent. and \$3.45 @3.60 for 11 per cent., the higher figures for single pounds.

POWDERED OPIUM.—The current demand is light and unimportant, but jobbers continue to quote the old range of \$4.45@4.65 for 13 per cent. and \$5.15@5.35 for 16 per cent. according to size of order.

MORPHINE.—Transactions are mainly in small lots, but in the aggregate the volume is of satisfactory proportions and values are well sustained at \$1.95@2.05 in ounces and \$2.20@2.30 in eighths, as to brand.

QUININE.—Jobbers report a tame market, but the undertone continues firm and quotations are steadily maintained at 31@32c. for bulk in 100-oz. tins, 33@34c. in 50-oz. tins and 38@39c. in ounce vials according to brand.

VALERIAN ROOT.—Jobbers have revised their quotations for the Belgian variety and the new figures show a decline to 25@30c., as to quantity.

OIL ANISE.—Values continue to harden under the influences noted last week and quotations for jobbing quantities have been further advanced to \$1.90@2.10. Foreign markets show increasing strength and still higher prices are looked for.

OIL CASSIA.—Under the same stimulating influences which affect anise, holders have advanced quotations to \$1.20@1.35, as to quantity, and the tone of the market is strong.

OIL PENNYROYAL.—Dealers report a seasonably active demand for consumption and the market is firmer with jobbing quotations advanced to \$1.70@1.80.

THYMOL.—Manufacturers' prices are higher owing to scarcity and jobbing quotations have been marked up to \$3.50@3.75.

GUARANA.—The available stock is very much depleted and a firmer feeling has developed with quotations showing an advance to 60@65c. for whole and 65@70c. for powdered.

GOLDEN SEAL ROOT.—The market continues easy in sympathy with primary sources and jobbers have further reduced quotations to 65@75c. for whole, 70@80c. for ground and 75@85c. for powdered.

JALAP.—Values are without quotable change but the tone of the market is firmer and jobbers are inclined to offer sparingly at 20@30c. for whole and 25@35c. for powdered.

CUTTLEFISH BONE.—Reports from producing points are to the effect that the yield this year will be very small, and in consequence the market is stronger and jobbers have advanced quotations for Trieste to 35@38c.

BEECHWOOD CREOSOTE.—Manufacturers' prices are stronger and jobbers have advanced their quotations to \$1.10@1.20.

SALICINE.—Values are somewhat unsettled and the tone of the market is easier with jobbing quotations reduced to \$4.75@5.00, as to quantity.

LYCOPodium.—Supplies are steadily diminishing under a fair consuming demand and the tone of the market is stronger with jobbing prices showing an advance to 70@75c.

BEESWAX.—Scarcity in primary markets has stimulated a firmer feeling among holders, and jobbers have advanced their quotations to 35@40c. for country and 38@43c. for city.

SALOL.—Manufacturers have reduced prices and jobbers have revised their quotations as follows: 1-lb. bottles, per lb., \$3; ½-lbs., per lb., \$3.05; ¼-lbs., per lb., \$3.15; oz., 27c.

Duroy & Haines' Crushed Fruits and Fruit Syrups.

Duroy & Haines Co., Sandusky, Ohio, have secured the services of the best known syrup maker in the United States, and are now in a position to supply the entire trade with superior concentrated fruit syrups and to take care of all orders that may come to them.

NOTE THESE CHANGES.

The Era Course in Pharmacy.

Students may begin any time and complete the work in One Year.

The division into junior and senior years has been discarded and hereafter the lectures will be issued in monthly instalments, the curriculum being so arranged that students may begin at any time and complete the course in twelve months thereafter.

The price of the full course is Ten Dollars, which also includes one full year's subscription to the Pharmaceutical Era.

The first instalment of lectures will be issued in October and the remainder at intervals of thirty days thereafter.

The Era Course in Pharmacy is just what it claims to be—a course for home study in pharmacy—and its success along this line has been phenomenal. It is particularly designed for drug clerks and for those who wish to prepare themselves to pass the examinations of a board of pharmacy.

Watch the columns of the Pharmaceutical Era for announcements and write to the publishers for new descriptive prospectus, soon to be ready. Address

THE PHARMACEUTICAL ERA.

THE EXPECTED HAPPENS.

Ever since the constitution of the new Committee of Revision of the U. S. P. was decided upon, we have been expecting some one to comment upon the fact that the medical profession is very slightly represented in this committee. We expected, also, that such comment would come from the medical profession itself, especially from its journals, and in none of these expectations have we been disappointed. In a recent number of an Ohio medical journal appears this paragraph:

"It is rumored that a decennial convention for the revision of the United States Pharmacopoeia was held in Washington in May. Judging from the lack of interest in the affair upon the part of those having in charge the arrangements for the meeting it might be supposed that the convention had been indefinitely postponed, or that it was desired to keep the attendance as small as possible. No invitations to medical societies to send delegates were issued this year as is customary, and pharmaceutical societies had to forage for themselves to find what they were expected to do. All in all the affair was very curiously managed. Possibly the reason for this may become more apparent as time passes. Certainly the convention should not be ashamed of itself before its work is begun, nor does there appear any obvious reason for secrecy in the arrangements for so important a matter to the practitioners of medicine and pharmacy as is the revision of Pharmacopoeia."

This is so obviously ill-natured, and makes some statements which are so palpably untrue, that it can hardly be allowed to go without rejoinder. Invitations were sent to all medical societies, which were authorized to send delegates, and the rest of the paragraph in question is equally unjust and unreliable in its claims. If there were not many doctors at the convention, whose fault was it? Certainly their own. If there are not many doctors on the Committee of Revision, whose fault is that? Same answer. As a matter of fact, it is not necessary that there be many physicians on the committee, inasmuch as nine-tenths, or perhaps more, of the work in preparing the Pharmacopoeia and making it reliable is purely of a pharmaceutical, chemical and botanical nature. The medical profession as a whole is not competent to prepare, without the assistance of pharmacists, a Pharmacopoeia which would be at all trustworthy or of any service whatever. The object of the Pharmacopoeia is to establish uniformity of quality of remedial agents, and the pharmacist is the man who can determine this to best advantage. The person who wrote the paragraph above quoted is very poorly posted on current medical and pharmaceutical literature. The journals were full of the U. S. P. convention; giving its proceedings in great detail, mentioning the names of all delegates, printing the speeches, and especially publishing broadcast all matters pertaining to and governing the next revision. There was no secrecy in any particular, and the only reason we can

see for the appearance of such a paragraph is that its writer knew nothing at all of the object he undertook to talk about.

BUSINESS TRAINING IN THE COLLEGE.

Several colleges of pharmacy are aroused to the desirability of including in their curriculum of study a course of business training. A description by Prof. Ryan at the last meeting of the American Pharmaceutical Association of such a course as given by the Philadelphia College was not only listened to very attentively and appreciatively, but through publication of his remarks, has set many others to thinking. At least one college has since instituted such a course of training, and others are considering it with a prospect of early doing likewise. The School of Pharmacy of the Northwestern University, in Chicago, is the first one to carry into effect Prof. Ryan's suggestion, and will hereafter give a special course of business training suited to the requirements of druggists. It will follow in the spring, immediately after the completion of the junior year's work, but will constitute a part of the regular work, and be taken into account as a portion of the requirement for obtaining the diploma. In this course the students will be taught the nature and use of invoices, bills, statements, orders, receipts, the banking business of druggists, bills receivable and payable, drafts, notes, checks; they will learn the meaning and use of price lists and trade discounts, credit, collections, remittances, consignments, taking stock, partnership, insurance, interest, taxes, contracts, leases, deeds, bills of sale, liabilities of pharmacists under the laws, etc., etc.

We have always maintained that this business training should precede admission to the college of pharmacy, but as things are, the college students having received no such preliminary education, it is far better, indeed essential, to give it to them in the college of pharmacy than to allow them to go out as certified pharmacists without any knowledge whatever of these subjects. Until colleges insist upon a proper degree of qualification for entrance, the inclusion of this course in their curriculum is to be commended and upheld.

THE PRACTICAL DRUGGIST REMONSTRATES.

A druggist who attended the recent meeting of the Indiana State Pharmaceutical Association is reported in print in a newspaper as saying: "The convention was one of the most uninteresting sessions I have attended. There were a lot of young college pupils who read papers. There was little discussion of any kind from which I could derive much benefit."

This is a sample of the complaints which are always forthcoming and must be met in connection with the work of the pharmaceutical associations. There is one class of members who place greatest importance upon the scientific papers, and there is another class who want

everything severely practical and would abolish the papers entirely. The individual here quoted is one of the latter kind. Those who have best studied the problem and are most competent to speak concerning it agree that it is not wise to give in entirely to either one or the other of these remonstrants. There should be a happy medium between or rather a harmonious combination of these two features of the association meetings. It will not do to devote the majority of the time to scientific papers, as in that case the attendance would undoubtedly be very small and the association die from inanition. Nor, on the other hand, would it be wise to cater entirely to the practical druggist members. In this latter event the preparers and readers of the papers would stay away.

It is very rare that the papers read at a State association meeting are so scientific and so highly technical that they have no practical value to the rank and file of druggists. Something can be gleaned from each one of them, which, put into application by the hearer, will have a most practical effect upon his business. We have little sympathy with the individual who is so captious and carping in his criticisms as is he whose words are reproduced above. He is one of the kind of druggist who can see little beyond his own doorstep, and if all were like him there would be no progress, no advancement, no profession of pharmacy or the business of the druggist. The best way is to take all the good one may for himself out of the association meeting, and he will find plenty of it and can afford to disregard those features and that portion of the proceedings which are not of much advantage to him. There is no meeting of druggists which is so poor and fruitless as not to bring some measure of benefit to each one of the attending members.

CHRISTIAN SCIENCE AND INSURANCE COMPANIES.

A Buffalo dispatch says that the Superior Lodge of the Knights of Honor has voted to exclude christian scientists and faith curists from membership, considering that such cases are bad insurance risks, which it does not care to undertake. Medical journals very generally are commending this action, and on grounds to which a reasonable man cannot well take exception. These fanatics may have full liberty to carry out their beliefs on themselves as they see fit, and at their own risk, but when it comes to denying the recognized aids to recovery to sick children and irresponsible individuals, by endangering unwilling victims by the absence of the proper precautions in the care of infectious diseases, etc., then it is time for the State and the law to step in and adjust matters in accordance with the dictates of common sense and common prudence.

Noninflammable Starch.

Sodium tungstate		.1 ounce.
Powdered borax		.1 ounce.
Starch		.6 ounces.

OUR LETTER BOX.

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors.

Please be brief and always sign your name.

THE INVOICE AND PRICE BOOK.

Editor Pharmaceutical Era: Having had some little experience in compiling an invoice and price book I have found it impossible to make a set of rules governing the classification of the articles and stick to them without finding as I proceeded I was getting away from trade habits and general business arrangement; that is, where I wished to have the name of the drug, chemical, patent or sundries appear but once.

Answering your pointed question regarding the arrangement of proprietary goods appearing in your recent issues, would say my plan has been to use the last name of the remedy or classify it according to the kind of a preparation, and would put Paine's Celery Compound under your "C" classification for compound, same as I would put all ointments under "O" and all elixirs under "E," except where a manufacturing concern make a line of remedies, as Jayne's, Ayer's and others. I would classify these under the maker's name, for the reason that such concerns who make many remedies are more apt to be familiar and well known to the trade than those who make but one, two or three.

Then again, if you want to look up one of the preparations of a certain manufacturer, it often happens that you want to see the balance of his list, and in invoicing bills in a price book this arrangement is invaluable; of course, where the arrangement is a simple index with ordinary prices attached, which have to be verified in some other way, the article might appear under that one head.

I beg to differ from your correspondent Mr. Darling, in issue of 21st, and think the majority of druggists would daily find they could not supply the name of the manufacturer of many of the patent remedies, especially as they are coming out by the dozens daily.

Those in charge of the records of the large houses in the big cities, where they handle those matters in a systematic way, might be able to supply name and other necessary information, but I have occasionally seen their want of knowledge displayed on items I thought easy. Then again, I do not see the need of adding such price lists as Wyeth's in a work like the Blue Book when the company get out such a handy and complete one, often supplying the price changes on sheets of the proper size to fit their position in the regular catalogue.

My arrangement covering all articles kept by a wholesale and retail druggist, and which I think is that generally followed, is to classify drugs, chemicals, regular official and general pharmaceutical preparations in first section of book, governed by a row of leather thumb tabs from A to Z; proprietary articles in the second section, and sundries, surgical instruments, utensils, etc., in the third section, the lettered tabs being of different colors to assist hasty reference.

There is no arrangement I think you can adopt that will be just right, each one will have to become familiar with your style by frequent reference.

I trust I have not encroached upon too much space, but the subject is a tender one with me and has been well rubbed in by hard work on two or three such private books, made in connection with my other regular work, the headings and spacings being as follows:

STOCK.	P. No.	COST.	W.	P.	S.	RETAIL.
		67-99 92-95 J.B. & S. P. & R. 1bb1 74 1bb1 73			J. S. 51b 83	
BORAX POWD	C 107		10	12	3	6 8 15

Explanation.—P. represents section of store house, and No. the place in that section; Cost having five spaces, being entered in lead pencil and the oldest rubbed out when entering new purchase; W. column for wholesale price; P. for price to physicians; S., special price column for price given on special quantities; and the retail section being divided for drugs in ounce, quarter, half and pound price, or used for patents for single package, quarter dozen, half dozen and dozen lots.

WILLIAM POOLE.

Wilmington, Del.

INDEXING PATENT MEDICINES.

Editor Pharmaceutical Era: Allow me to voice the sentiment of J. Pfeiffer and Louis Emanuel in "Our Letter Box" of June 21. J. Pfeiffer's plan is specially good, as it has two indexes. We are often called upon for preparations that are new in certain localities of which neither the customer nor druggist knows the maker, and an index giving the name of the preparation would be a great help. In fact if we can have but one index I should prefer "Bile Beans, Smith's," to "Smith's Bile Beans."

I do not agree with J. D. Gray that nine-tenths of the drug trade in this country is proprietary remedies.

J. H. COOL.

Owatonna, Minn.

Editor Pharmaceutical Era: I like your Blue Book very much; also your journal. I would list patents as follows: Celery Compound, Paine's, Emulsion Cod Liver Oil, Scott's, Sarsaparilla, Beggs'.

R. R. ROGERS.

East Peru, Ia.

Editor Pharmaceutical Era: In answer to your question, "How to do it?" the reply you received from Mr. Louis Emanuel, Pittsburg, Pa., to my mind, is the only plan that is of any use. I therefore take pleasure in endorsing his letter as published in Era June 21.

THOS. A. SPIVEY.

Rio Vista, Cal.

SHOULD THE PHARMACIST WHO IS SKILLED IN THE RECOGNITION OF BACILLI AND THE ANALYSIS OF URINE, ETC., OFFER HIS SERVICES FREE TO PHYSICIANS, OR SHOULD HE MAKE A CHARGE FOR THE SAME?*

Respectfully Submitted to the Representative Pharmacists of This Great Nation as a Plea for the Maintenance of a Proper Professional Self-Respect

By FREDERICK T. GORDON, U. S. Navy.

We need not go far afield for an answer to the above query; there is an answer already given to us in the teachings of the Great Physician: "Verily I say unto you, the laborer is worthy of his hire." What other answer can we humble followers in His footsteps give?

One of the soundest of business principles is that a service if worth anything at all is worth paying for, and if not worthy of payment worth nothing at all. Applying this broad principle to the question of asking payment from the physician for analytical work performed for him by the pharmacist, we are forced to admit the above conclusion, if such work is to be conducted on a sound business basis. Against this conclusion is the claim of many that the pharmacist is paid for such work by the goodwill of the physician and by the added amount of patronage and advertisement he receives and also by the enhanced professional standing its performance confers. Even granting this postulate for the moment, would it not bring greater respect and add a greater value to the advertising if a price commensurate with the needed skill were set upon the service? I think so.

Mankind in general are very prone to conclude that whatever is given to them for nothing is of little value, holding the opinion that nothing of any account is given free of cost, unless there is a "string" attached to the offer or that the donor expects more in return than he dare ask openly. Consequently, when the pharmacist proclaims that he will analyse urine, examine sputa, etc., without charge to the physician or his patrons, these very naturally think that such work is of a trifling character, easy to do and of slight importance when done, or else that they will be made to pay for it in some way in the shape of added charges for medicines and sundries. It is very hard to make the physician, or layman either, see that you are offering him a high degree of professional skill for nothing else than his good will or patronage; he will quite naturally class such service along with the sale of stamps, the free directory and the free telephone service, nothing more than another accommodation by the druggist. This giving too freely of his skill and learning has been the bane of the pharmacist; no other act has lowered his professional standing more, and now the dear people have come to look upon us as public conveniences, general information bureaus, and so on, and our stores are considered as being kept open day and night merely for the convenience of the tardy purchaser of stamps, of five cents' worth of headache powders! Free this and free that have made the pharmacist's life a burden, and now we are told that we should put the highest service of our professional skill in the same category as the supplying of stamps, the mixing of aerated beverages and the free transmission of calls and messages to our patronizing physicians.

Although the physician, from his own scientific education, should know better, he is very apt to value the service very low when we voluntarily offer to perform any analytical or microscopical work for him without the charge that any other professional man would expect as a matter of course. This free service he will put on a par with the quality of skill we render him when we tell him the name and dose of some new remedy or send him a message to call at a patient's house. We cannot say to him that we expect him to send his prescriptions to us in return for the work we have done for him; a self-respecting man would feel too much the obligation of barter and sale and would resent the implied bargain for his good will. It is all very well to say that nothing of this nature is understood. It is. The physician knows

very well that the pharmacist is not doing these analyses for friendship and good will, the good will is valueless unless it brings some return and this return is exactly what the pharmacist is counting on. It is "you tickle me and I'll tickle you," with a clear bargain on both sides. The self-respecting physician would far rather pay a fair price for what is now an unusual professional service and feel free of obligation, tendering his good will in a practical form as a tribute to the skill of the man who can do for him what he wants.

And here comes the thought of another contingency. Although skill as an analyst is usually found accompanied by skill as a pharmacist, the former by no means implies the latter; a man can be a very good chemist and a very poor pharmacist. The "cutter" and "substituter" can well afford to hire a skilled analyst and make a great splatter over having such a department in his store, yet does the fact that he has a chemist carry the corollary that he has also a skilled pharmacist to preside over his prescription work and does it imply that he will fill these prescriptions with pure and proper ingredients? Hardly. When we begin to put our analytical skill in the class of trade-drawing advertisements we invite just such competition and the result can be only a general lowering of standard such as heretofore came from price-cutting and substituting. It cannot be said too emphatically that professional skill should not be so degraded, and degraded it will be if such a practice becomes common. If we cheapen ourselves, the physician as well as the public will hold us to our own estimation and that is just what is the trouble with our profession to-day, we have made ourselves cheap men by falling over ourselves to give every talent we possess free of charge "to draw trade!"

I see in this matter of the pharmacist qualifying himself to serve as a skilled public analyst the most hopeful sign of the times; by so doing we will gain for ourselves and our profession an added lustre of professional standing that all our skill in things strictly pharmaceutical and all legislation and all writing and talking on the dignity of pharmacy would not bring about in a century. Do not let us spoil the good work by an unnecessary cheapening of ourselves and our skill; no one has yet asked us to analyze this or test that for nothing, and such work is universally recognized as worthy of a price in keeping with its requirements of skill and knowledge. Therefore, if we begin to give away this highest service of our skill, that service will soon be looked upon as of little value, expected, nay, demanded!

Let us return to the question of the value of a free microscopical and analytical service as a means of advertising our business. Will a service that is given without the charge that its value as the most scientific of all our work should give it pay as well as an advertisement as a similar service based on fair and reasonable prices for the exceptional skill and knowledge employed? To answer this question, let me again refer to the general popular estimation and opinion in such matters. A thing or service is valued by the possessor according to what it has cost him to get it, ergo, that which has cost nothing has little value; if any, nothing greater than what the owner himself thinks it worth. A free service as a skilled analyst may advertise the pharmacist, but in what way? The pharmacist has himself said that this work is of little value when he gives it away; how can he expect others to value his services more than he does himself? The average person, be he physician or layman, is very apt, as we all know, to put such work down as requiring very little skill, taking little time, and surmises that it is carelessly done; else why should the donor give it away?

Besides, it is a mighty poor policy to advertise one's business at the cost of his professional standing; the charlatan may attract trade by his offers to give his professional skill for nothing to all who will buy a small bottle of his wonderful remedy, but what man of intelligence thinks either the skill or the remedy of any value? It is giving away our professional skill and ability when we offer to perform analytical work free of charge; we might with just as much reason ask the honorable physician to give away his skill as a diagnostician to the man who will pay him for taking his temperature or writing him a prescription. We, indeed, hear of quacks offering "doctors' advice free with our remedies," but the reputable physician values his skill in detecting and

*Read at the recent meeting of the Pennsylvania State Pharmaceutical Association. Contributed to the Era for publication.

classifying disease as calling for the highest ability and would never even think of recklessly giving it away for nothing. Why, then, should we pharmacists give the physicians an exactly similar grade of professional service without asking them to pay us a fair price in return. What do they give us free of charge? This is the kernel of the whole question: Shall we pharmacists give free that grade of professional service which every other profession holds to be worthy of a good price and, what is more, demands that price for the rendering? Shall we be "scabs?"

A properly conducted analytical department, in which good work is done for a fair price, is the best advertisement a pharmacist can have; it gives him an added lustre of professional ability and attracts to his store the cream of the prescription trade of his neighborhood, drawn hither by the confidence his skill inspires. Moreover, there is no branch of his business that will give the pharmacist better returns for the capital and knowledge invested, if good judgment be exercised in performing the work and the prices be not unreasonably high. There is little enough profit nowadays in the drug business to permit us to give away the income from one of its best paying departments for an illusory and doubtful gain, hoped for in return for this giving. If, when the analytical department is first inaugurated, a fixed scale of charges is announced, no one will object to the payment of these, and the character of the work will be held to be higher than if it was merely an accommodation "for advertisement." Physicians will be only too glad to avail themselves of this invaluable aid to their diagnoses and treatments. As a rule they are disinclined to bother with the mess and trouble of urinary and chemical examinations of this nature and are quite willing to turn it over to the pharmacist when they are satisfied that he understands the work. They will expect to pay for this strictly professional service according to its difficulty and value if we are not foolish enough to offer it to them for nothing. It is no new thing, such analyses and examinations are considered absolutely essential nowadays, only it is rather too rare an addition to the pharmacy, hence people will not have to be educated up to its value, and the idea of having to pay for such professional work is well established. Nor will they expect it for a mere pittance, unless we ourselves teach them to do so by lowering its value as we have done in the way of "price cutting" on drugs and medicines.

The question, then, of charging for technical examinations of the various physiological secretions when done for the physician as an aid to him in his diagnosis and treatment of his cases, resolves itself into two very simple propositions. Shall the pharmacist give his acquired skill and the use of his expensive apparatus to the physician for nothing but his good will in return, and shall he thus throw away a goodly income as the price of a doubtful and uncertain advertisement when he could make it more effective by properly valuing the skill he advertises? Common sense says no. Sound business principle (an acquirement just as necessary as professional knowledge) says that if one can make a thing pay twice he is more than foolish to relinquish either of the profits. As a matter of good business, it is scarcely open to question that the skill which values itself highly is worth more than that which values itself as little; therefore, since we are to make use of this skill as an advertisement, should we not set as high a value as possible on it so that the effect of the advertisement may be enhanced?

Of course there must be distinctions and exceptions; it is just as good business policy to make a simple test for sugar or albumen for the waiting physician as it is to give him a cigar or offer him a glass of soda, these little favors are recognized in all trades. But whenever a thorough chemical analysis or a complete microscopical examination is asked for, charge a price for the service in keeping with its demands on your time and skill. Again, there are those physicians and laymen who presume on the purchase of a dollar's worth of goods to ask for two dollars' worth of favors and gifts; put these gentry in their proper class and treat them according to their deserts. Tell them gently and firmly that your skill is just as valuable to you as is their particular ability to them and that they should not expect of you, simply because you are a "druggist," the free gift of the same

sort of skill as that by which they gain their livelihood. It would be interesting to ask a physician to give his professional services and advice free to the pharmacist in return for the patients the latter might send to him, or to suggest that this advice be given free as an advertisement of the owner's skill. But, alas, the poor druggist is expected to do everything for nothing, all of them get rich in a few years on the enormous profits of the stamp trade and the telephone service, so it is looked upon as another of the druggists' extortions when one asks payment for his professional skill.

Let every pharmacist that is competent (and all should be) to perform chemical and microscopical examinations, fit up a department in his store of this nature and carry on its work as an adjunct to his prescription business. But do not, if you would not still further cheapen yourself and the popular estimation of your profession and add another burden to your sorrows, begin by giving this service free either to the physicians or the public. The physician is able to pay for such work if for himself, or he can instruct his patients that such charges are just as legitimate as those for compounding prescriptions and that such examinations are necessary, as much so as are the services of the trained nurse he employs. No one thinks of getting a trained nurse free of charge, outside of a hospital, nor does the physician ask the nurse to render him her services for nothing in return for his good will in recommending her to patients. Up comes again the question of the druggist enslaving himself to free service in everything; like Banquo's ghost, it will not down.

Unless the pharmacist himself begins a free service, no one will ask him for it; once begun, it is expected, nay, demanded, and its weight will become a burden that, like the "Old Man of the Sea," cannot be lightly shaken off. As said before, no other work that he can do will do as much for the pharmacist (and his profession at large) to advance his standing in the public estimation. Do not, do not, then, throw away most of its value by cheapening your service and ability. Remember, too, that in this work the pharmacist has a sure and steady source of profit; dollars are too hard to get to give away. Use your skill as an analyst for an advertisement, give it every prominence in every way you can, but make it also pay you in good honest cash as well. Like the soil that returns tenfold to the industrious tiller, the better you make it pay you, in reasonable charges, the better will this work pay you by advertising you as a skilled pharmacist and good business man, one who values himself highly and demands a like valuation from the world. "The laborer is worthy of his hire."

THE DRUGGIST.*

By S. H. CARRAGAN.

To a man of my sedate, studious and retiring ways, it is painful to be habitually misunderstood by friends and placed in the position of addressing a convivial gathering in a supposedly convivial strain. My tastes, as some of you know, are almost wholly scientific, and with decent encouragement I might have been induced, had your officers only shown the proper consideration for my feelings—I had almost said failings—to give you at one of your recent sessions the benefits of my researches into some of the most important processes of the pharmaceutical art. One of my well-meaning friends has suggested that I might have thrown much new and valuable light on the products of fermentation. Also in the domain of distillation, I flatter myself that I have learned a thing or two not commonly set down in the text books. On certain phases of percolation I claim to be an expert second to none, and the macerated condition in which I sometimes emerge from a pharmaceutical convention would, if set down in writing, be full of instruction to all young pharmacists, and to many of the old ones as well. But it is not to be. You prefer, I see, the frothy bubbles of after-dinner oratory to the solid scientific instruction which you might have had for the asking, and you will never know what you have missed.

My subject, "The Druggist," has a familiar ring. I have heard that name before. During the one hundred and sixty odd years of my connection with the trade I

*Response to a toast at the banquet of the New York State Pharmaceutical Association, June 28.

have met a few specimens of the genus "druggist." Ladies and gentlemen, they have used me mighty well. Such little success as I have achieved in the world I owe in no small measure to the fair and square men that I number among my friends on the road; and if the druggist has his frailties and his failings I am not the man and this is not the place in which to air them. In his virtues the druggist benefits all society; in his faults and errors he hurts only himself; if you want his character dissected and his shortcomings laid bare, you must look to some other demonstrator of moral anatomy for the job. The druggist has been a mighty good friend of mine in days gone by, and to others I resign the cheerless if wholesome task of exposing the human weaknesses from which even the hard life-long discipline of the drug business does not leave its followers exempt.

It would be a far more thankful effort if, reviewing my not insignificant experiences among druggists, I were able to single out and emphasize and render prominent the things that make for success in this present day and generation of the trade. But I have scarcely earned the right. Though often among you, in one sense I am not of you, for I have never taken my turn behind the dispensing case or the sales counter in a retail store. For me to theorize about success and failure in a calling which I have studied only from the outside would be likely to remind you of the famous picture which is mentioned in Mr. Lecky's recent and delightful book, "The Map of Life." The picture is by Hogarth and represents an inmate of a wretched and dismal debtor's prison writing a dissertation on the best means of liquidating the national debt. Disquisitions on the arts of success are rarely of much value even when they are written by one who has victoriously traversed the path his reader is about to follow, and their worth is nil when they are not freighted with personal experience. The secrets of success, even though they could be revealed, could not possibly impart the native power, the inborn force, the inherited ability, which win the race of life. Can you make a man strong and healthy by having him study hygiene? A good constitution is worth a thousand sanitary codes. Can knowledge and learning make a man wise? Has precept ever invigorated an infirm or decaying character? Do you suppose that successful men ponder over the hows and whys of their work? No; instinctive judgment and inward heat propel them along toward the wished-for goal. A painter can no more teach you how to paint a picture, or a poet how to write a poem than can the business man impart to others a power and a gift over which he has as little control as over his digestion. Ideas are like gastric juice; they are the precious secretion of the brain; you cannot compel them any more than you can make yourself an inch taller by tugging on your boot straps.

The past twenty years have witnessed many changes in the drug business, and the successful survivors have been those who have known how to change with the times. Adaptation to new conditions is the price of continued life. Woe to the man who cannot or will not change. In my time I have heard endless talk and complaint about the passing of the good old times, the growing competition, the excessive multiplication of druggists by the colleges, the character of board examinations, the manufacturer's invasion and occupation of the druggists' field in the making of medicine, the cutter's destruction of profits, the dispensing doctors. But I notice that there are plenty of prosperous druggists just the same and they seem to be the very men who save their breath to cool their porridge, who don't quarrel with accomplished facts which are beyond all human control, who don't waste themselves in useless struggles, and who go their ways steadily without brooding over grievances. Business life is a game of cards. Much depends on the deal, but the skillful player succeeds in the long run, and usually he plays his hand as he gets it without wasting breath in maledictions on his luck. It is the poor player who is always quarreling with his cards.

Three years have now elapsed since before this association I expressed the conviction that the work of a druggist is a business, not a profession. I have had no occasion to change my belief. I still hold that failure is more commonly due to lack of business training and business ability than to a faulty knowledge of pharma-

ceutical science. Far be it from me to belittle a sound college education as a fit preparation for the druggist's life work. I believe deeply that pharmacy has an important professional side, the claims of which should be respected. In this regard it differs honorably from other forms of retail traffic. The druggist as a dispenser of powerful medicines, as the aid and ally of the physician, ought to be an educated man, but the commercial phase does and must predominate in the great majority of cases. Three years ago I expressed this belief with all possible energy, and the importance of the subject will, I hope, plead for me if I here repeat two short paragraphs taken bodily from the reflections which I then had the honor of submitting to you.

"The pharmacist or druggist of the future will place a high value on book learning and college teaching; he will keep himself thoroughly informed as to the advances which pharmaceutical science is constantly recording; he will be the intelligent aid and guide of the physician in everything relating to the administration of medicine; but he will be essentially, primarily and principally a business man, thoroughly versed in buying, advertising and selling; quick in perceiving what to purchase and what to make with profit; understanding human nature; grasping every opportunity. He will fear no competition, because the very arena in which he must compete has been his drilling ground, and no matter what changes occur in medicine or pharmacy he will have plenty of arrows left in his quiver.

"And now let me ask: Whence comes this longing for the hauble of professionalism; whence this foolish and absurd talk about 'mere storekeepers'? Trace them both and you will find their root in some pharmaceutical school where young men are encouraged in the deplorable illusion that a college course will lift them above the hard, strenuous, but inevitable competitions of mercantile life. Because the actualities of business are severe and unpalatable some of our teachers and not a few of our druggists shrink from looking the truth stoutly in the face; they will not accept the difficult situation just as it is and prepare for it accordingly. These unfortunates are lulling themselves to sleep in a fool's paradise of professionalism; with few exceptions they will awake in a purgatory of failure and disappointment. The problem of the professional man is comparatively simple; he has only to study long and hard, prepare himself faithfully and then wait for employment. The druggist of the future will have to do all this, and more; he will acquire competence in every branch of his occupation and then, besides, he will everlastingly hustle for business, seeking the support of the physicians, catering to family trade, absorbing all the transient custom that can be made to come his way; scheming, pushing, advertising, and winning everybody's confidence by ability, by education and by that rigid uprightness in dealing which is, after all, the biggest winner in the race for success."

My friends, just as we have little choice in the selection of our parents, so we have little power over the conditions prevailing in the callings which we elect for our life work. We must take them as we find them and make the best of things. But it is possible for us to give our children a little better start than we had, if not in money, at least in education and in general preparation for the battle. So, too, with the drug business in which most of you have spent the best days of your lives. I cannot suppose that you are so bloodless as to have grown up in an occupation since your early youth without becoming at least somewhat attached to the work for its own sake, for its intrinsic interest, for its manifest usefulness, and not wholly for the money there is in it. With all its disadvantages there is much that endears the work to those who have met with moderate success in it. It is an educating work; it enriches the mind with the truths of various sciences; it keeps one in touch with the progress of the human intellect in many fields; it brings one largely in contact with professional men; it exhibits human nature in many interesting lights. It has undoubtedly its share of drudgery and mechanical toil, but it also affords food for the brain and the spirit and to an ambitious or aspiring man it opens up many avenues of self-culture. If the pharmacy of the present needs reform, contribute what you can to that better pharmacy which will surely greet the future. Help speed

the day by withholding all encouragement from the ignorant, the stupid and the immoral who are planning to become druggists. Do not debauch your calling. Do not let down the bars to every dunce. Do not introduce into the circulation of the body pharmaceutical a strain of baser blood. It lies with you to enrich the breed. The apprentices of the present will be the druggists of the future. If you pick them with care, if you close your pharmacies to all save the alert, intelligent and capable, you are fulfilling a genuine duty to your successors, to your professional posterity. I know that in every calling there are men who have adopted as a principle of life the retort of the humorist: "Damn posterity; what did posterity ever do for me?" But I believe that the members of this association are not of that stripe and that they will gladly co-operate with the agencies which are seeking to secure a more desirable class of young men for the druggists of the future. Lend them a helping hand in your own stores. What can your boards and colleges accomplish in keeping the unfit out of the drug business so long as you give them little freedom of choice? In the selection of your apprentices you are deciding the character of the druggists of the future; you are pronouncing the doom of your own calling. The colleges and the boards can only do their duty by the material which you send them, and if there is to be an improvement in the personnel of the drug trade it must begin with the individual at his first entrance into the store. The druggist who regards his calling as something more than a milking cow will not deny his help to the effort that many right-minded men are making at the present time to render the druggists of the future a more select and successful body of men than the druggists of the past. Who can fail to sympathize with their generous aspirations? Who is justified in withholding his support?

MIRROR MAKING FOR PROCESS WORKERS.

There are many practical men who imagine that the making of mirrors is beyond the skill of the ordinary process operator. They have, perhaps, worked in a studio where the mirror took the place of the reversing prism and where the metallic surface soon became blackened by sulphurous fumes; but in many respects a mirror is far superior to a prism. For one reason, a prism absorbs far more light than a properly silvered mirror. The objection to the mirror, arising from its use in unventilated studios, can be got over in the manner which will be explained later.

The author gives below a practical method of making mirrors which he has had in use for a long time. From these instructions it is the simplest thing to make all kinds of mirrors—plane, convex and concave. The great point to be observed throughout is cleanliness. All glasses, dishes, measures, etc., should have been as scrupulously cleansed as if they themselves were to have been silvered. Three solutions are required, and the process is completed within an hour, while the mirror used in the studio for negative making can be given a fresh silver coating in less than half an hour, since, after treatment with strong acid, it is ready for re-silvering. Great attention should be given to the purity of the chemicals. The solutions required are:

- Ten per cent. nitrate of silver solution,
- Ten per cent. caustic potash solution,
- Ten per cent. glucose solution.

All these should be dissolved in distilled water. The nitrate of silver ordinarily used for photographic purposes answers quite well. In regard to the caustic potash, it is in many cases very impure, although a large proportion of the impurity consists of carbonate of potash, formed by absorption of carbonic acid from the air. Even pure caustic potash when dissolved in water and mixed with a little lime water gives a precipitate of carbonate of lime. In order to prevent all difficulties which these impurities may give rise to, the writer advises the use of the purest caustic potash obtainable, as made for analytical purposes. (This can be obtained from large dealers in chemicals. Two pure brands of this potash are sold, one prepared from potassium, the other by precipitation by alcohol.) In order to preserve the alkali in the pure state the bottle should be sealed with par-

affin wax, and when the substance has been dissolved, a few drops of lime water are added in order to make sure that no carbonate is present.

The third solution is that of glucose. There are a good many varieties of this substance on the market. The only one suitable for the purpose is the fine crystalline product used in analytical chemistry. It is a fine light powder of yellowish tint. The solution of the strength given above is likewise slightly yellowish in color. It should be carefully filtered and kept in an air-tight and light-tight bottle. These preparations having been made, it is a matter of only some thirty minutes to obtain a very perfect mirror. The dish and necessary glasses are cleaned and rinsed with distilled water. The glass plate which is to be silvered is, if of small size, fitted with a handle. A little drop of ordinary sealing wax is melted and allowed to fall in the middle of the plate, and an ordinary match stuck in the melted wax. The handle, thus extemporized, enables the operator to carefully lower the plate into the silvering solution. This little handle is attached to a thin rod by which the plate can be suspended just in contact with the silvering solution. It is only necessary for the plate to dip into this solution by about half of its thickness. It must be borne in mind that the metallic deposit is produced from all parts of the solution, and that any irregularity in the preparation of the plate will give rise to streaks, spots and other defects. The fine silver surface should be formed by the attraction of the glass for the silver which exists in the solution in the nascent state. A too coarse deposit formed by the accumulation of various fine portions is to be avoided.

Plates larger than four inches by three inches should not be attached to the match as just described. They should be laid on two brass wires which have been varnished with an asphalt varnish, or even two strips of wood, each fitted with a couple of brass screws can be placed at the ends of the silvering dish. But these arrangements may be left to the ingenuity of the operator.

To compound the silvering solution we take 10 volumes of silver nitrate solution, to which we add enough strong ammonia (drop by drop) until the yellowish-brown precipitate first produced has been dissolved. Then 10 volumes of the caustic potash solution are added, and the dark brown precipitate produced is dissolved as before. Then 25 volumes of distilled water are added, and the mixture filtered into a glass dish. Enough liquid must be prepared to give a depth of liquid of at least 5 millimeters ($\frac{1}{4}$ of an inch). In the second well-cleansed measure 10 volumes of the glucose solution are placed.

The glass plate, having been fitted with a handle, is placed in a dish of distilled water, and the strip so arranged that the plate can be just immersed to about half its thickness in the solution. Just before doing this the glucose solution is added. The mixture becomes first yellow, and then, through red and brown, passes to an inkly black. Some of the silver is precipitated, and thus discolors the liquid. The metal deposited on the glass surface is a bright white color, while the silver falling to the bottom of the dish is yellowish-gray in color, and collects as a powder. After about fifteen minutes the plate can be removed from the bath and rinsed under the tap. Care must be taken not to stand the wet coated plate on its edges. The slightest pressure would cause some water to find its way between the silver and the glass, and the whole result would be spoiled. The plate is dried in a horizontal position.

The finishing of the mirror depends upon the purpose for which it is to be used. For reversing purposes we want, of course, a mirror without any glass cover. To get this is very easy. A fine smooth wash-leather, which should be used only for this purpose, is rubbed on a well cleaned plate with a little of the finest rouge. This smooth leather pad is then used to polish the mirror, which is slightly warmed and laid on a piece of clean paper.

However perfect the surface of the mirror may be when it is made, it is soon spoiled by using in an impure atmosphere; but the writer has found that a coating of celluloid varnish (celluloid dissolved in amyl acetate) forms a most excellent protection. It is true the latter gives a very feeble second image, but the thinness of the coating of varnish is so small that this

defect may practically be ignored. To varnish the mirror, it is thoroughly dried and immersed in the solution, being afterward dried at a temperature of 100° Fahr. The glass side of the mirror is then coated with black varnish.—(By H. Van Beek, in *The Process Photogram*, *Sci. Am.*)

(Written for the Era.)

ACETOUS FLUID EXTRACTS.

By WILLIAM B. THOMPSON, Philadelphia, Pa.

Observers of the progress of galenical pharmacy (a term used in contra-distinction to the larger operations of manufacturing establishments), the pharmacy of the shop, are not quite able to understand why so little discussion has arisen of contradictory or confirmatory judgment in regard to the application of acetic acid as a menstruum for the extraction of drug constituents or principles. The columns of the journals are devoid of evidence. These trade periodicals are now the acknowledged and valued media for the interchange of observation, and the pages are invitingly open and free. Workers in the seclusion of the shop laboratories, though widely separated, may communicate with each other, and by a reciprocal law of equivalents get information and suggestion from the experience of their distant co-laborers and correspondents. Thus knowledge is advanced, and it would be vastly to the credit of pharmaceutical education if more of value and practical usefulness came from the labor and brain of this lesser sphere of pharmaceutical occupation. Many problems wherein a question of doubtful expediency existed have been irrevocably determined, and much of original investigation of value formerly came from this source, the brain and handiwork of a Duhamel, Squibb, Proctor and Graham, so that source of investigation is not necessarily closed. New methods and processes should have their origin still ascribed to it.

The advocates of this use and application of Acetic Acid have not been as yet numerous, but their statements, which are fortified by fact, cannot well be combated. The solvent power of an aqueous acetic menstruum upon the alkaloidal principles of the active drugs is asserted, proven and established by confirmatory assay, so that this phase of the utility may be for the present set aside as not being involved in the statements of this paper, although there is yet opportunity to verify the claim of an extended scope of application and usefulness. A consideration which is quite irresistible in the employment of acetic acid in lieu of alcohol is economy. It is also quite unnecessary to enlarge upon this point in the limit of this paper, so that we may confine our statements chiefly to the chemical and physical conditions which would characterize a class of fluid extracts having acetic acid and water as the extracting menstruum.

The average dilution which has been proposed and found applicable as a solvent is that of 10 per cent. of acetic acid. This dilution is quite obvious to the sense of smell, and in more or less degrees of perception characterizes the odor of all preparations made with this acid. Where the odor of a drug is quite pronounced it is not altogether obliterated by the over power of the acid, but the two blend and identification by natural odor is not lost. Testing fluid extracts by odor is more of a physical than crucial means, and is seldom resorted to unless other confirmatory evidence is wanting. It would appear, then, that this condition, namely, that of one general and identical odor, would very properly be a subject of pharmaceutical and medical judgment and opinion. Would it, under the ordinary circumstances of stock storage and keeping, or in the range of original and extemporaneous prescribing, constitute an objection when other advantages are fairly weighed? This is a good query for pharmacists to take up and a subject which by referring to their medical friends and patrons would bring them into personal intercourse and furnish something pertinent to talk about.

The other and last phase of this subject which shall form the conclusion of this paper, is the result of the chemical behavior of an acid and an alcohol when placed in contact. Such union would occur of course in dispensing acetous fluid extracts in extemporaneous prescription with other compounds, some of which would, doubtless, be alcoholic tinctures, or alcohol in some form or other.

An elimination of ethereal odor would indicate the union or change and would be likely chiefly to occur when contact was prolonged. In the materia medica of a prescription intended for present and immediate uses and consumed in the period of a few hours, no such chemical change as has been referred to would occur. And it is a question whether it is likely to occur, or occur at all, unless favored and developed by the presence of vegetable matter. This point offers pharmacists another opportunity to investigate and determine, for it is conceded that the admixture of a vegetable acid and an alcohol develops a very slow reaction. Such is not the case, however, with the mineral acids.

These views are hastily inscribed to incite the thoughts of thinkers and to produce the work of workers. If new truth upsets cherished notions we cannot change fact by ignoring it. The age is one of inquisitiveness and utility, and the field of exploration in the pharmaceutical domain is large and inviting.

(Special Correspondence).

BRITISH PHARMACEUTICAL AFFAIRS.

London, June 30.

The Pharmaceutical Society.—The first meeting of the Council since the election of the year was held on June 12. The first business consisted in the election of officers, and G. T. W. Newsholme, of Sheffield, was chosen to succeed Mr. Martindale as president; C. B. Allen, of London, takes the vice-chair, and S. R. Atkins was re-elected treasurer. A long discussion took place on a motion by W. Hills recommending the Companies bill with its pharmacy clause to committee for report as to the best course of procedure. Finally the resolution was passed.

The New President of the Pharmaceutical Society.—Mr. Newsholme is the first provincial pharmacist to receive this honor, as it has previously been held that the duties could only be satisfactorily performed by a London man. It is probable that Mr. Newsholme's election will involve somewhat of a change in the working of the society, by taking much of the responsibility of the policy and conduct of the business off the president's shoulders, and placing it in the hands of an Executive Committee. Mr. Carteighe, and to a large extent Mr. Hills, when occupying the chair, practically dominated the society's action, and spoke for it when meeting government officials. But Mr. Martindale, partly owing to ill health, has not proved a strong president, and the change will, under existing conditions, be probably for the better. Mr. Newsholme was born in 1853, at Settle, in Yorkshire, and was apprenticed in Huddersfield. He bought the business in Sheffield of Mr. W. V. Radley (a former councillor of the Pharmaceutical Society) in 1877. He was elected a member of the Council of the Pharmaceutical Society in 1887. He has been vice-president since 1897. Mr. Newsholme is a fellow of the Chemical Society and president of the Sheffield Microscopical Society. He was twice president of the Sheffield Pharmaceutical and Chemical Society, and has also been chairman of the local Board of Guardians for the last two years. (His portrait appeared in the Era, June 7, Page 613).

The Chemists' Defense Association, formed to protect chemists in cases of prosecution under statutes affecting them in their trade relations, has gained a conspicuous victory in the North London Police Court. A Mr. Long was charged on June 12 with selling spirit of nitrous ether deficient in nitrite of ethyl. The C. D. A. took up the case, and showed that the mere fact of dividing the sample by the inspector into three parts according to the Act would result in a loss of 10 per cent., and that it was impossible to retail the preparation into customers' own bottles without deterioration. On these facts the magistrate dismissed the charge, saying that Mr. Long had done everything possible to prevent loss of strength, but the latter was absconded to pay \$3 costs, which seems a *reductio ad absurdum*.

Mrs. Hanbury, the mother of Cornelius Hanbury, head of the historic house of Allen & Hanburys, of Plough Court, London, which gave the Pharmaceutical Society its first president in William Allen, completed her 107th

year on July 9. Mrs. Hanbury still retains her faculties, although she is very feeble and has to keep her room.

Mr. Joseph Edmund Wright, this year's senior wrangler at Cambridge University, is the son of Joseph Wright, a Liverpool pharmacist. Young Wright, who is 22 years of age, has had a brilliant career at school and college; he is also an accomplished chess player, and president of the University Chess Club.

Oil of Lime Flowers.—E. J. Parry finds in the oil of *Citrus Limeda* methyl anthranilate, the odorous principle of neroli oil.

Another Attack on the Chemist's Privileges.—The Pharmacy Acts of Great Britain and Ireland give to the pharmacist the sole right to sell certain scheduled poisons, and among these are arsenic and poisonous alkaloids. Of late years there has sprung up a large trade in sheep dips and weed killers containing arsenic and insecticides consisting largely of nicotine, and a number of unqualified traders have been prosecuted for selling these articles. Within the last few months an association has been formed of seedsmen and dealers in agricultural requisites with a view of securing the right to vend weed killers, dips, insecticides, etc., and a bill has been prepared for introduction into Parliament to that end. The bill provides that licenses shall be issued to ordinary traders to sell the articles in question and other poisons for commercial purposes, provided they be labeled "poison" and are sold in the manufacturer's original packages. Certain regulations as to the registration of each purchase with the name of the buyer and the purpose for which required will also have to be carried out. Fines are provided for breaches of the regulations or for selling without a license. It is scarcely necessary to say that pharmacists will oppose the bill very strenuously.

The Royal Society.—At the conversazione at Burlington House on Wednesday, June 20, there was a distinguished scientific company, including the president, Lord Lister; Lord Avebury, Lord Rayleigh, Lord Kelvin, Sir William MacCormac, Sir John Evans, Sir Norman Lockyer, Sir John Burdon Sanderson, Sir Lander Brunton, Sir Henry Roscoe, Sir Frederick Abel, Sir William Preece, Sir W. Roberts Austen, Sir Michael Foster, Prof. E. Ray Lankester, Prof. Rücker, Prof. Judd, Prof. Carey Foster, Prof. Bonney, Prof. Forsyth, Prof. Dewar, Prof. Armstrong, Prof. Giacomo Ciamician, Prof. Raffaello Nasini, Prof. E. Yamaguchi, Prof. Story Maskelyne, Dr. Günther and many others, most of whom were accompanied by ladies. There was a fine exhibit of a scientific character. Prof. Wyndham Dunstan exhibited a living plant of the Egyptian poisonous lotus, which has caused the death of large numbers of cattle, sheep, etc., in Egypt. The glucoside, to which the plant owes its toxicity, lotusine, was also shown. This glucoside yields prussic acid on hydrolysis. Prof. Ramsay showed the spectra of crypton, xenon and others of the newly discovered atmospheric elements, and altogether the exhibits were very interesting.

Chemists' Exhibition.—The sixth of the Chemists' Exhibitions, organized by the British and Colonial Drug-gist, opened on June 19, at Manchester. This was the first of the series that has been held out of London. It was perhaps scarcely so large as one or two of its predecessors, but a good representative series of exhibits from about eighty houses had been got together, and excellent business was done. The show closed on June 22.

R. T. Fitzhugh, M. B., only son of Richard Fitzhugh, J. P., president of the Nottingham Chemists' Association, died of enteric fever at Defford on June 15. Dr. Fitzhugh, who was only 28 years of age, was civil surgeon to the Imperial Yeomanry Hospital in South Africa.

The Wellcome Chemical Research Laboratories.—At a dinner given by H. S. Wellcome (head of Burroughs, Wellcome & Co.) in honor of Dr. F. B. Power, Ph. D., formerly professor of pharmaceutical chemistry and materia medica in the University of Wisconsin, in July, 1896, the former made the first public announcement of his intention to establish laboratories for research in which work would be performed in general chemical investigation entirely unconnected with the commercial interests of the firm. These laboratories were first situated in a building adjoining the firm's London offices,

but increasing importance led to their being located in a building given over entirely to Dr. Power, who is the director, and his staff, which includes Dr. H. A. D. Jowett, D. Sc.; Dr. S. B. Schryver, D. Sc., and others. The building has been entirely reconstructed internally, and contains four floors and a basement, the last named used mainly for storage. The ground floor is devoted to a well equipped laboratory and Dr. Power's office and each of the three upper floors is a complete laboratory, fitted with all the latest appliances. As far as I know, there is no other laboratory in this kingdom or in the world which is run by a manufacturing firm and yet does work which has no bearing on the firm's products. Many valuable researches have been conducted under its roof, among which may be mentioned Dr. Power's work on Cerium Oxalate, Dr. Jowett's on Pilocarpine and on the Hypophosphites and Dr. Schryver's on Morphine Derivatives.

Cerium Oxalate.—At the last meeting for the session of the London Section of the Society of Chemical Industry, Dr. F. B. Power read a paper from the Wellcome Research Laboratories on Cerium Oxalate. Dr. Power finds that the correct formula is $Ce_2(C_2O_4)_3 \cdot 10H_2O$. The commercial oxalate does not contain much more than 50 per cent. of cerium oxalate, the remainder being mainly oxalates of lanthanum and didymium. The pure oxide is lemon-yellow in color, while that from commercial oxalate is red-brown, due to didymium oxide.

Joseph Wilson Swan, F. R. S., F. I. C., F. C. S., the president-elect of the Society of Chemical Industry, was born in Sunderland in 1828. He was apprenticed to a chemist and druggist in Sunderland, and subsequently joined the firm of Mawson & Swan, chemists of Newcastle-on-Tyne. Mr. Swan's name is still on the register of chemists and druggists, and he still holds a share in Mawson & Swan, but he is best known as an electrician. He invented inter alia the incandescent electric lamp and several improvements in photographic processes. Mr. Swan is a past president of the Institute of Electrical Engineers, a Master of Arts of Durham University and a Knight of the Legion of Honor (of France).

British Pharmaceutical Conference.—The arrangements for the annual gathering, which will take place in London on July 23 to 26, were finally decided at a meeting presided over by J. F. Harrington, held on June 20 in the Pharmaceutical Council Chamber, at No. 17 Bloomsbury Square. The president, E. M. Holmes, has met with considerable success in his efforts to promote a research scholarship in connection with the Conference, and negotiations are on foot for the scholar to work in the Pharmaceutical Society's laboratories. Already \$220 has been guaranteed annually for not less than three years by a number of gentlemen interested.

Belladonna Plasters.—The proprietor of a Liverpool drug store was on June 20 fined \$25 and costs for retailing belladonna plasters made with the old green extract and containing only one-tenth of the official proportion of alkaloid. The present official plaster is made from the alcoholic extract of the root, but the public still have a liking for the green plaster, and as these plasters bore a label stating that they were not the B. P. preparation, the decision seems somewhat hard.

Price Protection.—Boots, Limited, who have over two hundred chemists' shops in the United Kingdom, and who carry on a stationery as well as drug business, have brought actions against a number of firms in the print selling trade to prevent them from combining to cut off supplies. Boots are cutters in prints as well as drugs. The courts, however, have held in two cases that there is no ground for action and dismissed the cases. This is hopeful for the P. A. T. A. should their scheme, which is a similar one, be attacked.

Arsenic in Phosphate of Sodium.—Quite a sensation has been caused during the last week by the discovery that much of the phosphate of sodium, both simple and effervescent, in the pharmaceutical market contains appreciable quantities of arsenic as arsenate. The drug particularly in its effervescent form, is largely used as a mild aperient for children, and its contamination was discovered by a medical man, one of whose patients developed symptoms of arsenical poisoning. He tested some phosphate from the same bottle as that which

had been administered and found arsenic. He then communicated with the makers, who are well known producers of effervescent chemicals, and they examined their stock and found much of it similarly contaminated. Immediately they wired to all their customers, and also issued a circular recalling all of this particular article which they had recently sent out. The larger portion has been returned, but there is still some which cannot be traced. The occurrence is all the more serious because it is not only the effervescent salt, but the ordinary phosphate from which it was made that is at fault. It is remarkable, too, that the firm who supplied are Hopkin & Williams, a branch of Howards & Sons, whose name for the purity of their products is of the highest. The origin of the arsenic is not known outside the manufacturers. Several cases have been reported of arsenical poisoning from the impure drug, but no fatality has, so far as we know, occurred. The matter has got into the public press, and will tend to shake confidence in pharmacists generally. Summonses under the Sale of Food and Drug Act have been issued against two Paddington chemists. In one of these instances the adulteration is said to be $8\frac{1}{2}$ grains of arsenic per pound and in the other 4.

PARQUET POLISH.—Melt in the water bath 5 kilos of yellow beeswax and 10 kilos of Carnauba wax, and carefully add, when lukewarm, 45 kilos of turpentine oil and 40 kilos of benzine, with stirring. Stir until cool and fill into tin cans. This polish may also be used for refreshing stained furniture, in which case 90 kilos of the molten wax should be added instead of 45 kilos of turpentine oil.—*Seifensieder Zeitung*; (Sci. Am. Sup.)

TO DECORATE IVORY, the *Zeitschrift für Drechsler* Elfenbeingraveur recommends, as the simplest and most durable way, etching with the scraper or with the graver and subsequently rubbing with a good spirit varnish. Another process consists in coating the article with a mass composed of equal parts of white wax and mastic. Next scratch with an etching needle into this composition and allow the following mixture to act for one-half hour: Pure silver, one gramme; nitric acid, 5 grammes, and distilled water, 20 grammes. Now expose the object to the sunlight and wash off the etching ground with turpentine after a few hours, thus attaining good success with little trouble.

ONLY FILIPINO DRUG CLERK IN THE UNITED STATES.

The St. Paul Pioneer Press says that the only Filipino drug clerk in the United States, as far as can be ascertained, is Raymon Ruyes who is employed by the Sherman-McConnell Drug Co. of Omaha.

He has had a very interesting career for a boy of his years. He was born in Borongan, a small city on the eastern coast of the Island of Samar. His father is a merchant, and young Ruyes received a good Spanish education, but not being contented with the tame life of a Philippine village, and not seeing matters always as his father viewed them, he ran away from home and went to Iloilo, where he worked in a factory. He afterward enlisted in the Spanish army and was at Manila when Dewey annihilated the Spanish fleet. He was twice wounded in battle—once slightly in the chest by the fragments of a bursting shell, and once received a rifle ball through the right hand. He was taken prisoner by Uncle Sam's soldiers, and after his release came to America on a transport. He was one of the Filipinos who were on exhibition at the Philippine village during the Greater American exposition.

Young Ruyes is a bright, energetic and pleasing young man. As the accompanying cut shows, he is rapidly becoming Americanized. He is in love with the United States and says he has no desire to return to his native home. He is a devout Catholic. He is studying English and speaks it quite readily considering his short residence here. Notwithstanding his limited opportunities and being entirely among strangers, he promises to become a very useful and patriotic citizen. He says he would gladly defend "Old Glory" if opportunity offers, and there are reasons that cause one to believe he is sincere.

SELECTED FORMULAS.

Infants' Malted Food.

Powdered malt	1 ounce.
Oatmeal, finely ground.....	2 ounces.
Sugar of milk.....	4 ounces.
Baked flour	1 pound.

Lemonade Powder.

Oil of lemon.....	1 dram.
Sodium carbonate	9 ounces.
Tartaric acid	10 ounces.
White sugar, in fine powder.....	2½ pounds.

Rub the oil with the sugar until thoroughly taken up; then thoroughly incorporate the other ingredients, and pass the whole through a fine sieve.

Cherry Tooth Paste.

Clarified honey	225 grams.
Precipitated chalk	225 grams.
Powdered orris root.....	225 grams.
Powdered rose leaves.....	25 grams.
Oil of clove.....	30 drops.
Oil of mace.....	30 drops.
Oil of geranium.....	30 drops.

Chinese Tooth Paste.

Powdered pumice	325 grams.
Starch	5 grams.
Oil of peppermint	40 drops.
Carminc	1 gram.

Tooth Soap.

Castile soap	225 grams.
Precipitated chalk	225 grams.
Powdered orris root.....	225 grams.
White sugar	112 grams.
Rose water	112 grams.
Oil of cloves.....	60 drops.
Oil of peppermint.....	7 grams.

Dissolve the soap in water, add the rose water, then rub up with the sugar with which the oils have been previously triturated, the orris root and the precipitated chalk.

Syrupus Iodotannic Phosphoricus.

Iodine	1 gram.
Extract rhatany	4 grams.
Alcohol, 90 per cent.....	15 grams.
Syrup of cherry.....	400 grams.

Mix and add

Calcium acid phosphate.....	10 grams.
Distilled water, of each.....	10 grams.
Syrup of cherry, enough to make.....	500 ccm.

Lip Salve.

Paraffin	49.0 grams.
Vaseline	49.0 grams.
Oil of lemon.....	q. s.
Oil of violet, of each.....	0.75 grams.
Carminc	q. s.

Palatable Castor Oil.

Saccharin	12 grains
Oil of wintergreen (or peppermint).....	20 minims
Alcohol	4 drams
Castor oil	1 pint

The addition of saccharin, aromatic oil and alcohol has been used in making cod liver oil palatable, and is said to be very successful.—Med. Times.

Elixir of Hamamelis.

Fluid extract hamamelis.....	30 grams.
Tincture vanilla	20 grams.
Alcohol, 80 per cent.....	180 grams.
Distilled water	270 grams.
Syrup orange peel.....	500 grams.

Roter's Antiseptic Solution.

Corrosive sublimate	5 grams.
Sodium chloride	25 grams.
Carbolic acid	200 grams.
Zinc chloride	500 grams.
Zinc sulphocarbolate	500 grams.
Boric acid	300 grams.
Salicylic acid	10 grams.
Thymol	10 grams.
Citric acid	10 grams.
Water	10,000 grams.

Odontalgic Tincture.

(1) Oil of cajuput.....	2.5 grams.
Oil of organum.....	2.5 grams.
Camphor	5.0 grams.
Chloroform	40.0 grams.
Alcohol, 90 per cent.....	50.0 grams.
(2) Chloroform	50 grams.
Tincture of red sanders.....	7 grams.
Compound tincture of lavender.....	30 grams.
Alcohol, 90 per cent.....	113 grams.

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Information Wanted.—(J. G. Z.) asks "what are compound salts?"

Plating Glass and Repairing Mirrors.—(F. J. and S.) A paper on this subject appears elsewhere in this issue of the Era. See also this journal February 22, 1900, page 203.

Antipyrine and Spirit of Nitrous Ether.—(R. M. R.) Antipyrine and spirit of nitrous ether are chemically incompatible. When these substances are mixed, the ethyl nitrite of the spirit forms with antipyrine a green compound known as iso-nitroso-antipyrine, which crystallizes out of concentrated solutions. At one time it was thought this compound was poisonous, but it is not now generally considered so. In medicinal action iso-nitroso-antipyrine is said to be similar to antipyrine. All nitrites (in solution) produce this compound when mixed with antipyrine.

Pile Ointment.—(F. B. V.) (1) Melt 1 pound white wax and 2½ pounds white petrolatum. Then add 1 ounce powdered opium, 1 dram hydrastine sulphate, and 1 ounce powdered catechu. Stir well and mix thoroughly. (2) Tannic acid, 2 drams; bismuth subnitrate, 2½ ounces; aqueous extract of opium, 2 drams; yellow petrolatum, 12 ounces. (3) Yellow oxide of mercury, 5 ounces; gallic acid, 20 grains; extract of opium and extract of belladonna, of each, 10 grains; petrolatum, 1 ounce; simple ointment, 1 ounce. Apply night and morning. Other formulas may be found in previous volumes of the Era. Consult the indexes.

Potassium Bicarbonate and Fluid Extracts.—(T. W. P.) asks why the following mixture effervesces:

Potassium bicarbonate	3 drams
Tincture of hyoscyamus.....	6 fl. drams
Fluid extract of damiana.....	1 fl. ounce
Aqueous fluid extract of couch-grass, enough to make.....	6 fl. ounces

Effervescence is caused by the reaction between the tannin of the fluid extract of damiana and potassium bicarbonate, carbonic acid gas being evolved. If the aqueous fluid extract of couch-grass is "sour" it will also cause effervescence with potassium bicarbonate. Couch-grass contains easily fermentable sugars and dilute aqueous mixtures of it do not keep very well.

Filling for Dry Batteries.—(F. B. D.) The following has been recommended: Charcoal, 3 parts; mineral carbon or graphite, 1 part; peroxide of manganese, 3 parts; calcium hydrate, 1 part; white arsenic (oxide), 1 part; and a mixture of glucose and dextrine or starch, 1 part, all by weight. These are intimately mixed dry and then mixed into a paste of proper consistency with a solution composed of equal parts of saturated aqueous solutions of chloride of ammonium and chloride of sodium, to which is added 1-10 volume of a saturated solution of bi chloride of mercury and an equal volume of hydrochloric acid. The fluid is added gradually and the mass well worked up.

Creolin.—(J. J. K.) We cannot give the formula for this proprietary article which is said to be an emulsion of cresol obtained by means of resin soap. It consists of a brownish-black, syrupy liquid, which, when mixed with water, forms a more or less turbid mixture; with alcohol, ether or chloroform, it forms a clear solution. There are two chief preparations of creolin on the market.

Pearson's (from England) and Artmann's (from Germany.) According to the American Dispensatory the former is perfectly soluble in ether and in the cold, particularly in the presence of ice, deposits naphthalene in hard, white crystals; the second is but sparingly soluble in ether and contains less phenol than the English product. Both contain phenols in combination with soda, by means of which the hydrocarbons present are probably held in solution. Pearson's contains 60 per cent. of hydrocarbons; Artmann's 85 per cent.

Silver Plating Aluminum.—(L. F. B.) It is said aluminum may be plated by simple immersion in a suitable solution of a salt of the metal that is to form the plating, when this contains organic reducing agents, such as pyrogallol, pyrocatechin, hydroquinone, gallic, tannic, tartaric or oxalic acid. For such solutions the *Zeitschrift für Electrochemie* gives the following formulas: Bath for silver plating in the cold: Water, 5,400 parts; silver nitrate, 68 parts; potassium cyanide, 68 parts; ammonia water, 900 parts; hydroquinone or pyrocatechin, 8 parts. Bath for copper plating: Water, 18,000 parts; crystallized copper chloride, 450 parts; ammonia water, 540 parts; potassium cyanide, 495 parts; ammonium gallate or pyrogallate, 68 parts. The bath is used at 38° C. Bath for gold plating, used hot or cold: Water, 5,400 parts; sodium phosphate, 45 parts; sodium sulphite, 3 parts; gold chloride, 3 parts; ammonia water, 3 parts; potassium cyanide, 1.5 part; sugar of milk, 18 parts.

Foam for Soda Water.—(W. S. S.) Solution of Albumen.—This may be made by adding the white of one egg to one pint of water, stirring well, and, after standing for a short time, straining; or, better, if it is not all to be used at once, adding to 8 ounces of water, straining and adding equal quantity of syrup—the latter tending to preserve it. This can be used in the proportion of the white of one egg to the gallon of syrup, being one-half greater quantity than is usually recommended.

Solution of Irish Moss.—Take of Irish moss, 1 ounce, and water enough to make 1 pint. Wash the Irish moss in water, to free from impurities; add one pint of water and boil for five minutes, or heat in a water bath for fifteen minutes, or macerate in cold water for twenty-four hours, with occasional stirring; filter through purified cotton on a muslin strainer, in a hot-water funnel. This mucilage, it is claimed, has no more taste than mucilage of gum arabic, and is said to keep better. It can be used with soda syrup, in the proportion of from 2 to 4 ounces to 1 gallon of the syrup.

Solution of Gum Arabic.—Take of gum arabic, 8 ounces, and water, 1 pint. Wash the gum arabic with water, to free it from impurities, and add the water, stirring occasionally until dissolved. Used in the proportion of 3 or 4 ounces to 1 gallon of the syrup.

If gelatin be used as a foam producer, it must be dissolved by the aid of heat in the water used in making plain syrup. About half an ounce is sufficient for 1 gallon of syrup. Some other formulas are given in the *Era* of July 22, 1897, Page 112.

Soda Syrup for "Snow Balls" (Grated Ice Flavored.)—(J. G. C.) Various flavored syrups are used for dispensing with grated ice. The particular one to be used depends wholly upon the taste of the individual. Here are formulas collected from various sources: (1) Ambrosia—Syrup raspberry, 2 parts; syrup orange, 1 part; syrup pineapple, 1 part. Mix. Into a glass squeeze the juice of half a lime, add one ounce of the ambrosia syrup and half glassful of shaved ice; shake vigorously and fill the glass with the coarse stream of carbonated water. Serve with straws. (2) Lemon syrup, 2 fluid ounces; ice cream, 3 spoonfuls; shaved ice, $\frac{1}{4}$ glass. Mix in a 12-ounce glass, fill the latter with the coarse stream of carbonated water and serve with a spoon. (3) Juice of one orange; raspberry syrup, $\frac{1}{2}$ fluid ounce; lemon juice, 1 fluid dram; sugar, 1 tablespoonful; shaved ice, $\frac{1}{2}$ glassful. Add several fluid ounces of carbonated water, stir well, strain into an 8-ounce glass and fill with plain carbonated water.

The syrup ordinarily used and known as "soda" or "fountain" syrup is made by dissolving about 12 pounds of best granulated sugar in a gallon of water. Some

dispensers prefer the ordinary simple syrup of the *Pharmacopoeia* which, however, contains a greater amount of sugar. This syrup, if carefully made from the best quality of sugar will keep a long time if stored in a cool place in jugs which have been first sterilized and are securely corked. Syrups made with fruit juices do not, as a rule, keep so well. These should be prepared frequently and only in small quantities at a time. Syrups containing "fruit" or citric acid ferment very easily and when long kept they acquire a musty smell. In making any syrup for the soda fountain you had best prepare it only in such quantities as you are likely to use in a short length of time, say four or five days.

Manufacture and Preservation of Fruit Juices.—(J. J. K.) Pineapple, strawberry, or the juice of almost any fruit may be prepared by one of the following general processes. To begin, the pineapples should first be carefully pared, and strawberries should be deprived of the calyces. Preliminary treatment of other fruit will suggest itself readily enough. All fruit should, of course, be freed from dirt by careful washing. Then express the juice, filter and pour into champagne bottles; fill them up to the bend of the necks; cork tightly and fasten the corks down with cord or wire; then put the bottles into a kettle; set them on a double sheet of coarse paper, placed on the bottom of the kettle, and pack the bottles loosely in with hay or cloths; then fill the kettle up to the necks of the bottle with cold water; place over a moderate fire and let it boil for twenty minutes; then remove the kettle from the fire, allowing the bottles to remain in the kettle until the water becomes cold; then seal the corks and pack the bottles (sideways) in a cool, dry cellar. Prepared in this way they will keep in a perfect state for a very long time. Fruit pulps are preserved in precisely the same way, except that they have about an ounce of finely powdered sugar added for each bottle of pulp so put up.

De Brevans in "Manufacture of Liquors and Preserves," gives the following formulas: Juices of huckleberries, barberries, cherries and grapes.—Crush the fruit and pass the pulp through a horsehair sieve; crush the marc and unite and carry to the cellar. After twenty-four hours of fermentation, filter and preserve. The juice of cherries is better when a mixture of black and red cherries is used.

Orange and Lemon Juice.—Remove skin and seeds, crush the pulp and press, and mix with rye straw, washed and cut fine, to assist the separation of the juice. Clarify by repose, filter and preserve.

Quince, Apple and Pear Juice.—Peel and rasp the fruit, taking care not to touch the seeds. Press the pulp, mixed with rye straw, washed and cut fine. Clarify by repose, filter and preserve. The quinces should be fully ripe.

Raspberry Juice.—Crush the fruit and press the marc. The liquid is allowed to repose for one or two days, after which it is filtered. One-fifth of the weight of red cherries is sometimes added to the raspberries.

Another process reported to have given excellent results is this one: The clarified juice is heated to boiling in a copper vessel and then poured into a dish. Meanwhile the bottles are provided with stoppers, and are then gradually filled, a space of about two centimeters in the neck being left empty; some alcohol is then poured upon the hot liquid, and the bottle is quickly stoppered, the cork being further secured as the liquid cools. The alcohol which evaporates into the empty space is sufficient for the preservation of the juice. This process seems to be an entirely unobjectionable one.

Furniture Polish.

Boiled linseed oil.....	14 parts.
Acetic acid	6 parts.
Solution chloride of antimony.....	2 parts.
Turpentine	10 parts.

Metal Cement.

Litharge	2 parts.
Boiled linseed oil.....	2 parts.
White lead	1 part.
Copal	1 part.

Heat together until of a uniform consistence, then apply warm.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of
Era Readers.

FOREIGN.

China.

Persistent reports leave little room for doubt that all the foreigners in Pekin, envoys, attaches and missionaries, men, women and children, have been killed by the Chinese. The native Christians are supposed to have shared the same fate.

The foreign force at Tien-Tsin is hard pressed by Chinese troops, who surround the city.

Russia has assented to allow Japan to lead in crushing the rebellion in China and Germany and the other powers will co-operate in the new diplomatic move.

Prince Tuan, the usurper, is ruling with the hand of a despot and he is said to have removed from the throne the Emperor and Dowager Empress by means of poison.

A cablegram received by the State Department from Consul-General Goodnow at Shanghai declares there is imminent danger of an extension of the Boxer rebellion to the Southern Chinese provinces unless the international forces are increased.

Admiral Bruce telegraphs that all the allied admirals at Taku are working in perfect accord, and that the position of the American forces is identical with that of the other powers.

The French Minister of Marine has ordered two more cruisers to be fitted out for service in Chinese waters.

The German Emperor has ordered the ironclad cruisers Kaiser and Deutschland to be ready for sailing at once for China.

In view of the gravity of the situation in China, a German expeditionary force of volunteers is to be dispatched there. It will have the strength of a brigade of all arms. The Kaiser made a stirring speech on Tuesday of last week, declaring the intention of Germany to avenge the death of her minister at Pekin, but in official circles at Washington the action is not regarded as an official declaration of war on the part of Germany.

A special dispatch from Shanghai says that reports are current that Vice-Admiral Seymour was wounded in the fighting at Tien-Tsin.

The battleship Oregon was pulled off the rocks safely last week, and after a few repairs will be ready for service in Chinese waters again.

South Africa.

Secretary of State Reltz, speaking for President Kruger, says that there is no use discussing the question of peace, as the Boers will continue their fight for independence to the end.

A dispatch from Lorenzo Marques says the Boers claim that 800 British were recently captured, but the Boer claim is not generally believed.

According to a dispatch from Cape Town, President Kruger is reported to have moved to Nelspruit, the transport station for Lydenburg.

The British War Office reports the casualties in South Africa since the beginning of the war, exclusive of sick and wounded, to have been 29,706.

Commandant Phillip Botha, who was captured by the British near Kroonstad, May 17, has been released under heavy bail. He is to reside in Aliwal North until the conclusion of his preliminary examination.

A cablegram from London says Lord Roberts does not believe the Boer war has ended and has put a stop to the return of civilians and ordered mining men back to Bloemfontein.

The Philippines.

Two insurgent generals were captured last week in Manila, where they attempted unsuccessfully to incite an outbreak.

Other Foreign News.

The Colombian rebels are said to be in possession of the cities of Cartagena and Barranquilla, and to have attacked Panam.

Marquis Ito is making progress in the formation of a new political party in Japan with the ultimate object of forming a new cabinet.

A dispatch from the scene of the Ashanti rebellion says that all Europeans got out of Coomassie safely. Conditions in the city were terrible when the party left, thirty persons dying daily from starvation.

Sir Thomas Farrell, the sculptor, president of the Royal Hibernian Academy, died last week in Berlin. He was born in 1828.

DOMESTIC.

Politics.

The presentation of the statue of Lafayette, the gift of American school children to the Republic of France, was made in Paris on the Fourth amid great enthusiasm, the statue being accepted by President Loubet, General Porter, Commissioner Peck, Archbishop Ireland, Mrs. Daniel Manning and others spoke.

An imperial ukase was published in St. Petersburg last week providing in a large measure for the abolition of banishment to Siberia.

The Democratic National Convention met in Kansas City last week and nominated William Jennings Bryan for President and Adlai E. Stevenson for vice-president. An attempt was made to force the vice-presidential nomination on ex-Senator Hill, the Tammany men from New York insisting upon presenting his name and voting for him in spite of his protests. Hill was given a tremendous ovation when he addressed the convention declining the nomination.

The Democratic platform declares strongly against imperialism and the trusts, and declares for the free coinage of silver and gold at the ratio of 16 to 1.

Senator Jones of Arkansas was re-elected chairman of the Democratic National Committee.

Mr. Bryan is now the nominee of the Democratic, the Populist and the Silver Republican parties.

Governor Roosevelt announced last week, after a conference with Senator Hanna, that it had been decided that he should make a tour of all the Rocky Mountain States in the Fall.

The Republican State Executive Committee of Georgia has decided not to place a State ticket in the field this Fall.

Other Domestic News.

The Second, Fifth and Eighth Regiments of Infantry have been ordered to leave Cuba at once. They will be sent either to China or the Philippines, as occasion may require.

The coal operators and miners of Alabama have come to an agreement and signed a contract for the year ending June 30, 1901, based on the contract of the year just ended.

Rear Admiral Cotton has been designated as commandant of the Norfolk Navy Yard, vice Rear Admiral Barker, who takes the place of the late Rear Admiral Philip.

Reports received from 125 cities show that thirty persons were killed and 1,325 injured on the Fourth of July by accidents.

The Mexican Government has named October 22, 1901, as the date for the convention in the City of Mexico of the International Congress of American Republics. Every republic of the three Americas has given notice of its intention to be represented.

The recruiting office in Chicago is daily besieged by dozens of men who are anxious to enlist in the United States Army for service in China and the Philippines.

A trolley car on the outskirts of Tacoma, Wash., jumped the track as it was nearing a bridge over a deep ravine on the Fourth and the car plunged into the gulch. Thirty-six persons were killed and eighteen others injured.

Lightning struck the Standard Oil Company's plant at Bayonne, N. J., the night of the Fourth and nearly the entire plant was burned by a fire that raged the rest of the week. The loss is from \$2,500,000 to \$3,000,000.

The steamer Dirigo has arrived at Seattle, Wash., from Skagway. She brings ten boxes of gold dust valued at nearly \$800,000.

By a lease of the Allegheny Valley and Western New York and Pennsylvania Railroads the Pennsylvania Railroad Company has added 29 miles to its system.

Twelve persons lost their lives in a tenement house fire in Hoboken, N. J., last week.

The Santa Fe Railroad system has withdrawn from the military rate agreement of the Western roads. This breaks the combination.

The St. Louis street car strike was ended last week by an amicable agreement between the striking employees and the company.

The building trades strike in Chicago, which has practically stopped building operations in that city for the last five months, will probably soon be over. The bricklayers have submitted their claims to arbitration and it is believed that the other striking employees will follow their example without delay.

The Executive Committee of the Anti-Imperialist League has decided to call a national conference to meet in Indianapolis, August 15.

A comparative statement of the receipts and expenditures on account of the postal service for the fiscal year ended June 30, 1900, shows that the total receipts have been \$102,287,458 and the expenditures \$107,776,704, which leaves a deficit of \$5,489,246, as against \$6,610,776 for the previous fiscal year.

The insular budget which has been passed by the Porto Rican Council estimates the receipts at \$2,014,608 and the expenditures at \$1,984,645.

THE DRUG NEWS.

New York and Vicinity.

GERMAN APOTHECARIES' SOCIETY.

As an expression of its sympathy for the families of the victims of the recent fire at the piers of the North German Lloyd Steamship Company, in Hoboken, the German Apothecaries' Society of this city, unanimously decided at its meeting, Thursday evening, July 5, to donate \$100 for the relief of the sufferers. A check for that amount was given to Herman Ridder, of the Staats Zeitung, by Felix Hirseman. Mr. Ridder is receiving donations in this city.

Another matter that occupied the attention of the members at the meeting was the introduction of the following resolution by Sidney Faber:

WHEREAS, The pharmaceutical journal known as the American Druggist, in its issue of June 11, 1900, printed a communication bearing the typewritten signature, George H. Harper, Ph. G., No. 128 East 123d street, New York City, which communication contains a scurrilous article, falsely and maliciously assailing the German Apothecaries' Society of the City of New York, which article was printed solely with the design of causing discord and strife between the New York State Pharmaceutical Association and the German Apothecaries' Society, and

WHEREAS, No person named George H. Harper resides or is known at the address given, nor is a person by that name either a registered pharmacist of the city of New York or a member of the New York State Pharmaceutical Association, and

WHEREAS, A representative of the said American Druggist was informed by Messrs. Searles, Erb, S. Faber and Goldman, the parties alleged to have been in the conspiracy, that the statements in the said (Harper) letter were false and without foundation, there being no reason why the said letter should have been published. Therefore be it

RESOLVED, That the German Apothecaries' Society emphatically condemns and censures the action of the management of the American Druggist for publishing said letter. And be it further

RESOLVED, That the members of the German Apothecaries' Society be recommended to discontinue taking the American Druggist, and that a copy of this resolution and of a similar one passed at the meeting of the Manhattan Pharmaceutical Association on June 18, 1900, be sent to every advertiser of the American Druggist.

Mr. Faber prefaced the introduction of his resolution with a brief synopsis of the case, which has been reported in the drug journals. He stated that no such person as George H. Harper had been found, although it had been stated that he could be reached "through the United States mails." Mr. Faber then resigned the floor to G. Kleinau, who read a letter from the American Druggist in answer to one he had sent requesting that the journal locate Mr. Harper. The letter stated that the American Druggist had been unable to find Mr. Harper, a letter addressed to him by it having returned unopened. Mr. Kleinau also displayed a letter stamped with a special delivery stamp, which had been returned to him unopened after having been sent to Mr. Harper. He also read a signed statement from a reporter of the American Druggist, in which it was stated that no one by the name of Harper lived at the address given, but a man named Halper did. He, however, denied all knowledge of the letter.

Mr. Faber's resolution was then unanimously carried. It was then voted to secure an opinion from the Society's counsel, Messrs. Roche & Stelner, as to whether the letter could not be made grounds for an action for libel. Charles S. Erb introduced a motion that the American Druggist be excluded from the list of papers to which invitations should be sent from the society to attend its meetings and entertainments. This was passed without a dissenting vote. Mr. Hirseman stated before the matter was finally disposed of that Thomas J. Keenan, one of the editors of the American Druggist, who had attacked him at the meeting of the Manhattan Pharmaceutical Association two weeks ago, had subsequently apologized.

The meeting, which was a very interesting one, was called to order shortly after 10 o'clock by President

Schleussner. Recording Secretary Kilppert read the minutes of the previous meeting, and they were approved. President Schleussner extended a cordial welcome to S. V. B. Swann, secretary of the Manhattan Pharmaceutical Association, who was present as a guest, to which Mr. Swann fittingly responded. President Schleussner also spoke in a complimentary manner of Felix Hirseman, who was elected president of the New York State Pharmaceutical Association at the meeting in Newburg last week. Mr. Hirseman expressed his thanks in a few well chosen words.

Gustav Pfingsten read a report from extracts taken from scientific journals pertaining to chemicals, drugs and medicines; G. Kleinau gave a report on the telephone question; John Albert, Jr., read a report of the recent outing at Greenwood Lake, N. J., in which it was stated that \$73.82 was cleared; reports were also given by the delegates to the New York State Pharmaceutical Association, and Prof. Coblentz read a paper on the Revision of the Pharmacopœia. Felix Hirseman was chosen delegate to represent the society at the meeting of the N. A. R. D. in Detroit in September. F. Koch, Mamaroneck, L. I.; George Decker, No. 287 Delancey street, New York, and H. A. Herold, New Rochelle, N. Y., were elected to membership. Two propositions for membership were received.

THE DEATH OF MISS MARIE A. MAIN.

Many members of the trade were deeply grieved to learn of the death of Miss Marie A. Main, sister of Thomas F. Main, of Tarrant & Co., of West Broadway, which occurred at a cottage in the Catskills, where she had gone for the summer, early on the morning of July 2. Miss Main was widely known because of her association with the trade at the different conventions, which she attended in company with her brother, and her sterling nature and extreme affability drew to her a host of friends. Her life was devoted to her brother, and he showed her every attention. The funeral was held from Grace Church Chancery, July 4, and was attended by a large number of friends, including many members of the trade. Rev. Dr. Huntington, of Grace Church, officiated, and he was assisted by Rev. Mr. Carey, one of the assistant rectors of the church, of which the deceased was, and her brother is, each a devoted member. The interment took place in Moravian Cemetery at Staten Island.

THREE ALLEGED VIOLATIONS OF PHARMACY LAW.

Magistrate Cornell had three druggists before him in Yorkville Police Court last Thursday morning, accused of violating the pharmacy law in permitting unlicensed clerks to compound prescriptions, and he held them all in \$100 bail each for trial in the Court of Special Sessions now sitting. The accused were William C. Feely, No. 379 First avenue; Ernest A. Denicke, No. 158 Second avenue and Arthur Woodcock, of No. 371 Third avenue. The prosecution was conducted by an Inspector of the Board of Pharmacy. All of the accused persons were seen by an Era reporter last week. Mr. Denicke was very indignant over the matter and thought he was being persecuted. He said he was in the store at the time the prescription was being compounded, but was lying down for a few moments. He said he did not think he was being treated right. Mr. Feely asserted that his brother, who was not a licensed pharmacist, put up the prescription secured in his store. His brother had had over ten years' experience and was perfectly competent to compound the mixture which, as in Mr. Denicke's case, was a simple one. Mrs. Woodcock filled the prescription presented at her husband's store, he being asleep in the rear of the store at the time. She said she had over ten years' experience in the drug business, and although the prescription was a poisonous one,

she was perfectly sure it was correctly compounded. Sidney Faber, secretary of the Board of Pharmacy, stated that the evidence in the cases was strong and offered but little chance of denial. The druggists had been under surveillance for some time, but had not been troubled before because of want of direct evidence. Mr. Faber said Mr. Woodcock had been warned. It is not expected the trial of the cases will come up for several weeks. Mr. Denleke has entered a plea of not guilty.

DR. DADIRRIAN & SONS CO. GRANTED AN INJUNCTION.

On the application of the Dr. Dadirrian & Sons Co., of this city, John G. Wischerth, a retail druggist of No. 1076 Bedford Ave., Brooklyn, has been enjoined from manufacturing or offering for sale any preparation of fermented milk or other similar article under the name of "Matzoon," "Gullian's Matzoon," or other colorable imitation of the name. The injunction was granted at the special July term of the Supreme Court held in Brooklyn before Justice William J. Gaynor, who held that "Matzoon" is not an actual word, but a fanciful name applied by the plaintiff to its product. Further, the word "Matzoon" is not Armenian at all, but the result of an attempt to express the sound of the Armenian word by means of the English alphabet. It neither corresponds to the Armenian word in the number of its letters, nor does it quite conform to it in sound.

ANOTHER FORGED LETTER CIRCULATED.

Following the circulation of the letter signed George H. Harper a few weeks ago, has come another somewhat similar epistle, bearing the name of Julius Hammer, a well known druggist and prominent member of the Retail Druggists' Association. The Harper letter contained a libelous attack on the German Apothecaries' Society, while the last named document calls the attention of the druggists of the East Side to the alleged views of Sidney Faber, a member of the German Society and well known to the trade. This letter is also a base fabrication not only in its substance, but the name of Mr. Hammer is forged. On learning of its existence, Mr. Hammer immediately wrote to Mr. Faber expressing his ignorance of the letter, and assuring him that he held the highest opinion of him. A search is being made for the writer.

NOTES.

—A. Siebelewsky, who keeps a drug store at 280 Bleecker street, is telling a good joke at his own expense. Mr. Siebelewsky, whose name is rather long and the pronunciation of which to the uninitiated is difficult, believes in signs. He has a beautiful one in white enamel on the outside of one of his large display windows. Unfortunately the gamins in the neighborhood also have a fondness for signs, especially when they are within easy reaching distance and made of porcelain. The letters, they say, can be used to spell so many different words. Mr. Siebelewsky's sign appealed to them because it contained a lot of letters, so one evening when the darkness was thicker than usual and offered excellent opportunity for low-down deeds, several boys picked off a few syllables from Mr. S.'s sign. As is characteristic of the druggist, Mr. S. was on the alert and nabbed the boys before they could make away with their plunder. He turned them over to an officer who requested him to appear in court the following morning. The judge asked the plaintiff's name. The policeman turned appealingly toward the druggist, who stepped on the bridge and informed the judge. Evidently the shock was too great, for his honor did not quite appreciate the first contact and asked for a second, which was given with the same result. He then called upon the Ph. G. to spell the name, which was done. For a few moments thereafter there was silence, while the judge looked up his memoranda on the complaint. He then asked Mr. Siebelewsky if it were true the boys had been stealing letters from his name. He received an affirmative answer; he then said, "Well I think you ought to be mighty thankful that these boys took it upon themselves to take a few letters off your name, for it certainly will stand it. The prisoners are discharged." Mr. Siebelewsky appreciates this joke, though on himself, as much as any one he has told it to.

—Judge Adams, sitting in the United States Circuit Court at St. Louis, Mo., handed down a decision on June 30 in the case of George J. Seabury, of the firm of Seabury & Johnson, of this city, against Peter J. Singer, to the effect that a debtor must pay his debts, if his property is worth the debt, whether he has been declared a bankrupt or not. The case was begun in August, 1898, shortly after Mr. Singer had filed a petition in bankruptcy. Mr. Seabury brought his action to secure payment of a loan of nearly \$10,000 that he complained had been secured by misrepresentation. Mr. Seabury filed a protest against Mr. Singer's discharge from bankruptcy, holding the evidence of the loan as sufficient grounds for a stay in proceedings. Mr. Singer was declared a bankrupt in February, 1899, and the following December was discharged from all debts and claims which were made provable by the bankrupt act against his estate. Judge Adams, in his opinion, declares that Mr. Singer's release from his debts does not debar those made on the grounds of fraud. Defendant's counsel held that claim could not be recovered unless a judgment was obtained. Despite the holding of the Court, Mr. Seabury does not anticipate recovering his loan, as there are no available assets in sight.

—Commodore Tompkins, of Schieffelin & Co., is endowed with a most remarkable memory for faces and names. There is hardly a day passes that some test of its powers is not made. A few days ago a young man walked into Schieffelin & Company's store and as soon as the Commodore sighted him he was up with a "How'd do, Ben, I haven't seen you in seventeen years before. How are you, anyhow?" After the usual fraternal greetings and the young man had told the Commodore that he was a full-fledged M. D. with an excellent practice up town in this city, the Commodore related his last meeting with the young man. At the time the young man was working as clerk in a store in Thomastown, Conn., the proprietor of which bought goods of Schieffelin & Co. through Commodore Tompkins. This was in 1883, and the Commodore's friend was then nothing but a mere boy. When he greeted the Commodore the other day he had changed to a man, but nevertheless the transposition was not complete enough to disguise his identity to the keen perceptiveness of Commodore Tompkins' memory.

—It is possible within the next few days that another conference between the managers of the New York Telephone Company and the Conference Committee of the four pharmaceutical associations of Greater New York, of which G. Kleinau is chairman, will be held. Mr. Kleinau received a call during the last week from Mr. Walker, of the New York Telephone Company in relation to the matter. Mr. Walker told Mr. Kleinau that his company had agreed on a new scale of prices for druggists, and he said an arrangement would be proposed whereby the druggists would receive a larger commission from the pay stations.

—Herman Heinritz, of the old established drug house of J. Heinritz, Holyoke, Mass., who was in this city last week, took home with him what he considered a memory of a fortunate escape. Mr. Heinritz came here with his sister, who left on the Graf Waldersee Saturday morning, June 30, for Europe, where she will pursue a course of study. The ship sailed from the North German Lloyd docks, which were destroyed by fire the same afternoon and evening, and the fact of the Graf Waldersee sailing in the morning Mr. Heinritz considers quite providential, as a delay might have meant the death of his sister.

—D. Bellamore, representing the National Transport Co., Ltd., of Buenos Ayres, South America, was in the city last week. Mr. Bellamore came here to examine the quality of American drugs with an idea of importing them for use in his country. He said England controlled the trade there now and the people were not at all satisfied with the drugs on the market. From his examinations thus far, Mr. Bellamore has expressed himself very well pleased with the quality of our products. It is possible he will make arrangements with some of the firms here to send drugs to Buenos Ayres.

—Among those who called on the trade last week were: J. T. Higby, Milford, Conn.; E. Opperman, Cleveland, O.; J. H. Barr, Irvington-on-the-Hudson; H. B. Hargrave and Wm. Glimore, Cincinnati; Mr. Hepburn, of the firm of Hepburn & Co., Princeton, N. J.; W. O. Ristman,

Madison, Wis.; George Reiman, Buffalo; W. L. Briner, Princeton, N. J.; W. C. Schuler, Cincinnati, O.; C. W. Rogg, Des Moines, Ia.; T. R. Sutherland, representative of Parke, Davis & Co. in Western Virginia; Schuyler Rust, of Wm. Rust & Son, New Brunswick, N. J., and Hiram Merritt, of Newburg.

—It may be of interest for the trade to know that the exportation of drugs and chemicals from the United States to the West Indies has, in the last year, exceeded that to any other country. Cuba and Porto Rico have been the heaviest consumers, the former receiving \$405,443 worth of chemicals and drugs, and the latter \$52,968 worth. Hawaii and the Philippines have also been prominent figures in the trade, and the shipments sent them are not to be scoffed at; to Hawaii \$185,887, and the Philippines \$45,595.

—Robert R. Lampa, acting for the firm of Lehn & Fink, has secured an attachment against Walter B. Tongue, a druggist at Ninety-second street and Lexington avenue, for \$1,250, and the writ has been placed in the hands of the sheriff. The attachment was obtained to realize for goods Mr. Tongue has purchased of the firm. It is said Mr. Tongue has given his wife a bill of sale. He has been in business since 1887.

—The British pharmacists who attend the meeting to be held in London next Tuesday, will have an opportunity to study American pharmaceuticals at close range, for a number of firms in this country have sent over exhibits. A large shipment was despatched from the New York offices of the William S. Merrell Chemical Company last week for the meeting.

—The N. J. & H. J. Meyer Company received letters of incorporation from the Secretary of New York State last week to engage in the manufacture of grocers' and druggists' specialties. The principal offices are located in this city, and the capital of the firm is \$15,000. The promoters are H. J. and M. J. Meyer and A. H. Sichel, all of this city.

—Hiram Merritt, of Theodore Merritt's Sons, wholesale druggists, Newburg, says somebody in attendance at the recent meeting of the New York State Pharmaceutical Association lost a button badge of Mecca Temple. It is now in the possession of E. M. Murfield, of Newburg.

—The American Medical Protective Society was incorporated under the laws of New Jersey last week. The offices of the concern are located in Jersey City, and the capital stock is given at \$100,000. The promoters are F. E. Baldwin, W. E. White and J. R. Crandell.

—F. W. Kinsman, who owns drug stores at 125th street and 39th street and Eighth avenue and Twenty-fifth street and Fourth avenue, left Saturday on the North German Lloyd steamer "Trave" for Europe, where he will remain for the next two months.

—Quite a sharp rise has been noted in the last ten days in the prices of oil anise, oil cassia, rhubarb, nutgalls and anise seed. This is undoubtedly due to the unsettled condition of affairs in China. Advices say there is a likelihood of a still further advance.

—President Myhr, of the Alumni Association of the Brooklyn College of Pharmacy, is endeavoring to arrange for an alumni field day to be held before the summer is over. The idea has been favorably received by the members of the association.

—The baseball team of McKesson & Robbins was defeated at the baseball grounds in Prospect Park by a team from the Quartermaster's Depot of the United States Army of this city, last Saturday afternoon. The score was 16 to 15.

—The Hunter Drug Company is the name of a firm incorporated under the laws of this State a few days ago to do business in Brooklyn. The capital stock is \$2,150, and the promoters are E. E. Proper, James A. Hunter and Albert P. Moore.

—Warren Bradt, of Albany, was in town for a few days last week. Mr. Bradt was elected a member of the All-State Board of Pharmacy at Newburg during the recent meeting of the New York State Pharmaceutical Association.

—Fire did \$2,500 worth of damage to the drug store of Richard Savin, at No. 231 Avenue B, early on the

morning of July 1. The blaze is supposed to have been caused by exploding chemicals.

—H. Kauffholz, representative of Lehn & Fink for part of New York City and along the upper Hudson, has been transferred to the central and Western States, where he will begin work July 16.

—Rufus E. Smith, druggist of Syracuse, was the guest of Mr. Cubit, of the firm of Reid, Yeomans & Cubit, during a few days last week. Mr. Cubit was formerly employed by Mr. Smith.

—Richard Scheverckhardt, of Scheverckhardt Bros., druggists of St. Louis, visited friends in this city for a few days last week before leaving for Europe, where he will remain some time.

—Charles Stuckert recently purchased the drug store of Dr. Chas. P. Britton at Trenton, N. J., where he was head clerk for eighteen years. This store is said to be one of the finest in the State.

—C. O. Bigelow, druggist at No. 102 Sixth avenue, sustained the loss of the awning in front of his store, July 1, the fire having been caused by a firecracker. The damage was about \$25.

—The Bergen Point Chemical Company's works were destroyed in the fire which visited the property of the Standard Oil Company in Bayonne, N. J., last week.

—The Apothecaries' Bicycle Club have selected Rockaway as the objective point of their weekly run to-day. Dinner will be served at Schilling's Hotel.

—The Pharmaceutical Clerks' Association will enjoy an outing to Bergen Point next Wednesday afternoon. The trip to the Point will be made on bicycles.

—Charles Weisz, buyer for McKesson & Robbins, is enjoying his vacation this year at Five Islands, Me., accompanied by his wife and children.

—Two visitors at the Drug Club last week were Prof. L. C. Corbett, of Morgantown, West Va., and Prof. B. W. Kilgore, of Raleigh, N. C.

—D. A. Randall, representative of Lehn & Fink, has taken New York State for his territory. He was formerly in Rhode Island.

—Parke, Davis & Co. announce the receipt of a shipment of hand-picked lavender flowers and sweet basil leaves from France.

—Walter L. Filmer, of the St. Louis branch of the firm of Dodge & Olcott, of this city, is here on his summer vacation.

—J. Jacobson, druggist at No. 51 Eighth avenue, is confined to the German Hospital with an attack of typhoid fever.

—Wm. M. Warren, general manager for Parke, Davis & Co. visited the local branch of the firm a few days last week.

—G. G. Heller, druggist of East St. Louis, Ill., called on different members of the trade during the last week.

—B. B. Hamlin, manager for Wm. R. Warner & Co., of this city, spent the Fourth with friends in Philadelphia.

—For the week ending July 3, \$90,487 worth of drugs was sent from this port to other countries of the world.

—E. C. Fowell, Western representative of Schieffelin & Co., is enjoying a six weeks' vacation in Europe.

—The Gramercy Pharmacy was recently opened at Twenty-second street and Third avenue.

—W. T. R. Mersereau, salesman of Schieffelin & Co., is enjoying his vacation at Ortle, N. J.

FREDERICK HUMPHREYS.

Dr. Frederick Humphreys died at his summer home, "The Gables," at Monmouth Beach, N. J., Sunday, July 8. Dr. Humphreys was the organizer of the Humphreys Homeopathic Remedy Company, at 109 Fulton street, and retained an active interest in the affairs of the concern up to the time of his death, although he was over eighty-four years of age. The funeral was held at Monmouth Beach Tuesday afternoon and the body was taken to Auburn, N. Y., the former home of the deceased, for interment. A more extended notice will be given next week.

IN AND ABOUT BOSTON.

State Inspector of Drugs and Foods a Busy Man.

Boston, July 7.—Under State inspection, close watch is being kept, here and there, in the matter of adulterated drugs, medicines and foods. Inspectors appear without warning. Malden, Medford, Lynn and nearby places have been visited, and now Clinton has come in for its turn. A State inspector recently in that place went into the District Court and swore out complaints against three men, two for the sale to a minor of candy containing syrup which on analysis yielded more than the lawful limit of alcohol, and the other on the charge of selling adulterated drugs. His visit and its results created quite a sensation among Clinton dealers. No arrests were made, the parties being merely summoned to appear in court to answer to the charges brought against them. It appears in one case that a woman purchased of Albert E. Beach, clerk for T. D. Tate, druggist, an ounce of glycerine and one-half an ounce of tincture of iodine. The charge against Mr. Beach alleges that the two substances were both below the standard fixed by the Pharmacopœia. The penalty following conviction in the case of a sale of adulterated drugs is a fine not exceeding \$400. For sales of the candy composition alleged, the fine is not less than \$50 nor more than \$100. In bringing action against the clerks, the State officer said that the law requires that action be brought against the persons actually making the sale, rather than against the proprietor of the store.

NOTES.

—With the exodus of hundreds of their customers to the country, the Theo. Metcalf Company, this city, has resumed its practice of making a specialty of the filling of prescriptions and orders for medicine from summer resorts. They have a clerk specially designated to fix the time in advance for all deliveries, and he is expected to be fully informed as to all outgoing trains and boats, and it is his first duty to see that deliveries are made in time for the very first post office or express connections, after an order or prescription has been received. —The court at Plymouth has been wrestling with the problem of whether extract of malt is a medicine or a beverage. The question arose in the case of Everett C. Hall, a large wholesale grocer of Brockton, who was accused of keeping intoxicating liquors with intent to sell. The defense claimed that this "liquor" was this extract, and as such was a medicine and could not properly be classed as a beverage. The jury disagreed, and the defendant was discharged.

—Among corporation returns to the Massachusetts Commissioner of Corporations is that of the Jaynes & Chapin Company, of Boston, filed through its treasurer, C. P. Jaynes. It gives these figures: Cash and debts receivable, \$1,217; manufactures, merchandise and fixtures, \$18,640; profit and loss, \$18,820, a total of \$38,677. Against these there is a capital stock of \$20,000, and debts, \$18,677, total, \$38,677.

—Soap swindlers have been working Lawrence shopkeepers. They have been selling soap with "Wells Soap & Perfumery Co., Boston, Mass.," and "Cleveland, Ohio," printed on the wrapper, but have represented themselves to be agents of the Larkin Soap Company, of Buffalo, N. Y. The company employs no traveling agents, so that all are swindlers who so represent themselves.

—Talbot's pharmacy, at the corner of Dover street and Massachusetts avenue, in Cambridge, is soon to receive a Government commission to make it a sub-station of the Boston post office. This will be a great convenience for residents in that neighborhood.

—Andrew G. Weeks, of Weeks & Polter Company, is at his summer home, the Roberts cottage at Beverly Farms, Mass. He recently has been elected a member of the Essex County Club, the great country club of that section of the Massachusetts shore.

—P. D. L. Elswick, formerly assistant clerk in Eayrs' drug store at Jamaica Plain, has obtained a position in the Marine Hospital at Chelsea, where he will be the apothecary. Mr. Eayrs recently died.

—Friends and customers of Frank A. Epstein, the Tremont Row druggist, this city, are heartily congratulating

him on his recently-announced engagement to Miss Jennie M. Brodie, of the West End.

—A. A. Burnham, Jr., Dudley street, and M. W. Somers, Blue Hill avenue, Roxbury, now have sub-stations of the Boston post office. They were installed July 1.

—W. H. Reagen, of Cunningham's Pharmacy in Cambridge, is thinking of emigrating to New York State to continue there the pharmaceutical profession.

—H. B. Merchant, a Clinton druggist, has established his family at Washacum Park, Sterling, where a cottage has been secured on the lake at that place.

—Morris G. Roche, Ph. G., chief pharmacist at the Massachusetts State Hospital for epileptics, at Monson, has been enjoying a two weeks' vacation.

—Alfred W. Tilton, a druggist at No. 11 Parmenter street, North End, is among those now serving on the jury in the Storli murder trial.

—Mr. Whalen, recently head clerk for M. W. Somers, Roxbury, has taken a similar position in New Bedford.

—E. M. Smith, Waltham, will move his store to the new block at Main and Common streets, about September 1.

—The Danforth pharmacy, Watertown, has changed hands, Mr. Danforth retiring on account of ill health.

—The drug business of Charles W. Brown, at Ipswich, is to be sold, as the owner is to retire from business.

—Lee Smith has purchased the East Lynn pharmacy formerly managed by Mr. Kenyon.

—Waltham druggists are having a cut rate war on cigars and patent medicines.

—Henry C. Hall, of Hall & Lyon, Waltham, is attending the Paris Exposition.

—Mr. Sawyer, of Bacon & Sawyer, Waltham, is away for a two weeks' vacation.

—The Eastern Drug Co. expects to move into its new quarters about July 15.

—Ellis Joscelyn is the new manager of the South Common pharmacy, Lynn.

PHILADELPHIA.

Philadelphia Association of Retail Druggists.

Philadelphia, July 7.—The Philadelphia Association of Retail Druggists held its regular monthly meeting yesterday. About sixty members were in attendance. The financial secretary reported the receipt of \$65 in dues, which he had turned over to the treasurer, who reported a balance of cash on hand amounting to \$729.54. The Committee on By-Laws, through its chairman, reported the completion of the work of revising the constitution and by-laws of the association, which had been printed and were now on hand for distribution. Applications for membership were received from T. A. Tall, J. J. Ottinger and Frederick Radefeld. The reports of delegates to the Atlantic City meeting of the American Medical Association and the Pennsylvania Pharmaceutical Association were presented by Dr. C. B. Lowe and James C. Perry. W. L. Cliffe reported progress in the phenacetine litigation of Dickerson versus Maurer, and he stated the records were now completed and printed, and the case had been ordered for the October term of court. The question of an increase in the present retail prices of proprietary articles was taken up and fully discussed. In this discussion it was quite generally conceded that it would be impossible to obtain full prices for patents in Philadelphia under present conditions, and that the best thing to do would be for the druggists to adopt a uniform advanced price at a reasonable percentage of increase. The association then adopted a resolution recommending the following prices: 25 cents, 45 cents and 85 cents for 25-cent, 50-cent and \$1 articles respectively. The Executive Committee was instructed to have every druggist in the city visited, and that he be asked to affix his signature to an agreement embodying the above scale. The association adjourned to meet Friday, August 3.

NOTES.

—"It is time," said a humanitarian druggist, "for the State to attempt to regulate the sale of fulminates, gun-powders, nitro-glycerines and the like, as well as poisons and a few other comparatively harmless drugs. If there

is a law now, it is impossible to enforce it, or to keep the explosives out of the hands of irresponsible people. The idea of selling dynamite on fruit stands in the brick-throwing and pistol shooting slums, is a little too fierce. Philadelphia's casualty list of nearly 400—10 killed outright and the balance more or less crippled for life—is too high a price to pay for fun. There is no use in framing a law unless it can be forced. I do not advocate the idea of the retail drug trade carrying toy pistols and fireworks as a side line, but if the State wants a particular and responsible trade which understands the handling of all sorts of dangerous chemicals and instruments, I for one will be content to supply the Fourth of July fiends with their bombs and noise producers for a consideration, and I will see to it that infants in arms and male maniacs of every age will be unable to purchase at the explosives counter."

—There has been considerable newspaper agitation recently in this State to the effect that potash, an important chemical in all vegetable and animal economy, is growing so scarce that fertilizers containing it will soon be prohibited on account of price. State Geologist Henry C. Demming denies this, and claims that there are plenty of potassium-containing rock deposits in Pennsylvania. A species of niter containing potash is found in nearly all of the numerous caves of Centre county. These deposits average over 40 per cent. potash. In the southern parts of Chester and Lancaster counties, there are very large deposits of a feldspar which yields from 10 to 16 per cent. potash. A mineral named leucite, a little harder than limestone and of a greyish color and containing potash, is found in the igneous or volcanic strata of the state. It has not yet been quarried on a commercial scale. Muscovite, a kind of mica readily ground and easily utilized as a fertilizer, is found in twelve counties of the state. Here is a chance for some druggist of a geological turn to make his fortune.

—Among the numerous valuable resolutions submitted and approved at the recent meeting of the Pennsylvania State Pharmaceutical Association, was one presented by H. C. Byers, of Pottstown. Mr. Byers desires that the Association introduce a bill at the next session of the Pennsylvania legislature to amend the military code by making the hospital steward of each regiment of the state militia a ranking officer. The resolution was thought to be a good one, and the matter was referred to the legislative committee of which W. L. Cliffe, of Philadelphia, is chairman. Mr. Cliffe will introduce a bill modeled on the lines of the one recently passed in New York.

—Robert McNeil, late of Howard and York streets, has moved to his new quarters at Kensington avenue and York. The new shop is most elegantly appointed and is one of the largest among the Northern contingent. The interior is metal ceilinged, mosaic floored, while the York street side is one vast display window, and the popular Mr. McNeil is an artist in advertising.

—J. P. Frey, whose home is located at Sixteenth and Tasker streets, is making extensive alterations in the interior and exterior arrangements of his pharmacy. When the workmen have left and the last coat of varnish is applied, Mr. Frey will own one of the most attractive stores of the lower section.

—Nearly \$200 was obtained by voluntary subscription at the Ebensburg meeting for the purpose of purchasing an oil portrait of the late Charles A. Heinitsch, of Lancaster. The picture, when painted and suitably framed, will be hung in the museum of the Philadelphia College of Pharmacy.

—Jacob E. Lehman, the well-known druggist of Camden, is dead. Mr. Lehman kept the store over which he died at Eighth and Market streets, Camden, for twenty years. He was a native of York, Pa., and was about 58 years of age.

—Long's pharmacy, Twentieth and Diamond streets, was damaged by fire on the Fourth to the extent of \$300. The famous old mixture of chlorate of potash and sulphur did the business.

—G. B. Galton, D. E. Bransone's right bower and city and nearby hustler, is away on his two week's vake. He will do the mountains.

—It is reported that a Mr. Cohen, drug clerk and grad-

WALTHALL & PEMBERTON, HORSE CAVE, KY.

uate, will soon open a store in Chester, Pa., the location of which is not yet known.

—Baer & Snyder have just completed the outfitting of a new store at Sixteenth and Federal streets. This is their third establishment.

—P. M. Kelly, Twentieth and Federal streets, is in Paris and expects to remain abroad six weeks.

BALTIMORE.

A Census of Drug Stores.

Baltimore, July 6.—After considerable delay the State Board of Pharmacy has at last gotten down to working order, the vacancy caused by the death of J. H. Hancock and his reappointment by Governor Smith last spring in consequence of a misunderstanding, having been filled by the nomination of Ernest Quandt, a popular young druggist of South Howard street. As at present constituted, the board consists of J. Webb Foster, Ernest Quandt and D. R. Millard, the latter being the secretary. The board is determined to secure compliance with the pharmacy law for Baltimore City, which requires all persons engaged in the business to have passed an adequate examination or to place competent clerks in charge. With this end in view the municipal police force was prevailed upon to take a census of all the drug stores in the city. This work was completed a few days ago and showed that there are 304 retail pharmacies here. The data supplied by the police will be used for purposes of comparison with the records of the board. In this way discrepancies between the number of druggists registered and those in actual pursuit of the profession can be discovered, and the board will then be in a position to take further steps with a view to securing the vindication of the law. A special meeting of the Baltimore Retail Druggists' Association is to be held in a few days to decide whether the organization as such will assist the board in its work.

Two State Association Meetings.

Baltimore, July 7.—Announcements of the annual meetings of the North Carolina Pharmaceutical Association and the Virginia Pharmaceutical Association have been received here. The first-mentioned organization will be in session at Wilmington on the 17th and 18th inst. The selection of the meeting place is regarded as excellent and the hospitality of the people of the town will be extended in the most generous measure. Applicants for examination by the Board of Pharmacy are notified at the same time that this board will hold its sessions for the examination of candidates at Wilmington on the morning of July 17, one day earlier than the State Association meeting. Reduced hotel and railroad rates have been

secured. The Virginia Association will assemble on July 17 at Ocean View, continuing in session on the 18th and 19th. The Entertainment Committee has extended invitations to druggists all over the State, and every attention to representatives is promised. There will be a number of features for the entertainment of the members and their guests, among them athletic and other contests for both ladies and gentlemen. The wholesale druggists and dealers in druggists' sundries have contributed valuable prizes.

Trade League Matters.

Baltimore, July 3.—Nothing has yet been done with respect to carrying out the aims and purposes embodied in the formation of the Trade League at the last annual meeting of the Maryland Pharmaceutical Association. As stated at the time, the League was designed as a means of giving proper consideration to matters affecting the relations between the wholesalers, the retailers and the manufacturers of pharmaceuticals, and to this extent relieve the proceedings of the State Association of a mass of clogging detail. Without such a body the business concerning all three branches of the trade cannot well receive adequate attention. In order to prevent the league from becoming unwieldy it was decided that all the executive business should be placed in the hands of a committee of five members, four of them to be appointed by the president and the fifth to be chosen by the other four. It is almost certain that Dr. R. E. Lee Hall, the energetic secretary of the Baltimore Retail Druggists' Association, will be chosen.

Maryland College of Pharmacy.

Baltimore, July 7.—An adjourned meeting of the Maryland College of Pharmacy was held June 28. The action taken last month with reference to certain changes in the college curriculum and relative to the conferring of the degree of Doctor of Pharmacy upon graduates was confirmed. The selection of H. P. Hynson for the chair of practical pharmacy and dispensing was also approved, and the changes rendered necessary thereby were ratified. Charles H. Ware was elected secretary of the college in place of Mr. Hynson, and H. A. Brown Dunning was chosen to fill the vacancy on the Board of Examiners.

Maryland Association Meeting Echoes.

Baltimore, July 7.—The Baltimore druggists who attended the annual meeting of the Maryland Pharmaceutical Association at Hagerstown speak encouragingly of the interest developed at the sessions. One of the most important topics considered was the relations between the Maryland Association and the National Association of Retail Druggists. The former being composed of retailers, wholesalers and jobbers, it was suggested that the two latter branches of the trade might object to the payment of the per capita tax levied by the national association. These considerations gave rise to the suggestion that a commercial league, consisting of representatives of the various interests represented in the State Association be formed, and that this league deal with all questions affecting the relations between the different branches of the drug trade. The suggestion was approved by the association, which passed resolutions indorsing the National Association of Retail Druggists and recommending its members and other retail pharmacists of the State to become identified with the Commercial Protective League or some other body affiliated with the N. A. R. D.

The committee having the matter in charge will consist of R. S. McKinney, Taneytown, chairman; W. C. Powell, Snow Hill; H. P. Hynson and John G. Beck, Baltimore. The fifth member is yet to be selected, but it is said that R. E. Lee Hall, secretary of the Baltimore Retail Druggists' Association, has been decided on. The Maryland Association also indorsed the action of the American Pharmaceutical Association with reference to elevating the pharmacists in the United States army and navy, and directed the Committee on Legislation to prepare a bill which, if enacted by the Maryland General Assembly, will give druggists in the State militia organizations the rank of officers.

NOTES.

—The last session of the Wedgewood Club was held on June 29 at Thompson's Seagirt House, Point Breeze, where the members discussed soft crabs, fish and mosquitoes with equal impartiality. J. Forest Cochran presided. It was resolved to hold the next monthly dinner on board some bay steamer and invite the ladies. J. Webb Foster, J. F. Hancock, J. E. Hengst and O. C. Smith were appointed a committee to make the necessary arrangements.

—The Castner Electrolytic Alkali Company has been incorporated at Alexandria, Va., to manufacture soda, salt, bleaching powder and other chemicals, with capital stock of \$2,000,000, and James M. Edwards as president; John G. Agar, vice-president; John H. Ingram, treasurer, and John F. Van Name, secretary.

—Fred. Beane, a Baltimorean, but for several years past in the employ of the Dallas Drug Company, of Dallas, Tex., as a chemist, will establish himself in the retail drug business in this city as soon as he finds an eligible location.

—J. Adam Sohl, a Baltimore druggist, has been elected national treasurer of the National Council of the Junior Order of United American Mechanics, which convened recently in Philadelphia.

—A flash of lightning on Thursday afternoon of last week burned out the electric motor in W. M. Fouch's pharmacy, Charles street and North avenue, but did no other damage.

—L. E. Galloway opened his new pharmacy at Lanvale and Monroe streets, June 25. He formerly clerked for Paul C. E. Hauser, Fayette and Poppleton streets.

—Among the visitors in town last week were A. T. G. Hodnett, of York, Pa.; Dr. J. R. Zacharias, of Cumberland, Md., and Dr. D. E. Wolff, Cambridge, Md.

—Max Kramer, for a number of years clerk in the pharmacy of L. C. Horn, has discontinued his services there.

—The catalogue for the coming Fall and Winter sessions of the Maryland College of Pharmacy is about to be issued.

—C. J. Mauney, of Albemarle, N. C., and W. J. Burgess, of Newport News, Va., were in Baltimore last week.

—J. O. Harrison has opened his pharmacy at the corner of York road and Twenty-second street.

—J. S. Richardson, a Belair (Hartford County) druggist, was in Baltimore recently.

CLEVELAND.

Cleveland, July 7, 1900.

—A young man said to be W. E. Lange, twenty-three years old, of No. 28 Harper street, was found in a stupor on Bond street opposite the Hollenden Hotel, by Louis J. Bezena, former police court messenger, at 5:55 o'clock, Tuesday morning. It was discovered that he was suffering from morphine poisoning. At the end of three hours treatment he was pronounced to be out of danger. When sufficiently recovered he told the physician that he took between twenty-eight and thirty grains of morphine for the purpose of ending his life, because of financial troubles. At the hospital he claimed his name is William Lampson and that his home is at No. 95 Allen street. He is employed as clerk in a drug store, corner of Ontario and Prospect streets. Inquiry there elicited the information, however, that his name is Lange. His employer refused to discuss the matter any further.

—The Northern Ohio Pharmaceutical Association is gaining in strength every day. It now numbers nearly 300 members, and includes every druggist in Northeastern Ohio. It is the intention to push the organization of druggists until every one north of Columbus is included, and this ought to bring the membership up to 1000. It has been suggested that a Southern Ohio Association should be organized on the same plan and in this way every druggist in the State would be an aggressive enthusiast of the N. R. D. A. The effect of the above Association is being strongly felt here, the department stores are finding it more and more difficult to get supplies, and the sale of a large number of articles to retail druggists only, is the rule now. Not only this, but a price list includ-

ing a large number of the more common selling galenicals has been issued and is universally followed.

—The annual meeting of the Alumni Association of the Cleveland School of Pharmacy, was held on July 2, in the new lecture room of the School. The class of 1900 joined the Association, and a very interesting meeting resulted. The following officers were elected for the ensuing year: President, Edward Rabenstein; Vice-President, Orin R. Cory; Recording Secretary, M. Louise Carroll; Financial Secretary, Edward F. Hellwig; Treasurer, Frederick J. Wood; Executive Board, three years, Carl Flandermeier; two years, H. W. Dicker and F. H. Wendt; one year, M. J. Knauer, J. L. Noonan.

—E. M. Quackenbos and M. H. Howells, parties who imitated Peruna and other patent medicines, were arraigned before Judge Stone Thursday, and were ordered turned over to an agent of the State of Pennsylvania, to be taken to Scranton, where they are wanted to answer to an indictment charging them with forging a trademark. The court ordered them to be held in jail for three days until the fees in their cases are paid and transportation is furnished for the prisoners.

CINCINNATI.

Red Fire Causes Two Fires.

Cincinnati, July 7.—Red fire was the cause of two costly fires Tuesday, July 3. The first occurred at the drug store of John Bartholomew, Fourth and York streets, Newport, Ky. Henry Whitehouse, the clerk, was mixing a lot of about 25 pounds and left it to attend a customer, and when a few feet away from it, it exploded, and damaged the store to the extent of \$300. The entire front windows were blown into the street, but fortunately nobody was injured. The second and most disastrous occurred at Ford's drug store, corner Eighth and Vine streets, about 7.30 P. M. Mr. Ford had a number of pound packages of red and green fire on his counter ready for sale which, through chemical reaction, ignited. The entire north part of the store was burned completely. The south wall containing chemicals and tinctures, was damaged by heat, which was so intense as to melt the wax holding the labels on the shelf bottles. The damage sustained is figured at \$1,000. Both stores were fully insured.

NOTES.

—One of the largest cut-rate grocery concerns in this city, who operate stores in all parts of the city, recently decided to open soda fountains in conjunction with groceries at cut-rate prices. Ice cream soda was advertised at two glasses for five cents in large letters in front of all the stores, but the venture proved a failure owing to the noxious mixtures served. Artificial syrups were used, and in one of the suburban stores every clerk in the store drank so much of the poisonous article that all were sick the next day. The head clerk confided to the writer that the receipts from the sale of soda the first day amounted to eighty cents, and that the soda tank and very nearly all the syrups were empty. The druggist at the opposite corner was jubilant over the sales of paregoric etc. to the same clerks, and also the fact that his customers now praise his soda and are willing to pay legitimate prices for a good article.

—Frank Peyton, the druggist at Manchester, Oh'io, was an important witness in the Thomas arson case, which is being tried here. Mr. Peyton is a brother-in-law of Thomas, and the prosecution claimed that the latter had shipped him various articles at different times which were contended by Thomas were destroyed in the fire. Mr. Peyton testified that during December, 1899, he received 270 cases of bottles of various sizes, also a barrel of fish oil containing 55 gallons. He had never ordered the goods, but received a letter from Thomas, stating that he would make a very low figure on them and that he (Thomas) was anxious for him to keep them. Mr. Peyton's testimony was for the purpose of showing that Thomas' sales were not real.

—Heineman's drug store, at Liberty and Elm streets, was the center of much excitement about midnight June 20. Mrs. Heineman was awakened by the slamming of the screen doors and hurriedly aroused Mr. Heineman, who investigated and found the door open. A neighbor

passing by called a patrol wagon, but after a thorough search of the building no burglars were found. Eddie now has electrical burglar alarms on all the doors, and has a small sized cannon under his pillow at night.

—Ralph Freiberg and other druggists left with The Iroquois Club for Lake Maxinkuckee on July 5 for two weeks' camping. Charles Diehl, Jr., representative for the Pictorial Printing Co., also went with the other members whose names appeared in the Era a few weeks ago.

—Frank Haeberly has quit Wetterstroem's pharmacy in Cumminsville, and will clerk for Henry Rapp, at Longworth and Olum streets.

—Henry Stegemiller, druggist at the corner of Clark and Freeman streets, assigned Monday, July 2. Assets, \$1,500; liabilities, \$2,000.

—The Druggist Bowling Club defeated the Covington druggists' Friday for the second time, by the score of 34 to 20.

DETROIT.

Michigan Board Active.

Detroit, July 7.—Every once in awhile somebody asks, "What is the State Board doing these days?" or "Why do we not hear of more convictions of violations of the law?" And there seems to be a general impression that the board is not doing its full duty. All of which is not very agreeable to the board, which is "sawing wood" right along, month in and month out. For example, awhile ago there was a good deal of general complaint about Bay City and West Bay City. Nothing very definite, but a good deal of grumbling. So much so that the board finally made a thorough canvass of the two cities. Every druggist was called up, not one slighted. The result was that there was just one store found which was violating the law in not having a registered proprietor or registered help, and that proprietor went out of business before he could be prosecuted.

The canvass proved that the complaints were unfounded and also proved that many making them did not understand the law. One misunderstanding exists in believing that a proprietor, himself registered, must have registered help to leave in charge when he goes out. The law allows that a boy may be left in charge, provided he does not attempt to put up a prescription and that he sells only such goods as the law prescribes for him to sell. Another misunderstanding exists in believing that unregistered help shall not put up prescriptions. But he may, provided the registered man of the store oversees it personally.

Many of the complaints, it is said, come from discharged help. A boy proves unsatisfactory or perhaps is caught pilfering and is discharged on the spot. He often thinks it is "getting even" to write to the secretary of the board, "So and So, at Blank City, is not registered and has no registered help. If you hustle you can catch him." The secretary could spend immense sums of money in "nustling" after all such complaints. But he gets at it as soon as practicable and many investigations are made which prove to be entirely without foundation. Occasionally, however, some of them "pan out." The latest conviction was on June 18, when John Lyman, of Mt. Morris, was found to be an unregistered proprietor who did not keep registered help. He paid the minimum fine of \$10 and \$2.50 costs. Another recent one was G. M. Jordan, of Reese, who paid \$10 fine and \$3.85 costs for the same offence and who promised to go out of business. Still another was T. A. Miller, of Kalamazoo, who paid the fine and \$7.25 costs. The board has done a lot of investigating since the first of the year, but comparatively few convictions have been secured. In many of these latter, promises were made and have been kept to put in registered men.

Smuggler Held for Grand Jury.

Detroit, July 7.—Jesse A. Buel, charged with smuggling drugs and rubber goods from Canada into Detroit, was examined before Commissioner Graves on June 29 and held to await the action of the Grand Jury, probably in October. Bail was fixed at \$300 and was readily procured. It would appear from the examination that Buel obtained the goods from a man by the name of

Jenkins, of Windsor, Ontario, who delivered them to him at the Russel House, Detroit. Jenkins was arrested awhile ago on the charge of smuggling drugs, pleaded guilty and was fined \$50. He is suspected of keeping on in the business and is wanted by the officers, who claim they cannot catch him coming to this side of the river. If Buel tells the truth about the transfer being made at the Russel House, Jenkins catches the officers napping.

The large amount of rubber goods in Buel's rooms at the time of his arrest were returned to him, it is said, by Special Agent Parker, as there was no evidence at the examination to show that they were smuggled into the country. Instead, Buel's assertion that they were manufactured in Canton, Ohio, seems to be well founded. But the mystery is, why they were shipped to Detroit and delivered from this city instead of directly from Canton. No reason for it was brought out at the examination.

There is considerable sympathy for Buel among the local druggists, not sympathy for his wrong-doing, but a great readiness to find excuses for him. They seem to agree that it is exasperating to be obliged to pay so much more for the coal tar products than their neighbors across the river, all because of a construction of the law. It is quite a temptation to buy of the fellow who succeeds in getting some of it safely on this side and who sells it at less than half price.

NOTES.

—To celebrate the fifty-fifth anniversary of the founding of the Frederick Stearns & Company establishment, the traveling men for the firm were called in from all parts of the States and Canada and spent a good share of last week in jollification. On Friday, June 29, all gathered in the reception room of the new buildings and surprised some of the managers by making them presents. D. M. Gray, general manager of the travelers, received a beautiful Beatrice, standing, with the ebony base, eight feet high. Mr. Forbes was presented with a pretty desk clock. On Saturday a tally-ho ride to Belle Isle and Windsor was enjoyed, and the party wound up at a popular river resort for dinner. Every man appeared in a red, white and drab striped shirt and a yellow tie. All sorts of good things were on the menu and the dinner was a specially pleasant affair. Many of the men left for their respective territories on Sunday. W. W. Jones was the last to start out, and his wait was due to the fact that his automobile was not quite ready. He will use that vehicle in making the towns in his New York territory. The body of the machine is built like a sample trunk and is the first of its pattern to be turned out by the Detroit Automobile factory. Mr. Jones is an enthusiast on the automobile question, and expects great profit as well as pleasure in the use of it in business.

—Charles F. Mann, secretary of the Michigan State Pharmaceutical Association, has sent a circular letter to every one of the 1,500 druggists of the State setting forth the advantages of membership in the State Association and urging all who are not members to become so. A copy of Bulletin No. 8 of the N. A. R. D. was inclosed in each letter, as well as a programme of the coming meeting in Grand Rapids, August 14 and 15. It is hoped that there will be a large attendance.

—J. B. East, for several years a representative of the William S. Merrell Chemical Company, Cincinnati, has resigned and accepted a position with Nelson, Baker & Co., of this city. His headquarters will be in Birmingham, Ala. He is already in his new field of labor, and writes that business is booming throughout the South.

—J. B. Young has moved his drug stock and fixtures from the corner of Antoine and Monroe streets, Detroit, to the corner of Junction and Toledo streets.

—Michigan Drug Company Baseball team versus Buhl Malleable Company, June 30. Score 19 to 4, favor of the druggists.

—The Cleveland School of Pharmacy has secured new quarters in the building of the Cleveland Gas Company, Superior street, Cleveland. Three new large laboratories are being equipped with all the modern conveniences and apparatus, and a lecture room large enough to seat one hundred students is also being fitted up.

CHICAGO.

VETERANS CELEBRATE.

Chicago, July 7.—The following was the call issued for the drainage canal trip of the Veteran Druggists.

Chicago, June 25, 1900.

Dear Friend and Fellow Veteran:

Another year has gone by; another milestone on our life's travel has been reached, and the anniversary of our Veteran Association has come around again.

In selecting a suitable celebration for this year it has occurred to me that a tour of inspection on the Drainage Canal would furnish a most timely entertainment, as well as help us to grasp the question of the day. Nothing is of more importance to our beloved city than our great ditch, and before long this ditch will be the great water route connecting the East and West. Chicago must and will solve this great problem, and as the drug store corner has been the great furnace in which public opinion is moulded, let the Veteran Druggists look over the ground so that when we are called upon to give judgment in this matter we may be fully in position to do so.

The boat chartered for this, our annual excursion, will leave Van Buren street bridge at 8.30 A. M., Thursday, the 28th of June.

I hereby invite you most cordially to be my guest for this most promising trip. You need not bring your lunch basket along. We shall pick up a meal on the boat—especially if fishing is good. The boat will reach Chicago on the home stretch by 6 P. M., and our genial master of ceremonies will take care that we are looked after for the rest of the evening.

I do not ask you to send your acceptance for the simple reason that no regrets will be accepted, and I hope that the 1900 annual will roll up a full hand of Veterans. Time will come only too soon when one after the other of our Old Guard will fail to answer the roll call. Let us be true to our calling and be on top of all public questions; let us raise and elevate our profession to the standard of shaping public opinion; let us study the water route to the great "Father of Streams," and while we are thus engaged in raising the standard we may succeed in raising something else on the side.

Yours very truly,

THOMAS N. JAMIESON.

Pursuant to the above call the following members and guests on the day appointed assembled on board the steamer Juliet, commanded by Trustee Commodore Boldenwick; Messrs. E. H. Sargent, Wm. Jauncey, T. N. Jamieson, T. H. Patterson, A. E. Ebert, John Blocki, Wm. Blocki, Henry Biroth, J. S. Barclay, W. Bodemann, J. H. Borchardt, Thomas Braun, W. C. Scupham, C. W. Grassly, W. K. Forsyth, F. M. Schroeter, F. M. Schmidt, L. K. Waldron, Paul J. Behrens, H. Weber, and Judges Adams, Horton, Windes and Freeman of the Appellate Court, A. B. Hunt, J. H. Platt, Dr. C. E. Boynton and Stillman Jamieson.

During the trip the party was entertained by Mr. Boldenwick, with accounts of the excavation work and the difficulties encountered in excavating the canal. The dangerous condition of the wharves and bridges in the Chicago river was noted by everyone. During the trip J. H. Borchardt, "The Lone Fisherman" was affectionately presented with a line, pin hook and cob pipe and commanded to catch some fish for dinner. This was done on the representation of Trustee Braden there present, who stated that a pickerel three feet long had been caught in the canal.

Reaching Lockport the druggists and their guests were shown the various workings of the "Bear Trap" dam, and other contrivances for regulating the waters' flow. Luncheon was had on board the steamer. On the return trip the annual meeting of the Veterans was held. The following officers were elected: President, J. S. Barclay, Oak Park; vice-president, Albert E. Ebert; recording secretary, T. H. Patterson; corresponding secretary, John Blocki; treasurer, T. N. Jamieson; committee on membership, Henry Broth, W. K. Forsyth, W. Bodemann. An unanimous vote of thanks was given to Mr. Braden and the other trustees, to which Mr. Braden responded happily. The retiring president, E. H. Sargent, spoke feeling of his connection with the society. He said that druggists should find some way to get the pay of professional men. They should put their best foot forward and try at all times for the proper recognition of the professional aspects of their business. He advised frequent meetings of the members for business discussion as well as for social diversion. He indorsed Mr. Jamieson's plan for a pharmaceutical headquarters in Chicago, where all connected with the trade would be at home. The passage of laws prohibiting the sale of drugs and foodstuffs in the same store was advised. Mr. Sargent

closed his remarks with several entertaining reminiscences.

The trip lasted eight hours. At Thirty-first street the party took the cars for Sunnyside Park, where supper was served. The vaudeville entertainment was also a part of the evening's programme. Everyone had a glorious time, and Mr. Jamieson received the thanks of each with becoming grace.

Illinois Association Meets July 17.

Chicago, July 7.—The coming meeting of the Illinois Pharmaceutical Association will be an important one, and extensive preparations are being made to receive and entertain the many who are expected. A very liberal sum of money is available for this purpose. A large attendance is assured, yet it is the desire of Chicago druggists to have a meeting that in size and energy and usefulness will surpass anything heretofore attempted. They look to their brethren from all over the State to avail themselves of the opportunity. Lake excursions and other enjoyable things will be features of the occasion. The first day's session will be on July 17. Let every one come.

New Association to Be Formed.

Chicago, July 7.—The Will County Pharmaceutical Association has issued a call for a meeting to be held at the Palmer House, in Chicago, on July 16, at 2.30 p. m., to organize the Northern Illinois Pharmaceutical Association. This body will be composed of the druggists of the four tiers of counties lying nearest the Wisconsin line, i. e., Boone, Lake, McHenry, Winnebago, Stephenson, Jo Daviess, Carroll, Ogle, DeKalb, Kane, Du Page, Will, Kendall, Grundy, La Salle, Lee, Whiteside, Rock Island, Henry and Cook, outside of Chicago. The headquarters of the Will County Association are in Joliet. The call is signed by E. A. Stillman, president, and F. J. Hoon, secretary of the Will County Association.

NOTES.

—Two robbers sampled the chocolates in the drug store of R. W. Wilson, at Ashland avenue and Monroe street, early Friday morning, and then requested Manager Harry Friedgen to be calm while they sampled the contents of the cash register. "That's pretty good candy, but I believe we could enjoy the confectionery of the cash register," said one of the hold-up men, as he held a revolver to the head of Friedgen. The drug clerk held up his hands while \$50 was removed from the register. The robbers bade Mr. Friedgen "Good night" and ran into Ashland avenue. R. Spencer, janitor of the Fourth Baptist church, pursued the robbers several blocks and then gave up.

—L. A. Dyer, night clerk in the Oak pharmacy, at 422 Clark street, walked back to the prescription room for a drink of water, but turned to see a man walking off with the cash register, cash included. Being weighted by the register the robber, J. A. Callahan, dropped it when Dyer jumped on his back. Callahan tried to use brass knuckles, but the druggist dodged and brought into play a two-pound weight. Two blows with the weapon and Callahan was reposing unconscious on the floor. He was sent to the Samaritan Hospital to have his injuries dressed.

—H. H. Richards, for several years in the Kansas City office of Parke, Davis & Co., has accepted a position as traveling salesman for the Searle & Hereth Company, and will cover the State of Kansas.

—E. A. Melsenheimer has opened a new drug store at the corner of Evanston and Sunnyside avenues.

—Charles O'Neill, of Sexton & O'Neill, druggists of Madison, Wis., was married a few days ago.

—Charles Coonley, a South Bend (Ind.) druggist, paid a visit to Chicago a few days ago.

—A. L. Logan and bride, from Hartford City, are in Chicago on their wedding journey.

—Mr. DeLay, a druggist of Odebolt, Iowa, and bride were in Chicago this week.

—Edwin Lindsley, a druggist of Missoula, Mont., was in Chicago this week.

—Y. Elwell, a popular druggist of Tomah, Wis., was married on June 27.

—Edward Riggs, a druggist of Lincoln, Neb., was in Chicago this week.

—Paul Grupe has opened a new drug store in Oak Park.

THE NORTHWEST.

Druggist Testifies and Testifies.

St. Paul, Minn., June 28.—Richard C. Trudgen, an old-time druggist of this city, whose divorce case has already been referred to in this correspondence, occupied the witness stand Wednesday and proved a most voluble witness. According to an account in one of the local papers, he could recall the day when he had not "responded" when his wife spoke to him; the hour at which he had "retired" (with his wife) on another day; the flavoring to a glass of soda, and his accounts of several momentous and climacteric days in his married life were among the most astonishing exemplifications of detailed history ever told in the district court.

The country girl's name was Palmer—Effie Palmer—and she had performed the feat known among children as "turning up her nose" at Mr. Trudgen's father and mother. Mr. Trudgen, senior, is the locomotive foreman at the Omaha railway shops, a sturdy, honest appearing man, and he and his wife, so he testified, were anxious to do everything for the young wife and new daughter. The father-in-law used to drop into the drug store on his way home in his working clothes, on which grease and smut made some showing, and one day his son told him that Effie objected to his coming thus appareled. That cut him, he said, for he had set his son up in the drug business.

Then one day he and his wife had been in a street car, and Effie came in and stared with that far-away and over your head stare, which has in its time slain so many brave men and is a hard thing to endure by any one.

Then Effie wrote him a letter saying in effect that the devil possessed her and expressing sorrow.

They had all belonged to the O. E. S., and had taken her to the meetings to give her a little taste of society, for she came from the country, where the shells grow at Shell Lake.

They were married in April, 1898, and on the anniversary of the wedding day or thereabouts she went away. Findings were ordered.

NOTES.

—Successions: J. F. Morning, Utan, Neb., by Paul Koerber; Guinter & Dow, Fairview, S. D., by G. G. Guinter; Peterson & Co., Duluth, Minn., by E. Peterson; the Hoffman-Thompson Drug Co., Minneapolis, Minn., by J. R. Hoffman; W. E. Mansfield, Minot, N. D., by A. P. Slocum; R. Slater, Hudson, Wis., by F. G. Danielson; T. B. Shoebotham, Fort Benton, Mont., by D. G. Lockwood; N. E. Franklin, Deadwood, S. D., by W. L. Faust; Cowan & Kent, Iowa Falls, Iowa, by S. R. Magee; Howard & Mitchell, Neola, Iowa, by T. A. Mitchell; J. J. Keen, Gary, Minn., by Schulstad Bros.; A. Olsen, Chetak, Wis., by W. H. Harley.

—The Minneapolis Journal says: "The supreme court of Illinois says cider is an intoxicant. The court is right. The degenerate cider of today is not only an intoxicant, but a drug store intoxicant." It is hard to tell which the Journal is trying to "knock"—the cider or the drug store.

—E. J. Anderson has gone to work for C. H. Brown, Little Falls, Minn., vice Adolf Anderson, resigned. Mr. Brown evidently has a strong liking for the Andersons as pharmacists.

—A sneak thief entered the residence of E. J. Romans, the St. Paul druggist, the other afternoon and got away with jewelry and other valuables to the amount of \$100.

—William Gausewitz, of Owatonna, former president of the State Pharmaceutical Association, was one of the delegates to the Democratic National Convention.

—Woodruff-Jordan & Hegsted have started at Rexburg, Idaho; W. S. Knapp at Bladen, Neb., and J. F. Hesnault, at Walnut Grove, Minn.

—W. W. Noble, St. Paul, is enjoying his annual vaca-

W. F. MICHEL, WILLOW LAKES, S. D.

tion, spreading himself over half a dozen Southern Minnesota towns.

—C. B. Marsden, who is now with L. A. Benham, of Larimore, N. D., was visiting old friends in this city this week.

—A fire in E. H. Weinhold's drug store in Minneapolis Wednesday night caused a loss of \$2,000. Covered by insurance.

—Robert Slater, of Hudson, Wis., has sold out to Frank A. Danielson, late of Princeton, Minn.

—Alex. Richard, of Stillwater, Minn., has been on a little trip to Montreal and has returned.

—Peter J. Arbes has gone from New Ulm, Minn., to Cloquet to work for E. M. Johnson.

—George E. Hyde, Rexburg, Idaho, and C. L. Graffunder, Carlisle, Iowa, have sold.

—O. W. Seagust has left the Rice Street Pharmacy, St. Paul, and gone to Jordan.

—The E. L. Hustling Soda Water Co. has been incorporated in Milwaukee, Wis.

—Ed. Arvidson is now in Allen's drug store on East Seventh street, St. Paul.

—P. E. Oliver has left New Paynesville, Minn., and returned to Minneapolis.

—J. M. Arbes is now working in L. H. Lueder's store on Rice street, St. Paul.

—J. D. Jones, Logan, Iowa, has sold a half interest to L. E. Jones.

—Martin Qualley, Waucoma, Iowa, has given a bill of sale.

—Edward D. Allan has started at Great Falls, Mont.

—Carl Kinsey, Carnavon, Ia., is negotiating to sell.

—W. R. Nelson has returned to Winthrop, Minn.

—H. J. Narveson, Erskine, Minn., is ready to sell.

—The next annual meeting of the Vermont State Pharmaceutical Association will occur at Rutland, September 26 and 27. The local secretary is A. W. Higgins, Rutland.

ST. LOUIS.

Peaceful Passing of a Cutter.

St. Louis, July 7.—The cut rate problem in East St. Louis has received a very sudden and satisfactory solution. As related in the Era, Drs. McBrien and Lillie, bought the drug store of Dr. Meade, formerly Clark & Meade, some three weeks ago and under the name of the "Anti-Monopoly Drug Co." started out on the devious way of the cutter. There was evidently some slip up in the sale arrangement, as the "Anti-Monopoly Drug Co." of East St. Louis, in spite of its imposing name, has ceased to do business at the same old stand and the store reverted this week to the former owner, Dr. Meade, who never did cut and does not intend to. East St. Louis is free from cut rate worries for the time being and the druggists over there are patting themselves on the back and thanking their lucky stars that they sized up the situation right and did not meet "cut with cut."

Strike Off.

St. Louis, July 7.—The street railway employees' strike, which has been in existence for two months, was declared off this week and an agreement between the St. Louis Transit Company and its striking employees has been signed and ratified. The strike has been one of the bitterest in the history of organized labor and its adjustment has been eagerly looked forward to by the business interests of the city, which were to a certain extent paralyzed during its reign.

NOTES.

—The J. S. Merrell Drug Co. paid every employe in the house \$3 extra per month during the months of May and June in order to cover extra expense entailed in going to and from work owing to the great street railway strike.

—The annual meeting of the St. Louis Apothecaries' Association, which was postponed on account of the street railway strike, will be held Thursday afternoon, July 19, at the St. Louis College of Pharmacy.

—Frank L. E. Gauss, representing Searle & Hereth Co. for St. Louis, is in Michigan camping out with his wife and a party of friends. Just before leaving he was paid a visit by both Messrs. Searle & Hereth.

—F. L. Richt, formerly salesman for Meyer Bros. Drug Co., has bought the Raymond pharmacy, southwest corner of Sarah street and Suburban tracks, and took possession this week.

—E. A. Medlar has sold his branch store at Fourteenth street and St. Louis avenue to H. W. Klasterman, who formerly clerked for him.

—The St. Louis Drug Clerks' Society will give a river excursion on the steamer City of Providence, Thursday evening, July 12.

—J. J. Weingardner, druggist, Belleville, Ill., is in Old Mexico on a pleasure trip. He will return in about a month.

—Bldgs will be opened next Monday for supplying drugs and medicines to the city institutions for the ensuing six months.

—The drug store of Glenn & Griffith, at Harrisonville, Mo., was burned June 30; loss, \$4,500; insurance, \$3,000.

For McK. & R.

The five members of the Executive Committee of the McKinley and Hobart Sound Money Drug, Paint, Oil and Chemical Trades Campaign Club met in the private offices of George J. Seabury, 59 and 61 Malden Lane, Tuesday morning, to elect officers and form plans for the coming campaign this Fall. The following officers were re-elected: President, George J. Seabury; twenty-five vice-presidents from different branches of the trade; secretary, L. William DeZeller; treasurer, Isaac V. S. Hillier; division marshal, Major-General R. L. Molleux; chief of staff, Andrew B. Rogers, who is also chairman of the Executive Committee which is the same as served in 1896. The Executive Committee decided to recommend the adoption of the Republican platform and the endorsement of McKinley and Roosevelt. The club will take an active part in the campaign. Wm. S. Douglas was elected chairman of the Campaign Committee.

MONTREAL.

Montreal, July 7.

—The embalmed beef scandal brought to light by the American-Spanish war has a rival in Canada at the present time, and public opinion runs very high against the guilty parties. A prominent Montreal physician and druggist have both had their names brought prominently before the public. The facts of the case are briefly as follows: The physician in question, who is a staunch supporter of the Government, offered to supply the Minister of Militia with an emergency food for use by the Canadian soldiers in South Africa at what afterwards proved to be an exorbitant price. It was supposed to contain a very large percentage of proteids, but on analysis it tested only 15 per cent., one of the analysts stating that it would take at least four boxes daily to be of any benefit as a food. The subject was aired in Parliament and created such a commotion that the Government was compelled to appoint a Committee of Inquiry, with the result that the above facts were brought to light and a vote of censure passed on the party who purchased the so-called food. The Montreal Vitaline Co. was the house supposed to supply the stuff, but as there was no such firm either in Montreal or any other part of Canada, on investigation it was proved that it was imported in its crude state from the United States, powdered and put up in tins in Montreal under the supervision of the above physician. The interested parties made a big fat profit out of the transaction, but at the same time gained an unsavory reputation. The druggist gave his evidence in a straightforward way at the investigation, but the doctor was not to be found when called on to appear. The Government came in for a great deal of censure in the matter and acknowledged that they had been badly taken in.

—The new liquor license act relating to chemists and druggists has now come to a point where its clauses can be readily understood. The law is now set forth that any chemist or druggist under the Quebec Pharmacy act is permitted to sell intoxicating liquors for strictly medicinal, sacramental or mechanical purposes, under certificate from a registered medical practitioner, if for medicinal purposes, or a clergyman if for sacramental purposes, or from the purchaser if for mechanical purposes, and then in quantities not exceeding one imperial pint at a time; but every chemist or druggist who wishes to sell intoxicating liquors without such certificate or to sell liquor in quantities exceeding a pint must be the holder of a retail liquor shop license or a wholesale or wholesale and retail liquor license, and every chemist who is not the holder of a license must keep a register of his sales of such liquor, with the date of sale, the nature and quantity sold and the name of the purchaser and that of the signer of the certificate; the register must be open to inspection by the collector of provincial revenue at any time; likewise the certificates.

—The wholesale trade of Montreal have just organized a rifle league and the prospects for its success are very rosy, great interest being shown by the trade since its conception. It will be known officially as the Montreal Druggists' Rifle Club. The following were elected officers at the meeting held last week: Hon. President, H. H. Lyman; president, J. E. Morrison, first vice-president, A. B. J. Moore; second vice-president, John Findlay; secretary, W. J. Wilson; treasurer, Frank Brush; Executive Committee, R. C. Irwin, P. Lyman, A. W. Dettmers, W. A. Hendrie, Thos. Quirk, J. Garrity, Alex. Robert and L. A. Bernard. The object of the club is to further the interest in rifle shooting and target practice among the members of the drug trade and to accept challenges from outside clubs. There are already over one hundred bona fide members enrolled and the first step taken was to petition the Government for the free loan of rifles and the necessary amount of ammunition at cost price.

—The monthly meeting of the Pharmaceutical Council took place at the College of Pharmacy on the 4th inst. The principal business transacted was the election of officers for the ensuing year, which resulted as follows: President, S. Lachance; first vice-president, J. E. Tremble; second vice-president, Henry Willis; treasurer, C. J. Coverntou; registrar, E. Muir. These, with J. Coultant, R. McNichols, A. B. J. Moore, J. A. Picotte, J. E.

Dube, R. W. Williams, J. C. Sutherland and A. J. Lawrence, will constitute the council of the Pharmaceutical Association, Province of Quebec, for the ensuing year. The Board of Examiners was elected as follows: R. W. Williams, W. H. Chapman, Alex. B. J. Moore, A. J. Lawrence, H. R. Lanctot and Edmond Glroux, Jr., the preliminary examiners being Professors Isaac Gammall and J. O. Cassegrain. J. E. Dube was re-elected supervisor of examinations for Quebec City and district.

—H. B. Gourlay, one of last year's graduates from the O. C. P., is at present clerking for his brother at the latter's pharmacy, corner Guy and St. Catherine streets, in place of D. R. O'Neill resigned. Albert Davidson has gone on a couple of weeks' holiday.

—R. H. Bryson has left for his usual summer holiday, which he spends at his residence at the Thousand Islands.

—J. R. Parkin and J. Emil Ray have resigned from the Board of Examiners of the Pharmaceutical Association.

—C. J. Coverntou, corner Bleury and Dorchester streets, left this week for a tour through England and Scotland.

—Achille Goyette, M. C. P. '96, has purchased the business of J. L. Beaudry, St. Catherine street.

SOUTHERN CALIFORNIA.—W. A. Kampmann, formerly in the drug business at Ridgeway, Mo., has opened a new store at Hanford, Cal.—N. W. Kibler, a former proprietor of the drug store now owned by Mixter & Smith, Visalia, Cal., is visiting friends in Iowa. He is accompanied by his family.—Druggist J. J. Lasch, of Tulare, is visiting in Texas and Louisiana.—H. G. A. Ryckman, of Pasadena, is now clerking for N. L. A. Cody, Merced.—Jas. R. Roddick, formerly clerk for Druggist A. J. Waters, Los Angeles, is managing a branch store at Hemet, Cal., for McKim & Chambers, San Jacinto.—John U. Boetenmann, of St. Louis, Mo., has purchased the branch store of K. F. Vogel & Co., Temple street and Broadway, Los Angeles, and Dr. G. N. Hale, of Chicago, has bought the C. E. Bean drug store in the same city.—M. L. McAlone, of Buffalo, N. Y., is now with Druggist E. J. Wolf, San Diego.

N. A. R. D. NOTES.

Chicago, July 7.

President Simon N. Jones will attend, on the 17th inst., the meeting of the Virginia Pharmaceutical Association at Ocean View. President Eley, of the Va. Ph. A., writes that a large attendance is expected. Mr. Jones will be present at the North Carolina Association's meeting at Wilmington on the 19th, the forenoon of that day having been set apart for the discussion of the N. A. R. D. affairs, in which great interest is felt throughout the State.

The Will County (Joliet), Ill., Pharmaceutical Association, a loyal and vigorous N. A. R. D. society, has called a meeting of the druggists of four tiers of counties in Northern Illinois, to be held on July 16, at 2 o'clock in the Palmer House, Chicago. The purpose of the meeting is to organize the Northern Illinois Druggists' Association.

The Committee on Pharmacy Laws is discussing the desirability of calling a meeting of representatives of the various State pharmacy boards, to be held in connection with the coming N. A. R. D. Convention at Detroit. In some quarters the project is warmly advocated.

The Durham, N. C., Retail Druggists' Association, comprising every druggist in that city, has joined the N. A. R. D. There is no price cutting.

Loyal to the N. A. R. D. Plan.

Since the beginning of the year the following State pharmaceutical associations have re-affirmed their loyalty to the N. A. R. D.: Alabama, Arkansas, Colorado, Connecticut, Delaware, Georgia, Indiana, Kansas, Kentucky, Maryland, Massachusetts, Minnesota, Missouri, Nebraska, Ohio, Oklahoma, Rhode Island and Texas. The action taken at the recent meetings of the Indian Territory and Louisiana associations respectively has not been ascertained.

Business Record.

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS DIRECTORY can correct their copies from the record, and the term "D. D. List," used here, refers to this directory.

We exercise due care to insure the authenticity of items here recorded, but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, THE PHARMACEUTICAL ERA,
New York.

COLORADO.—Victor.—Lawyer & Chase, damaged by fire.
CONNECTICUT.—Middletown.—Estate of John T. Wall, 414 Main street, sold to John F. Nolan.

New London.—Downey & Kinney, succeeded by Stephen J. Downey.

GEORGIA.—Dublin.—H. Hicks, of the firm of H. Hicks and Co., deceased.

ILLINOIS.—Lafayette.—J. H. Hall, sold to C. G. Oswalt.
Lockport.—C. H. Bacon, succeeded by C. H. Bacon & Co.

Waggoner.—J. L. Alten, sold to Dr. F. E. Trigg.
INDIANA.—Butler.—F. M. Murdock, removed to Brooklyn, Ind., succeeded in Butler by Wm. H. Rockafeller.

Evansville.—F. S. Compton, 300 Washington avenue, sold to M. Barnett.

Terre Haute.—J. D. Denison, 901 North Thirteenth street, sold to F. S. Compton.

Warren.—Bonifield & Thomas, succeeded by Thos. U. Bonifield.

IOWA.—Neola.—Howard & Mitchell, succeeded by T. A. Mitchell.

KANSAS.—Council Grove.—D. A. Steblans, sold to Robbins & McColloch.

Mound City.—T. J. Smith, sold to Paul & Hawkins.

MAINE.—Old Town.—Melville L. Folsom, of the firm of Folsom & Co., deceased.

MARYLAND.—Cumberland.—Harvey Lancy, 61 Baltimore street, sold to A. M. Lichtenstein.

MASSACHUSETTS.—Salem.—G. A. D. Stickney, 119 Essex street, deceased.

Whitinsville.—F. G. Foster, of the firm of Harriman & Foster, deceased.

MICHIGAN.—Charlevoix.—H. D. Luke, succeeded by Luke & Jones.

MINNESOTA.—Bigelow.—John De Boos, sold to C. A. Bacon.

West Duluth.—A. Lofgren, sold to M. L. Olander.

Worthington.—Frank M. Hickman, new store.

MISSISSIPPI.—Charleston.—T. D. Murray, deceased.

McHenry.—F. E. Schilling, burnt out.

MISSOURI.—Springfield.—Hinton Bros., 318 College street, succeeded by Claud A. Hinton.

Wentzville.—Robey the Druggist should be added to D. D. List.

NEBRASKA.—Broken Bow.—I. W. Waynick, sold to R. W. Wilkins.

Wymore.—S. E. Yoder, succeeded by Yoder & Hauptman.

Yutan.—J. F. Morning, sold to Paul Koerber.

NEW JERSEY.—Newark.—A. M. Pell, 440 Orange street, succeeded by George B. Trochet.

Trenton.—C. P. Britton, State and Warren streets, sold to Charles Stuckert.

NEW YORK.—Medina.—C. M. Topliff, sold to O. M. Harlow.

New York City.—Cedar Park Pharmacy, 416 Mott avenue, Chas. Seliger, proprietor, new store.—E. J. Griffith, 221 Third avenue, removed to 223 Centre street, Oil City, Pa.—M. H. Smith, 1075 Lexington avenue, sold to Plump & Linnig.

Philmont.—Wm. H. Van Dyck, sold to Nelson L. Waltermire.

Rochester.—F. L. Hewitt, 100 South avenue, deceased.

NORTH CAROLINA.—Elkin.—Ring & Mosely, sold to W. H. Woods & Co.

Hickory.—Menzies & Harris, succeeded by E. B. Menzies.

OHIO.—Rudolph.—W. M. Mercer, sold to Fred. M. Jones.

Springfield.—Crahn & Co., High and Fountain, sold to S. H. Flockemer.

PENNSYLVANIA.—Allegheny.—Otto A. Schad, 739 Ohio, E., deceased.

Philadelphia.—George Freshell, 3526 Haverford avenue, sold to Edward A. Eyer.

Scranton.—W. Kornacher, 721 Pittston avenue, deceased.

TENNESSEE.—Memphis.—J. S. Robinson, 668 Main street, in D. D. List is an error; correct address, Masonic Temple, Memphis, Tenn.

TEXAS.—Ennis.—Bass Bros., succeeded by Bass Bros. Drug Co., Inc.

Laredo.—Dr. A. Frosa, sold to Dr. N. Davila.

Marquez.—A. M. Johnson, assigned.

Mason.—R. H. Lowry & Son, sold to Back & Payne.
Mobeetle.—J. M. Baldwin, sold to L. A. Brice.
Newark.—Moore & Graham, succeeded by J. W. Moore.
Paris.—Longmire, Barry & Co., 102 East Side square, succeeded by Barry & Ellis.
Paradise.—Samuel T. Rhodes, succeeded by Rhodes & Morton.
Yoakum.—W. A. Nichols & Co., sold to J. H. Weymouth.

OBITUARY.

GEORGE A. D. STICKNEY, a well-known druggist and former alderman of Salem, Mass., died suddenly June 19 of heart disease from which he had suffered for some time. He was born in Beverly about fifty years ago and in 1871 entered the drug store of James Emerton, at the corner of Elm and Essex streets. He succeeded to the business four years later, which he conducted till his death. He was a member of the Salem Common Council in 1892 and of the Board of Aldermen in 1894-95. He belonged to several fraternal organizations and was a man of sterling traits. He was also director in the Salem Mutual Fire Insurance Company. Mr. Stickney is survived by a widow and one daughter.

RUDOLPH SCHAEFFER, a Huntington, Ind., druggist, died June 26, from the effects of morphine taken with suicidal intent. He had been one of the most successful business men in Huntington for the last thirty years. Recently, however, he became dissipated, and his wife brought suit and had a receiver appointed for his property. The humiliation worried him and his suicide is attributed to regret over his many mistakes.

FRANK G. FOSTER, junior member of the firm of Harriman & Foster, retail druggists, of Whitinsville, Mass., died June 19. He was thirty-six years of age, and very popular with all classes in that village. In addition to his drug business he was local manager of the New England Telephone and Telegraph Company. He leaves a wife.

FRANK L. HEWITT, a well-known druggist of Rochester, N. Y., died June 27. About two months ago he had an attack of appendicitis. He refused to submit to an operation and blood poisoning setting in resulted in his death. Mr. Hewitt was a prominent factor in local Republican politics and had represented that party in various official positions. One daughter survives him.

ALBERT ANTHES, a Pittsburg, Pa., drug clerk, shot himself, June 23, dying shortly thereafter. He had been drinking and, it is said, he worried over an approaching examination. He was thirty-three years of age and at several times had considerable wealth, which he had lost in various ways. He often asserted that the world was against him.

WM. F. KORNACHER, a Scranton, Pa., druggist, died June 21, aged fifty years. He was born in Bavaria, and educated at the University of Weisberg. In 1883 he came to America, locating in Scranton in 1884. A widow and four children survive.

DR. SAMUEL MANSFIELD, formerly a wholesale druggist, of Memphis, Tenn., died at Los Angeles, Cal., June 10, aged seventy-nine. He is said to have been one of the wealthiest residents of Los Angeles, where he located about thirteen years ago.

JACOB F. LEHMAN, a well-known druggist, of Camden, N. J., died suddenly June 24th of paralysis of the brain. Mr. Lehman was fifty-eight years of age, and had been in the drug business in Camden for more than a quarter of a century.

LEVI RICKMAN, a druggist of Export, Westmoreland County, Pa., was killed June 20, by a fall from a bicycle. His skull was badly fractured.

"In Time of Peace Prepare for War."**ILLINOIS DRUGGISTS VOLUNTEER.**

At the January, 1900, meeting of the Board of Pharmacy (Illinois), after carefully considering the many subjects confronting us as merchants and as druggists, the board adopted a resolution adding to its standing committees a Committee on County Organization, whose duty it is to organize in each county that has none, (except Cook, which can be worked by wards) a County Retail Drug Association. As chairman of that committee I began the work with twenty counties south of B. & O. R. R. as an experiment. While the results have not yet been just what I expected, I am not discouraged.

It is needless for me to enumerate the many advantages of county organization, both financially and socially, as every druggist has studied the question, no doubt, more than the writer; however, by organization we have strength. All to gain and nothing to lose.

The Board of Pharmacy attempt this organization for the general good of pharmacy. As a board they would hope to get in closer touch with the druggists throughout the State, learn their wants, exchange ideas, help them in every way possible, such as correcting the cut-rate evil, violations of pharmacy law, country store permit evils, and many important questions could be more pleasantly settled if we knew and understood each other better.

By organization you can arrange schedule prices on every line carried in your store; you can grow from a credit to a cash system of business; you can learn that your competitor is about as good a fellow as yourself and will do to trust; you can become a direct member of the N. A. R. D. and be entitled to a voice in that association, thereby helping in the greatest of all efforts of the retail druggists. Any violation of our law can be better adjusted through a local organization. The country store permit may need regulating and the board not know it; but your organization could acquaint them with all circumstances and your recommendations would be appreciated; the State is too large for our board to be acquainted with locality troubles or violations without the help of an organization. Our present pharmacy law, though not perfect, is a blessing; without it, how many grocery stores in your county would be selling patent medicines, how many people would be peddling all kinds of patent medicines from house to house; how many doctors would start drug stores? You would see a wonderful change; many of us would have to retire. Would you like to see this law repealed? There is a movement on foot in Chicago by a few patent medicine concerns that your board refused to grant permits to their agents in towns with drug stores, and a few individuals whom we have had to prosecute for repeated violations, to have the law repealed.

As the Legislature meets next January, it stands us in hand to fortify against our enemies and, if we find ourselves strong enough to amend our present law so none but registered pharmacists can sell even patent medicines. We can get sufficient support only by thorough organization, and if this cannot be accomplished the movement to which we are devoting our best energies will certainly fail. This committee is determined to do everything possible to accomplish this purpose, because we are convinced a failure upon our part means the overthrow of our law.

Being desirous of extending this work throughout the entire State as quickly as possible and not knowing personally a desirable man to undertake the work in each county, I want to enlist volunteers. If the reader can't do this work, will he please write me recommending a good busy druggist in his county? I want a busy man because the busy men of to-day are doing the work. A drone is a back number and always out of a job. It will take a busy man to correct the many evils and burdens of the retail druggists of this State.

As charity begins at home, let us concentrate our efforts for home work. Our only hope is in organization. No matter if your county only has three druggists; your organization will be a spoke in the wheel of success. Interest the A. P.'s and apprentices; make them honorary members, thereby getting the social benefits of a greater number, and as they are to become registered pharma-

cists sooner or later, you have begun to educate them concerning the value of organization. Can we hope for your support?

Join the army and let us fight them to a finish. You are as much interested as any other druggist. Do your part. Keep these two thoughts ever before you: "The few must work for the many," and "The busy man does the work."

Please write a few words of encouragement and give me the name of the right man in your county to do this work. If for no other purpose than that we may save and amend our present law. Without the earnest, combined support of the druggists throughout the State we may see our present law repealed by next legislature.

Now is the time to prepare for the battle.

Very respectfully,

W. C. SIMPSON,

Chairman Committee County Organization.

Vienna, Ill., July 1.

Robert M. Green & Sons.

Mention was made in our last week's issue of the fire which nearly wrecked the soda apparatus plant of Robert M. Green & Sons at Vine and Broad streets, Philadelphia, on June 26. At that time the loss was stated to be \$60,000, but it will reach \$100,000, and Mr. F. D. Green says may exceed \$150,000. The two upper floors were entirely destroyed and the stock and fixtures on the floors below badly damaged by smoke and water. They were fully insured and expect to immediately begin the erection of a modern plant on the old site, installing in it improved machinery and appliances, thus increasing their facilities and putting them in a position to still further serve their friends. They particularly wish to thank their many friends for expression of sympathy and kind offers of assistance and to state that they will be ready to fill orders for new designs, new stock, etc., for Fall trade.

Welch's Grape Juice.

Last year the Welch Grape Juice Co. doubled the capacity of their cellars and pressed grape juice enough to do nearly double the amount of business in 1900 that was done in 1899. With five months of 1900 gone the company finds over half their stock sold. Preparations are now going forward for the building of a three-story brick addition, which will be completed this Fall and will give the Welch Grape Juice Co. double the working room which they now have. Welch's Grape Juice is being advertised to a greater extent than ever before, and druggists everywhere report an increasing sale. There is a big difference in Grape Juice; it is rather a new article on the market and people are just beginning to appreciate this difference. Customers who know will take only "Welch's," the Grape Juice pressed on the spot where the grapes are grown.

For Sale.

Among the Want advertisements in this issue is offered for sale a drug, book and stationery store in a thriving city in Maine. The store was established thirty-five years ago; it has always enjoyed the choicest patronage and carries a line of goods which gives it trade enjoyed by no other store in that section. A letter addressed to Fox F. Skowhegan, Me., will bring full particulars.

Ammonol.

The following, sent to us by the Ammonol Chemical Co., New York, explains itself:

Ammonol Co.

Dear Sirs: Received sample of Ammonol some time ago, and must say that it is one of the best remedies in the market.

Yours,

R. W. BARR, M. D.

—The Grand Rapids, Mich., Druggists' Association has been reorganized and is making extensive plans for the reception and entertainment of the Michigan Pharmaceutical Association which will hold its annual meeting in that city August 14 and 15. At a recent meeting the following officers were elected: President, G. T. Haan; vice-president, R. N. McWilliams; secretary and treasurer, Walter K. Schmidt; trustees, John E. Peck, John G. Steketee and Henry Reichel.

STATE OF TRADE.

Vacation Dullness Prevails.

New York, July 10.—Extremely warm weather during the greater part of the week under review has stimulated a desire to get away from the city and the dull conditions incident to midsummer have been more pronounced than usual. Consequently the volume of business has been limited to actual current necessities of the consuming trade, and the general market has presented a somewhat tame appearance with the movement almost exclusively of a routine character. Opium has continued to rule easy and the weakness reflected a week ago has resulted in a reduction in values, the concession being chiefly in quotations for large parcels. The concession, however, has not stimulated demand and the market remains dull and uninteresting.

Quinine remains about as noted in last week's report. Manufacturers' quotations are unchanged and only a fair amount of stock has moved into consuming channels. No new features of consequence have been developed and there is a disposition on the part of outside holders to await the expected revival of demand, when it is believed there will be a general improvement in the tone of the market. Among the more important price changes during the interval was a reduction of 50 cents per pound in manufacturers' quotations for salol, due, it is claimed, to the expiration of some of the patents and a general agreement among the makers to continue a uniform schedule of values. Another important change was a reduction of 7c. per pound in prices of foreign salicylic acid. Domestic makers met the decline and a corresponding reduction was made in quotations for salicylate of soda.

Menthol has gradually but steadily moved upward in price under the influence of improved conditions abroad and spot quotations for parcels in first hands are fully 20c. per pound higher. Salline is easier, foreign manufacturers having cabled their local representatives to reduce quotations 25c. per pound. Star anise seed is firmer in sympathy with other products of the far East. The available stock is light and the existent troubles in China are expected to interfere with obtaining fresh supplies.

Cubeb berries have shown increased strength and the movement has been fairly active, several large parcels having changed hands during the past week. In the department of essential oils anise and cassia have shown further improvement under the influences heretofore noted and the tendency is still upward. Cubeb is higher in sympathy with the berries. Clove is easier in a large way, the spice having reacted from its strong position, owing, it is said, to speculative pressure. Cacao butter is firmer on account of improved conditions abroad, material advances in prices having been established at the July auction sales in London and Amsterdam. Cuttlefish bone continues decidedly strong both here and at primary sources of supply and spot quotations are 1c. per pound higher. Large flake manna is scarce and firmer with the limited spot stock held at an advance of 5c. per pound over previous quotations. Among the roots a continued easy market is reported for senega and serpentaria, both of which are offered freely from producing districts.

Among the heavy chemicals, alkali and caustic soda are both easier under a slow demand, and the same is true of bleaching powder. Epsom and glauber salts are seasonably active and firm. Nitrate of soda is hardening in price owing to the reported combination of producers on the west coast of South America.

Busy Week in Boston.

Boston, July 7.—On account of the great holiday this has proved a busy week for all branches of the trade. With the wholesalers orders have been received in good amount and size and as so much work had to be crowded into one less than the usual number of working days, and with Saturday a half holiday at this time of the year, everybody has appeared to have had his full share of work. Jobbers report good trade among their retail customers. The retailers reaped large harvests on the Fourth of July and the receipts at soda fountains everywhere were of large proportions.

In the general markets the trading has been of so limited a nature that no noticeable changes in prices have been effected. Opium and quinine have shown a little activity, but this has not affected prices. Other drugs show no special feature and the same may be said of the list of chemicals. At steady prices, dyestuffs and tanning materials are beginning to be more sought. Alcohols seem to be moving fairly well. The supply of hops in sight is said to be getting smaller constantly and this, it is thought, may cause some stiffening as to prices.

Everybody Busy in Philadelphia.

Philadelphia, July 7.—In spite of the debilitating and nerve-destroying heat of the last week in this city, business has maintained an even level, if it does not actually point upward. As everyone knows, the prospect of war, in spite of the dire threats of the weak and pessimistic, actually tends to make things boom. As a result, and it is nothing new, some of the staples are very strong from a speculative standpoint. If the city retailer is some-

ABBEY'S EFFERVESCENT SALT

is as staple in a drug store as quinine. Its rapid rise in popular and professional favor has been phenomenal, and is due solely to its merit and the methods used to market it.

Progressive druggists everywhere should take advantage of our increased advertising campaign for 1900, and push sales.

THE

Sold in three sizes retailing at 25c., 50c. and \$1.00 per bottle.

Trade List on Application.

what dull, and there is reason to doubt such a statement, the very obvious activity of the wholesale concerns proves that his up-the-State brother is thoroughly occupied. If there is to be a general conflagration in the East, quinine will surely advance, at least such is the opinion of some well-posted observers. Everybody is busy and owing to the great activity and growing strength of the several organizations of retailers, there is a buoyancy and hope in that trade unwitnessed for many years.

Remarkably Good in Baltimore.

Baltimore, July 7.—Business this week was reported as remarkably good among the wholesalers who had many orders from city druggists and elsewhere to fill. The work of putting up goods and the other store routine was attended with considerable difficulty, owing to the heat, which tried the endurance of the strongest. Jobbers speak encouragingly of the business conditions and declare that the year will show a considerable increase of transactions over last year. Manufacturers express themselves as satisfied with the prevailing state of affairs, the products of Baltimore houses being in strong demand. Retailers, too, are doing quite well. Soda water fountains flow almost incessantly, like rivers, and the regular summer business has received a strong impetus. Botanicals and heavy chemicals reflect the conditions which obtain elsewhere.

Detroit Reports Better Business.

Detroit, July 7.—The spell seems to be broken and wholesalers have been really quite busy for the closing week. Of course the fact that it has been a five day week with them has had something to do with it. Six days' work done in five days would make almost any kind of a business house appear busier. And then the weather has been the regular Fourth of July, sizzling, blistering kind and so the soda water supplies have boomed. Generally the retailers report a better prescription business.

Trade Fair in Chicago.

Chicago, July 7.—Since the sudden advent of very hot weather business has picked up in some lines and languished in others. While the heat has been pitiless, sapping the physical energy of everyone, few are complaining that it is bad for business. Fountain supplies are in immense demand. Trade is fairly brisk in staple goods and sundries. Manufacturers are doing as much as the season demands and are satisfied. The strike is ended, a fact which will help everyone a little. Collections are good and everyone seems to be fairly busy.

Improvement in Retail Trade.

St. Paul and Minneapolis, Minn., July 6.—The past week has witnessed something of an improvement among the retailers. Their business has been more active than for the previous seven days, despite the fact that those in the residence portions of the cities feel the effects of the absence at the lakes of so many of their customers. The weather has been almost intolerably warm all the week and the soda water sales have been very heavy and constant. Every branch of the trade is fairly well maintained. The jobbers report a slighter falling off in orders than is to be expected at this season of the year. Heavy and frequent rains have fallen all over the Northwest during the past four days. These will have the effect in most cases of saving the wheat crop, which, owing to the long and almost unprecedented drouth, had been given up as lost and business men of all classes expected serious results to trade.

Strike Over; Trade is Better.

St. Louis, July 7.—Hot weather and the settlement of the street railway strike, briefly referred to in the St. Louis letter, have materially improved local retail business. Trade with the country is quiet, a late harvest keeping the farmers busy in the fields.

—The Ohio Pharmaceutical Association held its annual meeting at Hotel Victory, Put-in-Bay, June 19-23. The following officers were elected: President, B. S. Young, Ada, O.; vice-presidents, O. N. Garrett, Hillsboro, and J. O'Connor, Urbana; permanent secretary, L. C. Hopp, Cleveland; treasurer, J. H. Von Stein, Upper Sandusky; Executive Committee, J. H. Baker, Bellevue; A. W. Kille, Columbus, and Albert Woetterstroem, Cincinnati. Report of the State Board of Pharmacy was read by the secretary and topics of general interest were discussed, including a paper on fire insurance by John Weyer, of Cincinnati. On June 20 the members took a boat ride on a steamer to the near-by islands.

—The Northern Ohio Druggists' Association, which held its meeting during the annual session of the Ohio Pharmaceutical Association at Put-in-Bay, elected the following officers: President, J. A. Bartlett; vice-presidents, Joseph Albrecht and Wm. F. Kuder; secretary, E. T. Helwig; treasurer, George W. Voss.

MARKET REPORT.

NEW YORK MARKET.

New York, July 10.—Jobbers report a generally tame market with transactions limited to small parcels to meet the light current wants of the consuming trade, but the undertone continues steady and fluctuations in values are wholly the result of natural causes.

OPIUM.—There is no improvement in demand and a continued quiet feeling prevails, with jobbing quotations nominally unchanged at \$3.35@3.50 for 9 per cent. and \$3.45@3.60 for 11 per cent., the outside figures for single pounds.

POWDERED OPIUM.—The current demand continues light and unimportant, but there is no apparent pressure to force business and quotations remain steady at the former range of \$4.45@4.65 for 13 per cent. and \$5.15@5.35 for 16 per cent. according to size of order.

MORPHINE.—Transactions continue limited to small lots, but the demand is fairly active and the volume of business shows liberal proportions. Quotations are steady at the old range of \$1.95@2.05 in ounces and \$2.20@2.30 in eighths, as to brand.

QUININE.—Jobbers continue to report a tame market, with transactions of a hand to mouth order, but there is no abatement of steadiness on the part of holders and prices are maintained at 31@32c. for bulk in 100-oz. tins, 33@34c. in 50-oz. tins, and 38@39c. in ounce vials, according to brand.

SALOL.—Manufacturers' prices are 50c. per lb. lower and the revised jobbing quotations for pound bottles are \$2.70 for 25-lbs. or over, \$2.80 for lots of 5 to 25 lbs., and \$3 for smaller parcels. In ½-lb. bottles 5c. additional is charged and in ¼-lb. bottles 15c. additional. For ounce packages 23c. for 50 ozs. or over, 24c. for 25 to 50 ozs., and 27c. for less than 25 ozs.

SALICINE.—Manufacturers have reduced their quotations 25c. per lb. and jobbing prices show a decline to \$4.50@4.75, as to size of order.

MENTHOL.—The tone of the market is stronger owing to an increase in the import cost and jobbers have marked up quotations to \$3.05@3.20 per lb. and 25@30c. per oz., according to quantity.

SALICYLIC ACID.—An easier feeling has developed in sympathy with weaker markets abroad and jobbing prices have declined to 47@51c., as to quantity.

SODIUM SALICYLATE.—Under the same influence jobbers have reduced quotations to 55@62c.

OIL ANISE.—Conditions abroad continue favorable to holders and the upward tendency noted last week has resulted in a further advance in jobbing quotations to \$2@2.20.

OIL CASSIA.—Increased firmness at primary sources of supply and a fair trade demand have caused jobbers to further advance prices to \$1.35@1.60, as to test and quantity.

OIL CUBEBS.—Owing to a continued upward movement in prices of berries the tone of the market is stronger and jobbers have advanced quotations to \$1.05@1.30.

CUBEB BERRIES.—Stocks are very much depleted at all distributing points, and with the outlook indicating a small yield of new crop holders are firmer in their views and jobbing figures show an advance to 20@25c. for whole and 25@30c. for powdered.

CACAO BUTTER.—Higher prices at the July sales in London and Amsterdam have stimulated a stronger tone to the local market and jobbers have advanced quotations to 46@47c. for cakes in 12-lb. boxes, and 51@56c. for less.

CUTTLEFISH BONE.—Reports concerning the new catch continue discouraging and the market is decidedly strong with quotations for prime Trieste advanced to 33@38c.

MANNA.—Large flake is scarce and higher and jobbers have advanced quotations to 70@80c., as to quantity. There is no change in small flake or sorts.

SERPENTARIA ROOT.—The market is easier owing to free offerings of new crop and prices have been reduced to 40@45c. for whole, 42@47c. for ground and 45@30c. for powdered.

SENEGA ROOT.—Jobbers have reduced quotations to 48@58c. for whole and 53@63c. for powdered, and the market is easy under an influence similar to that affecting serpentaria.

THE ERA COURSE IN PHARMACY.

The lectures will hereafter be issued in monthly installments, and the entire work of the Course can be completed within twelve months.

NEW CLASSES FORMED EACH MONTH.

The first installment of lectures will be issued in October, and the remainder at intervals of thirty days thereafter.

Recitations and examinations are conducted by correspondence directly with each regularly matriculated student.

Especially valuable as a preparation for examination by a board of pharmacy, to those who cannot attend a college of pharmacy, and to all desiring to review their former study of the subjects embraced in the curriculum.

TOTAL EXPENSES FOR FULL COURSE, \$10.00.

For fuller particulars see announcement on last advertising page.

Write for new descriptive Prospectus, soon to be ready.

Address, THE PHARMACEUTICAL ERA.

THE ERA COURSE IN PHARMACY.

On another page in this issue are printed the names of the graduates, prize winners and successful junior students in the Era Course in Pharmacy for the term just closed. There will be a number of other graduates whose names will be announced later, the delay being occasioned by the fact that they have not been prompt in getting their recitations and examinations to the Director, and a little additional time is necessary to determine their standing.

The year just closed has been a very satisfactory one to both students and to those having in charge the direction of the work. There have been, as always, two classes of students, the good and the poor, but the line of separation between them has been more distinct than ever before; the good being very good, and the poor coming nowhere near the standard required in the work. There have been very few along the doubtful line. Experience in the work, however, has taught that the course of study could be very materially improved, the labors of the student facilitated and greater benefit conferred. With this end in view, some very important changes in the Era Course in Pharmacy have been made, and these are announced in detail in the new Prospectus, now ready for distribution.

The most important of the changes are two: Combination of the previous junior and senior years into one full course, which can be completed within twelve months, and the formulation of a plan by which students can enter upon the work during any month and complete the course within the prescribed year. The lectures have been very thoroughly gone over, strengthened where needed, condensed where possible, and the whole course dressed into a more compact, practical and serviceable form. Classes will hereafter be formed every month. The lectures will be sent to matriculated students in regular monthly parts, reaching them at thirty day intervals. With each part will be included the questions on the lectures in that part, and the entire service will constitute a thorough, practical training in pharmacy sufficient to start the young man well on his way in his chosen profession.

The object of the Era Course is to provide a pharmaceutical education, to what extent it may, to that very large class, numerically, of young men who, intending to enter pharmacy as a calling, are by force of circumstances and surrounding conditions absolutely debarred from acquiring such an education at the colleges of pharmacy. It is far better that these

young men shall enter the drug business with some, greater or less, systematic training than with none at all. The Era Course has been particularly successful in its purpose in this respect. Those who have followed its work and achieved sufficiently high percentage standing to win graduation from it have found it particularly serviceable and of direct practical nature. It is the aim in the new revised and reconstructed course to achieve even greater success along these lines.

With the alterations made and improvements instituted it is confidently believed that the Era Course will appeal more strongly than ever to those for whose benefit it is intended. The innovation permitting students to join at any time will be found a great convenience, inasmuch as matriculates need suffer no delay. Readers of this journal are specially requested to call to the attention of their clerks, and any others who may be interested, this course of home study in pharmacy. The new Prospectus will be gladly furnished to any one whose name is sent us, and will be found to give all necessary information concerning the manner of conducting the course, the feature of recitations and examinations by correspondence, and a synopsis of the subjects embraced in the curriculum.

Notwithstanding the great improvements and the condensation of the two terms into one full year, the cost has been kept at the previous figure of \$10, which is essentially a reduction of one-half of the expense to the student.

PHARMACOPOEIA CONVENTION INCORPORATED.

A certificate of incorporation of the United States Pharmacopoeia Convention was filed July 11 with the Recorder of Deeds at Washington. The period of incorporation is 999 years, and the incorporators, all residents of the District of Columbia, are William S. Thompson, George L. Magruder, John T. Winter, Thomas C. Smith, F. M. Criswell, Murray Gott Motter and William M. Mew.

It is provided that during the first year of its existence the affairs, funds and property of the convention shall be vested in a board of trustees composed of seven members, these being Albert E. Ebert, Chicago, chairman; Samuel A. D. Sheppard, Boston; William S. Thompson, Washington; Charles E. Dohme, Baltimore; George W. Sloan, Indianapolis; Horatio C. Wood, Philadelphia, and Charles Rice, New York. In the language of the certificate, the purposes of this association are "the encouragement and promotion of the science and art of medicine and pharmacy, by selecting by research and experiment and other proper methods, and by naming such materials as may be properly used as medicines and drugs, with formulas for their preparation; by establishing one uniform standard and guide for the use of those engaged in the practice of medicine

and pharmacy in the United States, whereby the identity, strength and purity of all such drugs may be accurately determined, and for other like and similar purposes, and by printing and distributing at suitable intervals such formulas and the results of such and similar selections, names and determinations among the members of the association, pharmacists and physicians generally in the United States and others interested in pharmacy and medicine."

The decennial convention, it will be remembered, met at Washington some time ago. It was composed of representatives of all the colleges of pharmacy, pharmaceutical associations, medical societies and similar organizations, and applied itself to the work of providing for the revision of the United States Pharmacopoeia. Dr. Horatio C. Wood, of Philadelphia, is the president of the convention.

GET A NEW BOARD.

Two or three members of the California State Board of Pharmacy do not seem to be very great ornaments to the board or to the pharmaceutical profession, if we may believe all that is printed in the newspapers about them. On the contrary, if the charges against them are substantiated, it would seem that their proper place is in the State's prison. Some time ago, as reported in this paper, certain members of the board were charged with giving out in advance the examination questions to be used by the board and receiving good fat fees for their kindness. Now it is announced that another member has been obtaining money by false pretenses and paying his butcher's bill, etc., with bogus checks. There are, however, one or two members of the board whose reputation and character for integrity and ability are above question, and these men should be cleared from all opprobrium brought upon the board by the acts of their unworthy companions. Farther than this, these latter should be ousted from their positions without hesitancy, and the board reconstructed, retaining only its honest and honorable members. It is unfortunate that this scandal has arisen, but it behooves the pharmacists of California to clean out the Augean stables as soon as possible.

THE N. A. R. D.

The annual meeting of this association is near at hand, Detroit being the place and September 12 the date. The meeting promises to be unusually interesting and a very large attendance of delegates from affiliated bodies is anticipated. During the past year very much progress toward the attainment of the aims of the association has been accomplished, and the officers and committees will without doubt have cheering reports to make. The retailers, jobbers and manufacturers have recently got together upon a common basis. In a few instances the plan adopted has already been put into force, and it is expected that it will be in

operation by all branches of the trade by the time the meeting convenes. Nearly the entire jobbing trade has signified its desire and intention to abide by the regulations agreed upon, and, though there may be a little friction, it is expected that before another twelve months has passed, the drug trade will have seen a very great amelioration of the cut-rate abuse and the restoration, in great part, of prices upon proprietary preparations. Every one should go to the Detroit meeting, and hear at first hands the reports of the good work which has been done and of the rosy prospects for the future.

POOR THING!

A woman, head of a patent medicine concern whose nostrum is one which appeals to the credulity of womankind, and is reasonably sure to have disastrous effects if purchased and employed, has brought suit for \$25,000 damages against the Kentucky Board of Pharmacy. She was arrested recently on the charge of selling medicines without a license, and practicing medicine without a license, on the first charge being fined \$50 and acquitted on the second. She alleges that the board is conspiring to drive her out of the State and ruin her business, and she wants monetary consolation. It is to be hoped that she will lose her suit, for the best thing that can happen would be for all charlatans of like ilk to be driven out of every State and the business of every one of them ruined. The world does not need that stripe of individuals nor that character of so-called medicinal preparations which they exploit.

THE ILLINOIS PURE FOOD LAW.

The Illinois Pure Food Law went into force July 1, after which time all articles intended for consumption must be labeled with strict truthfulness as to their real nature. The penalty for fraudulent labeling or branding is not less than twenty-five nor more than two hundred dollars fine, or imprisonment in the county jail for from thirty to ninety days, or both, for each offense. Eighteen months' notice has been given, so that merchants have had ample time to get rid of previous stocks, and ignorance of the law will not be taken into consideration.

INDEX TO VOLUME XXIII.

A very complete Index to Volume XXIII. of the Era, January to June, 1900, has been prepared, and will be sent to any subscriber desiring it for his file.

Please drop us a postal card if you wish a copy of this Index.

Brown Shoe Polish.

Soft soap	4 drams.
Lanseed oil	6 drams.
Liquid annatto	2 ounces.
Beeswax	6 drams.
Turpentine	2 ounces.
Water	2 ounces.

Dissolve the soap in the water and liquid annatto, melt the wax in the oil and turpentine, then gradually stir in the soap solution. Stir till cold.

OUR LETTER BOX.

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors.

Please be brief and always sign your name.

STRONGLY ADVOCATES THE DIPLOMA REQUIREMENT.

Editor Pharmaceutical Era: The question, "Should college graduation be a pre-requisite to board examination?" should be carefully considered by all pharmacists. My views are with those on the affirmative side, not simply because I am a graduate, but that such an act would be beneficial both to the pharmacist himself and the community.

The old cry, "give the poor man a chance," should cut but a very small figure in considering this question. The pharmaceutical profession should not favor him any more than the medical or legal profession. If he is ambitious and desires a thorough knowledge of pharmacy and chemistry, the obstacles can be overcome and the goal reached with more satisfactory results than if he had received his pharmacy education behind the drug store counters.

It is true that some graduates pass the State board examinations with no better an average than one who has had only a few years' of experience, but do you take into consideration where these graduates received their diplomas? In nine cases out of ten you will find that they are only cramming concerns, whose only mission is to make the student pass the board and are deserving of the severest condemnation, as their methods are wrong and constitute a menace not only to pharmaceutical education but to pharmacy itself.

What the pharmaceutical profession wants and what will, I hope, soon be a requirement, is a better, broader and more thorough education. High school graduation should be a pre-requisite to entrance upon the college course and to State board examinations.

To pass the State board is thought, by the apprentice to be an end. This, however, is a sad mistake, as it is only the beginning of his career and his success will depend upon the knowledge he has acquired. If he be a graduate from a reputable college, his knowledge will make him a competent, trustworthy member of the learned profession and will give him confidence in himself and pride and joy in his work, whereas if he was not a graduate his assortment of odds and ends of pharmaceutical lore, stray facts and not facts, all jumbled together, will be forgotten for the most part as soon as it was acquired and should be looked upon as a dangerous thing.

To be sure experience is often lauded as the best teacher, but her worth depends upon her lessons and upon the receptivity of her pupil. She is apt to teach lessons that were better never learned as to teach those of practical value. Unless they are guided by correct theory, her books had better remain closed. Experience is the forger of habit and unwise experience hangs to one like a ball and chain to a criminal, preventing the restoral of a shattered ideal or the creation of a new one. Is it not better, therefore, to be thoroughly drilled in correct theory and a habit of observation that will enable one to avoid misleading experience and to move continuously along the way of actual service and real success? Common sense says yes, even if prejudice curls the lip. The pharmacist well trained in theory is often able to surmount difficulties or explain them away in cases where he has not had previous experience. Hence, while it may be true that the compensation of pharmacy does not give adequate return for a high training, I believe that a thorough college training in the theory of pharmacy and college laboratory practice in its manipulations may prove of more service to the beginner than the narrow, abortive training received in many stores.

(Specially Prepared for the Era).

THE EARLY DAYS OF PHARMACY.

The Mahometan Period---The Orient the Cradle of the Art.

I.—DAWN IN THE EAST.—BAGDAD.

A Druggist's Booth, Apoc. at Rome

THE origin of almost every branch of knowledge is more or less shrouded in the mists of past ages, and this is especially true with regard to the exact date of the separation of professions. This separation is brought about by a process of gradual evolution, and just as priests were probably the first to practice medicine, so we must look among

the doctors of olden times to find the originators of pharmacy as a separate study. Among

The Ancient Greeks and Romans

shops and booths where drugs were sold evidently existed. But are we to consider the venders of dried herbs, the peripatetic charlatans such as wander nowadays from fair to fair, the pounders of drugs, the herbarii, agyrtæ, sellularii, pharmacotritæ, sagæ, denounced by Pliny and other authors, as the lineal ancestors of the honest and hardworking modern pharmacist, highly educated and legally licensed to pursue an honorable (if not always lucrative) calling? Surely not. We will therefore simply note the names of Hippocrates (B. C. 430), and Galen, and pass on to those Oriental lands which may be looked upon as the true cradle of pharmacy in its modern sense.

The Nestorians.

a sect of Syrian Christians, banished from the Byzantine Empire on account of certain dogmas considered heretical, took refuge on the eastern limits of the Empire of Khouzistan and founded at Dzhonisabour a great medical school where the learned doctors of Western Asia met their colleagues from India on neutral ground. In this establishment, which flourished about A. D. 765, pharmacy was taught, presumably for the first time, as a separate branch of the healing art. The text books appear to have been Syrian translations of Hippocrates and Galen. Gheber's remarkable work on Alchemy, in which nitric acid, corrosive sublimate, the distillation of water, etc., are described, was written in Mesopotamia during the eighth century. About the same epoch an author of Nestorian origin, John Serapion, wrote various works on the art of preparing medicaments, which were compiled at a later date by another Nestorian, Mesue of Damascus. The Krabadin, written by Sabour Ehsabel, who was the head professor at Dzhonisabour about A. D. 850, is considered by some to be the first real Pharmacopœia.

While the systematic study of pharmacy was thus being organized,

THE ARAB WORLD about A.D. 800

The Mahometans

had swept over the Eastern World. From the Persian Gulf, along the coast of North Africa, across the Mediterranean to the foot of the Pyrenees, these turbaned

A MEDIEVAL PHARMACIST'S LABORATORY.

hosts had carried the banner of the Prophet during the seventh, eighth and ninth centuries. But once their sway firmly established, the Arabs practised with success many of the arts of peace.

The sciences of medicine, alchemy, botany and pharmacy were cultivated by the highest in the land. Mahomet himself is said to have studied pharmacy and medicine; it is, of course, highly probable that this remarkable man gave sound and simple rules of life (diet, hygiene and elementary medicine) to the thousands who sought his counsel on spiritual and worldly matters. The great Caliph of Bagdad, Haroun Al Raschid, confided the education of his sons to his medical adviser, Mesue, who, as we have seen, was also a pharmacist.

Bagdad

in these days was a flourishing city of a million souls. It contained a great university, 870 doctors and 6,000 students. Here hospitals were first established, as well as public pharmacies, where eminent men trained young practitioners in the art of preparing medicaments.

When Caliph Haroun Al Raschid sent his ambassadors to Charlemagne in A. D. 807, they brought "balms, spike-nard, unguents, drugs and medicaments in great quantities" as a present to the Emperor of

Western Europe.

It is among the Arabs about this period that we obtain the first glimpse of pharmaceutical legislation. Laws forbidding percentages on prescriptions and providing for official inspection of pharmacies and fixed maximum prices for drugs, etc., appear to have existed even in these early days. Military pharmacy would also seem to have been organized, for we read that Afschin (a general or chief of army) inspected the military pharmacies to assure himself that all necessary drugs were on hand.

This golden age of Oriental Pharmacy continued for several centuries and produced some celebrated

Arab Writers on Pharmacy.

Rhazes, a Persian, who died in A. D. 923, is called "the Arab Galen." He wrote a book in which the distillation of brandy and arrack, and the brewing of beer

of various kinds are described. He is said to have discovered, by accident, sulphuric acid. Of Mesue we have already spoken.

Avicenna, the "Scheik al Reil" or "Prince of Physicians," (978-1036) was also a native of Persia. He spent his youth in Balkh and Bokhara and studied in Bagdad. He was a man of remarkable attainments in many respects. The second and fifth volumes of his "Canon" are devoted to a description of simple and compound medicaments. This work found its way from Bagdad to Cordova and from Cordova to Montpellier, and the rest of Europe. The Oriental figure on the arms of the British Pharmaceutical Society is supposed to represent this great writer. He was one of the first to attack the theory—the great defect of Arab pharmacy—that the activity of a drug is duplicated by its being mixed with a number of others.

Abul Hassan Hebotallah Ebno' Talmid, who appears to have combined the elevated, and doubtless profitable, functions of high priest and doctor to the Caliph of Bagdad in the twelfth century wrote a sort of Pharmacopoeia which was long a standard work among Arab apothecaries. Nicolas, Myrepsus of Alexandria, Abenzoar, Averroes and Abulcasis must likewise be named, but to these we shall have occasion to refer later on.

We may conclude by remarking that as late as the Thirteenth Century we find Bagdad University taking a new lease of life. Caliph Monstanfer reformed, about this time, the Medical College and established new pharmacies and public lessons.

II.—THE SCHOOL OF SALERNO.

Brothers in Science

WHILE science thus flourished in the countries of the East, Europe was mostly sunk in the ignorance of the Dark Ages, the Empire of Charlemagne (A. D. 768) being a brief and brilliant exception.

What little learning survived took refuge in a few convents. In one or two towns, however, study was still pursued, among these was Salerno, in the kingdom of Naples, Italy, which made a specialty of the healing art.

In the Eleventh Century the arrival of some Arab savants infused fresh life into this seat of learning, and the Emperor Frederick II. gave it the title and charter of a university.

Pharmacy Laws 750 Years Ago.

Here, as at Bagdad, the pharmacists formed a separate class from doctors. The high reputation of the medical and pharmaceutical professions was kept up by stringent regulations based on Arab legislation. The law promulgated in 1233 by Frederick II. divided pharmacists into two classes. The Stationarii sold simple medicines and non-magistral preparations; they also dealt, like all apothecaries in those early days, in spices, candy and many articles now considered as groceries; sugar, for instance. The confectionarii compounded prescriptions. A fixed tariff of prices to prevent overcharges and periodical inspection of drug stores also existed.

All pharmacies were placed under the authority of the Medical College.

An Official Pharmacopoeia.

The apothecary took an oath to prepare all medicaments according to the official Pharmacopoeia, the "Antidotarium Nicolai," written by Nicolaus Proepositus at Salerno about A. D. 1150, and long the official standard throughout Europe. The M. D., on the other hand, was bound by oath to denounce to the authorities every druggist who sold, spoilt or adulterated merchandise. Fraud was punished by the confiscation of property; while if those who acted as jurymen were found guilty of aiding and abetting illegal practices, they could even be put to death.

Although the foundation of a University at Naples marked the downfall of Salerno as a principal seat of Italian learning, yet the high character of the pharmaceutical profession, which was based on the laws above briefly capitulated, long characterized Italy. We must,

however, leave the history of Italian pharmacy to cast a glance at Spain, which country influenced, even more than Italy, the evolution of European pharmacy.

III.—THE MOORS IN SPAIN.

WHEN the Arabians had swept westwards along the northern coast of Africa, the Mahometan armies invaded Spain. About A. D. 720 they had conquered the whole peninsula to the foot of the Pyrenees, they even invaded France (Languedoc) in 732, but were repulsed by Charles Martel.

Abderame I., surnamed the Just, formed Spain into an independent Caliphate and established his capital at Cordova during the Eighth Century, founding schools for medicine, astronomy, mathematics and other sciences.

Cordova.

The new capital flourished. In the time of Abderame III. Cordova contained 200,000 houses and 900 public baths. The Caliph's annual revenue in hard cash alone is supposed to have amounted to 45,000 dinars (say \$26,000,000) exclusive of taxes paid in kind. A brisk trade was carried on with Mediterranean and other ports, sugar, cochineal, ambergris, antimony, sulphur, saffron, ginger, coral, etc., being among the merchandise.

The tourist who visits the ancient city may still see the superb mosque built in A. D. 770, with its columns of marble, porphyry and jasper (spoils from Constantinople, Alexandria, Nimes, Narbonne and Tarragona) and other relics of Cordova's glorious past.

Cordova University.

The city was the home of science as well as the centre of trade. The University library contained 600,000 volumes. The schools of Medicine, Alchemy, Astronomy, etc., were famed, not only throughout the Mahometan world, but also in all Christian lands.

Gerbert of Aurillac, Abelard of Bath, Daniel Mosley, Gerardo Campagno—French, English, Italian—all studied at Cordova. Gerbert became tutor in the royal families of France and Germany and subsequently Pope of Rome under the title of Sylvester II.

The Brotherhood of Science.

It is surely a curious and noteworthy spectacle to find in these barbarous and intolerant ages, warring religions and races, thus reconciled in the pursuit of science. From

GENERAL AFSCHIN'S INSPECTION.

the English bishop's throne and the Papal chair itself, scientific truth was spread that had been learnt at the feet of the Mahomedan doctors of Spain. About the year 950 the Emperor of Constantinople sent the Caliph

THE MOSQUE AT CORDOVA.

Abderame III. a Greek edition of D'scorides, one of the principal medical works in olden days, illustrated with drawings of plants.

Greek was an unknown language at Cordova University, and the Caliph had to ask the Emperor for a learned clerk to translate the work. The Monk Nicholas, who was selected to go to Spain, was evidently a skilled pharmacist as well as a Greek scholar, for he appears to have first introduced to Cordova the preparation of "Thieraca" or Venice treacle, the famous electuary of which we read so much in ancient pharmaceutical works.

The Christain monk, the Arab savant, even the despised Jew, here worked hand in hand. No one can help citing the case of King Sancho of Leon, a neighboring Christian monarch, often at war with Abderame. Afflicted with dropsy, he came to Cordova to be treated and was safely sent home cured.

After the death of Abderame III. the Caliphate of Cordova became a prey of internal dissensions and civil war. It was finally reconquered by the Christians, who throughout all these centuries of Arab and Moorish domination had seldom sheathed the sword in Spain.

Yet Cordova, though no longer the glory of Mahometan Spain, produced several

Famous Arab Writers.

Albucasis (Alzavario or Alzagaro) was born in the Province of Cordova and died in that city in 1122. His work *El Tasref* (the "Practise") was translated into Latin under the title of "Methodus Medendi."

Abenzoar, surnamed *El Sabio* ("the Wise") was also a native of the Province of Cordova. He died at Seville about 1162 at the age (it is said) of 135 years. His treatise on medicine is called the *Teissir*. He particularly studied syrups and electuaries, the preparation of medicaments and the virtues of simples. Averrhoes was Cadi (magistrate) of Seville and afterwards Grand Cadi of Cordova; he died in 1206. His work, entitled *Koulliya Fitthobb*, or "Generalities of Medicine," (usually styled the *Colliget*) gives the history of Thieraca and of medicinal plants. He translated and commented Aristotle. He may be considered as having dealt the death blow to the practice of poly-pharmacy among the Arabs; like Avicenna, he held that the active principle of a medicament should be mingled with as few ingredients as possible.

Ebn Beithar, of Malaga, died in 1248. He left an excellent work on simple medicaments, containing many personal observations and may be considered as the leading botanist of the Moorish age.

Other Schools.

Besides Cordova, there were important schools at Seville, Murcia, Tarragona and Toledo. At Seville the tourist may still see the Giralda, built in 1196 by the Moors for an astronomical observatory, the first established in Europe; and it is interesting to note that one of the Spanish Faculties of Pharmacy is still located in this fair city. It is held by some that Gheber, the alchemist, was a Sevilian, although this legend (like the tale of Avicenna's journey into Spain) need not perhaps be taken too seriously.

Ebn Vaphedi, a Valencian who studied at Toledo, wrote "*Manudocti ad Artem Medicinæ*" which treats of the collection of roots, seeds and flowers, the preparation of syrups, pills, electuaries, plasters, oils, etc., while Aymer Ben Abdala, who lived in Toledo during the Eleventh Century, wrote on mineral waters.

Arab Pharmacy.

With regard to the drugs used by the Arabs, their great work was the substitution of relatively mild medicaments for the more drastic remedies of the ancient world. Thus we find senna, tamarinds, a sort of manna, and rhubarb (though then rare) take the place of hellebore, euphorbia and thapsia. They introduced musk, cassia, nutmegs, mace and cloves; these latter, like pepper and sugar, are now considered groceries. Yet the use of sugar as a base for syrups, etc., was a great progress in the art of pharmacy. It appears to have been first used in medicine by Rhazes and Avicenna, to whom we have already alluded. Honey was, of course, familiar to the ancients. In Abulcasis' works we find mention of saffron, fennel, fumitory, fenugreek, quicksilver, vitriol, liquorice, jujubes, and also some of the animal remedies which continued to be quoted in pharmaceutical books for so many centuries afterwards, cockroaches, snails, hedgehogs, etc.

Modern Survivals.

The Arab school of pharmacy originated many words still in every-day use. Alcohol, alkali, alembic, are all of Arab derivation, camphor is from "kafour," the juleps and syrups (of Arab origin as we have seen) are still known by the same names as in Cordovan days, the original words being "djoulab" (Persian for rose water) and "schirab."

The practice of using conventional signs to represent drugs also dates from the Arab schools.

CONCLUSION.

The True Originators of Modern Pharmacy.

We have dwelt at some length on this period of the history of pharmacy, as it appears to us that this wonderful Moorish civilization has never been properly recognized by any writers on the subject, with the exception of Spanish authors. There is little doubt that the laws which governed the practice of pharmacy at Salerno and Naples were simply copied from regulations which already existed at Cordova and we would submit that this famous Caliphate was the first place in Europe where pharmacy existed as we know it to-day, i. e., as a recognized profession exercised by trained and qualified men under proper legal restrictions.

MR. DOOLEY ON ALCOHOL AS A FOOD.—"No," said Mr. Dooley. "Whisky wudden't be so much iv a luxury if 'twas more iv a necessity. I don't believe 'tis a food, though whin me frind Schwarzmeister makes a cocktail all it needs is a few noodles to look like a biled dinner. No, whisky ain't food. I think betther iv it than that. I wudden't insult it be placin' in on th' same low plane as a lobster salad. Father Kelley puts it r-right, an' years go by without him lookin' on it even at Hallowe'en. 'Whisky,' says he, 'is called th' divle because,' says he, 'tis wan iv th' fallen angels.' he says. 'It has its place,' he says, 'but its place is not in a man's head,' says he. 'It ought to be th' reward iv action, not th' cause iv it,' he says. 'It's fr th' end iv th' day, not th' beginnin,' he says. 'Hot whisky is good fr a cold heart, an' no whisky's good fr a hot head,' he says. 'Th' minyin't a man relies on it fr a cruthch he loses th' use iv his legs. 'Tis a bad thing to stand on, a good thing to sleep on, a good thing to talk on, a bad thing to think on. If it's in th' head in th' mornin' it ought not to be in th' mouth at night. If it laughs in ye, dhrink; if it weeps, swear off. It makes some men talk like good women an' some women talk like bad men. It is a livin' fr orators an' th' death iv bookkeepers. It doesn't sustain life, but, when taken hot with wather, a lump iv sugar, a piece iv lemon peel, an' just th' dustin' iv a nutmeg grater, it makes life sustainable."

"D've think ye'ersilf it sustains life?" asked Mr. Hennessy.

"It has sustained mine fr manny years," said Mr. Dooley.

THE NEXT STEP.*

By JOSEPH FEIL, Ph. G.

The Ohio State Pharmaceutical Association has a noble record in regard to the high and progressive stand it has taken on pharmaceutical education. But while the standard demanded of schools, namely, a course of at least one thousand hours' duration, is excellent, it is practically of secondary value unless there goes with this well-meant recommendation a condition which will enable the educational institutions to carry out the requirements.

The pharmacy schools of the State practically demand a grammar school certificate as an entrance requirement. Now the questions arise as to the exact meaning of this condition and whether it is in itself a sufficient preparation for a course of the required time length.

A thorough and efficient grammar school course should enable a pupil to write fair elementary English, have some knowledge of United States history and descriptive geography, and enough of practical arithmetic to include square root and simple mensuration.

An experience of nearly fourteen years as teacher in a high school, which last year numbered fifty-seven teachers and twenty-one hundred and thirty scholars, has given me an unusual opportunity to observe the ability of grammar school pupils to build on their knowledge and to note the amount they are able to hold. Without going into details or quoting from the large amount of statistics I have, it may be said that of those who enter the high schools, approximately only one-half, or 50 per cent., are really able to master the higher studies, and only about one-third, or 33 per cent., actually complete the course.

But only two-thirds of those who finish the grammar school course enter the high school, and this class usually contains the poorer pupils, intellectually, and is the one from which most of the drug store boys are recruited.

I believe it is a perfectly safe estimate that not more than one-third of this class of boys could possibly do any successful work in high school studies.

Now as to the ability of these pupils to study physics, chemistry, botany and pharmacy, without the two years' preparation which precedes these branches (pharmacy excepted) in every good high school, and furthermore, the ability to study the higher work in these sciences, which requires five or six years' preparation in colleges; this is hardly worth stopping to inquire into or argue; it certainly can not be done thoroughly, and it need hardly be added that superficial work is injurious and dangerous.

In the very nature of the present conditions of pharmacy it is a practical impossibility to obtain apprentices who have the necessary educational qualifications to intelligently master pharmacy and its allied sciences, but the future is still before us, and we must positively, absolutely, elevate pharmacy, or in the ordinary struggle where only the fittest survive, we shall fail.

Now it is my purpose to indicate how this can be practically accomplished. My proposition is that this association demand that after a period, say of two years, no student shall be admitted to any school of pharmacy in this State unless he has had at least one year of thorough high school instruction and, after a period of, say anywhere from five to ten years from now, at least two years of such instruction. This foundation, with a thorough and well-balanced one thousand hours' course, is ample for the next ten years.

About one-fourth of the pharmaceutical schools in this country now demand one year high school instruction as an entrance requirement, so this association in adopting the above recommendation, would only be just in the front rank of progress. Incidentally it may be mentioned that many medical schools require at present not only a four years' course, but likewise a collegiate degree to enter.

Now as to the exact meaning of a one-year course in a high school, or its equivalent. This should include

algebra, Latin and natural science, preferably a half-year each of physiology and physical geography, or, as zoology is not taught in pharmacy schools, this science could additionally be advantageously studied for one term, that is, about twelve weeks.

As to the amount of each branch: For those who must study by themselves with some help, Wentworth's First Steps in Algebra or any so-called Grammar School Algebra, Complete, is sufficient. It is, however, far better to take the regular first year's high school work in algebra, which includes everything through quadratics with one unknown quantity.

As to Latin, for store or home study, Robinson's Latin Grammar of Pharmacy and Medicine and Elements of Latin for Students of Medicine and Pharmacy, by Crothers and Bice, are good and thorough books as far as they go, but for the ambitious student two excellent high school books are worthy of mention, namely, Collar and Daniel's First Latin Book and Tuells and Fowler's First Book in Latin, to be followed, of course, by easier portions of Cæsar, Cicero and other Latin authors.

As to natural science, the entire work of Colton's Descriptive and Experimental Physiology is recommended, although Walker's, Hutchinson's and other high school physiologies are likewise good. Davis' Physical Geography and Packard's Elementary Zoology are excellent books, though "there are others" also good.

The above outline would mean two years of study outside of school, and with such a preparation the pharmacy schools of this State could conscientiously give a thousand hours' course with good results.

SOD OIL, WOOL GREASE AND DEGRAS.

By ERASTUS HOPKINS.

When the tariff act of 1897, known as the Dingley bill, was made a law to govern the classification of imported articles, there appeared a paragraph in the act which, with an intent of definite designation, opened a question which became so involved that its final settlement was made only after litigation.

The paragraph is No. 279, which reads " . . . ; wool grease, including that known commercially as degreas or brown wool grease, one-half of one cent per pound."

The introduction of the term degreas caused all the trouble, because the authorities framing the bill did not make the fact clear that the term degreas is applied to oils and greases used by tanners without any special distinction.

For the question involved, research work was done in this laboratory on wool grease and sod oil, the results upon the latter being published in this Journal in 1899, page 291.

As a result of the trial of the cases involved, sod oil was decided to be entitled to free entry as an oil used expressly for currying leather not specially provided for in the act, paragraph 568, and not similar to wool grease. Since that time I have been so often approached by people regarding the facts pertaining to the substances involved in the case that I thought the subject might be of wider interest than to the limited circle of my professional acquaintances.

Sod oil and wool grease have entirely different constitutions as well as characteristics, and hence should be easily distinguished apart.

I wish especially to call attention to the terms "wool grease," "degreas" and "sod oil."

Wool grease is extracted from the wool of sheep. Sod oil is expressed or extracted from leather which has been curried by oils, particularly fish oils.

Sod oil has no relation to wool grease in its derivation, but is related to it in its use; that is, for the currying of leather. Sod oil contains a resinous substance (not a resin) known as degreas-former, which is characteristic of sod oil. No other oil or grease (and this includes wool grease, which is, scientifically speaking, an animal wax and not a grease at all) contains this degreas-former, which is therefore characteristic of sod oil.

Originally, sod oil was called degreas. Later the term was made by the American oil trade, and to a less extent by the English, to embrace wool grease. The term degreas has therefore come to embrace two substances, dissimilar in constitution, source and chemical constants.

*Read at the last annual meeting of the Ohio State Pharmaceutical Association, and contributed to the Era for publication.

Wool grease being called degreas by the trade, caused the mention of degreas in paragraph 279 of the act of 1897—a commercial term by which wool grease is known, as it is also known under the name of brown grease. The point I wish to make is that the degreas there mentioned means wool grease, but it does not embrace sod oil, which in no way resembles it except in use. From this it can be seen that the term degreas, which originally had a limited meaning, has come to be applied indiscriminately to the two substances used for currying and stuffing leather, and was mentioned in paragraph 279 to make that paragraph stronger in covering wool grease.

Paragraph 279 mentions two substances, tallow and wool grease. Degreas is not mentioned in that paragraph, excepting as a wool grease degreas. Brown grease is mentioned also in this same connection.

Paragraph 568 mentions "all other greases and oils used for stuffing leather." Here also is included a degreas, but this degreas is not that specially mentioned in paragraph 279, which is a wool grease, but is the original degreas, or sod oil made from oil expressed from leather, and therefore having no connection with a wool grease which comes from wool. Sod oil is the English name for the substance known to the French as degreas or moëllon, and the term degreas is the original name for this oil extracted from oiled chamois leather, and has been borrowed by the English to be misapplied to wool grease.

The term sod oil is unknown in the French currying trade excepting as an English translation of their own word degreas or moëllon, and the process of making degreas might be said to have originated in France in the manufacture of chamois leather.—(Jour. Am. Chem. Soc.)

GOOD. ISN'T IT?

The following is an advertisement of a Kentucky drug firm, which occupies the space of three columns in the local paper. In many respects it is hard to beat:—

ANNOUNCEMENT!

The Pioneer Drug Store of ——— has lost its old name of ———, which it bore for 40 years. That name which to your grandparents and their children as well as to many of you meant integrity, honesty of purpose in its most unselfish form, in early life the name also was synonymous of activity and enterprise as well. But declining years, enfeebled health compelled our old patriots to retire from the active pursuit of their chosen profession, which induced others to embark into the drug business as competitors in ——— but failure after failure has been their fate. Why? Because they did not have proper respect for their old and esteemed brother druggist, presuming on their old age to ridicule and defame the methods of their old brethren. The innate gratitude of the good people of ——— rebelled against such lack of common courtesy toward those who had administered to the sick wants of their probable dead. Father, mother or friend, constantly striving to relieve their pains and sorrows through life and using every effort then known to the medical world to remove all possible pains from the death bed. Thanks to an allwise Providence, thanks to that universal law which places humanity above the animal and fills his being with a conscience, which predominates over his depravity and gives to him that intuitive love of justice characterizes our people over the broad land of America. The old Pioneer Drug Store grew stronger and yet while handicapped with the infirmities of those years which begin to rest so heavily on its proprietors. Until to-day it blooms out into a new century a monument to the memory of our old patriots. Under a new management it is true, but one which will ever endeavor to perpetuate the integrity and fidelity of its predecessors, adding to their merits, that enlightenment which has come to the chemist, to the pharmacists, the botanist of to-day through the famous researches and explorations of scientific men every where so grand and promising to the race. The Old Pioneer Drug Store as a bases for future superiority and general active proficiency has at once become the best stocked drug store in ———. It is financially able to sell at lowest prices.

It is the only drug store in ——— under the management of not only a Registered Pharmacist, but also a graduate in pharmacy, also a analytical chemist and graduate in Medical Botany. We are therefore specially prepared to test our chemicals as to their identity and purity, identify our roots, herbs, etc., beyond any possibility of mistake, analyze all our chemical and pharmaceutical compound by which we can determine their reliability and properties therapeutically. We do not have to depend upon the wholesale house or their whole army of employees, competent and others not, to pick out our various goods for shipment to us.

The system introduced into our Prescription Department has reduced a probability or error practically to an impossibility. Our Prescription Department has a larger variety of chemicals, extracts, hydro carbons, volatile

oils, alkaloids and compounds than any other drug store in our community as verified by the liberal patronage bestowed on us by our prominent physicians. We will donate \$100.00 to the ——— Library if this is not true. We wish the people of this community to participate in the pleasure of our formal opening March 31, 1900. We will have for everybody a present, a souvenir from ——— Ideal Drug Store, the greater the number the greater will be our happiness and satisfaction. We wish to add interest to the birthday of all our friends and patrons, that mile stone in life which shows the notches made by old Father Time, and will have on our counter a book in which you can register the date of the month in which you were born, (not the year) certificates will be given with each purchase which at the end of your year will show the total amount of your purchase. Promptly on your birthday we will send you a present costing 10 per cent. of your money spent in our store. We hope that this offer will be freely accepted as we wish this little innovation to be so general that everybody can draw from it some little ray of pleasure. We can assume you that your happiness will be ours. When we come to think of it what greater real sources of joy have we than the peace and bliss of seeing others so.

When inviting you to our store we anticipate to give you courteous treatment, solicited information such as chemists, pharmacists and botanists can give will be given. When you want a physician go to those who have proven efficiency by successful practice and almost miraculous surgical operation, but when you want a chemist or pharmacist we are whom you seek.

A special fine line of Havana Cigars and Choice Tobaccos, Perfumes from the flowers of India, Ceylon and Japan, Toilet and Medicinal Soaps, rich in their purity and excellence, Hair, Tooth, Nail, Bath, Shaving, Throat and Infant Brushes of superior designs and bearing the ear marks of the highest workmanship, the most beautiful assortment of French and Italian Mirrors ever seen in ———. Ear, Nose, Eye, Throat, Urethral and Rectal, Glass and Rubber Syringes of various designs, Combination Hot Water Bottles and Fountain Syringes are our speciality, a judicious use of which will add largely to your health, no home complete without one. Toilet and Medicinal Atomizers our stock full and complete. Wines, Brandies, Whiskies, Rums, Gins, &c. will be kept by us chemically pure, positively will only be sold when a written order is presented by a reputable physician for his patient. Keep cool until our beautiful Onyx Soda Fountain arrives with its silver draught tubes for soda water, gingerale, mineral waters, root beer and above all the natural fruit syrups so delightfully refreshing when drawn from our porcelain chambers contained in the inner recesses of our Arctic Fountain, constantly surrounded by zero ice. Lead and tin poisoning as frequently occurs from drinking soda waters drawn from cheaply constructed two and three hundred dollar fountains cannot possibly occur in ours, as no lead or tin is used in its construction. When completed we want everybody to have a treat at our expense.

Our Pharmacy thanks the public for the kindly patronage, the confidence and fidelity, the friendly interest bestowed upon its predecessors. We wish to add new laurels to the name of your old friends. Not only have we got the prestige of the Old Pioneer Drug Store to maintain, but it becomes our duty to be ever the leading drug store of ——— in the future.

The man who can only imitate lacks experience and perfect knowledge of his business. Watch us. Respectfully,

NUMBER OF REGISTERED PHYSICIANS IN THE UNITED STATES.—The actual number of registered physicians in the United States, according to the most recent count, shows an average for the whole of about one to 647 inhabitants, but the proportion in the States varies greatly. California appears to be the State which is the most liberally supplied, the proportion there being one physician to 420 inhabitants, while in Iowa nearly the same conditions prevail. On the other hand, in North and South Dakota and New Mexico, the proportion was respectively one to 1,285, 1,296 and 1,391 inhabitants.

ARROW POISON OF THE WAKAMBA.—From this arrow poison, employed by the Wakamba tribe of German East Africa, Brieger (D. Med. Woch.) has isolated an extremely toxic glucoside, resembling ouabain in its action on the heart. The formula of the substance is found to be $C_{27}H_{46}O_{13}$. In the anhydrous state, it crystallizes in needles melting at 182° – 184° C. It also forms larger plates, containing water of crystallization; these melt at 93° – 94° C. It is insoluble in ether, acetic ether, chloroform and benzene; slightly soluble in cold alcohol or water, more so on warming; the solution is levogyrate. The pure substance does not reduce Fehling's solution, but on hydrolyzing with mineral acids, a yellow, amorphous, non-poisonous body separates, the aqueous filtrate from which has marked reducing powers, gives an amorphous glucosazone, and ferments with yeast. The original substance dissolves in concentrated sulphuric acid with a reddish-brown color and a green fluorescence.

(Special London Correspondence).

BRITISH PHARMACEUTICAL AFFAIRS.

London, June 29, 1900.

The Scottish Branch of the Pharmaceutical Society.—The annual meeting of the North British Branch of the Pharmaceutical Society of Great Britain was held on June 22 at Edinburgh. There were twenty-nine candidates for seventeen seats on the Executive, which, subject to the veto of the Council in London, controls the Society's affairs north of the Tweed. All members of the Society resident in Scotland are entitled to vote, and out of 583, 282 availed themselves of the privilege. Mr. Peter Boa, chairman of the Executive, headed the list of votes, and all the old members seeking re-election were successful. There appears to be some little friction between the Scottish members and the London secretary, and a resolution was passed on the subject.

The Companies Bill.—After nearly every one concerned had come to the conclusion that the Companies Bill would not be seen any more this session there has come a sudden revival of interest, as it now seems that the Government is going to make a big effort to pass the measure before Parliament adjourns. On June 26 it passed its second reading in the House of Commons, and was referred to the Grand Committee on Trade. Already two members have put down amendments to expunge the pharmacy clause, and as Mr. Ritchie, the president of the Board of Trade, who has charge of the bill, expressed his opinion when moving the second reading that both this clause and the one dealing with medicine were not proper ones for inclusion in a financial bill, it seems probable that they will be dropped in spite of the Lord Chancellor's affection for them.

The Constitution of Morphine.—At the meeting of the Chemical Society on June 21, Dr. S. B. Schryver and Mr. F. H. Lees, of the Wellcome Research Laboratories, communicated an important paper on the constitution of morphine. The substance of the communication was as follows: Morphine is now known to be a derivative of N-methyl morpholine. It contains also a phenanthrene complex and two hydroxyl groups, one of alcoholic and the other of phenolic character. The researches recorded in this paper were undertaken with the object of determining the influence of the various groups on the physiological action of the alkaloid and to obtain some further information as to the way the various complexes are combined together in the molecule. The authors of this paper have replaced the hydroxyl group of morphine by the elements chlorine, bromine and hydrogen, and have obtained a new series of products which are entirely devoid of narcotic action. Chloromorphine, $C_{17}H_{19}O_2NCl$, obtained by the action of phosphorus trichloride on morphine, is a crystalline product, melting at 190° with decomposition, and gives beautifully crystalline salts. Bromomorphine, $C_{17}H_{19}O_2NBr$ is obtained in a similar manner. Desoxymorphine hydrochloride, $2(C_{17}H_{19}O_2N.HCl)3H_2O$ is obtained by the reduction of chloromorphine by tin and hydrochloric acid. On treatment of chloromorphine and bromomorphine with water, these bases decompose, giving rise to the haloid acid salts of new bases. In the case of bromomorphine the action may be represented by the equation:

The product thus obtained is isomeric, but not identical with morphine. It is a crystalline base, soluble in hot water and melts at 274° – 276° . Its salts are very soluble in water and are more strongly laevorotatory than those of morphine. The chemical relation of this base to morphine has not yet been determined, but it is entirely devoid of narcotic action and it is probable that the morpholine ring has been entirely split up, as it has been shown by Knorr and Leubuscher that various simple synthetic morpholine derivatives have nearly the same physiological action as morphine.

British Pharmaceutical Conference.—Next year's meeting will be held in Dublin and the chemists of Dundee have arranged to invite the Conference to visit the latter city in 1902. Considerable dissatisfaction is felt by country members that the London local committee has made no arrangements for the Lord Mayor to welcome the members when the Conference meets next month.

David S. Davies, a London pharmacist, committed suicide with prussic acid in Hyde Park, on June 20.

The well-known firm of G. B. Kent & Son, brush makers, of London and other places, is to be formed into a limited liability company with a capital of £160,000.

PRODUCTION OF ARSENIC FROM PHOSPHORUS.

Note by SAMUEL P. SADTLER, Ph. D.

The announcement by Prof. F. Fittica, of Marburg, the well-known editor of the *Jahresbericht*, that he had succeeded in changing both the clear and the amorphous varieties of phosphorus into arsenic by following certain lines of treatment comes with something of a surprise to chemists.

Already near the beginning of this century the observation was made that, under the influence of ammonia, phosphorus, whether on exposure to light or when in the molten condition, passed into a so-called black modification, and in 1892 Flückiger showed that this was arsenic and nothing else. However, it was assumed that the arsenic had existed in the phosphorus as an impurity, and had merely separated out under this treatment.

The author soon found, on repeating the earlier experiments, that atmospheric oxidation was an essential part of the process yielding the result noted, and he then began the treatment of the phosphorus with ammonia in the presence of stronger oxidizing agents like hydrogen dioxide, and with nitric acid alone and in conjunction with barium dioxide. Amorphous phosphorus was found to give better results than the clear variety.

The method finally chosen by which he succeeded in obtaining the maximum yield (8-10 per cent.) was the following: Two grams of amorphous phosphorus, free from arsenic, were heated on the sand bath with 12.9 grams of finely powdered ammonium nitrate after being carefully mixed in a rather wide tube connected with a condenser, and the temperature gradually raised to 180° C. When the reaction begins care must be taken to moderate the heat, which, however, rises to about 200° . After allowing to cool, the contents of the tube, a fused grayish mass, are dissolved out, and, after filtering, hydrogen sulphide added. The yellow precipitate is dissolved in ammonium carbonate and the arsenic sulphide precipitated from the solution on addition of hydrochloric acid. Its identity is established by its conversion into arsenous acid and by Marsh's test.

The author gives a provisional formula for arsenic, PN_2O , according to which it is a nitrogen monoxide compound of phosphorus. Further communications are promised.

Prof. Clemens Winkler, of Freiburg, Saxony, publishes in the *Berichte der Deutschen Gesellschaft* for June 11, which is just at hand, a review of Fittica's experiments, and shows quite conclusively that the arsenic found is simply a constant impurity of the phosphorus, and, in four experiments, using different oxidizing agents, he gets 1.91, 1.925, 1.920 and 1.920 per cent. of arsenic. This uniformity, to his mind, shows the exact extent of the arsenic impurity originally present in the phosphorus used. So we still have to consider arsenic as an element.—(Am. Jour. Pharm.)

SEPTICIDIN.—This is a serum preparation employed in veterinary practice for swine fever or chicken cholera. It is prepared from the blood of highly immunized animals. It remains active for six months, if kept cool, but not if frozen. The serum is injected under the skin of the loose tissue, in swine best behind the ear or behind the knee joint, and under the wing or on the neck of a bird. For swine which are suffering from contagious diseases or from fever, septicidin "A" should be employed; if the animal weighs less than 50 kilograms 10 Cc. is injected; if heavier, 20 Cc. is given. If after three to five days no improvement has occurred a second injection is necessary. To immunize small healthy birds from cholera, 0.5 Cc. is sufficient; for large birds, 1 Cc.; for birds already attacked, 2 to 3 Cc. is injected and repeated in twenty-four hours if necessary. To immunize swine septicidin "B" is employed. (Pharm. Zeit., 45, 27. Pharm. Jour.)

BAMBOO MANNA.

By DAVID HOOPER, F. C. S.

The recent occurrence of a sweet secretion on the stems of bamboos growing in the Central Provinces is a most interesting fact to students of antiquarian medicine. Bamboo manna derives its name from the Sanskrit words, *Tvak-kshira*, "bark milk;" *Vansa-sarkara*, "bamboo sugar;" and *Vansa-karpura*, "bamboo camphor." *Vansa-lochana* is the name by which it is known by Indian physicians at the present day. These terms would signify a manna-like substance exuding from the stem of the tree, but what is known and used as *Vansa-lochana* all over India is quite a different article.

That bamboo manna is not a sugar, but a white, gritty body, now called *Tabashir* by Europeans, is gathered from the account of Dioscorides, and from the fact that no kind of sugar prepared from the sugar cane answering to this description was known in India in his time. Dioscorides writes: "It is a kind of concrete honey, found in reeds in India and Arabia Felix, in consistence like salt, and brittle between the teeth like salt." *Tabashir*, or bamboo manna, was known to the early Arab travelers in the East, and the port of Thana, on the western coast of India, was famous for this product in the twelfth century. *Tabashir* is employed as a medicine for its cooling, tonic, aphrodisiac, and pectoral properties. In its crude state, when taken from the inside of the bamboo stems, it is mixed with insect remains, and has a blackish appearance; but on gently calcining it becomes quite white, with a pearly luster. It consists of about 80 per cent. of pure silica, with variable proportions of alkalis, water and organic matter. The history and properties of *tabashir* have been very fully discussed by Sir David Brewster (*Philos. Trans.*, 1819; *Edin. Journ. Science*, vol. viii., p. 280); Sir George Birdwood (*Bombay Products*, pp. 95-96); Dr. F. A. Flückiger (*Zeit. des Allg. Osterr. Apoth. Ver.*, 1887, No. 14), and by Sir D. Brandis (*Indian Forester*, March, 1887).

The only modern work which alludes to a sugar in the bamboo is the "System of Botany," by La Maout and Decaisne. The authors remark: "The young shoots of these two trees (*Bambusa arundinacea* and *B. verticillata*) contain a sugary pith, which the Indians seek eagerly; when they have acquired more solidity a liquid flows spontaneously from their nodes, and is converted by the action of the sun into drops of true sugar. The internodes of the stem often contain silicious concretions of an opaline nature, named *tabashir*." Here a distinction is made between the manna forming on the outside of the stem and the *tabashir* found inside, but no reference is made to any record where the first-named exudation was observed or examined. Dr. Watt, when writing the article on *Bambusa* for his "Dictionary of Economic Products of India," sums up the general experience with regard to this point, and says: "Nor has the spontaneous excretion of sugar on the outside of the stem ever been recorded by Indian travelers."

The strange appearance of manna on the stems of the bamboo was reported last March by the Divisional Forest Officer, Chanda, Central Provinces, and notices of this phenomenon have been published in the local papers. The bamboo forests of Chanda consist of *Dendrocalamus strictus*, the male bamboo, a bushy plant of from 20 to 30 feet in height, and affecting the cooler northerly and westerly slopes of Central and Southern India. This is said to be the first time in the history of these forests that a sweet and gummy substance has been known to exude from the trees. The gum has been exuding in some abundance, and it has been found very palatable to the natives in the neighborhood, who have been consuming it as a food. The occurrence of the manna at this season is all the more remarkable, since the greatest famine India has known is this year visiting the country, and the districts where the scarcity is most keenly felt are in the Central Provinces.

An authentic specimen of this bamboo was sent to Dr. Watt, Reporter on Economic Products, Calcutta, and was subsequently handed to me for examination. It occurred in short stalaetiform rods about an inch long, white or light brown in color, more or less cylindrical in shape, but flattened or grooved on one side, where the tear had adhered to the stem. It was pleasantly sweet, without the peculiar mawkish taste of Sicilian

manna (*Flaxinus rotundifolia*). It was soluble in less than its own weight of water, and the solution, when allowed to repose, deposited white, transparent crystals of sugar. The manna contained 2.66 per cent. of moisture, 0.96 per cent. of ash, 0.75 per cent. of a substance reducing Fehling solution, and a small quantity of nitrogenous matter. The remainder consisted of a sugar which became inverted in twenty minutes when boiled with dilute hydrochloric acid (1 per cent.), and from its solubility, melting point and crystalline nature, appeared to be a saccharose, related to, if not identical with, cane sugar. It contained no mannite, the saccharine principle peculiar to true manna.

The bamboos and sugar canes belong to the same natural order of grasses, and perhaps it is not unnatural to expect them to yield a similar sweet substance which can be used as a food; but it is a coincidence that the culms of the bamboo, hitherto regarded as dry and barren, should in a time of great scarcity afford sustenance for a famine-stricken people.—(*Nature*; *Pharm. Jour.*)

THE ERGOTINS OF COMMERCE.

Merck, in his "Annual Report" for 1899, pages 65-67, gives a comparison of the various brands of ergotin met with in commerce.

Ergotinum Bonjean.—This is an aqueous, reddish-brown extract purified by the addition of alcohol. One part corresponds to 5 to 6 parts of ergot. The dose is 10 to 20 centigrammes in pills or hypodermically.

Ergotinum Bonjean Depuratum Pro Injectione.—This is a further purified preparation of the former, 1.5 part corresponds to 1 part of ergotin Bonjean. Dose, 50 to 60 centigrammes subcutaneously for uterine or internal hæmorrhage.

Ergotinum Bonjean Siccum cum Dextrino is ergotin Bonjean mixed with an equal weight of dextrin. It is a brown powder, and used similarly to ergotin Bonjean, but in twice the dose.

Ergotin Bonjean Siccum cum Saccharo Lactis contains equal parts ergotin Bonjean and milk sugar. It is a brown hygroscopic powder soluble in water. Use and dose same as above.

Ergotinum Bombelon Fluid (Cornutinae ergotas).—This is a dark brown fluid which is employed subcutaneously or internally in labor. The dose for internal use is 2 grams, to be repeated in ten minutes. For subcutaneous injection 0.2 to 0.5 Cc. of the preparation is aspirated into a 1 Cc. syringe, which is then filled with water, shaken up, and the freshly prepared mixture injected.

Ergotinum Bombelon Spissum.—This is a solid extract for internal use exclusively, in the form of pills. Ergotin solutions in distilled water soon develop fungoid growths, so that they should either be freshly prepared or have alcohol added. A solution which keeps well is obtained as follows: *Ergotin Bombelon spiss.*, 10; *Aq. Laurocerasi*, 7.5; *Alcohol* (90 per cent.), 2.5. Four to 15 drops for a dose according to requirements.

Ergotinum Denzel (Fluidum).—A purified extract of ergot which has the same dosage as that of the German Pharmacopœia. The following formulas are recommended for its administration:

(a) Internal. *Ergotin Denzel*, 2; Cinnamon water, 180. Two or three tablespoonfuls to be taken daily.

(b) Subcutaneous. *Ergotin Denzel*, 2.5; Borax, 0.25; distilled water, 7.25. 0.5 to 1 Cc. to be injected.

Ergotinum Kohlmann Fluidum.—This is a dark brown fluid miscible in water, 16 drops (1 gram) of this preparation corresponds to 1 gram ergot, the effect is the same as that of fresh ergot. Single dose for uterine atony 4 to 5 grams. For hæmorrhage the same dose is given in portions in twenty-four hours. For inducing labor, at first 5 to 12 drops hourly may be given, the dose increased gradually as required to 20 or 30 drops.

Ergotinum Purum Dialysatum Spissum Wernich is a dialyzed aqueous extract of ergot which has previously been treated with alcohol and ether and is, therefore, specially suitable for subcutaneous injection. This preparation is very rich in salts and is given in relatively large doses (2 grams and over).

Ergotum Purum Dialysatum Liquidum Wernich.—About two parts of this preparation corresponds to 1 part of the last mentioned; the dose is proportional.

Ergotinum Purum Dialyatum Wernich Siccum.—The active constituents of 1 gram of ergotin Wernich siccum are contained in 0.7 part of this preparation, so that the dose is 1.4 gram.

Ergotinum Purum Siccum Wiggers is a dried alcoholic extract of ergot, partly deprived of oil, which, according to Kobert, consists chiefly of sphacelinic acid. It forms a brownish-red powder which dissolves in warm alcohol; the solution may be diluted with water without precipitation. Dose from 2 to 5 up to 10 centigrammes for each injection. Maximum dose in twenty-four hours, 50 centigrams.

Ergotinum Yvon.—A dark brown fluid extract which contains cherry laurel water, prepared by extracting fat-free ergot with solution of tartaric acid; 1 Cc. of ergotin Yvon contains the equivalent of 1 gram of ergot. Dose for internal use 10 to 20 drops, subcutaneously 1 Cc. each day, the injection to be repeated every second or third day.

PHARMACY.

COLD AND SEED PROTOPLASM.—The degree of cold to which seeds may be subjected without being killed is stated to be as low as -65° C. The latent life in seeds is spoken of by F. Escombe as being in a state of hypnosis, while to tell protoplasm in this condition he gives the name of hypnoplasm.

PURIFYING THE AIR IN A ROOM.—In order to purify the atmosphere of the room inhabited by a phthisical patient the following may be plentifully and frequently sprayed: Gualacol, 10 parts; carbolic acid, 6 parts; eucalyptol, 8 parts; menthol, 4 parts; thymol, 2 parts; oil cloves, 2 parts; alcohol (95 per cent.), 170 parts. Mix and dissolve. (Louisville Jour. of Med. and Surg.)

RENDERING ALCOHOL UNDRINKABLE.—Coal tar hydrocarbons have lately been allowed in Germany as denaturing agents. The boiling point of the coal tar naphtha used lies between 80° and 150° C. Spirit so treated becomes milky when mixed with water and has an extremely unpleasant taste. About 5 volumes of the naphtha are mixed with 100 volumes of spirit. (Jour. Soc. Chem. Ind.)

INSECT DESTROYING POWDER.—The following combination is the subject of a recent English patent: Horse radish (14 pounds) is boiled with water (4 litres) to a stiff paste, which is then mixed with tartar (60 grams) and soda (30 grams) and baked in an oven. The product is finely powdered and mixed with powdered sugar (53 pounds), powdered borax (42 pounds) and Brunswick green (2 pounds).

ACTIVE PRINCIPLE OF CAPSICUM.—K. Micko (Pharm. Centralh.) finds that the so-called capsacutin of Morblitz isolated by the latter from Capsicum annuum (Paprika), and described as possessing a vanilla-like odor, is identical with his capsalcin, the peculiar odor of the so-called capsacutin being due to decomposition products. Reviewing his own work, the author reasserts that capsalcin, $C_{15}H_{25}NO_2$, is the acrid principle both of the fruits of Capsicum fastigiatum (cayenne pepper) and of C. Annuum (Paprika), but that the former contains about 20 times as much as the latter; hence its greater pungency.

THE NAILS OF THE HUMAN HAND. P. A. Minakoff has made an exhaustive study of the nails of the hand, some of the results of which he regards as of medico-legal importance. Among other things he asserts that the nails of the right hand in a right-handed person are wider by from one-half to two millimetres than the corresponding nails on the left hand; while in left-handed persons the reverse obtains and in the ambidextrous the nails are of equal size on the two hands. The thickness of the nails diminishes progressively from the thumb to the little finger. (Medical Record)

LIBRARY PASTE:—

White dextrin	12	ounces
White sugar	3	ounces
Alum	$\frac{1}{2}$	ounce
Boiling water	20	ounces
Formaldehyde	10	minims
Oil wintergreen	10	minims

Rub the solids to a powder and add water. Then allow to cool and rub in a mortar to a very smooth consistency, adding formaldehyde and oil of wintergreen last.

LIQUID CARBON DIOXIDE.—Although perhaps the cheapest, the method of producing carbon dioxide by the combustion of coke is unsuitable for gas that is to be used in the aeration of beverages, because of the comparatively high percentage (0.25 per cent.) of carbon monoxide present, corresponding to 26 litres per 20 kilos. cylinder of the liquefied gas. Brewers and aerated water manufacturers consulted by C. Gravillon (Jour. Soc. Chem. Ind.) state that carbon dioxide obtained from calcium carbonate by the action of sulphuric acid is more piquant than that from coke, to say nothing of the disagreeable flavor produced in coke gas by the sulphuretted hydrogen present.

A NEW SPIRIT-PROOF SEALING AND BOTTLE-CLOSING WAX, said to withstand the softening effect of alcohol or liquids containing alcohol, and also to produce a sealing wax less susceptible to changes in weather, consists essentially of calcium resinate mixed with a little heavy petroleum oil (solar oil) to render it less brittle and containing, if desired, a small proportion of oleic acid or an oleate insoluble in spirit, in order that it may be melted by the use of steam heat. The calcium resinate is manufactured by incorporating 3 parts of slaked lime with about 23 parts of molten colophony. The compound is patented in England.

SPIRIT LAMPS.—An English patent has been granted on the following: Ordinary spirit is mixed with from 15 to 20 per cent. of hard or soft soap, free from glycerin, heated and stirred until dissolved; on cooling, a buttery mass is obtained, from which the spirit does not sensibly evaporate. The lamp, a simple metal box with lid, has no wick, but is filled with this mass, which melts and becomes ignited by applying a light; after extinguishing the lamp by blowing on it, or by using the lid as an extinguisher, the mass again solidifies and is readily and safely portable. The inventor claims "a spirit lamp in which the fuel is fluid in use," but "in a solid or occluded condition when cold."

PILL EXCIPIENTS.—J. Cohn (Pharm. Zeitung) recommends the following excipients for remedies ordinarily prescribed in pill form:

For carbolic acid use soap and powdered licorice or marshmallow; soap, marshmallow and honey; marshmallow, starch or tragacanth, and glycerin.

Alkaloids should be rubbed down with starch, sugar, milk sugar, or kaolin, and massed with honey, syrup or glucose. Aloes rubbed down with a little water in a warm mortar, or with water and soap, or extract of gentian. Copalba should be mixed with one-sixteenth of its weight of calcined magnesia and a little water; or with kaolin, tragacanth and a little water. Alkaline bromides and iodides with kaolin and vaselin or lanoline; with marshmallow and honey, starch, tragacanth and honey. Calomel, starch, tragacanth and water; tragacanth and glycerine.

Glucose, honey and similar bodies should not be used as they reduce the mercurous salt.

Camphor, soap and starch with honey or glucose.

Chloral hydrate, starch, tragacanth and honey or glucose.

Eucalin forms a good mass with kaolin alone.

Ergotin the same.

Eucosote, soap, 1 part; powdered licorice, 5 parts; kaolin, extract of licorice and honey. Eucalyptol, gualacol, and terpineol may be massed with the same excipients.

Methylene blue may be triturated with vaseline and sufficient kaolin added to mass the mass.

Oleoresins, kaolin; kaolin, tragacanth and honey.

Croton oil, licorice powder, tragacanth and honey or glucose.

Tar, powdered marshmallow and magnesia.

Pharmaceutical Celebrities.

J. WEBB FOSTER.

Tradition makes poets appear languid and credits them with outlines slender to the point of attenuation. But nothing could be wider from the mark than such a characterization applied to J. Webb Foster, of Baltimore, the gifted poet laureate of the Wedgwood Club and one of the most jovial of pharmacists. His compact figure, dark eyes, square shoulders and round face suggest joviality and a plentiful infusion of the milk of human kindness. He is quick at repartee and can keep a company in a high state of good humor, besides being thoroughly up in his profession, a circumstance well attested by the fact that he was for twelve years lecturer on pharmacy at the Baltimore Medical College. He is still a young man, in the prime of life. He graduated nineteen years ago at the Maryland College of Pharmacy, and soon afterwards established himself in business at the corner of Hanover and Hill streets. Forming a partnership with John Stauff, a quiet and unassuming but very conscientious and well informed druggist, he opened another store at the corner of Barre street and Fremont avenue, both places being conducted with much success. Mr. Foster is vice-president of the College of Pharmacy, a member of the College Board of Examiners, chairman of the Maryland Pharmaceutical Association Executive Committee, first vice-president of the Baltimore Retail Druggists' Association, and prominently identified with the American Pharmaceutical Association. He has marked facility for writing verse, and most of the Wedgwood Club minutes are written in rhyme. The peculiarities of the different members are aptly described, and the poetic effusions of the club's secretary are among the most enjoyable features of the meetings.

Dental Enamel.

Borax in fine powder.....	4 parts.
Glass in fine powder.....	5 parts.
Silica in fine powder.....	8 parts.
Zinc oxide	200 parts.
Saturated solu. of calcium chloride, a sufficiency.	

Mix the powders by sifting, and keep in a closed bottle. When required for use make into a stiff paste with the solution.—Br. & Col. Dr.

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Liquid Bluing.—(G. A. M.) See this journal, July 5, 1900, page 9.

Distinguishing Extract of Vanilla from Liquid Preparations of Vanillin, Etc.—(G. F. L.) See papers by Hess and Prescott, this journal, June 8 and September 7, 1899, Pages 772 and 329 respectively.

Lister's Carbolic Paste.—(H. S. R.) Various formulas for this preparation have been published. Here are some of them: (1) Carbolic acid, 5 parts; linseed oil, 20 parts; prepared chalk, q. s. Mix them so as to form a mass of the consistence of a soft ointment. (2) Carbolic acid, 50 parts; linseed oil, 350 parts; precipitated carbonate of calcium, 600 parts. (3) Carbolic acid, 50 parts; olive oil, 450 parts; wheat starch, 500 parts. The second and third formulas are ascribed to Dieterich.

Deterioration of Dynamite.—(U. S. M.) Mining experts say that dynamite deteriorates in two ways. (1) By the loss of nitro-glycerine, this being a slowly volatile substance. The loss would probably be slight if the dynamite were stored in original cases in a reasonably dry and moderately cool place. (2) By chemical changes in the dynamite from various causes. Dynamite, for instance, which has been stored where it froze and thawed alternately, becomes "tender," and is liable to play odd tricks. Dynamite should not only be kept dry, but should not be exposed to sudden changes of temperature.

Practical Experience Required for Registration in New York State.—(W. G.) We do not know how much credit the State Board of Pharmacy will allow you for the time you have spent in a college of pharmacy. The law requires that the applicant for registration as a pharmacist shall have had four years' experience, but whether this may be made up of both practical experience and the experience gained in college we are unable to state. Why do you not refer your inquiry to the secretary of the New York State Board of Pharmacy, E. S. Dawson, Jr., Syracuse, New York?

Crayons for Marking Leather.—(J. T. F.) Try one of the following:

(1) Black, 3 parts; soap, 6 parts; wax, 8 parts; tallow, 4 parts.

(2) Black, 2 parts; soap, 4 parts; wax, 8 parts; spermaceti, 4 parts.

For your use the proportions of some of the ingredients may have to be slightly altered, which, of course, can only be determined by experiment. To make the crayons, melt the wax, etc., over a gentle fire until dissolved, add the soap in fine shavings, stir until dissolved, then add the black, which may be lampblack, drop-black or black lead. These crayons may be cast in a flat cake and then cut up with a saw or hot knife into square pencils, or they can be cast in a grooved box similar to a druggist's pill machine, pressure being applied while hot.

Rhigolene as a Local Anæsthetic.—(Dr. V. B. M.) Rhigolene, the lightest boiling portion of petroleum, has been recommended as an efficient local anæsthetic when employed in the form of a spray. This liquid boils at 18° C. and must be handled with great care, as it emits an inflammable vapor even at low temperature. That portion of petroleum which boils below 50° C. is usually col-

lected by itself and as such is commonly known as naphtha or gasoline. A certain portion of this having a boiling point of about 60° C. is known as canadol. It is principally normal hexane and has also been recommended as a local anæsthetic in the treatment of sclatia, rheumatism, etc. Chloride of methyl (chloro-methane) is similarly employed. It is a gas of an ethereal odor compressed to liquid in cylinders or siphons, in which containers it reaches the customer. Merck lists this substance at \$25 per liter siphon.

Ichthyol and Quinine Sulphate.—("Clerk") sends the following prescription with which he has had considerable difficulty in making it into a desirable mixture.

Ichthyol	½ ounce
Quinine sulphate	30 grains
Resorcine	2 drams
Tincture of nux vomica	4 drams
Tincture of columbo	3 ounces
Solution ammonium acetate	3 ounces

We find upon trial that a clear mixture cannot be made from the prescription as written. The quinine sulphate is insoluble in the solvents of the mixture. It should, if dispensed at all, be sent out as a shake mixture. Ichthyol, or more correctly ammonium ichthyol-sulphonate, is soluble in water, partly so in alcohol, ether and petroleum benzene. The prescription is a modification of one that has been going the rounds as an antiphlogistic and alterative. If odor be any index of the value and usefulness of this mixture it must be truly valuable. Ichthyol to be taken internally is usually prescribed in pills or capsules.

Embalming Fluid.—(G. A. M.) We cannot give the formula for the proprietary article. Here are several formulas compiled from various sources, however, one of which may prove satisfactory: (1) Mercuric chloride, 2 ounces; zinc chloride, 4 ounces; creosote, 4 ounces; water, 1 gallon. A fluid said to be largely employed in cavity injection has the following composition: (2) Mercuric chloride, 2 ounces; zinc chloride, 3 ounces; creosote, 4 ounces; alcohol, 5 gallons; pyroligneous acid, 5 gallons. Durand & Worth make use of the following injecting fluid (McCurdy): (3) Arsenous acid, 3 ounces; sodium carbonate, 4 ounces; water, 3 quarts. (4) Arsenous acid, 360 grains; mercuric chloride, 1¼ ounces; alcohol, 9 fluid ounces; solution of carbolic acid, 5 per cent., 120 fluid ounces. From 10 to 12 pints of this solution are injected into the carotid artery, at first slowly and afterwards at intervals of from 15 to 30 minutes. The addition of a little red aniline is said to impart a life-like hue to the corpse. Some other formulas are given in the Era, April 21, 1898, page 585.

Lachesis.—(Homeop.) Lachesis is the name of a homeopathic remedy prepared from the poison of the Trigonocephalus Lachesis L., a poisonous snake inhabiting the hot countries of South America. As described in the American Homeopathic Pharmacopœia, this snake attains a length of upwards of seven feet, and its poisonous fangs are nearly one inch long. The skin is reddish-brown, marked along the back with large rhomboidal spots of a blackish-brown color, each of which encloses two spots of the color of the body. The poison resembles saliva, is less viscous, limpid, inodorous, without any marked taste, in color somewhat greenish; at the extremity of the fang it easily forms into drops and falls without threading; exposed to the air it soon concentrates into a dry, yellow mass which for an indefinite time preserves its poisonous qualities. This poison introduced into a wound or injected into a vein produces the most dreadful symptoms and generally death. The virus of this serpent is said to have been more carefully "proved" than that of any other. The same authority states that "the specimen used by Dr. Hering in his experiments was obtained from the living snake, which was stunned by a blow; the poison was then collected on sugar by pressing the poison-fang upwards against the bag and the first three attenuations prepared by trituration." The word "lachesis," "the allotter," is taken from ancient Greek mythology, where it was employed to designate one of the Fates whose special function was regarded to be that of determining each mortal's fate.

Potassium Iodide in a Prescription.—(D. T.)

Criticism is asked upon the following prescription:

Potassium iodide	2 drams
Spirit nitrous ether	1 ounce
Tincture chloride iron	1½ drams
Compound tincture gentian	1½ ounces
Glycerin	½ ounce
Water, enough to make	4 ounces

Teaspoonful three or four times a day before each meal.

Several reactions occur when this prescription is compounded, each depending somewhat upon the order of procedure. The reaction most noticeable, and the first one likely to occur, is that between potassium iodide and tincture of iron, free iodine being liberated as explained in the following equation:

A mixture containing such a combination is dangerous and should not be dispensed. Another reaction which always occurs in acid mixtures is that between potassium iodide and spirit nitrous ether. In this case the prescription cannot be dispensed without a reaction taking place, iodine and nitrous oxide being liberated. Other criticisms might be made upon the probable changes likely to take place in the mixture, as that between the tincture of iron and the spirit of nitrous ether and also between the tincture of iron and the compound tincture of gentian, but enough has been said to show that the combination is a very bad one as regards chemical incompatibility.

Tobacco Flavors.—(G. A. M.) This subject was very fully discussed in the Era of February 23, last year, page 252. Why don't you consult your indexes? Here are some additional formulas. They are said to be some of the methods used in French and German tobacco factories and we give them for what they are worth: (1) For 1,000 kilos of tobacco take 4 kilos purified potash, 5 kilos kitchen or table salt, 10 kilos canella water, 5 kilos rosewater, 5 kilos mellotte water and 1.4 grams tonka bean, finely pulverized. Color the whole with 4 grams English red. The tobacco, cut up as usual for smoking purposes, is treated with this liquid.

(2) For the same quantity of tobacco: Four kilos sweet almonds, 2 kilos bitter almonds, 2.8 grams saffron, 10 grams cochineal, 4 kilos salammoniac, 3 kilos purified potash, 5 kilos table salt, 5 kilos white sugar, 8 kilos Malaga wine, 8 kilos canella water, 5 kilos rosewater and 3.5 grams oil of bergamot.

(3) For the same quantity of tobacco: Twelve kilos soda, 4 kilos salt of tartar, 10 kilos canella water, 10 kilos rosewater, 5 kilos mellotte water, 2.8 grams tonka bean, 4 kilos simple syrup, 6 kilos French brandy, 6 kilos red sandalwood. Unite the three waters, brandy and the wine, dissolve in them the soda and tartar and add the syrup. Rub the tonka bean to a fine powder and mix with a portion of the tobacco, treat with the above solution and color and put through a sieve. Let macerate and ferment. After fermentation the tobacco is ready to mix with the body of the lot.

Two simpler formulas from Pharmaceutical Formulas are: (1) Heliotropin, 20 grains; essence of musk, 2 ounces; essence of apricot, 18 ounces. (2) Coumarin, ½ dram; essence of musk, 2 ounces; oil of lavender, ½ ounce; alcohol, to 20 ounces.

Formulas and processes for spotting tobacco leaves were published in this journal, April 13, 1899, page 477, and June 28, 1900, page 701.

TO DISTINGUISH GLUE AND OTHER ADHESIVE AGENTS.—In the Oesterreichische Chemiker Zeitung (Sci. Am. Sup.), H. Borntraeger, of Hanover, gives a simple method to distinguish bone glue from gum arabic or dextrin. The product to be examined is heated with hydrofluoric acid (50 per cent.) If bone glue is present in any reasonable quantity, an intense odor of butyric acid arises at once, which strongly reminds of Limburger cheese. Even inexperienced persons will smell this at once. But if dextrin or gum arabic is present, only an odor of dextrin or fluorhydric acid will be perceptible. The author recommends conducting the reaction with little substance, otherwise the smell will be so strong that it is hard to remove from the room.

Era Course Graduates and Prize Winners for 1900.

Below we give the names of the successful students for the present year of the Era Course, and to each and all we extend hearty congratulations and good wishes.

The several prizes will be sent to the fortunate winners of them within a short time. The diplomas will be mailed to all graduates as soon as the names can be engrossed thereon, probably within ten days or two weeks.

The names of the recipients of the trip prizes will be announced at a later date.

SENIOR PRIZE LIST.

GENERAL PRIZES.

- First Prize.**—Sister M. Bernard Nunan, Mat. No. 3.
Second Prize.—J. E. Addleman, Mat. No. 26.
Third Prize.—Sister Juliana Fleming, Mat. No. 39.
Fourth Prize.—Vincent Schwackenber, Mat. No. 64.

SPECIAL PRIZES.

- Official Preparations.**—James F. McGlone, Mat. No. 7.
Materia Medica.—Ralph R. Dykstra, Mat. No. 121.
Organic Chemistry.—Maude M. Price, Mat. No. 72.
Operative Pharmacy.—Otto Landwehr, Mat. No. 77.

MEMBERS OF THE GRADUATING CLASS WHOSE GRADES ENTITLE THEM TO HONORABLE MENTION.

News and Trade Department.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of
Era Readers.

FOREIGN.

China.

In spite of the many rumors that the foreign envoys, missionaries and guards and their wives and children in Peking are safe, it is now believed that the worst has happened and that all have been massacred, perhaps with cutaneous tortures.

The Chinese troops who are besieging Tien-Tsin are well drilled soldiers with modern guns, and they gained several successes in their fights with the foreign garrison last week. Their artillery fire is very accurate and destructive.

The Chinese are driving the Russians out of Manchuria and are threatening the Germans in Kiau-Chau.

Our State Department has issued a note to the Powers declaring that we will insist on maintaining the integrity of the Chinese Empire.

The situation in China has begun to affect German trade. Preparations are being earnestly pushed for sending a strong military expedition from Germany.

Senor Silveira, the Spanish premier, says that no Spanish war vessel will go to China, Spain having no interest to defend in the extreme Orient.

A cablegram from Rev. William H. Macy at Foo Chow, says that the Province of Fuhkien, where there are thirty-five Methodist missionaries, is quiet.

It is thought that nearly 50,000 Japanese troops will be sent to China. The Japanese press asserts that a large measure of responsibility for the troubles rests upon Russia and Germany because of their arbitrary action in China.

The American hospital ship Maine has sailed from Southampton for China.

Brigadier-General Grant will probably be assigned to duty in China.

Wu Ting Fang, the Chinese Minister to this country, delivered to Secretary Hay last week a copy of a cablegram from the Chinese Imperial Government disclaiming responsibility of the Imperial Government for the "Boxer" trouble and asserting that the engagement at Tien-Tsin was the direct result of the bombardment of the Taku forts by the foreigners.

The Russians intercepted a courier in Manchuria last week bearing a secret imperial decree commanding the Chinese troops to aid the Boxers.

Dr. Mumm von Schwarzenstein, the Envoy Extraordinary to the Grand Duchy of Luxembourg, has been appointed German Minister to China in succession to the late Baron Kettler. The appointment of this minister shows that the German Emperor accepts the American view that we are not at war with China, but are merely engaged in putting down a rebellion.

The steamer chartered by the American consul at Chee Foo to rescue missionaries, has returned from its third trip up the Chinese rivers bringing fifteen French Catholics and six Americans.

South Africa.

The Boers on Wednesday of last week captured Ntatal's Nek, eighteen miles west of Pretoria, together with two British guns, the greater portion of a squadron of the Scots Greys and ninety men of the Lincolnshire Regiment. The British garrison was overpowered by a superior force and reinforcements sent from Pretoria arrived too late. It is feared the casualties were heavy.

United States Consul Adelbert S. Hay, of Pretoria, is about to return to the United States.

General Buller reports that 659 prisoners, released by the Boers, have arrived at Ladysmith.

A dispatch from Cape Town says it is understood that at the close of the war Bloemfontein will be the headquarters of the Commander-in-Chief, the seat of the South Africa Court of Appeals and eventually the Federal capital of South Africa.

Bethlehem, a town in the Orange River Colony, held by the Boer Commander DeWet, was captured by the British under Clement and Paget on July 8. Positions commanding the town were taken by assault.

The Boers have evacuated all their positions around Senekal in the Orange River Colony.

A Boer bulletin has been issued asserting that the Boers have recaptured Waterval.

The Philippines.

The total strength of the United States Army in the Philippines on June 30 was 63,426 officers and men. Of that number 31,821 are regulars and 31,605 volunteers.

Five Filipinos, sailors of the bark Ethel, have been sentenced to death at Perth, West Australia, for mur-

dering the captain and officers of that vessel. M. Royaz, formerly a Lieutenant of Agulnaldo, was one of the mutineers.

During last week's scouting in the Philippines three Americans were killed and two wounded and thirty-five rebels were killed. Fifty rebels were captured and twenty-five rifles and fourteen tons of powder and ammunition taken.

Other Foreign News.

Queen Victoria has approved the selection of the Earl of Hopetoun as Governor General of the Australian Commonwealth.

The demand for wheat flour throughout the Orient is rapidly increasing, the best points of consumption at present being Russian possessions in Northern China and Eastern Siberia.

Heavy rains have fallen in throughout Chili, washing away sixteen bridges and flooding several cities.

A Berlin dispatch says that Herr Krupp is building a large mill for the manufacture of American car wheels and axles.

The Viceroy of India reports that the rains have been fairly general over many districts of the Peninsula, but much below the average; little or no rain has fallen in Rajpootana, Guzarat and Central India.

DOMESTIC.

Politics.

Chairman Hanna announced last week the new National Executive Committee and the appointment of Perry S. Heath, First Assistant Postmaster, as secretary, and Cornelius N. Bliss as treasurer of the Republican National Committee. Mr. Heath will resign his present position in a few days.

The official notification of the nomination of McKinley and Roosevelt for President and Vice-President was made last week by the committees of the Republican National Convention.

The formal notification of Bryan and Stevenson is to be made at Chicago on August 8.

The Populists have nominated William A. Poynter for Governor of Nebraska.

President and Mrs. McKinley will visit Senator Hanna at his cottage in Elberon, N. J., next week.

The Maine Democrats have nominated S. L. Lord, of Saco, for Governor and endorsed the Kansas City platform.

Indications point to an interesting struggle for supremacy in Democratic State politics between Hill and Croker.

Other Domestic News.

The State Department has been advised of the appointment of Kogoro Takihara as Japanese Minister at Washington.

Dr. Fernando E. Guachalla has been appointed Minister of Bolivia to the United States.

A mob at Cresswell, Ala., lynched John Jennings, a negro, last week for the murder of L. Martin, a railroad man.

The Baptist Young People's Union, at its tenth international assembly in Cincinnati, last week, elected John J. Chapman, of Illinois, president.

The Newark Dime Savings Institution closed its doors last week.

Senator Gear, of Iowa, died on Saturday of last week.

The exports of domestic products during the last fiscal year amounted to \$765,351,798, an increase over the previous year of \$45,542,722.

The receipts from all sources at the Havana Custom House for the month ending June 30, 1900, show a total net increase over the preceding year of \$100,288.

United States Post Office Inspector James W. Erwin, of San Francisco, has received orders to proceed to the Philippines and assist in the organization of the postal system in the islands.

A reciprocity convention between the United States and Germany has been effected.

A fire in Prescott, Arizona, last Sunday destroyed \$1,000,000 worth of buildings and property in the heart of the town.

—V. W. Bigney, of Bigney & Co., druggists at Sumner, Ind., is the subject of a sketchy "write-up" in a recent issue of a local paper published in his county. Beside being one of the county's successful business men and a druggist, he is the president of the Ripley County (Ind.) Pharmaceutical Association, a real estate agent, notary public, solicitor of the local building association, vice-president of the Milan Bank, etc. His faith in the future of Sumner is made manifest by the erection of a brick store building 36 x 60, and a new modern constructed residence. Mrs. Bigney is the junior partner in the company.

THE DRUG NEWS.

New York and Vicinity.

MANHATTAN PHARMACEUTICAL ASSOCIATION.

A recent editorial in the American Druggist touching on the new well-known letter of one George H. Harper, which has been branded as a forgery, was read by Secretary Swann before the members of the Manhattan Pharmaceutical Association at the meeting Monday evening last. It so aroused them that they adopted a resolution that a committee of two be named by Second Vice-President Schweinfurth (who presided in place of President Smith, who was unavoidably absent) to confer with like committees from the Kings County Pharmaceutical Association, New York Alumni Association and German Apothecaries' Society, and go in a body to the office of the American Druggist to request the management to desist from attacking the associations mentioned in the columns of its journal. Mr. Goldman, who introduced the resolution, said he was tired of the abuse the paper had heaped on the Manhattan Association and that he took exception to the editorial read which characterized the action of the association at its last meeting in censuring the management of the paper for publishing the Harper letter as "silly in men." Mr. Goldman stated it was not the first assertion of like character the journal had made and he believed a stop should be put to the practice. If nothing could be gained by the visit of the committees, then by more stringent means. Mr. Faber stated that repeated efforts had been made to locate the signer of the letter, George H. Harper, but had not been successful and George Kleiman exhibited a letter sent by special delivery that had failed to reach him.

Owing to the "heated condition of the atmosphere" it was decided to dispense with the reading of the secretary's minutes when the meeting began, but Treasurer Hitchcock was allowed to present his report, which showed a balance of \$354.79 from the last meeting with receipts of \$95 and disbursements of \$11.25, swelling the amount on hand to \$438.54.

William H. Porr read a letter from the Knickerbocker Telephone Company received in answer to one he sent asking the management of they could give any better tariff rates to the druggists of the city than were proposed at a conference of a committee of the druggists and the Knickerbocker Company sometime ago. The letter stated the company was not in a position to grant any further concessions. Mr. Porr said he had heard from Mr. Walker, of the New York Telephone Company, who had said his company was prepared to give the druggists a better percentage but he could not tell how much. William H. Ebbitt called attention to the fact that all the telephone companies hereabout had consolidated.

Secretary Swann read a communication from the Retail Druggists' Association stating that the members had voted to contribute its share of the expense incurred in making a test case of the shorter hour law. The letter was placed on file.

The Committee on Membership reported favorably on twenty-eight applications and they were unanimously elected; sixteen propositions for membership were referred to the committee. Treasurer Hitchcock brought up the siphon question, which he said he believed was of more importance than the telephone question. He desired that the Committee on Grievances call on the makers of a certain siphon with a view to securing a cheaper price for their product, as at present the druggist was not realizing enough profit on the sales to cover the cost of handling and yet he was compelled to keep this brand of siphon because of a constant demand the manufacturers made for it. The matter was referred to the committee named, after Mr. Faber had made a few remarks substantiating those of Mr. Hitchcock.

Secretary Swann made a motion that the time for meeting be changed from 8 to 9 o'clock sharp, as this was considered an hour when nearly all members of the

association could be present, and the motion was adopted, after which adjournment was taken.

COUNTY COMMITTEES FOR LOCAL ORGANIZATIONS IN NEW JERSEY.

ATLANTIC COUNTY.—Charles J. Brownly, F. W. Cotton, C. M. Hays Deemer, all of Atlantic City.

BERGEN COUNTY.—Eugene McFadden, Hackensack; L. Rockefeller, Englewood; Albert Neiderer, Carlstadt.

BURLINGTON COUNTY.—George F. Deacon, Bordentown; H. B. Weaver, Burlington; H. P. Thorn, Medford.

CAMDEN COUNTY.—George M. Beringer, Joachim R. Moon and Lewis H. Wilson, all of Camden.

CAPE MAY COUNTY.—Westley R. Wales, Cape May City, (only member in that county.)

CUMBERLAND COUNTY.—O. K. Whipple, Bridgeton; Frank N. Weber, Milville; E. M. Wallington, Vineland.

ESSEX COUNTY.—C. Wunsch, Newark; J. B. Thompson, Arlington; S. L. Beegle, Orange Valley.

GLOUCESTER COUNTY.—F. C. Thoman, Glasboro; H. C. Malsbury and W. E. Speakman, both of Woodbury.

HUDSON COUNTY.—F. O. Coles, and E. T. N. Stein, both of Jersey City; J. N. Petterson, Bayonne.

HUNTERDON COUNTY.—W. N. Baker, Clinton; I. Voorhees, White House; C. S. Allen, Bloomsburg.

MERCER COUNTY.—W. L. Briner, Princeton; D. W. Baker and E. E. Riggs, both of Trenton.

MIDDLESEX COUNTY.—S. S. Rust, New Brunswick; F. A. Seaman, Perth Amboy; C. W. Jacques, South Amboy.

MONMOUTH COUNTY.—Jos. H. Rosell, Freehold; Chas. A. Minton, Red Bank; Jos. T. Antonides, Manasquan.

MORRIS COUNTY.—Robert Kilgore, Dover; J. E. Stiles, Morristown; W. H. Larison, Madison.

OCEAN COUNTY.—C. R. Priest, Bay Head; C. B. Mathis, Tome River; W. J. Harrison, Lakewood.

PASSAIC COUNTY.—W. C. Berger, Passaic; O. V. Carnett and E. B. Oats, both of Patterson.

SALEM COUNTY.—W. H. Dunn, Salem; C. M. Andrews, Woodstown; Frank Leursen, Salem.

SOMERSET COUNTY.—J. U. Case, Somerville; J. C. Thatcher, East Millstone; George Burns, Bernardsville.

SUSSEX COUNTY.—C. H. Linn, Hamburg; J. V. Rosenkrans and C. Roe, Jr., both of Newton.

UNION COUNTY.—George H. Horning, Elizabeth; R. J. Shaw, Plainfield; George F. Brown, Rahway.

WARREN COUNTY.—H. W. Faust, Belvidere; C. V. S. Rea, Hackettstown; F. N. Jenkins, Washington.

DEATH OF A DRUGGIST'S WIFE.

Mrs. Julia J. Cherey, wife of Louis I. Cherey, a druggist at 104 Canal street, met with a tragic death Friday evening, July 13. Friday was Mr. and Mrs. Cherey's third wedding day anniversary and to commemorate their happy marriage they took a carriage ride to the Bronx, starting early in the morning. Returning home in the evening, the horse shied on Spring street and ran away. The animal took a course over Broome street, zigzagging so that the carriage swayed from side to side like a tree in a gale of wind. Mrs. Cherey became frightened and leaped from the swiftly moving vehicle, but unfortunately her dress fastened to something in the carriage and when she fell her head struck the roadway with much force. In this way she was dragged nearly two blocks before the terrified horse could be brought to a stop. An ambulance took the injured woman to St. Vincent's Hospital where she immediately expired. She had sustained a fractured skull and internal injuries.

SUPPOSED TO HAVE SUICIDED.

Henry A. Schaeffer, aged 24 years, a druggist, was found dead in his bed at No. 21 East 103d street, Tuesday morning, July 10, by Mrs. Katherine Gunther, from whom he rented a furnished room. Beside the body was found a bottle that had contained cocaine. The police reported the case as one of suicide to the Coroner, who on investigation confirmed the opinion. Schaeffer sold his store at No. 1987 Third avenue, about six months ago, to M. Schumann, after which he married. His wife deserted him because of financial troubles, and it is asserted was living with her family on Twelfth street. In letters Schaeffer wrote to friends recently, he mentioned his troubles and seemed much depressed by his wife's desertion.

DRUGGIST-BOWLERS' OUTING.

Coney Island received a visit on Saturday, July 7, from a party of men whom it has never had the honor of entertaining en masse before, and its whole area of shooting galleries, side shows, bowling alleys, etc., seemed to make an extra effort to treat them well. They were sixteen members of the Retail Druggists' Bowling Association, and the occasion was the second annual outing of the organization. Those who composed the party follow: George E. Schweinfurth, William Weis, Otto Boeddiker, J. M. Pringle, Jr., L. W. DeZeller, G. H. Hitchcock, C. H. White, S. V. B. Swann, A. J. Heinemann, S. F. Haddad, Fred. Wichelns, M. Mahler, T. W. Linton, B. Dauscha, F. W. Pond and R. R. Smith. The start was made from the old Iron Steamboat Company pier at 10 o'clock and lunch was enjoyed at Feltman's Casino on the Island, at noon. In the afternoon the Ph. G.'s started in to see the sights. They shot the chutes, threw base balls at the wooden habics, ate hot frankfurters, fed the numerous "wild men" and concluded with bowling. For some reason the crack bowler of the club rolled very poorly, the honors of the day being taken by Otto Boeddiker, R. R. Smith and F. N. Pond, the latter scoring 117 points, higher than that made by any of the players. An excellent dinner was served at the Pabst Loop, a special room being provided. The party reached home about 1 o'clock, after one of the best days in the history of the association. The arrangements for the affair, which were perfect, were made by George E. Schweinfurth, George Hitchcock, R. H. Timmerman, C. H. White and Matthew Mahler.

JAMES A. HETHERINGTON, NEW YORK.

ATTACHMENT AGAINST DRUGGIST REMOVED.

The attachment against Walter B. Tongue, a druggist at Ninety-second street and Lexington avenue, secured by Lehn & Fink about a week ago and placed in the hands of a deputy sheriff for service, has been removed, Mr. Tongue offering sufficient security to cover the amount called for. The writ was obtained to insure the payment of a bill for goods obtained from the firm.

THE YOUNGEST REGISTERED PHARMACIST.

This is the claim made by O. C. Kleine, Jr., president of the Kings County Pharmaceutical Association, and it would seem from the proof he has to show in substantiation of his claim that it is a hard one to beat. Mr. Kleine has a son, Edward Kleine, who has but recently attained the age of 17 years, and he has passed the much dreaded Board of Pharmacy, and on his first trial, July 1, 1900. But as young Kleine was "raised in the business," his father says he rather expected he would go through. The youthful Ph. G. was graduated from the Brooklyn College of Pharmacy, May 2 of this year. He thought while the memory of his "book learnin'" was still fresh in his mind he would wrestle with the greater problem, which he did. Father Kleine is quite proud of his prodigy, so much so that he has placed him in his drug store, No. 110 Hamburg avenue, Brooklyn, that he may get an idea how to manage things. The senior Kleine believes in dealing conscientiously with the people. He is a stickler on honesty, and will not permit the slightest deviation from his set rules. Young Kleine, by passing the board this year, saves four years' time, as he could not try the examination under the new law until he reached the age of 21 years.

LAW SUIT OVER A PRESCRIPTION.

Mrs. Minnie B. Clark, No. 424 West Forty-third street, has instituted a suit to recover \$10,000 damages against Herman F. Cassebeer, a well-known druggist of Forty-second street and Ninth avenue. Mrs. Clark claims she was injured to that amount by taking a poisonous prescription which she contends Mr. Cassebeer gave her in place of one—a sedative—her husband took to the drug store to be refilled. Mrs. Clark alleges that her husband, Wm. G. Clark, took a bottle to Mr. Cassebeer's store on March 11 last to be refilled and that he returned with the poisonous prescription which she took and was made violently ill, the services of a physician with a stomach pump being necessary to restore her to health. Mr. Cassebeer has a system in his store of giving checks to persons who have prescriptions filled. When the prescription is ready the number on the check is called out and that person takes the prescription. Mr. Clark's number was called out, but instead of taking the bottle he brought in he took another bottle that was labeled in two places "poison" and "for external use only." This was the prescription that caused Mrs. Clark's illness. It has been said that the complainant has offered settlement, but Mr. Cassebeer is not willing to entertain any such proposition and will try the case on its merits.

NOTES.

—Drug men are said to be the easiest going people in the world, but when aroused they are the equal of a hostile newspaper in hounding the person who commits the offence; so it has been with the push-cart man, whose favorite haunt until last week had been Fulton street from Broadway to Pearl street. Members of the firms of McKesson & Robbins and the C. N. Crittenton Company grew tired of going to the corner, a half block away, when they wished to cross the street, but could not for the blockade of push carts, so they began agitation for a movement that resulted in the passing of a bill by the Municipal Assembly and signed by the Mayor, making Fulton street, within the limit mentioned, forbidden territory. The letter of the law was not observed in the prescribed manner, so McKesson & Robbins complained to the police, with the result that policemen were busy during last week driving the peddlers from the thoroughfare, and it is now entirely free from them.

—Members of the trade have recently received circular letters from Billings, Clapp & Co., manufacturing chemists of Boston, Mass., containing an approximate estimate of the firm's assets and liabilities, which are given as follows: Assets—Real estate, plants at Tiverton, R. I., \$70,000; real estate at Gloucester, \$5,000; machinery and tools, \$1,000; merchandise, \$58,318.08; merchandise accounts receivable, \$48,628.79; notes receivable, \$2,000; securities pledged as collateral for note of \$5,000, \$5,700; mortgage on real estate at Newton, Mass., \$5,500; cash, \$100.92; total, \$196,247.79. Liabilities—Indebtedness to salesmen and operatives, \$1,745.01; bills and notes, unsecured, \$113,317.03; note payable, \$5,000; merchandise account, \$11,121.90; leaving a balance of \$161,213.74. It is generally believed that the firm will resume its former standing in the trade as soon as the difficulties under which it is now laboring shall be removed.

—Bakst Bros. have a novel as well as ingenious display in the windows of their drug store at 249 Henry street that is attracting the attention of passers-by to such an extent that a large crowd is in front of the place afternoon and evening. The exhibit consists of a nicely-built miniature house covered on the outside by sticky fly paper to keep the flies out of the house, a sign says, while inside is shown a number of different brands of insect powder. The house serves a double purpose in that it advertises the goods of the firm and at the same time keeping the store clear of flies. A member of the firm states the idea has not only caught the flies, but has "caught on" with the crowds as well.

—Among those who visited the trade last week were: C. G. Peter, New Orleans; Joseph Pritchard, Pittsburg;

A. Rosenfeld, New Orleans; Mr. Burk, of Marsh & Burk, Princeton, N. J.; W. C. Baur, Norwalk, Conn.; E. J. Montgomery, Pittsburg, Pa.; Theodore Benjamin, Riverhead, L. I.; P. J. Tormey, San Francisco; J. D. Sipp, Baltimore, Md.; George E. Burrows, New York State representative for Schieffelin & Co.; Mr. McQueen, of R. McQueen, East Norwich, L. I.

—The large plate glass windows in the front of the store of A. I. Meyer, corner Elizabeth and Bayard streets, were shattered by a runaway horse plunging through them, Tuesday afternoon, July 10. The animal was on the drug store floor and trying to draw the wagon load of empty siphons, to which it was attached, in after it, when stopped. A policeman arrested the driver of the outfit on a charge of reckless driving.

—George E. Williams, a druggist of Asbury Park, N. J., has just closed a large real estate deal in Lakewood, by which he becomes the lessee of the Loomis property in that city. The lease runs for ten years, with the privilege of twenty years more. Mr. Williams proposes to erect on the property a new building containing seven stores, with flats above them. The corner store he will occupy with his drug business.

—It was a jolly party which enjoyed the hospitality of William B. Kaufman, manager of the importing department of Parke, Davis & Co., at the Drug Trade Club on Thursday, July 12. It was made up of S. P. Nickells, Parke, Davis & Co.'s manager in New Orleans; W. J. Worthing, ditto in Florida; Cotterill, ditto in Washington, D. C.; G. S. Mariager, cashier for Parke, Davis & Co. in the New York branch, and Mr. Kaufman, the genial host.

—President George Seabury, of the McKinley and Hobart and Sound Money Drug, Paint, Oil and Chemical Campaign Club, has caused to be sent out over 200 letters to various members of the trade in this city asking their co-operation. The club will not take an active part in the campaign for McKinley and Roosevelt unless its services shall be required.

—S. H. Carragan, superintendent of salesmen at the New York branch of Parke, Davis & Co., was in attendance last week at the meeting of the Maine State Pharmaceutical Association at Portland. After the meeting Mr. Carragan, armed with a fishing rod, went to Ringely Lakes, Me., where he hopes to induce a large number of fish to join him.

—A. M. Jones has opened a store at Seventh avenue and 141st street. Mr. Jones is the proprietor of a store at 140 Sands street, Brooklyn. The Manhattan store has been fitted throughout with black walnut fixtures and presents a neat appearance. A new soda fountain made of glass, so that the syrups are visible, is one of the novelties of the place.

—G. S. Mariager, cashier, and W. J. Carr, superintendent of the New York branch for Parke, Davis & Co., leave town to-morrow for the Abbitibi Fish and Game Club, about sixty miles north of Ottawa, where they will remain about two weeks. A. L. Ritchey was also one of the party.

—United States Marshal Henkel sold the lot of confiscated opium that was consigned to Wing Wo Chong, a Pell street merchant, at the Appraiser's stores, Friday, July 13, Meyer Jeffrey being the purchaser. Ninety-nine cans were sold for \$3.50 a can and twenty-one cans at \$1.75 a can.

—Dr. B. T. Whitmore, of Parke, Davis & Co., will attend the meeting of the British Medical Association at Ipswich, England, July 31 and August 1, 2 and 3. He will also attend the International Medical Congress at Paris, August 2 to 10. He will go as a delegate to both meetings.

—A handsome and well-equipped drug store has been recently opened at 1783 First avenue by Anton Sieke, who for the last fourteen years conducted a pharmacy at Avenue A and Eighty-eighth street. Mr. Sieke has had over twenty-nine years' experience in the drug business.

—George J. Seabury, of the firm of Seabury & Johnson, accompanied by his daughter, Eugenia, left yesterday on the steamer Deutschland on a tour of the world. They will first visit the Paris Exposition and before returning will stop at Hong Kong, Honolulu and San Francisco.

—The Era trip party, consisting of Harry C. Yager, William Hauenstein, A. B. Baltzly and Arthur Reeder,

left Saturday, July 14, on the steamer Astoria for the Paris Exposition, where they will remain about six weeks. The party will return via the steamer Trave.

—Weaver's Pharmacy Company has been incorporated under the laws of New Jersey to manufacture drugs and chemicals. The firm is located at Phillipsburg, N. J., and has a capital of \$10,000. The incorporators are J. M. Reese, J. R. Zearfross and Paul Anspach.

—The importation of drugs and chemicals at this port for the week ending July 14 amounted to \$984,936. The largest item in the list was 5,887 packages of shellac, valued at \$123,067. Only twenty-six packages of quinine, valued at \$5,170, were received.

—The store of H. E. McIntire in the Y. M. C. A. building at Pennsylvania and Liberty avenues, Brooklyn, was recently purchased by Ramine & Cole, who will continue the business. Mr. McIntire has another store in Brooklyn at 2812 Fulton street.

—The Secretary of State has issued articles of incorporation to the European Drug Company of this city to deal in drugs. The capital is \$10,000, and the incorporators are: I. Schlossberg, W. Wallach and S. Wallach, all of New York.

—A meeting of the Jersey City Druggists' Association was held in Jersey City Tuesday afternoon, when a delegate and an alternate were chosen to the N. A. R. D. convention in Detroit in September.

—Frank Richardson, the well-known druggist of Albany, intends to locate at Cambridge, N. Y., where he will open a new store about August 1. It will be a thoroughly up-to-date establishment.

—Frank Avignone, of Frank Avignone & Co., at 59 McDougal street, is enjoying a well-earned vacation in Sullivan County. Louis Montanaro is in charge of the store during Mr. Avignone's absence.

—Thomas F. Farrell, of McKesson & Robbins, is enjoying a two weeks' vacation at Far Rockaway. George F. Marsh, city salesman for the same firm, returned home Monday from his vacation.

—Pinkus Herz, who for some time had been manufacturing chemist in the Haas pharmacy, will open a drug store shortly at the corner of Lexington avenue and Thirty-ninth street.

—Articles of incorporation have been secured by the A. R. Bremer Co., Limited, for the manufacture and sale of Coke Dandruff Cure in Canada, with capital of \$75,000 and offices at Toronto.

—F. P. Hinkston, for many years traveling salesman for Lehn & Fink, has left their employ and joined the forces of Bruen, Ritchey & Company, covering Northern and Western New York.

—R. E. Miller, secretary of the Owl Drug Company, of San Francisco, Cal., is in town for a few days. Mr. Miller will leave Saturday for Europe, where he will spend some time.

—Bruce C. Hallowell, of Frankfort, Pa., has recently accepted a position with Lehn & Fink, and will travel for them in Pennsylvania and New York, beginning August 1.

—J. Finestone has purchased the drug store of H. Dincin, corner Seventy-first street and Second avenue, and has entirely renovated the place, making an attractive store.

—Lehn & Fink are announcing the receipt of what they say is the first shipment of true German chamomile flowers, which they are offering at market prices.

—The fluctuations in quinine during the last few days have been watched with interest by the trade, and many predictions have been made as to its ultimate rise.

—Max J. Breitenbach, of M. J. Breitenbach & Co., is enjoying a two weeks' vacation in Canada. Mr. Breitenbach took a fishing rod and tackle along with him.

—Port Said, Egypt, will receive a consignment of \$2,750 worth of perfume sent from this port last week. This is the largest shipment sent out in some time.

—Solomon Marculescu has sold his store at 33 Avenue B to Henry Jacoby, formerly a clerk in Grimm's pharmacy, corner Avenue B and Fourth street.

—Gideon F. Ebers, representative of Lehn & Fink in Western Pennsylvania and the eastern part of Ohio, will spend the next two weeks in this city.

—Three persons were elected to membership at the meeting of the Drug Trade Club Wednesday, July 11, and routine business was transacted.

—Jr. B. T. Whitmore, of the New York branch of Parke, Davis & Co., is spending the heated months at Hotel Panacee, Seabright, N. J.

—Edwin McGill and Charles A. Loring, representatives of Lehn & Fink in the New England States, spent a few days in the city last week.

—A. Braunstein, a druggist at No. 41 Manhattan avenue, Brooklyn, has disposed of his store to David Goldman, his clerk.

—Charles Mosher, of Cincinnati, O., and Mr. Conklin, of this city, dined with Henry Merz at the Drug Trade Club last week.

—C. E. Monell, of First avenue, has been making his handsome store look brighter by giving it a thorough renovation.

—A. Weiss, of Ninth street and Second avenue, is rusticating in the mountains. He will remain away about two weeks.

—W. P. Ritchey, of the firm of Bruen, Ritchey & Company, returned last week from a pleasant fishing trip in Canada.

—Isaac V. S. Hillier, secretary and treasurer of R. Hillier's Son Company, is enjoying a vacation in Orange County.

—Mr. Schmetz, manager for William O. Luttman at 440 Columbus avenue, is sojourning at White Lake, Sullivan County.

—G. T. E. Ruckert has recently established a drug store at the corner of East Sixteenth street and Irving Place.

—G. D. Taylor, of South Africa, was the guest of C. Blair Leighton at dinner at the Drug Club one day last week.

—A new drug store has recently been opened at No. 136 Meserole avenue, Brooklyn, by William F. Morgan.

—George Marsh, superintendent of the Brooklyn department of McKesson & Robb's, is away on his vacation.

—T. R. Towles, of J. Milhau's Son's drug store, is enjoying a ten days' vacation at his home in Kentucky.

—A new drug store has been established at East Sixteenth street and Irving Place by G. T. E. Ruckert.

—Frederick W. Robinson, of R. W. Robinson & Son, enjoyed his vacation this year at Far Rockaway.

—C. G. Euler, with the firm of Antoine Chiriz, returned recently from a two months' sojourn in Europe.

—Col. E. W. Fitch, manager for Parke, Davis & Co. in this city, is on a two weeks' visit in Detroit.

—The "hot weather" of last week kept a good many buyers in nearby towns away from the city.

—H. M. O'Neil, druggist on Columbus avenue, is enjoying a vacation at Saratoga.

—A. M. Redmond, of J. Milhau's Sons, is enjoying an outing at Chicago.

—Dr. Stella has recently opened a drug store on Broome street.

—A. G. Belden, 156 Malden Lane, is seriously ill at home.

—The Charles M. Baumbach Company, of Milwaukee, has recently changed its name to the Yahr & Lange Drug Company.

WARNER'S NEW THERAPEUTIC REFERENCE BOOK.—This new book, soon to be issued, must not be confused with Warner's Therapeutic Reference Book, now discarded. This new hand-book is one of the very few guides of its kind now offered students and busy practitioners. As its preface states, it is not intended to teach graduates anything about therapeutics, but is to be regarded rather as a handy aid to a poor memory. Many exceedingly valuable tables are represented, including the metric table, thermometric equivalents, etc.; valuable tests for various matters, including urinary tests for albumen, sugar, etc.; comparative values of certain foods, a complete dose table of drugs, a list of diseases and their remedies, hints as to indications of pregnancy, recommendations as to post-mortem examinations, etc., etc. It is bound in two styles, one leather, at 50 cents, and the other a leatherette, at 25 cents per copy, postage prepaid in both instances. The publishers are Wm. R. Warner & Co., Philadelphia, Pa.

IN AND ABOUT BOSTON.

Suicide by Poison Is Epidemic in the Hub.

Boston, July 14.—Boston has been suffering a perfect epidemic of suicides by poisoning within the past week or so. Perhaps the ease with which almost anyone having the price can buy poison at many drug stores may have something to do with these recent cases. Although carbolic acid is on the poison list and has been on it during two years past, comparatively few retail druggists seem to know the law regarding it. They appear to be very lax regarding their sales, and even if they do place a red "Poison" label on a bottle, they do not always compel the purchaser to sign for what he buys.

On the Fourth of July the wife of a retail druggist was standing in a drug store at Jamaica Plain (her own husband's store is in another city) and observed that an old man bought a quantity of carbolic acid to "kill an animal." He was given it without much question or hindrance and half-an-hour later was found dead from having taken the acid. On Saturday last a woman who, on the street, had taken the contents of a bottle of laudanum, throwing the empty bottle away, caused a sensation. She bought this at a Bowdoin Square drug store, saying she had the toothache. She disappeared before she could be apprehended.

Another case this week is that of a formerly prosperous contractor, who died from carbolic acid which he had easily bought at a drug store near his home. Still another case is that of a man who was well known as a poultry dealer. He procured a quantity of carbolic acid, drank it, and died in the hospital ambulance. A young woman was found one day this week in her room in an unconscious condition. She had taken the contents of a bottle of morphine. At the drug store the label of which was found on the bottle, nothing is known of her. She was supposed to be a nurse. An unknown colored woman bought carbolic acid at a South End drug store, drank it and died. Still another case is that of a young woman who bought carbolic acid at the drug store of M. L. Graves, Union Park and Tremont streets, which she took and tried thereby to end her life. She is in a dangerous condition. The druggist was summoned into the Municipal court and fined \$20 for selling the poison without a permit and in a bottle (afterwards found) not properly labeled. That it is easy in Boston on the slightest pretext to buy the wherewithal to end life is a fact that cannot be disputed.

NOTES.

—The proprietor and clerks of T. E. Meany's drug store on Chandler street, Worcester, had a bad half hour on the afternoon of the Fourth of July, when the firing of shots from a revolver in the rear of a house on Austin street, nearby, came near causing trouble in the drug store. A board was set up in the yard in the rear of the Austin street house with the idea of using it as a target, but the persons with the revolvers were not accurate as to sight and several shots went into Meany's drug store. A man with a dinner pail happened to be in the store and his pail was struck. The Austin street family was notified that the sport was assuming dangerous proportions.

—In the court at Brookfield, William H. Kelly, a West Warren druggist, was fined \$50 for alleged maintenance of a liquor nuisance at his drug store. He appealed and then was re-arrested on a warrant sworn out by Simon B. Harris, State agent of the Massachusetts Board of Registration in Pharmacy, charging him with operating a drug store without being a registered pharmacist. He had both cases continued and furnished \$300 bonds in each case.

—William A. Burton, a druggist at Athol, is in financial trouble with liabilities of \$5,818 and \$2,000 assets, comprising stock in trade. Of the claims against him \$2,350 is secured and \$3,468 unsecured. The unsecured claims range from \$2 to \$1,000, those amounting to more than \$100 including West & Jenney, Boston, \$399; Dana Malone, Greenfield, \$305; First National Bank, Greenfield, \$300, and the National Bank of Athol, \$1,170.

—George A. Hill, who is prominent as a pharmacist and large property holder at West Springfield, has just

met with a deep loss in the death of his son, Walter Garfield Hill, from typhoid fever, at his home in Roxbury. He was a young man of much promise. He had but lately attained his majority. His parents and young wife were with him when he died. The funeral took place at his father's home in West Springfield.

—Deputy Revenue Collector McGrillis, of Methuen, has this week visited Lawrence and commenced the collection of revenues among local dealers who come under his jurisdiction, druggists leading in this matter. He will be in that city regularly one day in the week during the month of July for the purpose of collecting revenues there.

—J. C. Emery Panneton had his customary display of fireworks in front of his pharmacy in the Flint district of Fall River on the night of the Fourth of July. The exhibit lasted about two hours and probably was about the largest in the city. It attracted great crowds of on-lookers.

—Patrons of the well-known drug firm of J. H. Oxnard & Co., at Beverly, have received this month tickets entitling them to a drink of punch free. The clean, modern soda fountain there is of the kind to draw trade.

—A Tremont street druggist was arraigned in the Municipal court, July 12, and fined \$15 for selling carbolic acid without a poison label, the acid having been bought by a girl who attempted suicide.

—While trying to extinguish a fire which burned up an awning, Arthur Gammon and William Broderick, clerks at the White Corner Drug Store, at Haverhill, had their hands badly burned.

—The week's exports at the Port of Boston include drugs and chemicals, \$6,556; india rubber manufactures, \$1,179; soap, \$275; tobacco, \$22,174; wax, \$468, and spirits, \$6,450.

—A recent fire in Walker Brothers' chemical manufacturing establishment on Broadway, Chelsea, damaged the building to the extent of \$500.

—One of the Roxbury druggists has the following sign displayed in his store: "If we please you, tell others; if we don't, tell us."

—Dr. N. S. Boyce, who died recently at Guildhall, Vt., at an advanced age, formerly was a druggist in Boston.

—Arthur P. Derby, of Danvers, is a new clerk at Moore's drug store in Beverly.

—C. E. Coombs, of Massachusetts avenue, is spending his vacation in Europe.

—Henry Bassett is a new clerk at Cameron's drug store in Springfield.

Other New England Items.

—A large window in Dexter's drug store at Waterbury, Conn., was broken during the Fourth of July celebrations. A man was firing a small cannon at the end of the green across the street from the pharmacy. After one of the discharges it was found that a side window where the prescription department is located, was broken. It is thought that the charge from the cannon struck a stone in the street and hurled it against the window.

—Extensive improvements are being made to the large drug store of the J. O. Roy Company, corner of Tolles and Canal streets, at Nashua, N. H. Among other things the entire interior is being finished in white enamel.

—George Sherry, of Somersworth, N. H., who was formerly connected by partnership with S. S. Forsaith, the druggist at East Rochester, has lately visited his old friends in the last-named place.

—A recent marriage is that of John H. DeOrsay, the junior member of the drug firm of W. C. Hawker & Co., Waterville, Me., and Miss Grace L. Smith, the daughter of D. V. Smith, of South Thomaston.

—D. Edward Nichols, of the Llewellynes pharmacy, Chestnut street, Philadelphia, is employed at M. C. Morrison & Co.'s Village Pharmacy in Bar Harbor, Me., for the season.

—The new drug store at Gray, Me., is now supplied with acetylene gas for lighting. It proves a very fine and perfectly satisfactory light.

—Edward J. Forbes, of Deering Centre, Me., has entered

the employ of C. B. Woodman at his Westbrook drug store.

—O. N. Davis, the Concord, N. H., druggist, lately has had as his guest W. C. Foster, of Manchester.

—A new drug store at Lisbon, N. H., is practically ready to be opened for trade.

PHILADELPHIA.

Soda at the Department Store.

Philadelphia, July 14.—Some of the big department stores are onto all the kinks of the soda fountain business. Your correspondent, having occasion to purchase a quart of collar buttons, after finishing the transaction, stood behind the six-row-deep flock of "peaches," "daisies" and all the other suggestive flora and fauna adjectives, and watched the shirt waists struggling for position at the soda bar. From a rough calculation this particular store was dispensing at the rate of 3,000 drinks daily. The manager of the department sidled up.

"Do you keep this sort of thing going all year?" was hazarded.

"It averages about the same. Soda in summer and light lunch in winter, and we could handle twice the trade if we had the room."

"Only five cents a glass?" said the Era man.

"Yes, five cents for everything at the counter, from plain up to pistache ice cream soda."

"The average retail druggist claims that there is no money in ice cream soda at five cents?"

"He don't know how to work it," said the manager. "Of course, this is my only job, and I've got it down fine. I don't pay any 20 cents per quart for ice cream, either, and I don't buy the 'Stork' brand. There are others, better and cheaper. I get sixteen dippers of ice cream to the quart, and you can bet I know how to make my own syrups. There's the latest apparatus for carbonating, and I see myself that every glass that goes over the counter is up to standard. It don't do to wait until the trade complains. There's over 100 per cent. in the stuff the way I manage it."

NOTES.

—Harry Campbell, of No. 146 McKean street, and h's chum, Dr. Morrison, made a flying trip to Baltimore this week. The Maryland metropolis presents a long and interesting menu: Crabs, terrapin, ducks, oysters all the year round, cheap and rapid trolley rides, canned goods, Pattersons, Bonapartes, John Hopkinses, Peabody, Cardinals, Parks and pretty girls. The latter, however, on the bill of fare cannot be called the *pièce de résistance*. The Philadelphia pharmacists have not yet disclosed what items they ticked off on the above list.

—An adjourned meeting of the Philadelphia College of Pharmacy was held on Tuesday for the purpose of approving the by-laws. The meeting was well attended, and great interest was manifested by the younger members of the institution. First Vice-President W. J. Jenks, Ph. M., occupied the chair in the absence of the president.

—Prestie Headings, a P. C. P. man, who has been employed by J. C. Perry, in West Philadelphia, since the closing of college, is putting in a "vake" of two weeks at the home of his parents in Lewistown, Pa.

—Prof. Henry Kraemer, of the Philadelphia College of Pharmacy, is looking eagerly forward to the opening of August. He will take h's family to the Southland, and there enjoy a much needed rest.

—Lawson C. Funk, an influential member of that brilliant coterie of pharmacists, Lancaster Avenueites, will utilize his month of August holiday among the granite and pine of our next possession, Canada.

—In the phenacetine case of Dickerson vs. Maurer, the testimony on both sides is all in. The records have all been printed, and order of court issued for the final hearing at next October term.

—Barney A. Hertsch, of No. 410 West Cambria street, is dead. He was formerly on Germantown avenue, and was well known as a druggist and local politician.

W. A. RUMSEY, PHILADELPHIA.

—Mr. Watson, late with G. B. Evans, has purchased the pharmacy at Twenty-seventh street and Montgomery avenue, formerly owned by A. Walton.

—W. A. Rumsey, the popular secretary of the Philadelphia Association of Retail Druggists, is whiling away the summer at Ocean Grove, N. J.

—F. W. E. Stedem, of Broad street and Fairmount avenue, intends spending the month of August at Ocean City, N. J., with his family.

—Theodore Campbell, of Overbrook, contemplates enlarging his store, in order to accommodate the increasing trade of that swell section.

—E. E. Menger, of Tenth and York streets, has been visiting relatives in Kentucky. Altogether his excursion lasted ten days.

—M. M. Hull, of Manayunk, has disposed of his Merion pharmacy to a clerk who was formerly in charge of the establishment.

—A. H. Bremer has purchased J. D. Shenck's store, Germantown avenue and Cambria street.

—C. A. Gill, of Twenty-ninth and Diamond streets, is summering his family in the country.

—J. R. Smyser, of West Philadelphia, is at Atlantic City.

BALTIMORE.

Alumni Association Committees.

Baltimore, July 14.—President Owings, of the Maryland College of Pharmacy Alumni Association, has appointed the following standing committees to serve until the next annual meeting:

Special Features—Owen C. Smith, chairman; J. Edward Hengst, A. Ferdinand Ries, J. Emory Bond and W. C. Parkhurst.

Auditing—Charles H. Ware, chairman; Forest Cochran and Frantz Naylor.

Alumni Prize—George D. Campbell, chairman; Frank Dannett and W. Robin Zemp.

Deceased Members—Ernest E. Quandt, chairman; Prof. Charles Caspari, Jr., and Henry Maisch.

Publications—Louis Schulze, chairman; Chas. Schmidt, Nathan C. Mules, H. L. Eichelberger and Joel J. Barnett.

Druggists and Drug Stores.

Baltimore, July 13.—Opinions as to the profitability of the retail drug business necessarily vary with the experience of the individual. Some pharmacists regard the trade or profession as worthy of one's undivided attention, while others look upon it as suffering to such an extent from inordinate competition that there is scarcely more than a bare living to be got out of it. Druggists resemble persons engaged in other occupations in this respect, that they believe themselves to be worse off than anybody else. Hence they manifest a disposition to become doctors or whatever else their inclination may suggest. As a matter of fact the prizes in the medical profession, in law, and in all other endeavors, are probably not more numerous than those in the drug trade. Competition is to be en-

countered everywhere and the list of failures is long, no matter in what direction one may glance. We are prone to fly to the evils we know not of. Enthusiasm is as essential to success in the drug business as in dry goods, literature or hardware. Business knowledge and attention to detail are required in whatever we may attempt. Many Baltimore druggists would like to sell out if they could because they have an idea that they could not easily do worse by going into something else. The representative of a local manufacturing house has a list of not less than sixteen drug stores which can be bought. But would-be purchasers, also, are not lacking. No good location need go begging, the demand for eligible properties being very active. Notwithstanding all the pessimistic talk numbers of Baltimore retail pharmacists are prosperous and not only make money, but hire sufficient intelligent help to enjoy a proper amount of leisure and recreation. While the retail drug business has its limitations, it offers to the energetic and enterprising proportionately large rewards.

NOTES.

—The members of the Wedgewood Club will take their regular monthly diversion to-day in the form of a trip down the bay on board the yacht Runabout. It is the intention of the party to cross the bay to Betterton and to touch at other points. Refreshments, liquid and solid, will be served on board and a jolly time is anticipated.

—A falling leaden plate, 300 pounds in weight, swept five men from a scaffold and hurled them twenty feet to the bottom of a tank in the Liebig Chemical Works at Wilmington, Del., on Wednesday of last week. Samuel Hartly was crushed to death and the other four unfortunates were seriously injured.

—Luther B. Benton has sold his drug store at Laurens and McCulloh streets, which he conducted for years, to Fred. Bein, formerly a clerk for F. A. Meickel, Fremont and Lafayette avenues. Mr. Benton will settle down on his farm.

—J. W. Westcott, of Hynson, Westcott & Co., Franklin and Charles streets, left on a vacation trip of several weeks last Monday. He went to New Jersey, where he owns a country place, and will give himself up wholly to bucolic joys.

—John Pickes, Jr., for some time past owner of the drug store at the corner of Broadway and Canton avenue, formerly occupied by E. Hasenbalg, has purchased the premises.

—The retail drug firm of Rich & Saulsbury, at Towson, Md., has been dissolved, Dr. Saulsbury retiring from the business, which will be continued by Dr. Rich.

DETROIT.

Detroit, July 14.

—Charles H. Woods, formerly in the drug business in Detroit, died July 11, after a lingering illness of two years. Last April Mr. Woods went South to recuperate, and returned to his home less than a week before his death. His funeral on Friday July 13, was very largely attended.

—Vacations are in order, and Detroit clerks are taking turns at enjoying a well earned rest. George Jones and C. E. Knight, of the Michigan Drug Company, are away at present. John J. Dodds and Louis Wolff, of Farrand, Williams & Clark, will begin their vacations next week.

—The Michigan Drug Company baseball team defeated the Walkerville team on July 7, by a score of 4 to 2. To-day (the 14th) the druggists go to Sugar Island, there to play an exhibition game with the Malleable Iron Works team, the occasion being an I. O. F. picnic.

—R. J. Pinkerton, of Detroit, whose drug store was damaged by fire a few weeks ago, is in nice shape again. A new stock of drugs and new fixtures have been put in, and on the whole things look better than before the fire.

—A. T. Ellsworth, manager of the City Drug Store, Hancock, Mich., is in Detroit, the guest of Parke, Davis & Co. H. T. Nichols, traveling representative of P. D. & Co. in the Northern Peninsula, is also in town.

—L. S. DUNN, a former Monongahela, Pa., druggist, died recently at his home in Swisshale, Pa.

AUDITORIUM PHARMACY, CHICAGO.

CHICAGO.

Chicago, July 14.

—William Mehl, a druggist at Sixty-seventh and South Halsted streets, who has been spending a two months' vacation at his summer home in Phillips, Wis., having fun with the deer and trout, will return next week.

—Mr. Lauterbach, of the firm of Datin & Lauterbach, at Fifty-fifth street and Wentworth avenues, will leave soon with his family to spend a two weeks' vacation in Central Illinois.

—James A. Davidson, the well known jobber in druggists' sundries, will leave to-night with his family for Yellowstone National Park to spend three or four weeks among the Rockies.

—A new drug store is about to be put in at the northwest corner of Milwaukee and California avenues, in a new building just completed at that location.

—The Omega Drug Company has opened a new store at Milwaukee and Hoyne avenues. It is said that the Alpha drug store started some years ago.

—Ed. Hagerty, West Side salesman for Peter Van Schaack & Sons, was called to Peoria this week by the sudden death of his grandmother.

—Cornelius P. Van Schaack of Peter Van Schaack & Sons, leaves to-night for a few weeks' vacation in Wisconsin, where the fish bite freely.

—It is reported that a new drug store will occupy part of a building now in process of erection at Fifty-ninth and South Halsted streets.

—The drug store at West Adams street and Western avenue has changed hands. The name of the new owner is W. F. Matthew.

—B. J. Baskerville has opened a new drug store at Oakley avenue and Laughlin street.

—Fred. Behrens has succeeded the firm of Behrens Brothers at No. 567 Western avenue.

—R. H. Goederlein has opened a new drug store at Racine and Belmont avenues.

—O'Brien & Kask have opened a new drug store at Fifty-ninth and State streets.

—A. E. Latrenneau has just opened a new drug store in Manteno, Ill.

DR. GEORGE F. PAYNE HONORED.

The Georgia Pharmaceutical Association at its recent meeting in Savannah greatly surprised Dr. George F. Payne by passing the following resolution of esteem and appreciation:

Resolved, That the Georgia Pharmaceutical Association congratulates our brother, Dr. George F. Payne, upon the distinguished honor recently conferred in selecting him as a member of the committee of twenty-five to revise the next Pharmacopœia and likewise congratulates the committee on securing the services of so competent and worthy a representative of the South. Dr. Payne has devoted much of his time and talents to the work of progressive pharmacy and we have every confidence in his ability to worthily represent our section in this important work of pharmacopœial revision.

THE NORTHWEST.

St. Paul, Minn., July 13.

—Daniel R. Noyes, the wholesale druggist, has long been treasurer of the St. Paul Relief Society, an organization which has accomplished much good in alleviating the condition of destitute people. At a meeting of the society a few nights ago, Mr. Peet, a member, moved to accept a report made by Treasurer Noyes, but qualified his motion by asking the society to direct the treasurer to classify in future reports the receipts and disbursements for publication, so the public might know just how its money was spent. Mr. Noyes objected, and showed that it would be impracticable to carry out Mr. Peet's idea. Mr. Peet insisted, whereupon Mr. Noyes threatened to resign if Mr. Peet's proposition was adopted. The result was that the society rejected the proposition with but one dissenting vote—that of Mr. Peet himself.

—The St. Paul druggists held their annual picnic at Wildwood, White Bear Lake, Thursday. To the number of 150, including the pillmen's wives, sisters, cousins and aunts, they put in a very pleasant afternoon. Athletic games were among the attractions. The drug stores were not closed on the occasion, as was the case last year, due to the refusal of one druggist to close up for the afternoon.

—The Crescent Pharmacy, at Eldora, Iowa, owned by Neal Tobin, has been sold to Steeley Bros. The store is one of the oldest in Central Iowa, and was operated many years by the late J. H. Hammond. The Steeley brothers are from Bristol, Iowa. One of them—John—has for the past year managed the Winchester Pharmacy at Eldora.

—F. M. Parker, Fifth and Wabasha streets, St. Paul, has nearly finished the refitting of his store, which has been in progress for over a month. The space is greatly enlarged and entirely new fixtures have been put in, and Mr. Parker's establishment will be one of the two or three handsomest and largest retail stores in the city.

—A. Quevli, druggist and general merchant, was the heaviest loser from a \$75,000 fire that occurred in Windom, Minn., Saturday night. He was burned out almost completely. His loss was \$10,000, with only \$1,000 insurance.

—C. H. Babcock has gone on a trip to the southern part of the State looking up a location for business.

—B. E. Cole, of Cole & Pierce, Breckenridge, Minn., is in Minneapolis on a short visit.

—Henry Prestholt was down here a day or two this week from North Branch, Minn.

—C. Shumway, Aberdeen, S. D., has sold to S. C. Lacey & Son.

—D. E. Billington has returned from a visit to Milwaukee.

—J. J. Keen is now at Minto, N. D.

GAMBLE & LUDWIG, MINNEAPOLIS.

ST. LOUIS.

Labor Conditions.

St. Louis, July 14.—The street railway strike was "off" but a week and was declared on again last Tuesday, the men claiming the Transit Company was violating the agreement which had been signed. Conditions, however, are by no means so serious as they were before. People are riding on the West End cars much as before the strike, and while the north and south lines are by no means patronized to the usual extent they are being more freely used than before the strike was first settled. The boycott on the cars and those using them is on again and affects trade in some localities. Even this feature seems to be losing its force to some extent.

NOTES.

—Dr. Loler, formerly with Koeneke & Co., druggists, Seventh and Spruce streets, will open a drug store of his own in the new building at Delmar and Walton avenues in the West End as soon as it is completed. He is a graduate in pharmacy.

—Robert Wagenman, head clerk for F. E. Whitecomb, Garrison and Washington avenues, is spending his vacation in Denver, Col. Paul Eichsted, a well-known local drug clerk, is now with Mr. Whitecomb.

—F. V. Johnson, of the Frost-Johnson Drug Co., has recovered from his long illness and leaves for Colorado Springs, Col., for a long stay to regain his strength.

—Gus Koch, the North St. Louis druggist, and George W. Krebs, vice-president of the Wm. A. Stickney Cigar Co., are "summering" at Collingwood, Ont.

—Dr. Meade has discontinued his drug store in East St. Louis and has moved the stock to Pinckneyville, Ill., his home, and where he has a large practice.

—C. P. Walbridge and family left Tuesday of this week for Boston from whence they will go to York Beach, Me., for a sixty days' sojourn.

—G. W. Baker, a recent graduate of the College of Pharmacy, is now clerking for Dr. H. Frielingsdorf, 2200 South Broadway.

—Albert G. Rockel, formerly representing Meyer Bros. Drug Co. in this city, has been given Texas territory.

—Charles Sittel, head price at Moffitt-West Drug Co.'s, is spending his vacation at Cincinnati.

THE CALIFORNIA FIG SYRUP COMPANY'S NEW PLAN.

The California Fig Syrup Company has sent its new price list of July 1 to all wholesale dealers on the list prepared by the committee of the three national associations. The new list quotes Syrup of Figs at \$48 per gross. Wholesale houses selected as wholesale distributors, ordering at one time and for one delivery, in quantities of not less than five gross, or \$240, who do not quote or sell Syrup of Figs, either directly or indirectly, or divide the above quantity with another party, or permit such goods to be disposed of in any way by their salesmen or others, at less prices than those above stated, will be allowed a rebate of 10 per cent. upon payment of the invoice within sixty days; if paid within ten days, an additional discount of five per cent. If the quantity purchased at one time amounts to two gross, or \$96, besides the rebate of 10 per cent., an additional discount of two per cent. will be allowed for cash payment within ten days' time. On orders for not less than two gross, the company will pay freight to destination. Wholesale distributors may allow a discount of five per cent. to dealers buying six dozen Syrup of Figs at one time. It will not, however, be considered a violation of the above terms when wholesale distributors, on their bills paid within ten days, allow a discount not exceeding the customary cash discount on such goods in their section of the country. The company will decline to sell its preparation at any price to any party supplying cutters or brokers.

ROTHINGHOUSE BROS., GAS CITY, IND.

PATENTS

Trade-Marks, Designs, Etc.

PATENTS.

Issued July 3, 1900.

- 652,741.—Emil Beringer, Charlottenburg, Germany. Making hydrocyanic acid.
 652,761.—Justus B. Entz, Philadelphia, Pa., assignor to American Alkali Company, of New Jersey. Electrolytic production of caustic soda, etc.
 652,826.—Theodor Weyl, Charlottenburg, Germany. Ozonized-soap preparation.
 652,910.—Jean Peeters, Schaerbeek, Belgium. Making yeast extracts.
 652,969.—Wilhelm Krauth, Griesheim-on-the-Main, Germany. Making ionone.
 653,013.—William A. Armour, Thomaston, Conn. Syringe.
 653,166.—Henry B. Cary, assignor to F. W. Braun, Los Angeles, Cal. Open bunsen burner.
 653,193.—Joseph Albiez, New York, N. Y. Stopper for atomizers or perfumery bottles.

TRADE-MARKS.

Registered July 3, 1900.

- 34,814.—Tonic. John C. Wilson, Houston, Texas. The representation of a shield, flags and a liberty-cap.
 34,845.—Tonic. John C. Wilson, Houston, Texas. The word "Vinosula."
 34,846.—Pharmaceutical Preparations for Lung Tuberculosis. Gustav Köhne, Hanover Germany. The representation of a thorax and the compound word "Tuberkel-Tod."

LABELS.

- 7,677.—Title "Carmeliter Bitters." (For Bitters). Carmeliter Stomach Bitters Company, New York, N. Y. Application filed June 7, 1900.
 7,678.—Title: "Balm-Oil." (For Medicine). John C. McFarland Drug Company, Dallas, Texas. Application filed June 7, 1900.
 7,680.—Title: "Physicians' Surgeons' and Dentists' Toilet Disinfectine Soap." (For Soap). Disinfectine Co., Canton, Ohio. Application filed June 7, 1900.

A Profitable Article.

Langerfeld's Baby-food Warmer is a simple, automatic but efficacious method of heating any form of artificial food to precisely the correct temperature at very small expense, and with the least possible risk of breakage or trouble. It requires no watching nor exercise of judgment, a very important fact to mothers and nurses, who by the use of this simple apparatus, can rapidly and safely heat any required artificial food without waste of time or unnecessary annoyance. This food warmer has never been prominently placed before the trade, but has had considerable local sale. Druggists who wish to add it to their line should write for quotations to J. H. White Mfg. Co., No. 127 North Tenth street, Brooklyn, N. Y.

The good points of Stearns' Headache Cure are too numerous to be mentioned in one advertisement, but we are glad to see that its makers are emphasizing its safety, as well as its efficacy. No wonder this article is used by millions, since it produces such uniformly good results.

Associations, Boards, Colleges.

KENTUCKY ASSOCIATION.

The twenty-third annual meeting of the Kentucky Pharmaceutical Association was held at Glen Springs, Lewis County, June 19 to 22, and was easily the most enthusiastic and successful meeting ever held by the association.

One hundred and twenty-five members, with a large number of ladies, were present. Twenty-five new members were elected.

The matter of the association supplying a number of representative physicians with epitomes of the National Formulary, as compiled by Prof. C. Lewis Diehl for the American Pharmaceutical Association, was referred to the Executive Committee with power to act.

Resolutions were adopted indorsing the actions of the N. A. R. D., and reaffirming to that body the loyalty of this association.

The executive committee was instructed to form local organizations throughout the State.

The following papers were presented: "The Proper Relations Which Should Exist Between Competing Druggists," by J. W. Gayle, A. Dimmitt, R. J. Snyder, V. Driskell, H. P. Chenoweth and C. S. Porter; "The Advantages and Disadvantages of Our Pharmacy Law, with Suggestions for Improvement," by Addison Dimmitt; "Is a Druggist Justifiable in Diverting the Sale of a Proprietary Preparation," by C. S. Porter, V. Driskell and E. B. Walthall; "Why Are Loaded Sponges the Most Expensive and the Most Unsatisfactory," by Vernon Driskell; "Why Every Druggist Should Be a Member and Attend the Meetings of His State Association," by Addison Dimmitt; "Is Soda Water a Profitable Adjunct to the Drug Business," by E. B. Walthall, Vernon Driskell and W. H. Tibbals; "Is It Profitable or to the Advantage of the Retail Druggist to Manufacture His Stock of Pills, Tablets, Fluid Extracts, Elixirs and Medicinal Syrups," by A. Dimmitt, E. B. Walthall and Vernon Driskell.

The following officers were elected for the ensuing year: President, C. Lewis Diehl, Louisville; first vice-president, J. L. Clark, Vanceburg; second vice-president, C. W. Peters, Sharpsburg; third vice-president, J. M. Lang, Paducah; secretary, J. W. Gayle, Frankfort; treasurer, Vernon Driskell, Ghent; chairman Executive Committee, Howard Jett, Cynthiana.

The place of the next meeting will be either Crab Orchard or Rock Castle Springs, the selection to be made by the Executive Committee.

MAINE PHARMACEUTICAL ASSOCIATION.

Portland, Me., July 14.—Maine druggists in large numbers congregated at Portland this week for the thirty-third annual meeting of the Maine Pharmaceutical Association, held July 11, 12 and 13. The visitors made their headquarters at the Preble House. On Wednesday afternoon a short business meeting was held and various matters discussed. That evening the entire party went by special electric cars to Riverton Park, a suburb, where there is a summer theatre. Later came a reception and dance, with supper and a general good time.

Thursday was given over to pleasure and business combined. Early in the forenoon a car ride about the city was followed by a sail in and about the many beautiful islands in the harbor. The programme included a stop at Harpswell, at about noon time, when another business meeting took place. This included the appointment of committees and delegations to conventions and like matters, but the main interest centred in the annual election of officers, as follows: President, William H. Boynton, of Biddeford; vice-presidents, F. R. Partridge, of Augusta, B. P. Moulton, of Lewiston, and F. T. Crane, of Machias; secretary, Dr. L. H. Porter, of Danforth; treasurer, W. I. Drew, of Portland. A fine dinner, well served, proved an enjoyable feature of the visit to Harpswell, and an orchestra enlivened the occasion for the druggists. Friday's programme included a trip to the White Mountains, with dinner there and a return to Portland in the evening, during which the druggists went to Underwood Spring Park and attended the entertainment by the Fadettes. A supper was also enjoyed at that place.

TORREY BOTANICAL CLUB.

Wednesday evening, May 30.—The meeting was held at Hazelwood, the residence of Vice-President Dr. T. F. Allen, near Litchfield, Conn., subsequent to a field excursion arranged by Dr. Allen, in the vicinity of Litchfield, the club being his guests from May 29 to May 31. F. L. Montgomery and E. A. Colby were elected active members of the club. The regular meetings of the second Tuesdays in October and November will be held at the Museum Building of the New York Botanical Garden at 4 o'clock p. m.

Prof. Lloyd called attention to the occurrence of nectaries on the leaves of *Pteris aquilina*. The glands are found on the rachis, one below the insertion of each pinna, and may be recognized as modified oval areas covered by a dark red epidermis. The color is due to the presence of matter dissolved in the sap, and is found also in lines running up and sometimes down the rachis from the glands. It is noteworthy that up to the present time no other Pteridophyte has been reported to be possessed of nectar-secreting organs.

Dr. Britton remarked on a young tree of the Swamp Spruce, *Picea brevifolia* Peck, found in a sphagnum bog near Litchfield, and stated that this was probably the most Southern known station for this species in New England. Mrs. Britton exhibited specimens of the red-flowered Columbine of the Litchfield region.

N. L. BRITTON, Secretary, Pro Tem.

—The Tennessee Druggists' Association has issued an elaborate programme for its fifteenth annual meeting, to be held at Kingston Springs, July 15 and 19. Reduced rates on all of the railroads have been secured (round trip tickets for one and one-third fare) and also the unusually low hotel rate of \$1 per day. The programme includes various athletic contests, guessing contests, etc., and the member coming the greatest distance from each of the three divisions of the State will be awarded a prize. A number of interesting papers will be read at the meeting.

—The North Dakota Pharmaceutical Association will hold its fifteenth annual meeting at Fargo, August 7, 8 and 9. An elaborate amusement programme has been prepared for the last day of the meeting, which takes place at Detroit Lake, Minn. The association offers prizes to the winners in the various sports and games provided by the Committee on Entertainment.

—The Michigan Board of Pharmacy examined ninety-eight applicants for registration at the meeting held at Star Island, June 25 and 26. The following received certificates: Registered pharmacists—R. M. Bauer, Petoskey; L. Barlow, Hastings; M. J. Cloonan, Pontiac; L. O. Cushing, Ann Arbor; A. G. Dunlap, Charles Davey, Detroit; D. F. DeWitt, Port Huron; E. C. Edsall, Jackson; H. Hudson, Riverdale; H. Hudnutt, Hanover; E. W. Hackmuth, Big Rapids; J. W. Kremer, Grand Rapids; F. M. McCarrick, Lansing; D. S. Mathews, Ypsilanti; J. R. Martin, Monroe; S. P. Rockwill, Pontiac; G. F. Stickney, Gowen; P. J. Tischer, Detroit; F. W. Tillson, Battle Creek; F. H. Whiting, Union City; G. A. C. Wilson, Manacelona. Assistant pharmacists—E. J. Belser, Ann Arbor; H. D. Berry, Detroit; E. J. Bennett, New Haven; G. S. Coffman, Sheboygan; J. B. Cannon, Detroit; F. L. French, Spring Harbor; G. D. Hilton, Freemont; W. W. Horn, Fayetteville, N. C.; A. E. Lambert, Detroit; D. M. Monroe, Cass City; J. J. Neihardt, Detroit; G. J. O'Brien, Bessemer; E. Royce, Mecosta; G. G. Stillwell, Jonesville; A. L. Todd, Spring Arbor; F. A. Williams, Ionia. The next meeting of the board will be held at Sault Ste. Marie, the last week in August. The board elected officers as follows: President, A. C. Schumacher, Ann Arbor; secretary, H. Heim, Saginaw; treasurer, W. P. Doty, Detroit.

—Adolph Brandenberger, of Jefferson City, has been appointed by Gov. Stephens a member of the Missouri Board of Pharmacy for three years. His commission dates from July 2.

GEORGIA BOARD OF PHARMACY.

The Georgia Board of Pharmacy examined thirteen applicants for licenses at Savannah, May 21. Seven passed successfully. The only graduate in pharmacy among the applicants made 15½ per cent. higher than the next highest man. The successful applicants were: H. S. Redding, Ph. G., Waycross, pharmacist; D. L. Brown, Culverton, apothecary; C. A. Francis, Augusta, apothecary; P. H. Croghan, Savannah; B. F. Chapman, James B. Black and E. L. Sumeran, all of Augusta, druggists. Dr. Harry Sharp, of Atlanta, a member of the board, was not present, on account of continued ill health. He notified the board that he had decided to tender his resignation to the Governor. Dr. Sharp had an exceedingly severe attack of what appeared to be paralysis about a year ago, and has been in feeble health ever since. He has left for a trip through the West. At the meeting of the Georgia Pharmaceutical Association, May 22, five names were selected to be presented to the Governor, from which he is to fill the vacancy occurring in the board next November, and also that caused by the resignation of Dr. Sharp. The names chosen are C. D. Jordan, Monticello; C. G. Paine, Waycross; H. H. Arrington, Rome; J. O. Tigner, Greenville, and J. D. Dodson. The next meeting will be held in Atlanta, November 26.

—The South Dakota Board of Pharmacy held a meeting for the examination of applicants for registration at Mitchell, July 11. Eight candidates were examined. The president of the board reported that the members were looking after violators of the pharmacy law, and that he had recently secured the conviction of a druggist who was conducting a drug store without a license. Three convictions for this violation of the law have been obtained in the State during the year. Numerous violations of the liquor law by druggists throughout the State, especially in the smaller towns, have been reported, but the prosecution of these offenders is beyond the province of the Board of Pharmacy, though the members state they are willing to co-operate as individuals with the State's attorney in any county and help to put an end to violations of this law.

—The Wisconsin Board of Pharmacy is actively engaged in prosecuting violators of the pharmacy law in that State. On July 7 F. W. Clark, of Colby, was fined \$50 and costs for conducting a drug store with no registered pharmacist in charge. This case attracted considerable attention as it was one of the first of the kind since the law was passed in 1882, where an assistant was in charge of a store in a town of over 500 inhabitants. Similar charges were preferred against C. W. Schied, Highland, Iowa County, about the same time, but he was found not guilty. He testified that he sold his stock of drugs a short time before the complaint was made. The Board of Pharmacy will proceed against the new proprietors of the store, who are said to have no pharmacist in charge of the business.

—The Nebraska Board of Pharmacy met in regular session at the Paddock Hotel, Beatrice, June 5. Twenty candidates were examined, of whom the following will receive certificates of registration: Arthur L. Adams, Talmage; W. E. Bechtelheimer, Juniata; C. H. Hoff, Wisner; Harold R. McKeen, Beatrice; E. R. Wheeler, Beatrice. The next meeting of the board will be held August 8, at the Thurston Hotel, Columbus.

—The Wisconsin Board of Pharmacy, through Secretary Heinstreet, reports the conviction of Myers & Chase, proprietors of a large department store at Abbottsford, Clark County, for running a drug store department with no registered pharmacist in charge. The convicted parties were fined \$50 and costs.

—The Iowa Commissioners of Pharmacy examined a class of eight applicants at Clear Lake last week, previous to the meeting of the Iowa Pharmaceutical Association, which was held at the same place. About 200 druggists were in attendance, and the membership of the association was increased to 400.

SCHOOL OF PHARMACY, UNIVERSITY OF MICHIGAN.

The commencement exercises of this school were held on June 19, 20 and 21. An address to the graduating class was delivered on June 19 by Prof. James H. Beal, of Scioto, Ohio. This address concerned the present status of pharmacy, and was full of interesting counsel to those now engaging in the profession. The meeting of the alumni in connection with the alumni of other departments of the university was held on the 20th, with a general business session at 3 p. m. On the evening of the same day there was a reception by the Senate of the university in all its departments in the spacious gymnasium building. The fiftieth anniversary of the founding of the Department of Medicine and Surgery was celebrated on the same occasion. A large number of former graduates in chemistry and pharmacy were present. The commencement oration was given on the 21st, by Dr. John Merle Coulter, of the University of Chicago. His subject, "The Mission of Science in Modern Education," was of especial interest to the graduates of the scientific departments of the university. Following the oration there was a dinner for the graduates and guests of the university, all departments coming together. The following are the names of those graduating in the School of Pharmacy: Pharmaceutical Chemist Harry Albers, Lyman Frederick Barlow, Ernest Joseph Belser, Edwin Judson Bennett, Pearl Charlotte Bennett, Harry Denman Berry, Edgar Charles Edsall, Lemuel William Famulener, John Estill Ferris, Llewellyn Elliott Frazier, Frank Leonard French, George Delbert Hilton, Henry C. Hitchcock, Warren Winslow Horne, Edward Nicholas Emil Klein, John Richard Martin, Augustus O'Brien, William Alexander Pearson, Burnette Burgoon Smith, George Giles Stilwell, Arthur Louis Todd, Frank Holmes Whiting and Frank Yott, Jr.

Bachelor of Science (in Pharmacy)—George Millard Heath, Ph. C.; Charles Willis Johnson, Ph. C.

NEW ORLEANS COLLEGE OF PHARMACY.

The New Orleans College of Pharmacy, recently organized in that city, has elected the following members of the faculty: Jacob A. Storck, M. D., M. Ph., professor of materia medica, botany and physiology; Walter T. Taylor, Ph. G., professor of pharmacy, and Philip Asher, Ph. G., M. D., professor of chemistry. The assistants to the various chairs are to be appointed by the professors. Each of the professors has had much practical experience in the drug business and is thoroughly equipped for successful work. The board of trustees has under consideration several sites for the new college, but none has yet been positively decided upon. A prospectus is soon to be issued and the school will open sometime during the latter part of October.

Does Good Everywhere.

The benefits which are conferred on suffering humanity by "Tanglefoot" sticky fly paper are appreciated in every country on the globe. "Tanglefoot" catches the flies and the loads of filth they carry, and coats them all over with a varnish from which escape is impossible. The article sells as soon as known, and, as it offers a good profit, it is a valuable asset to dealers. All jobbers in druggists' goods handle "Tanglefoot" sticky fly paper.

Mr. A. Hart, manager of the sponge department of Smith, Kline & French Co., Philadelphia, has gone to Europe to purchase goods for the coming fall and spring trade. Smith, Kline & French Co.'s business in the sponge department has very considerably increased in the last few years, and they attribute this increase to the high class goods which they carry. They send their representative abroad in order that he may be better able to select such goods as suit the trade, which consist chiefly of high grade Mandruka Bath and Fine Toilet Cup Sponges, of which they had an exhibit in New York from April 2 to 5. Mr. Hart's father was one of the first in the sponge business in this country, and he still personally selects and looks out for the best grade of goods that are shipped to the London market.

OBITUARY.

FREDERICK HUMPHREYS.

Dr. Frederick Humphreys, as briefly told last week, died at his summer home, "The Gables," at Monmouth Beach, N. J., Sunday, July 8, after an illness of about four weeks. The funeral was held from "The Gables," Tuesday, July 10, and the interment was made at Auburn, N. Y.

Dr. Humphreys was born in Marcellus, Onondaga County, N. Y., March 11, 1816. When a lad of seven years his family moved to Auburn, where he served his father, Erastus Humphreys, who was a physician of high standing, as office boy. Later he was sent to the Auburn Academy, where he spent a brief time under a Quaker tutor. When 14 years of age, he secured a position clerking in a store, which he held for two years, when, with his brother and uncle, he left for the South to engage in the manufacture of clocks. His father was a man who believed that a young man should go through the mill of experience at an early age, and it was for this reason that Frederick went South. In three years he returned and took charge of a farm his father had purchased. Shortly afterward he married. He then made another journey Southward, but had been away only a year when he was called to Chillicothe, Ohio, where his wife had died. The affairs of his father-in-law being somewhat unsettled, young Humphreys took up teaching to assist the family. He followed this three years, and then entered the ministry of the Methodist Episcopal Church. His pastorates were at Worthington, Ohio; Cayuga twice, Cortlandville, New Hartford and Utica. He was ordained deacon at Wilksburg in 1843; elder in 1845 and minister in 1846. He had begun researches in homeopathy in 1840, and when he resigned from the ministry he joined his father to obtain further knowledge. There were scarcely any works in English on the subject, the majority of scholars being French and German, so young Humphreys began a study of these languages. He soon came to be regarded as an authority, and after nine years of study he was said to have the finest and most lucrative practice in Utica. He spent the winters of 1848, 1849 and 1850 in Philadelphia at the Pennsylvania Homeopathic Medical College, where he was on intimate terms with Dr. Constantine Hering, a noted authority on all medical subjects. In 1850 he issued, with his father, a series of "Tracts for the Times," and later he wrote on "Cholera and Its Homeopathic Treatment," and a monograph on

dysentery. His most important labor was the "Proving of Apis Mellifica, or Poison of the Honey Bee." Before this was issued, nothing had been known on this subject, consequently Dr. Humphreys' original proving was considered the most important contribution ever given to homeopathic materia medica in America. Attention was next attracted by the appearance of "Nux Cum Sales." Three years after the announcement of this, with the aid of his class, Dr. Humphreys proved *Plantago Major*. He assisted in forming the Central New York Homeopathic Medical Society, and when this was later transformed into a State organization, Dr. Humphreys was one of those who aided in the change. That his work was appreciated by his fellows was evident from the fact that he was called to the chair of the Bureau for Augmentation and Improvement of Materia Medica of the American Institutes of Homeopathy, the highest honor that could be given him. He accepted the position and filled it in a most satisfactory manner. He came to this city in 1853, and a year later founded the Humphreys' Homeopathic Remedy Company at No. 109 Fulton street. The present site is at the corner of William and John streets. He received a call to the chairmanship of the Homeopathic Institute of the Practice of Medicine in his old college, and served for three years, proving an excellent lecturer. He resigned because of differences arising from his new discovery and subsequent practice of a new homeopathic combination, termed by him Homeopathic Specifics. The alternative he chose when the controversy arose was to pursue his researches in the field he was in, rather than sacrifice his labor for personal relations, and his friends left him. He continued his work for twenty-five years in a successful manner.

Dr. Humphreys was instrumental in building Trinity Church, Asbury Park, N. J., and he also had a hand in the construction of the Church of the Heavenly Rest in this city. His residence here was at No. 22 West Thirty-ninth street. Beside his summer home at Monmouth Beach, he had a winter house at Thomasville, Ga. He was very fond of dumb animals, and had contributed many articles to "Animal Friends." The establishment in this city was closed during the first three days of last week in observance of his death.

DR. CHARLES W. GELINEAU, druggist at Indian Orchard, Mass., aged fifty-six years, is dead from blood poisoning. A wife and three children survive him. The funeral was held from his home in Indian Orchard, with services also in St. Aloysius Church.

One of the most important acts of the U. S. Pharmacopœial Convention of 1900 was the passage of resolutions or general principles, one of which was upon the subject of "Doses," instructing the Committee on Revision and Publication of 1900 that:

"After each Pharmacopœial article (drug, chemical or preparation), which is used or is likely to be used internally or hypodermically, the committee is instructed to state the average approximate (but neither a minimum nor a maximum), dose for adults, and, where deemed advisable, also for children. It is to be distinctly understood that neither this convention nor the Committee on Revision created by it intends to have these doses regarded as obligatory on the physicians, or as forbidding them to exceed them whenever in their judgment this seems advisable. The committee is directed to make distinct declaration to this effect in some prominent place in the new Pharmacopœia."

It was further directed that doses should be expressed metrically, followed by the older Apothecaries' weights and measures.

In line with this action, H. K. Mulford & Co., Philadelphia, have been the first, in their new catalogue, to give under the list of Fluid Extracts, etc., the dose of the products in the older form of weights and measures, followed by the newer metric system.

The catalogue, which is an unusually comprehensive one, embraces 234 pages of closely printed subject matter, and is unique in the fact that it contains a Therapeutic Index, which classifies remedial agents according to the conditions in which they are indicated.

STATE OF TRADE.

Seasonably Meagre Trade, But Prospects Good.

New York, July 17.—In a general way conditions are practically as noted in last week's report, but there have been several developments of more than ordinary interest, and while the aggregate volume of business continues of seasonable meagre proportions, there are indications that the outlook is considered favorable to an improved demand with the advent of cooler weather. In other words, it is expected that the coming Autumn and Winter season will bring a revival of activity, and a return of the prosperity noted during the corresponding periods of the past two years. The leading feature of the past week was an advance in quinine. At the bark sale in Amsterdam on Thursday, nearly the entire quantity offered was disposed of, at prices showing an advance of about five per cent. over the average unit value at the previous sale. This was immediately followed by cable instructions to local representatives of foreign manufacturers of quinine, to mark up quotations 2c. per oz. Domestic makers also announced a corresponding advance, and all leading brands of both foreign and domestic are quoted on the basis of 33c for bulk. Desirable parcels in second hands are held on the same basis and holders offer sparingly, an opinion prevailing that still higher prices are warranted by the strong statistical position of bark.

Opium also has developed increased firmness, and prices are about 5c. per pound higher, the improvement being due to an advance in prices at primary markets, where considerable purchases are reported by cable that the London market has been cleared of all descriptions suitable for shipment to China.

In the department of essential oils there has been a partial reaction in values of anise and cassia. Some claim that the recent advances were not wholly warranted and others that the reaction is due to manipulation on the part of speculative operators. Natural wintergreen is a shade lower, and synthetic has declined on account of the lower prices ruling for salicylic acid. Wormwood is offered more freely and wholesale prices are about 25c lower. Rose is easier, owing to reports from Turkey indicating an abundant yield from the current crop, and it is generally expected that prices will be reduced.

Under the influence of the decline in salicylic acid, manufacturers have reduced their quotations for benzoate of soda. Cassia buds and the star variety of anise are both firmer in sympathy with other products of China, which have been affected by the disturbed conditions of political affairs in that country. Celery seed is fractionally higher owing to reports of stronger primary markets due to crop shortage. Cuttlefish bone continues to harden in price and holders offer very sparingly as reports of a small yield from the current season's catch are fully confirmed. Cube berries show a further advance under the influences noted last week. Short buchu leaves are decidedly firmer. Cables from London reporting that the bulk of stock there had been taken up for American account caused local holders to advance prices 3@5c per lb. The feeling is very strong, as it has since transpired that the recent large purchases have been chiefly for consumption. This will materially reduce the available stock, and no fresh supplies are due until the beginning of next year. Serpentina root is firmer owing to scarcity. An advance abroad in ozokerite has resulted in a higher range of prices for all grades of ceresin wax. The steady upward movement in sugar has caused a further advance in rock candy syrup. Jaborandi leaves are in reduced supply and firmer. Jobbers quote a higher range of prices for the African variety of ginger.

A Pretty Good Week.

Boston, July 14.—This has been, all in all, a week of pretty good trade, for at many places business has been very good, while here and there others have found it fairly so, and in no instance has there been a dull week. There has been nothing to make trade active and it therefore must be looked upon as of the legitimate kind. At nearly all retail drug stores the soda fountain trade keeps good. In the general market the trade in chemicals and drugs is better than might be expected. Prices hold well and there is an undercurrent of satisfaction with present conditions. There is no marked change in alcohols. They are steady and in fair demand. Dyestuffs show some activity and rather good trading.

Trade Experiences a Slight Slump.

Philadelphia, July 14.—The summer of 1900 being a remarkably healthy and prosperous one, with almost everybody well and thousands out of town on various recreations bent. It causes no remark when trade takes a slight slump toward the middle of the season. In other words, the current week was duller than the last. All merchants admit, however, that business is better than the corresponding period of last year. The change in the position of quinine and opium was not unexpected in

ABBEE'S EFFERVESCENT SALT

is as staple in a drug store as quinine. Its rapid rise in popular and professional favor has been phenomenal, and is due solely to its merit and the methods used to market it.

Progressive druggists everywhere should take advantage of our increased advertising campaign for 1900, and push sales.

THE

Abbey Effervescent Salt Co.,

9-15 Murray Street, NEW YORK, N. Y.

Sold in three sizes retailing at 25c., 50c. and \$1.00 per bottle.

Trade List on Application.

this market. Quinine is considered a buy and opium a sell by the well informed, owing altogether to the condition of affairs in the East. The uproar will in all probability extend to all the South Sea Islands, the bark-producing regions will be affected, hence there will be a rise in quinine. Speculators in the alkaloid are pleased to note the sympathy exhibited between the American and foreign manufacturers, though there are no big purchases to record in this market. Other staples are quiet. Manufacturers of pharmaceuticals and chemicals report no change in their lines.

Business Very Satisfactory.

Baltimore, July 16.—Business continues remarkably good for this season of the year. The manufacturers of pharmaceuticals report a large city trade, while the jobbing houses confirm the prevalence of a brisk movement along the whole line. Out-of-town orders, though numerous, are generally small, involving a lot of detail which taxes the clerks in a manner rather disproportionate to the total of transactions, but the situation upon the whole presents a very satisfactory aspect. The retail druggists are having a rush for soda water and similar decoctions, the prescription trade being fair. A moderate movement in heavy chemicals prevails, while the market for botanicals adheres closely to the conditions at New York.

Fair for July.

Detroit, July 14.—Even the most sanguine among the druggists of Detroit are to-day willing to admit that business for the week has not been any more than "fair—for July." A rise of two cents on quinine was received this morning, and linseed oil is away up, selling at 68 and 69 cents per gallon. Other prices keep pretty steady.

Firm Summer Trade in Chicago.

Chicago, July 14.—Although this is the middle of the vacation and convention season, trade with the manufacturers remains good. It is, they say, somewhat better than it was last summer. The jobbers are busy, especially so with all seasonable, hot weather goods. The city trade is rather slow in some localities which are immediately affected by the strike, which is not yet settled, though the prospects for a settlement seem very bright. Dealers in sundries are fairly busy. The opening of several stores recently has contributed to the general activity in some degree. Staple, regular trade and collections remain good and steady.

Improved Conditions in the Northwest.

St. Paul and Minneapolis Minn., July 13.—A rise of two cents per gallon in linseed oil this week breaks the long reign of unchanged prices. The market on all other Western commodities remains steady. Retailers unanimously report improved conditions. This is particularly true of collections, of which not one complaint is to be heard. General trade is well sustained. The jobbers are well satisfied with the present status of affairs, though less busy than a month ago. This is usually a quiet time of the year, but the falling off in orders this year is not one-half so noticeable as in previous years. Every sign points to 1900 as a "bumper" in the drug trade.

Some Improvement in St. Louis.

St. Louis, July 14.—Trade conditions are but little changed from last report. Wholesalers state that country business is, if anything, slightly better than last week. Quinine has been advanced a couple of cents, the notifications being received this morning. Local trade in some sections of the city is again adversely affected by the renewal of the street railway strike and boycott. Collections locally are slow.

T. C. HILTON, of the firm of T. C. Hilton & Co., druggists at Lock Haven, Pa., died July 13. He had been in ill health for nearly three years, but did not give up active business life until last January. He was born in Kittanning, Pa., in 1852. After receiving his education he graduated from the Philadelphia College of Pharmacy and located in Lock Haven in 1877. In 1879 he was married to Miss Gertrude M. Brown, who with one son, survive him. He was a great lover of music, and was director of the Lock Haven chorus of more than one hundred voices. He was also for many years leader of the choir in the Episcopal Church, of which he was a member.

DR. JOHN COTTON, one of the leading druggists of Charlestown, West Va., and among the oldest in the town, died on the morning of July 8, from paralysis. He had been helpless for several weeks. Though only 52 years old, he had a long business career behind him, and was highly esteemed in the community.

MARKET REPORT.

NEW YORK MARKET.

New York, July 17.—Transactions continued limited to the light current requirements of consumers, but the market retained the steady undertone which has been a prominent feature thus far during the midsummer season.

OPIMUM.—Early in the week jobbers reduced quotations, but primary markets have since developed increased strength under a heavy demand and liberal purchases, presumably to be for Eastern account. Consequently the local market is firmer and it is doubtful whether buyers can shade the former range of \$3.35@3.50 for 9 per cent, and \$3.45@3.60 for 11 per cent., the outside figures for single pounds.

POWDERED OPIMUM.—There is no improvement in demand but the market is steady with jobbers quoting \$4.45@4.65 for 13 per cent, and \$5.15@5.35 for 16 per cent., according to size of order.

MORPHINE.—Small lots are finding a steady outlet and jobbing quotations remain unchanged at \$1.95@2.05 in ounces and \$2.20@2.30 in eighths, as to brand.

QUININE.—Manufacturers advanced quotations 2c. per ounce on Friday last and the revised jobbing prices are 33@34c. for bulk in 100-oz. tins, 35@36c. in 50-oz. tins, and 40@41c. in ounce vials, according to brand. There is no demand of consequence, but the tone of the market is strong.

BENZOATE OF SODA.—Manufacturers have reduced their quotations and the jobbing market is easier to the extent that small lots are obtainable at 55@60c., as to size of order.

OIL WINTERGREEN.—Natural is unchanged at \$1.75@2, but the synthetic variety is easier in sympathy with crude material and quotations show a decline to 60@70c.

OIL WORMWOOD.—Primary markets are easier and spot quotations for jobbing quantities have been reduced to \$6.75@7.75 for best and \$6@7.25 for good, as to quantity.

OIL ANISE.—There has been a partial reaction in prices and the revised jobbing range is \$1.90@2.15.

OIL CASSIA.—Under a similar influence quotations for jobbing parcels have been reduced to \$1.25@1.50.

OIL PENNYROYAL.—There is a seasonably active demand and jobbers have advanced quotations to \$1.65@1.85.

THYMOL.—Owing to scarcity and stronger foreign markets jobbers have advanced quotations to \$3.65@4.

BEECHWOOD CREOSOTE.—A firmer feeling has developed and jobbing quotations show an advance to \$1.15@1.25.

MANNA.—A general revision of prices indicates a continued strong market and the new figures are 68@75c. for large flake, 40@45c. for small flake, and 35@40c. for sorts.

SALICINE.—The market is a shade firmer and jobbers have marked up quotations to \$4.75@5.

JABORANDI LEAVES.—Supplies have diminished and values are firmer, jobbing quotations showing an advance to 27@32c. for whole, 30@35c. for ground and 32@37c. for powdered.

MENTHOL.—The market is somewhat unsettled and jobbing parcels are available at \$3.10@3.25.

ROCK CANDY SYRUP.—Jobbing prices show a further advance to 62c. in barrels, 65c. in half barrels, 67c. in 10-gallon kegs and 73c. in 5-gallon kegs.

GINGER.—African is firmer and jobbers have advanced quotations to 11@15c. for whole and 16@20c. for powdered.

FREDERICK H. EGGERS, a pioneer druggist of Allegheny, Pa., died July 7 after a lengthy illness. He was born in Allegheny in 1841, and served his apprenticeship with A. J. Zwinger, one of the most prominent of the early druggists of Pittsburg. He continued in the drug business until the outbreak of the Civil War, when he enlisted in the 112th Pennsylvania Volunteers. During his service in the army he was chief steward at the Patent Office Hospital in Washington, and was taken prisoner at Harpers Ferry. He was the father of eight children, all of whom, with his widow, survive him. In company with his son, Frederick W. Eggers, he conducted several pharmacies in the cities of Allegheny and Pittsburg. He was connected with a number of financial institutions, and was vice-president of Teutonia Insurance Company. He was a prominent member of the Lutheran Church, and was identified with a number of fraternal organizations.

THE ERA COURSE IN PHARMACY.

The lectures will hereafter be issued in monthly installments, and the entire work of the Course can be completed within twelve months.

NEW CLASSES FORMED EACH MONTH.

The first installment of lectures will be issued in October, and the remainder at intervals of thirty days thereafter.

Recitations and examinations are conducted by correspondence directly with each regularly matriculated student.

Especially valuable as a preparation for examination by a board of pharmacy, to those who cannot attend a college of pharmacy, and to all desiring to review their former study of the subjects embraced in the curriculum.

TOTAL EXPENSES FOR FULL COURSE, \$10.00.

For fuller particulars see announcement on last advertising page.

Write for new descriptive Prospectus, now ready.
Address, THE PHARMACEUTICAL ERA.

INDEX TO VOLUME XXIII.

All subscribers who wish the Index to Volume XXIII., from January to June, 1900, are requested to send us a postal card request to that effect.

MATRICULATE PROMPTLY.

As recently announced, and set forth in various positions in this issue, the Era Course in Pharmacy has been so remodeled and revised that it can now be completed within a calendar year. As a part of the plan it is arranged that new classes will commence each month, beginning with October next. We want to urge all intending students, who desire to commence the work at the earliest moment, to send in their matriculation orders now. The prospectus of the new course is now being distributed, and we shall be pleased to send copies of it to all applying. All students who matriculate now will be entered in the October class; those coming in subsequent to that time will begin the work in the month during which they matriculate.

Matriculate now.

PRINT THE PAPERS.

At the meeting of every State pharmaceutical association are read at least a few papers upon subjects of direct interest to the members and druggists generally. Very few of these papers, however, ever see the light of publication, save in the annual volumes of proceedings. These proceedings are, as a rule, issued several months after the annual meetings are held, they are circulated only to the members of the association, and the contents of the volume is, except in rare cases, but cursorily perused. By limiting in this way the distribution of the papers read at the meeting, they lose very much, if not all, of their value.

Every State pharmaceutical association should have a special committee whose duty it should be to see that copies of all papers to be read are prepared in advance of the meeting, so that they may be sent promptly after adjournment to the leading pharmaceutical journals. This committee, of course, could exercise its judgment and discretion in the matter, and send only such papers as are worthy of publication. We believe that if such a rule were lived up to the druggists of the country generally would profit largely, and the pharmaceutical journals would reflect more closely than they do now the real sentiment and impressions of the trade.

There is many a practical paper upon a subject which lies close to the druggist's heart which

is read at some State pharmaceutical association meeting and goes no farther. Such a paper given the wider circulation of the pharmaceutical journals would exert good in many directions, and not its least effect would be to draw out the views and recitals of experiences of other druggists. There is a large element among the retail druggists of this country who possess the ability, the knowledge and the experience requisite to write valuable papers upon professional and trade topics. This is a mine which has been poorly worked thus far. These are men who will not go to the trouble of preparing papers and giving away the results of their experience and observation if their hearers are to be limited to the very few, comparatively, in attendance at the association meeting. They are the very men, however, who, if assured wider circulation for their articles, would be ready to contribute of their fund of information. Let the State associations make some effort to devise a plan whereby papers read at their annual gatherings may be brought to the attention of the profession at large.

WHAT ARE "PHARMACEUTICAL PREPARATIONS?"

Under the Oklahoma pharmacy law the sale of drugs, chemicals and pharmaceutical preparations is confined to regularly licensed pharmacists. The Board of Pharmacy is notifying general dealers that they will be held to strict accountability and must not deal in articles contrary to the provisions of this law. The board goes very far, however, in defining what the law means by the term "pharmaceutical preparations!" The board tells the general dealers that under the classification "pharmaceutical preparations" are included perfumes, toilet preparations, medicinal soaps, etc. While the intent of this definition and warning is to be commended, yet we believe if placed under test it would not stand. We do not believe any court would rule that the sale of toilet articles and perfumes should be confined to registered pharmacists.

IS THIS SO?

In an interview published in our Baltimore correspondence this week the statement is made by the representative of the largest cutter in the South, and one of the largest in the entire country, that the manufacturers of proprietary medicines are not, yet at least, observing their agreement with the retail druggists and jobbers, and that he has no difficulty in purchasing goods direct from any manufacturer. This statement is of altogether too serious an import to be allowed to go without refutation, if denial can be substantiated. A number of proprietary houses have stated very plainly that they will not sell to cutters, or to any one who supplies cutters, and several of these firms have farther announced that this plan has already gone into effect. If the statement of the cutter in question is worthy of any credence, this is a case where

the N. A. R. D. officials should get right to work and probe the matter to the bottom. Do the manufacturers and jobbers intend to keep faith with the retail druggists through the N. A. R. D. plan, or do they not? Sixty proprietors and eighty or ninety per cent. of the jobbers say that hereafter they will be honest. Mr. Jacobs' mouthpiece says they do not and will not observe their agreement. Who is right?

NOT VERY PROFESSIONAL.

DRUGGIST, handy man, elderly, to put up drugs, wait on door, &c., in doctor's office; salary \$9; give full particulars and references; one speaking several languages preferred. Drugs, 140 Herald.

Gentlemen: This ad. appeared in to-day's Herald, page 13, section first. I would like to know your opinion about it; whether a pharmacist of to-day is still a professional man or simply a common laborer, who can be hired for any work at any price.

J. FINESTONE.

New York, July 15.

VOLATILITY OF PERFUMES AND THE SENSE OF SMELL.—In order that a substance may act on the olfactory nerves it is necessary that it shall be volatile, but since the converse does not follow, Erdmann (Zelts. f. angew. Chem., Jour. Soc. Chem. Ind.) considers that the sense of smell has the nature of a chemical reaction. This is further borne out by the fact that those substances which are most pronounced perfumes belong to the class of aldehydes which, possessing unsaturated valences, readily form additive compounds. Another instance in support of this view is given by oxygen, which in its ordinary condition is without smell, while as ozone it possesses a distinct odor. In considering the sense of smell, a distinction must be drawn between quality and penetrating power. The quality depends entirely upon the chemical constitution of the substance and those substances possessing similar constitutions have the same or a similar scent. It occasionally, however, occurs that differently constituted substances, e. g., nitrobenzene and benzaldehyde, or bornylacetate and trichlorisobutylalcohol, have an almost identical odor. With regard to the penetrating power of a scent, this also is dependent upon its constitution. The investigations of Valentin, E. Fischer, and Penzoldt have shown that it is possible to recognize 1-600 mgrm. of bromine, 1-5000 mgrm. of sulphuretted hydrogen, and 1-20,000 mgrm. of otto of roses, whilst the 4,600,000th part of a milligram of chlorophenol and the 460,000,000th part of a milligram of mercaptan may still be detected. The condition, however, in which a scent exists considerably modifies its penetrating power. For instance, the evaporation of a slightly volatile perfume is increased by passing a current of air through it or by dissolving it in alcohol, and if this solution be used in a spray diffuser the evaporating surface is still further increased and the odor is most fully developed.

STERILIZATION OF SURGICAL INSTRUMENTS.—Dr. DeSchweinetz makes a useful suggestion in regard to the sterilization of ophthalmic instruments without blunting or tarnishing them. He finds that ten minutes' immersion in a 1:1000 formaldehyde solution is satisfactory, but he prefers the use of pure formaldehyde gas. The instruments are first washed and dried and are then packed in a box in the bottom of which there is a dish of formaldehyde. A small piece of calcium chloride is placed in the dish and the close-fitting cover adjusted. In ten minutes the instruments are sterile; no harm is done by leaving them in the gas for an hour. (Red Cross Notes.)

CHLOROFORM may be preserved for long periods, according to Duriën (Pharm. Ztg.), who recommends that it be kept in amber colored bottles with a layer of glycerin floating on the surface. The chloroform is removed as wanted by means of a glass siphon.

THE PROPER RELATIONSHIP THAT SHOULD EXIST BETWEEN COMPETING DRUGGISTS.*

By ADDISON DIMMITT.

As the above query only calls for the consideration of what constitutes the proper relationship that should exist, and does not call for a statement of the many causes of friction in our ranks, it may seem inappropriate for me to discuss the latter side of the question. Yet, as this negative side shows the rocks to avoid, it may aid us to touch upon it.

I cannot resist calling your attention briefly to some of the more pertinent reasons why druggists do not work harmoniously.

To the local conditions that surround the retail druggists may be traced much that influences their feelings and conduct towards each other. In many cities and towns the business is overdone, necessarily reducing the volume of each, and in some towns this is so true that it does not justify the employment of a clerk by the druggist. In many such cases the close confinement and long hours have an unfortunate result. The man becomes physically and mentally exhausted, and prone to take a pessimistic view of his own and his neighbor's business prospects. He concludes that his own lack of business is due to some underhand methods of his competitors. He is ready to hear and believe all that is told him by the professional shopper, or prevaricator I should say, who wilfully misrepresents both sides. The idea that he is not being fairly treated takes complete possession of him, warps his judgment, and prejudices him against his fellow-druggist, who, he at last believes, is in league with his satanic majesty.

Another, and a very justifiable, cause for ill-will or enmity between competing druggists is the cut-rate system. This subject has been threshed over so much that every one is familiar with its ravages. I will only say it is the greatest evil that any class of merchants has ever had to contend with. It is so far-reaching in its harmful results, and we have as yet been unable to cope with it successfully. But if we fight it persistently, it may at last be overcome.

Other causes for disagreement and jealousy are conditions that are hard to remedy. For instance: One druggist may display more push and energy than his neighbor; or one's location may be better than another's; or one's financial condition may permit of a larger and more varied stock, or one druggist may be more highly educated in his profession than another. But these are purely personal, and can only be dealt with or remedied by the individual.

I might enumerate an endless chain of seeming causes for disaffection between competing druggists, but realizing that all of us have enough glimpses of the dark side and need the sunshine that amity and good-fellowship bring, I will present the other side, which, when realized, will be all the brighter by contrast.

"The proper relationship that should exist between competing druggists."

I do not know a better way to bring about this proper relationship than by endeavoring to follow the Golden Rule, which, after all, is the hardest task ever given to mortal. Suppose we illustrate it, showing how we would like our fellow-druggist to do unto us, and in this light we may hope to see the proper relationship reflected, which in the near future may develop into a beautiful reality. A reciprocal basis is the best foundation. It will bring the greatest and most lasting benefits, and tend to establish a bond of unity and good feeling between local druggists in every community.

I will mention a few of the benefits that would accrue if the proper relationship existed.

First take it up from a financial standpoint:

If there is a thorough understanding and confidence existing between competing druggists, fair, legitimate prices can be established and maintained. We can pur-

chase merchandise together and divide it, thereby securing quantity prices and discounts. This also permits a druggist to buy oftener, insuring fresh, clean stock, and saves the interest on the money that would necessarily be tied up if one made quantity purchases alone. This same plan permits of an exchange of stock and supplying of shorts at a limited margin. Another item that saves money for both is receiving shipments, in the way of freight and drayage. This branch of our business is a very important one, for, as you know, "goods well bought are half sold." There are numerous financial advantages if we will but work together.

Then we look at the advantage to our profession. By competition we do not mean opposition. We all know that only in union is there strength. Individual force is scarcely recognized to-day in the business world. By a combination of druggists in every town great good may be accomplished. The trade of no druggist will be encroached upon by another. Let there be a unity of purpose, a standing shoulder to shoulder to uphold the standard, and by well-directed, intelligent and united effort each man will secure a fair share of business. If we are occupied with work—which is "God's best gift to man," there will be no time or room for harboring unkind thoughts of our neighbor. Let us give our earnest thought and labor towards elevating our profession. By local agreement and legislation we can restrict the sale of liquor, cocaine and morphine for legitimate uses only. We can stamp out adulteration and substitution, and finally, by getting together and discussing the many perplexing questions that naturally and constantly arise in every druggist's business life, such as a defective formula, new preparations, incompatible prescriptions or some unusual chemical reaction, we may glean ideas that will shed new light on these subjects and be of material assistance in our work.

There are equally as many advantages from a moral standpoint, for is it not the desire and ambition of every druggist to have the confidence and respect of his fellow-men, whether they be competitors or not? To know and feel in his heart that all his dealings are above suspicion; that his competitor doubts not his integrity or honesty of purpose; that his word is held as good as his bond? For, gentlemen, honor is more in life than money or glory or aught else. Let us direct our business relations on the highest possible plane; always be fair and just, avoid personalities when speaking of competitors, then you can command and hold their confidence. Let us remember that we are all striving for the same goal. Uphold the weaker and lend a helping hand to all who are struggling. Cultivate, if necessary, a kindly feeling for all who are in our ranks, give of our time and interest, and thus—and thus only, may we hope to bring about the proper relationship among men in our profession, and make life one grand, sweet song.

IPÉCACUANHA contains more than 2 per cent. of total alkaloid, of which 72 per cent. is emetine, 26 per cent. cephaeline and 2 per cent. consists of a third alkaloid which is as yet unnamed. Other constituents of ipecacuanha root are an amorphous bitter glucoside named ipecacuanhic acid, choline, resin, pectin, starch, sugar, calcium oxalate, odorous fatty matter and a disagreeable smelling volatile oil. Cartaxena ipecacuanha contains rather more total alkaloid than the Brazilian, but 57 per cent. of that consists of cephaeline and only 40 per cent. is emetine (Pharm. Jour.) The expectorant property of ipecacuanha appears to be due to emetine; the emetic effect is ascribed to cephaeline. The alkaloid emetine was discovered by Pelletier in 1817.

SODIUM BOROGYLCEIDE.—Schazki (Ap. Ztg.) recommends the following as a reliable process for the preparation of sodium boro-glyceride: Boil together 120 grams of glycerin, sp. gr. 1.255, and 100 grams of borax in an evaporating dish until the glassy mass may be drawn into threads. The half cooled mass is then rolled out into cylindrical lengths, wrapped in wax paper, and preserved in well-stoppered flasks. Schazki believes that sodium boro-glyceride is a chemical compound having the formula $(C_2H_5)_2(H_2BO_3)_2 \cdot HNaBO_3 \cdot (OH)_2O$. It is readily soluble in water and alcohol and melts at 153°–154° C.

Chemical Exhibits at the 1900 Exposition.

The Foreign Nations at Paris.

G

ERMANY undoubtedly takes first place among all the foreign nations who have decided to exhibit at Paris. This is the first time since the great Franco-Prussian war of 1870 that the Fatherland has been represented at a Parisian international exhibition. The Kaiser is supposed to have taken a personal interest in making the finest show possible, and certainly it is not to the German exhibits that the reproach of "schlecht und billig" can be addressed on this occasion.

The German National Pavilion

is unique in its way and the Emperor's collection of masterpieces of French art is visited by

all fashionable Paris. The German Maritime Exhibit, with its models of the Kaiser Wilhelm der Grosse, the Deutschland, the Port of Hamburg, etc., etc., is crowded to suffocation every Sunday afternoon. The gigantic machinery arouses the wonder of every visitor. The German collection of historic military uniforms is one of the neatest retrospective museums in the Exhibition. And so one might continue. But our particular object is to describe

The German Chemical Exhibit

which is the leading feature of all the foreign groups in this building. Germany's allotment is one of the largest of all; it is said she sacrificed space elsewhere to enable her to do adequate justice to this national industry.

The collective character of the exhibit is even more marked than at Chicago, and, as will be seen, it is on somewhat the same lines. The Central Committee was composed of Dr. J. F. Holtz, president; Dr. C. A. Martius, vice-president; Drs. H. T. Bottinger, Kraemer and Hauesen, together with the presidents of the sections—Dr. Merck (pharmaceuticals), Dr. Siroof and Herr Voigt (chemical works), Herr Struckelin (mineral colors, varnishes, etc.), Dr. Steche (essential oils and artificial perfumes), Dr. Brunck (coal tar products) and Dr. Heraeus (apparatus).

These gentlemen have succeeded in producing the most comprehensive and best arranged object lesson in organic chemistry which a student could desire, a sort of a fully illustrated and cleverly grouped text book of glass jars of all the colors of the rainbow. For neither trouble nor expense has been spared to secure the rarest productions when necessary to complete a series.

The Allegorical Statue

of the Stassfurt Potash Salt Mines, shown in our engraving, is the first object that strikes the visitor's eye. Science stands aloft with her arms outstretched in a protecting attitude over two seated females, one engaged in deep study of a book, the other bent over a retort. Below, a miner, holding aloft a block of the mineral won by his toil, offers it to Science. The figures are of bronze, the pedestal of blocks of chloride of potassium and the whole symbolizes, of course, the union of physical labor and intellectual research which builds up all industries in general and the German chemical trade in particular. We remember that one German Aniline Fabrik alone employs 6,500 workmen and 150 doctors of

science as we pass on to view the exhibits in the oaken cases. On the right are products of the sulphuric, muriatic and nitric acid industries, soda and potash, arsenic, ammonia and artificial manures. On the left are pyrite residue products, compressed and liquefied gases, metals and metal salts, phosphorus and its derivatives, aluminum and the electro chemistry products.

The Drug Court

forms a separate compartment, where again the exhibits are classed in cases according to their nature. In one, for instance, we have the antiseptics and dermatics, in the centre astringents and laxatives; anæsthetics, narcotics, excitants, etc., are similarly divided. The recipients vary in size, usually according to the importance of the product and their endless glassy ranks are agreeably relieved by models of medical plants in full bloom, labeled in French and Latin. Aloes, belladonna, camphor, cinchona, cassia, digitalis, jaborandi, poppy, podophyllum, tobacco—we need not give a complete list—are thus repre-

THE ALLEGORICAL STATUE.

sented. In a few instances the raw drug is shown—poppy heads, for instance, and samples of opium.

Up-to-Date Pharmacy.

One case is devoted to preparations in modern form, capsules of santal and guaiacol, cod liver oil emulsion, tabloids, lanoline, vaseline, paraffin, glycerine, etc. Another shows a neat collection of essential oils in elegantly stoppered bottles (many very rare and costly specimens being included), also their constituents.

The exhibit of synthetic perfumes hardly attracts much

IN THE ENGLISH COURT.

attention, and there are essences of flowers and fruits. A pervading odor of ylang-ylang hangs about, despite stoppers and glass cases, and testifies to the odoriferous capabilities of this product of the Philippines.

A Retrospective Exhibit

forming a history of German chemical discovery during the Nineteenth Century is also an attractive feature. Each bottle is labeled with a name and date, ranging from "Morphine, Sertürner, 1811;" "Aniline, Unverdorfer, 1826;" and "Chloral and Chloroform, Liebig, 1831;" and passing by "Carbide of Calcium, Wöhler, 1862," to conclude with "Phenacetine, Kast and Hinsberg, 1887," Knorr's Antipyrine, 1893, and other well-known modern products. In another case just opposite the leading chemical dyes are treated in the same historical fashion. A piece of dyed material is placed under each bottle and the whole is as picturesque as it is instructive. The only defect of the collection is that it leaves one under the impression that every important chemical discovery of the century was made in the Fatherland, outside science being necessarily ignored in a national exhibit.

Linde's Liquid Air Machine.

which works dally, is a principal feature in the third court, where photographic sundries, with chemicals for perfumery and confectionery, dyeing and color printing, analysis, etc., are shown; also acid proof metal vats. We may pass rapidly by the apparatus exhibit, the vat containing 6,000 litres, the product of the Berlin Royal Porcelain factory, the silver lined copper capsules, the still and worm in pure silver, "without joint or soldering," etc., etc., and enter

The Coal Tar Court.

perhaps the most remarkable and attractive of all. In the central case is a bronze female figure, whose running attitude is symbolic of the giant strides this industry has made in Germany and elsewhere. She poises her foot on a huge boulder of coal—the raw material—and her hand supports rays of all the colors of the spectrum—the coal tar dyes, of course.

Around this Goddess of Coal Tar are grouped all the products, marshalled in hierarchic order of precedence and in jars suited to their importance. The process can thus be traced from the original tar product to its most distant derivative, the "chemistry manual" idea being skilfully worked out. Here, for instance, is a big jar of naphthalin, flanked by two smaller recipients containing A and B naphthalin; from each of these extends a long line of jars, gradually growing smaller.

From this main centre case, in its turn, branch off four corner cases. One shows alizarine, synthetic indigo, gallic acid, etc., etc.; a second is devoted to triphenylmethane, etc., with its dazzling fan of dyestuffs; the two others show us the azo dyes (1) for wool (2) for cotton, the dyed material being exhibited as well as the dye itself. The whole coal tar exhibit contains some 1,500 specimens; about 400 chemical colors and pigments are also shown.

The Weak Point

of these collective exhibits, however well arranged, is that the individual manufacturer is to some extent sacrificed. With very few exceptions, not a single manufacturer's name is given. They are, it is true, to be found in the official catalogue by those interested and a uniformed attendant is stationed at a desk in the centre of the exhibit, where, by the way, there is a show of the products of wood distillation. Just opposite the Coal Tar Court, across the corridor, is

The German Perfumery Court.

The entrance is guarded by two female statues holding baskets of flowers, and a fresco over the door—a trifle high colored, perhaps—represents the "Triumph of Flora;" this was probably before the days of synthetics! Inside the court are two more very vivid frescos in which Parsifal and Tannhauser, dear to all fervents of Wagner, form a picturesque excuse for a wealth of floral decoration. This court is not so uncompromisingly collective as its chemical neighbor; each firm has its own case (though all are uniform) and the exhibitors vie with each other in tasty arrangement and get up. Only Farina's Eau de Cologne has the honor of two cases. A feature that is sure to attract the visitor is the little model of the auditorium of a theatre by Lechner's Perfumery, Berlin, where the stalls and boxes are filled with bottles, etc., a clever idea, well carried out, and lit by electricity. One attendant distributes printed matter and gives information for the whole of the exhibitors.

The British Chemical Exhibit.

just opposite the German, affords as striking a contrast as could well have been devised. If the Germans have unduly sacrificed individual exhibitors to make a great collective show, English individuality is no less exaggerated and regrettable. In fact, the British have decidedly spoiled the general effect of exhibits (which are in themselves very creditable and interesting) by a total lack of system and mutual understanding, carrying out the good old rule of "each one for himself," backed by the idea that the United Kingdom will always "muddle through" somehow.

The large stand of the Sunlight Soap on the main corridor at once strikes the eye. This is the firm (Lever Bros.) which gave its working people—some 1,500 in all—a free day at the Paris Exhibition, running special trains and boats and paying all expenses,

food, etc. This immense beanfeast was quite one of the events of the Paris Exposition and the photos of Port Sunlight, and the model upstairs, show it to be a pretty model town of the Pullman type.

But this long and lofty case, interesting and creditable enough in itself, as will be seen by our illustration, entirely hides from view the four charming little kiosques constructed by Pears Soap, Grossmith's and Atkinson's perfumeries, and Gosnell's Farnora, which are among the prettiest features of the section. In the same way the other cases in the main corridor, Howard & Sons' medi-

cial chemicals, J. McFarlane's opium alkaloids, and Wilkinson Heywood & Clarke's varnish and paints are all so utterly unlike and so closely juxtaposed that the general effect is regrettable. The only attempt at a collective exhibit is the fourfold case of pleasing effect where we find the United Alkali Co., of Liverpool; Brunner, Mond & Co., of Norwich; Gossage's soap, soda and glycerine from Widnes; Chance & Hunt, J. & J. White, of Glasgow, and the British Cyanide Co.

Behind are many well-known firms, Day & Martin's blacking, Price's candles and soap, with stearine figures of Her Most Gracious Majesty and "Liberty Enlightening the World," delicate compliments to the British or American patriot; Elliman's Embrocation, with its little picture gallery of the clever and amusing sporting sketches which one sees in almost every English chemist's shop; Field's soap and candles, Lowe's carbolic acid, the Fuller's Earth Union, Riley's chemicals, Mander's paints and varnishes—there is the material here for an attractive show with little arrangement.

As a happy medium between British over-individuality and German autocracy, we would recommend a visit to

The Austrian Court

on the first floor gallery. All cases are strictly uniform, carved in warm-toned red wood, with the wondrous curves which are characteristic of "New Art," and lined with sage green. A carpet of old gold tint and an awning to soften the light make up as pretty a court as could be wished for. Here every exhibitor has his own case or separate portion of a case, and has not apparently tried to "kill" his neighbor's exhibit, but to harmonize with it as far as possible. The names and addresses are clearly and distinctly stated and in many cases

Austrian Court.

A Show Case of Chemicals.

circulars are obtainable. One attendant in the centre is charged with the whole exhibit, as in the case of Germany.

Vienna is the Paris of Eastern Europe and tasty window dressing is evidently one of the characteristics of the Austrian capital. First we have the perfumers. Calderara & Bankmans surmount their exhibit by the Austrian Imperial crown (their trade mark) prettily worked in artificial flowers. Kielhauser, of Graz, Styria, makes a pleasing effect with violet and lily of the valley perfumes; Gettlieb & Taussig, perfumers to the Imperial Court, and J. Feix, of Gablitz (founded 1804) may also be named.

Nor are the soap and stearine exhibits less effective in their way, grouped on each side of Olszewski's apparatus for liquefying gas, which is shown by Dr. Bauer, of Vienna. Sarg. Son & Co.'s big case is adorned by a bust of A. de Milly, founder of the stearine industry, and shows what an artistic show can be made with this class of goods. Their "Kalodont" is conspicuously put forward, and in a small side case are Ozokerit and Ceresine. Equally clever is the "Apollo" Company's exhibit. The lyre, emblematic of this god of music and medicine, is surrounded by rays of stearine candles. Soap is also shown, and the date of the foundation of the firm (1839) is conspicuously indicated.

As Hungary exhibits apart, most of the goods here come from Bohemia or from near Vienna. Hell & Co. are a Viennese firm and have chosen new or special products as far as possible, subannate of bismuth, peptonate of iron and manganese, parhæmoglobine of iron and Hell's Haemalbumine for anemia, tannate of mercury, Horbeczewski's nucleine, petrosulfol (a cheap substitute for Ichthylol in certain cases), Honthin (an astringent), etc., etc. Kleewein shows hæmecticum, a preparation of hemoglobine, hypodermic solutions, pills, etc.; Brosche has malt, potash and chemicals; Wagenmann &

Seybel, tartar and chemicals; Marguille, gelatine, and Mautner a brewery and distillery exhibit; all these firms are in or near Vienna.

From the Prague district we have Janousek's well-arranged display of essential oils and anethol, Oeslenger's liquid and solid extracts for tanners, Heiltreyer's soap trophy and Herbert's white lead exhibit (well worth examination) with its great show of prize medals, are both from Klagenfurt, near Trieste, and the first Austrian soda works (who show soda salts) are situated at Hruschau, in Silesia. The Austrian Chemical and Metallurgical Union, of Aussig-on-Elbe, show a large case of heavy chemicals, soda, pyrites, superphosphates, etc., etc. Fischer also has chemicals, slabs of gelatine and bone powder, unartistic goods tastefully shown, with a view of his works, at the back of the case, in the latest style of New Art. The Austrian paper and leather exhibits, hardly, are likewise very nicely arranged.

Hungary

asserts her rights, as a separate kingdom under the same crown, to an independent exhibit, here as in all other sections. We therefore find her chemical show in the neighboring gallery. Less important than Austria's, it is characteristic and comprehensive in its way. The ironwork of the cases is strangely quaint, and long tri-colored streamers of the national colors make the general effect very picturesque. It is arranged in small courts, in the first the tobacco industry is well illustrated by maps, diagrams, samples, etc., etc. The leather and paper courts are creditable; the aerated waters and asphalt industries, stearine, wax, potash and chemicals, gelatine and glue are all represented, and Nobel's dynamite factory has a case to itself.

The most interesting to a pharmacist is the fourfold case jointly occupied by pharmacists, an exporting agency's exhibit, a medicinal plant exporter and sundries. We must refrain from a detailed description, but may just notice the Paprika, or Hungarian red pepper (which is, we believe, popular with bird fanciers for

HUNGARY

RUSSIAN CHEMICAL COURT.

deepening the tint of the plumage of canaries), chamomille flowers, etc., etc. A petroleum trophy, a nude female figure holding an antique lamp, with barrels, jars and tins of paraffin, and a model of the special railway trucks used, closes this relatively small but interesting section. Having thus described two or three of the most characteristic chemical exhibits, we must deal very briefly with the remainder, some of which present no very special features.

RUSSIAN COLONIAL BUILDING.

Russia

has naturally been placed on the footing of "the most favored nation," and is next to Germany on the ground floor. She naturally suffers, like England, by the comparison. The space is large and not crowded, the cases are of all sizes and shapes, but well grouped, and some of them are delightfully Slavonic in their form and ornaments. There are plenty of varied exhibits, paper, colors, varnish, soap, matches, tobacco, chemicals and chemical apparatus and perfumes—the Shah of Persia's perfumer exhibits here—and we notice a small case devoted to Dr. Pöhl's sperminum and organic extracts.

The Belgian Section

is also large and varied, but not very pharmaceutical. Aluminum, chemicals, artificial manures are all largely produced in the busy little kingdom. The great feature of this section is Solvay's handsome court with its eight frescoes in violet and gold representing the manifold uses of soda in bleaching, dyeing, soap, paper, glass and chemical works. Neat iron stands hold the sample products, and a handsome iron screen at the back is adorned with the arms of the various countries where this important firm has chemical works and the names of the localities where these different factories are to be found.

Italy's Exhibit

is neither large nor striking. Iris root from Florence, liquorice from Naples and Sicily, chemicals from Turin, and soap from Tuscany are among the principal features. S. M. Novelli's pharmacy at Florence shows flower extracts and powder of Iris. Candiani & Co., of Bovisla (the first chemical works established in Lombardy), who were at the Chicago World's Fair, show bismuth and mercurial salts and rock alum, and Erba, of Milan, has mannites and lactates, various chemical crystals, etc.

The Swedish Section

is about the same size, and mostly given up to wood pulp, paper and similar exhibits. Matches are, of course, prominent. The well-known "Sakerhets-Tandsticker" safeties are shown by Jonkoping in a revolving case with medals and views. The Vulcan Works inform us they manufacture "205,000 matches a minute" and show a large glass bottle full. We also notice carbide of calcium and a few specialties—the Vademecum antiseptic, the Krafts-skur powder and some preparations for dairy-men's use—coal tar, tar graphite and sleeper oil which is said to be superior to both creosote and carbolineum. These latter three articles are shown by the J. Ohlsson Co., of Stockholm.

Having thus viewed the ground floor exhibits, we may mount to the galleries and commence by the

Norwegian Court,

where, as in the Swedish, wood pulp is a great feature, the rest is mostly leather, paper, cellulose, etc. There is also soap and a few chemicals.

Denmark

figures creditably all over the Exhibition considering the small size and population of this kingdom. The Copenhagen Chemical Works show pyrites and cryolites and Bang & Tegner patriotically illustrate their surgical dressings by the figure of a wounded soldier. But here blacking is the great feature. Rasmussen and Spies and Adolf Prior show by Chicago certificates and English labels that they cater for Anglo-Saxon custom in this line.

Roumania

is a country which has made much progress and has a small but representative exhibit in which pharmaceutical proprietaries largely figure. The photographs and

ITALIAN CHEMICAL SECTION.

specimens shown by the Chemical Institute of Bucharest are worth examination.

Holland

Has a large allotment for such a small kingdom, but there is little to interest the pharmacist except a very pretty perfume kiosk, Ketjen's chemicals and Jan Dekker's soaps. These Wormerveer soap works claim to be the largest in Holland, and though much is consumed at home—was it not a Dutchwoman who Imagined Heaven was a place where everything was always being scrubbed and scoured—they evidently do a very large export trade as well.

But time presses, and we must pass rapidly on to

The Spanish Exhibit.

attracted by the gay festoons of yellow and red flags, which make it visible from afar.

Here pharmacy is well to the fore, and it is interesting to note what are the popular remedies on the other side of the Pyrenees. Dr. Trigo, of Valencia, (it should be remembered that the Doctorate degree for pharmacists exists in Spain) has chlorate of magnesia and cod liver oil emulsion with hypophosphites. Nadal, of Tarragona, shows us another emulsion, and Dr. Fernando Gomez, of Madrid, his kola wines. From Barcelona—ever the chief seat of Spanish pharmaceutical and other industry—we have Dr. Piza's oil of sweet almonds, J. Font & Co.'s soaps and perfumes, Page's soaps, and Callol's elixir and ovules. Dr. Sastre's "Vine de Ostras" appears to depend for its virtues rather on quinine, coca and kola than on oysters—possibly the name implies that it vies with the toothsome bivalve in regenerating invalid strength. Felipe Guasch, who owns the "Liceo" pharmacy in the center of Barcelona, shows chlorate of potash lozenges and compressed tablets of various kinds.

Japan

has here for the first time entered the lists side by side with the great civilized nations of the world. There is a certain tendency to exaggerate the use of diagrams

and to make a somewhat monotonous show in some cases, but here, in the Chemical Section, this is not the case. The exhibit is interesting enough, though on a somewhat tiny scale (which reminds one of a doll's house) in some respects. There is a great tendency to use the English language—in fact, the printed labels on the put-up goods are usually in English and in Japanese, though we noticed German used in one case, and the written descriptive labels are, of course, in French. In a big case devoted to camphor—a leading Japanese article which seems to come principally from Formosa—we noticed a neat "Trade Catalogue" got up in English and adorned with views of the famous Japanese volcano, etc. Peppermint oil is another feature of this exhibit, also vegetable wax and, of course, lacquer. Rapeseed, camellia and kuromoji oil, flowers of sulphur, tobacco, cement in tiny barrels, soaps and perfumery in boxes neatly chromolithographed with Japanese and Oriental figures, etc., may be noticed. The rapeseed oil bottles in our sketch, capped with gold cloth and tied with tasselled cords in gay red or violet, show the popular Japanese idea of getting up show goods. The tiny barrels bound around with rushes or osiers, are also used for many classes of goods and are equally characteristic.

The French Chemical Exhibit

is too important to be dealt with in the space at present at our disposal. This interesting section—as well as various American exhibits (not ready at the time our last article appeared) and an immense number of articles shown which, though not included in the Chemical Industries Building, are of interest to pharmacists—must be reserved for future description.

FRUIT ESSENCES AND FLAVORS.*

By G. WEINDEL.

Pineapple Essence.—A ripe, but not too soft pineapple, weighing about 500 grams, is mashed up in a mortar with Tokay, 200 grams. The mass is then brought into a flask with water, 500 grams, and allowed to stand two hours; alcohol (90 per cent.), 400 grams, is then added and the mixture distilled until 700 grams of distillate have been collected; cognac, 300 grams, is then added to the distillate.

Apple Essence.—Thirty fresh ripe apples are peeled thin and the peel thus obtained, about 350 grams, is covered with alcohol (90 per cent.), 1,000 grams, and water, 2,000 grams, and allowed to stand for 24 hours; 1,250 grams is then distilled off, and vanillin, 10 centigrams; bitter almond water, 50 grams, added to the distillate. This may be colored with 10 drops of saffron tincture.

Sweet Orange Essence.—Twenty-five large oranges, about 500 grams, are thinly peeled and the finely cut peel macerated for 24 hours with alcohol (90 per cent.), 1,000 grams, and water, 3,000 grams; 5 drops of lemon oil and 10 drops orange oil are added, and 2,000 grams distilled off. The distillate is allowed to stand for eight days and is then filtered. Vanillin, 0.05 gram, is dissolved in the filtrate and two drops saffron tincture and caramel tincture, 3 grams, added.

Banana Essence.—Twelve bananas are peeled, the thick peel sliced and macerated with Burgundy, 300 grams; cognac, 200 grams; alcohol (90 per cent.), 300 grams; water, 1,000 grams; 1,000 grams distillate is now recovered and saffron tincture, 3 drops; and coumarin, 10 centigrams, added.

Pear Essence.—Forty muscatel or bergamot pears are peeled and the peel, about 430 grams, macerated with alcohol (90 per cent.), 1,000 grams; Moselle wine, 250 grams; water, 2,000 grams, for six hours, and then 1,500 parts distilled off. To the distillate, which may be colored

*Translated from Pharm. Zeitung by Journ. Pharm.

a faint green, coumarin, 5 centigrams, and sweet orange oil, 5 drops, are added.

Bitter Almond Essence.—Bitter almond water, 16 grams; alcohol (90 per cent.), 18 grams; water, 12 grams; rose essence, 1 gram. Mix.

Bishop Essence.—Tincture of bitter orange, 30 grams; aromatic tincture, 3 grams; bitter almond water, 3 grams; orange flower water, 20 grams; alcohol (90 per cent.), 50 grams; water, 100 grams. Distill off 100 grams and color with caramel.

Cardinal Essence.—Green orange peel, 10 grams; unripe orange, 4 grams; cloves, 0.5 gram; cinnamon, 0.5 gram, are macerated for five days with alcohol (90 per cent.), 50 grams; water, 50 grams, to which is added bitter orange oil, 4 drops; lemon oil, 1 drop; bitter almond water, 5 grams; 100 grams is then slowly distilled and colored with caramel.

Cinnamon Essence.—Cinnamon, 10 grams, is macerated for 5 days with alcohol (90 per cent.), 70 grams; water, 70 grams, and 100 grams distilled off; this is colored with caramel.

Champagne Lemonade Essence.—Vanilla essence, 1 gram; celery essence, 5 grams; woodruff essence, 1 gram; cognac, 4 grams; Burgundy, 2 grams. Mix.

Lemon Essence.—Twenty-five medium size lemons are peeled and the finely cut peel macerated for 24 hours with alcohol (90 per cent.), 1,500 grams; water, 3,000 grams; lemon oil, 10 drops; sweet orange oil, 5 drops, are then added; 3,000 grams distilled off. This is set aside for eight days and filtered. Vanillin, 10 centigrams, is added and the product colored with tincture of turmeric, 60 drops; saffron tincture, 4 drops; caramel tincture, 60 drops.

Strawberry Essence.—Fresh dry strawberries, 750 grams, are pulped in a mortar and then put into a retort with Tokay, 200 grams; cognac, 200 grams. Then add vanilla, 1.5 grams; alcohol (90 per cent.), 300 grams; water, 500 grams. This mixture is allowed to stand for an hour in the warm, and 1,000 grams is then slowly distilled over and colored light red.

Clove Essence.—Cloves, 15 grams, are macerated for five days with alcohol (90 per cent.), 70 grams; water, 70 grams. Distill 100 grams; color with caramel.

Raspberry Essence.—Fresh raspberries, 200 grams, are pulped in a mortar, allowed to remain for two days at a temperature of 20° C., and then mixed with water, 100 grams. Fifty grams is then distilled off and alcohol (90 per cent.), 25 grams, in which 0.01 gram vanillin has been previously dissolved, is then added to the distillate.

Ginger Essence.—Ginger, 100 grams, is macerated for five days with alcohol (90 per cent.), 600 grams; water, 300 grams. The whole is then put in a retort and 1,000 grams distilled off and colored with caramel.

Melon Essence.—Two or three large ripe melons are peeled and the finely cut peel macerated for three hours with alcohol (90 per cent.), 1,000 grams, and water, 2,500 grams.

Orange Flower Essence.—Orange flower water, 100 grams; alcohol (90 per cent.), 50 grams; water, 50 grams; rose essence, 20 grams; lemon oil, 2 drops; orange oil, 1 drop. Mix.

Peach Essence.—Twenty ripe peaches are stoned and bruised in a mortar. The kernels are made into a paste with water, 200 grams. After half-an-hour the mixed pulp is placed into a retort; water, 600 grams; alcohol (90 per cent.), 400 grams, and 1,000 grams distilled off. To the distillate, coumarin, 0.1 gram; orange flower water, 100 grams; orange oil, 5 drops, are added and the mixture colored with saffron tincture, 5 drops; safflower tincture, 3 grams.

Quince Essence.—Twenty-five ripe quinces are peeled and the fine cut peel allowed to stand in a retort for two hours with water, 500 grams; alcohol (90 per cent.), 300 grams, is then added and 500 grams distilled off. To the distillate, coumarin, 0.5 gram; vanillin, 0.1 gram; bitter almond water, 25 grams; lemon oil, 5 drops; citronella oil, 2 drops; saffron tincture, 3 drops, are added.

Greengage Essence.—Thirty fresh ripe greengages are stoned and bruised in a mortar, the kernels are also made into a paste with water, 200 grams. After 30 minutes both are mixed in a retort with water, 600 grams; alcohol (90 per cent.), 400 grams, and 1,000 grams distilled off. Vanillin, 0.05 gram; bitter almond water, 20 grams; lemon oil, 5 drops, are added. Color green.

Rose Essence.—Rose oil, 1 gram; alcohol (90 per cent.), 70 grams; water, 30 grams. Mix and color rose tint.

Vanilla Essence.—Vanillin, 1.5 gram; alcohol (90 per cent.), 700 grams; water, 300 grams; turmeric tincture, 30 drops; caramel tincture, 20 drops. Mix.

Orris Essence.—Finely-sliced orris root, 500 grams, is macerated for three days with alcohol (90 per cent.), 500 grams; water, 500 grams, then 1,000 grams is distilled off. Vanillin, 0.5 gram; coumarin, 0.02 gram, are dissolved in distillate.

Walnut Essence.—Five hundred bruised green walnuts; cloves, 2 grams; cinnamon, 5 grams; mace, 1 gram, are macerated for four days in alcohol (90 per cent.), 750 grams, and water, 500 grams. Another 500 grams of water are then added and 1,000 grams distilled off. To this is added bitter almond water, 100 grams, and the mixture colored deep green.

Woodruff Essence.—Bruised tonka beans, 100 grams; alcohol (90 per cent.), 480 grams; water, 140 grams, are macerated for seven days, water, 400 grams, is added, then 700 grams is distilled, mixed with orange flower water, 50 grams, and colored green.

Lemon Wine.—The fine cut peel of 4 to 5 lemons is treated with sherry, 1,000 grams; cognac, 300 grams; and filtered after 24 hours. To the filtrate add orange flower water, 50 grams.

Pineapple Wine.—A pineapple of about 500 grams and one quarter of a vanilla pod are cut up and macerated with port wine, 1,300 grams; cognac, 200 grams; allowed to stand two days, then filtered without strong pressure.

Orange Wine.—Two blood oranges are stuck with cloves and the whole fruit is then covered with Burgundy, 1,000 grams; cognac, 300 grams; alcohol (90 per cent.), 200 grams, and filtered after standing for four days.

Artificial Orange Juice.—Tartaric acid, 2 grams; citric acid, 50 grams; water, 300 grams; lemon essence, 10 grams; orange essence, 50 grams; caramel, 0.2 gram. Mix.

Artificial Lemon Juice.—Citric acid, 10 grams; phosphoric acid, 1 gram; water, 40 grams; lemon essence, 50 grams; mix. These juices mix clear and bright, have a pleasant odor and taste and do not become mouldy in less than three to four months.

Froth Heading.—(1) Quillaia bark, 5, is covered with water, 15, allowed to stand for three hours and then heated for four hours on a water bath. It is now filtered, the filtrate evaporated to 8, and glycerin, 2, added. (2) Saponin, 5, are dissolved in water, 80, and alcohol (90 per cent.), 20, added.

NEW METHOD FOR THE ACETIMETRIC VALUATION OF VINEGAR.—The method described by Durieu (J. Pharm. Chim.) is advocated as being applicable to the colored vinegars. Two solutions are prepared, the first a 5 per cent. solution of sodium bicarbonate, the second a 7 per cent. solution of acetic acid. The apparatus requisite consists of a tube graduated in 0.1 Cc. such as is used in the determination of urea by Esbach's method, and a 1 Cc. pipette. Six Cc. of the bicarbonate solution are first introduced into the tube, followed by 6 Cc. of 95 per cent. alcohol, so added that the two liquids do not mix and 1 Cc. of the dilute acetic acid solution is then added and the whole well shaken. When reaction is complete the opening of the tube is placed under water and the volume occupied by the gas read off, as in making a determination of urea. The volume is noted and a second experiment is made with a similar quantity of the vinegar to be examined. The volume of gas evolved by this, compared with the volume given by the standard acetic acid solution will give the amount of acetic acid in the sample. It is, of course, first necessary to determine that the whole of the free acid in the vinegar is acetic acid.

MOSQUITO BITES.—Contractile collodion has recently been recommended as a most satisfactory application for mosquito bites. When a drop of collodion is spread on the red bites the itching at once disappears and with the contraction of the collodion the swelling flattens down and becomes comparatively bloodless, the collodion soon being alone apparent.

Pharmaceutical Celebrities.

JAMES C. PERRY.

To the Philadelphia readers of the Era, the labelling of our life-like representation of their popular champion will seem quite superfluous; for, if there is one single druggist in that city who has not met Mr. Perry and had N. A. R. D. talked into him, he must have been stranded here during the late Republican Convention. If so, he had better get his dollar ready for dues and sign his application for membership in the N. A. R. D. as soon as he sees this warning, for Mr. Perry dearly loves to coax a newcomer into the local ranks.

Mr. Perry is best known to fame as the active organizing spirit of the local branch of the N. A. R. D., in which body he occupies the trying position of Chairman of the Executive Committee. In addition to this well-earned honor, he has lately sprung into prominence as the only man who ever dared to beard the Jersey "skeeter" in his den and escape with whole skin and on top of the heap.

When the now well-established N. A. R. D. movement first began to attract attention, Mr. Perry was one of the few who recognized its importance to the retailer; he was a delegate to the original convention, and to his labors are largely due the organization and continued prosperity of the Philadelphia Association of Retail Druggists. Most people who own two drug stores think they have enough troubles of their own, not so with J. C. Perry; he amuses himself in leisure moments by doing about three men's work for his local association. Energy is the keynote of his character; if Prof. Keely had been able to develop as much energy in his celebrated motor, the world would now be revolutionized. Thirty-seven atmospheres to the square inch was the latest reading

taken while Mr. Perry wasn't looking. Whether it is lassoing retailers and dragging them into the fold, creating atmospheric disturbances in a football game, persuading a reluctant customer to buy a dollar bottle of "Beef, Iron and Wine," or convincing a recalcitrant druggist of the error of his ways, Mr. Perry goes into the business with a vim and earnestness that are irresistible. When "J. C. J." goes on the warpath, the aggressive cutters quake in their boots and flee to the woods for safety.

The great beauty of Mr. Perry's way of doing business is his evident earnestness and sincerity; it is just these traits that have given him such success in his N. A. R. D. work; everybody knew that he didn't have a buyers' club up his sleeve to sandbag the "Plan" on some fine evening! "You always know what Perry means when he says anything." One of the pleasant little episodes that have made Mr. Perry so popular was his work as president of the Alumni Association of the Philadelphia College of Pharmacy, in drawing together the graduates and undergraduates of that institution. He made the students feel that the Alumni regarded them with the most kindly affection, and that a student could always count on a "job" with the Alumnus when business was good; indeed, Mr. Perry has always a tender spot for the old college, and an earnest desire to further its interests.

To the community at large, James C. Perry is known as an enterprising, successful business man, one who is suspected of having amassed a fortune from the sale of stamps and patent medicines. To his friends, and they are legion, he is ever the honorable, kindly gentleman; staunch in his friendships, open in his fighting, none know him but to respect him. "Long may he sell soda water!"

(Written for The Era.)

DOCTOR RUMMUN'S EMULSION.

By THERSITES MENDAX.

Agrippa Rummun, M. D., is a representative of a class of medical men who are (fortunately for society) becoming more rare from day to day. Born about the end of the forties, he "taught school" for a couple of years and thence gravitated into a country doctor's office, where he spent two more years pulling teeth, washing bottles, mixing medicines and generally "assisting" his preceptor. When his second year was up he decided to go to college and as the Civil War was raging at the time and the demand for medical officers in both armies was considerably in excess of the visible supply, he emerged from the institution of learning he had honored with his presence, as a fully fledged M. D. in less than a year from the day of his matriculation. He was under fire in several sharp actions, received a severe wound and on his discharge at the conclusion of peace he sought out the village he now resides in and opened a practice there.

Now I know more than one medical man who graduated under the same circumstances and who has realized that a diploma is not the only necessary qualification to ensure professional success. Some of my friends have taken post-graduate courses in American colleges, others have crossed the water and put in longer or shorter terms at London, Edinburgh, or even on the continent, and one or two, who were unable to stand the expense of a post-graduate course, have done their best to keep up with the times by a diligent and systematic perusal of the most recent works on medicine and surgery and a careful study of the best professional journals and magazines.

Dr. Rummun, however, has never troubled himself about a post-graduate course, his library is more remarkable for its antiquity than its size, the periodicals he reads are usually sample copies, and any new ideas he gets are derived from the advertising matter of the various proprietary remedy companies. He resides twenty miles from my place of business, and all the druggists in — (myself included) most devoutly wish that the distance was two hundred.

It is the usual custom of this great and good man to make about four pilgrimages a year from his place of abode to our town, there to attend to an interminable

lawsuit he is interested in, buy small amounts of drugs and medicines, and sample the liquid refreshment provided at the various barrooms. I may add that when at home he is strictly temperate, and consequently he has a large arrearage of draught to work off when he arrives in town. In appearance the doctor is not prepossessing, he stands about five feet ten, weighs about a hundred and ninety pounds, and judging by the visual and olfactory tests he uses a very limited quantity of soap and water. He usually has some new invention in the medical line that he wishes the druggists to "take hold of and push."

The first time I met him I happened to be in one of my competitor's stores. The store is the best, cleanest and most fashionable one in town. The proprietor makes a specialty of seeds, and one of his customers had just sent in about a dozen very fine onions from "sets" he had supplied. When I entered the sanctum sanctorum, I saw the doctor seated on a stool devouring one of these onions with the aid of a "toad-stabber" jack knife. The onion was as large as a good-sized apple, and the doctor was cutting slices from it and in the intervals of mastication holding forth on the virtues of a certain tonic bitter he had recently invented. I transacted my business and retreated, declining the drink which the doctor offered me.

On another occasion he honored my place with a visit. He had warmed up considerably under the influence of Medford rum and raw onions, and the peculiar odor which he evolved was the reverse of pleasant. He ensconced himself in my most comfortable chair, and after a few inquiries for quotations on a line of glucosidal granules manufactured by the Skowhegan Chemical Company, and a rather severe comment on my negligence in not keeping them in stock, he began to criticise the medical practitioners in our town. When he had enumerated the shortcomings of his professional brethren, he turned on the druggists.

After commenting on their lack of push and energy in not stocking the "latest" remedies, carrying a full line of Messrs. Puffer & Blower's tinctures and fluid extracts, and Batting & Company's surgical dressings, he requested to be enlightened as to the source of a certain noise he heard in the back shop. I told him that it was caused by the churn in which my emulsion of cod liver oil was prepared, and ushering him into the rear store I showed him a large-sized colored man laboring at a crank. Now I take especial pride in my emulsion. A fifty-cent bottle costs me exactly twenty-five cents to prepare, wrap up and place on the market. The doctors prescribe it in seven cases out of ten, and the public, finding they can get more for their money, buy it in preference to the patent article. It contains forty-five per cent. of oil, and that oil is the best money can buy, and I make a batch every Monday morning. I may add that I use nothing but oil, mucilage of acacia, hypophosphites and flavoring, unlike one of my competitors who uses "just a little" alkaline matter to prevent accidents. I cannot say that the patent emulsion firms love me much. In fact, one or two of them have evinced a decided dislike to my product and myself, but as long as the doctors prescribe, and the public buy, my "substitute" I am quite contented.

Doctor Rummun sank into a chair and watched the Ethiopian turn the crank; presently the process was completed and the emulsion was drawn off into bottles. Then the darkey commenced to clean up the churn, graduates and other utensils with the aid of some hot lime water, washing soda and a scrubbing brush, as a preliminary to a second cleaning by my clerk or myself. I picked up a test tube with a few drachms of oil in it, poured a little lime water into it, gave it a shake and drained the contents into the sink. Doctor Rummun asked me "what did you mix with the oil in that tube?" "Just lime water and nothing else," was my reply. My answer was a brief one, but it was enough for Rummun. He rose from his chair, refreshed himself from a pint flask and started—somewhat unsteadily—for his boarding house. I expected a call from him later on but he did not turn up. Next day I enjoyed the pleasure of his society for several hours. He requested further light on the subject of emulsion, and I gave him as much as I deemed advisable. He thanked me for my information, lamented my imperfect knowledge of chemistry and pharmacy, pre-

dicted the speedy ruin of all firms who made emulsion on an unscientific basis and informed me that he was going to revolutionize the emulsion business in six weeks.

Three weeks later I saw that he had raised the sum of one thousand dollars by mortgaging his house, and not long after both local papers came out with a half-page advertisement of "Doctor Rummun's Perfect Emulsion of Cod Liver Oil." Then the other papers in the vicinity joined in, to the extent of from a quarter to half a column, and the local druggists began to receive printed circulars extolling the virtues of "Rummun's Emulsion." The first advertisement I saw ran as follows: "To all who are consumptive, scrofulous or tubercular; Notice. For years you have been imposed on by unscrupulous firms who have placed six or seven-ounce bottles of emulsion on the market at the price of fifty cents a bottle. Latterly this evil has been aggravated by the action of dishonest druggists who have filled their shelves with an inferior product at a lower price. Utterly ignorant of chemistry or medicine they have copied the product of the original firms until their spurious imitations can hardly be distinguished from the 'genuine' article. Rummun's Emulsion is a perfect compound. It is prepared by a medical man with over thirty years' experience, on a scientific and altogether novel basis. Bulk for bulk it is cheaper than any emulsion on the market, and in therapeutic value one pint of it is equivalent to six pints of any known preparation of cod liver oil, etc., etc."

Shortly afterwards I noticed that a gentleman in the grocery line had laid in a stock of several dozens. The emulsion was put up in amber whisky bottles, six to the gallon, to retail at sixty cents each. Each bottle bore a well-lithographed label, and the package "looked well for the money." Then one of the druggists laid in a quarter of a gross and Rummun "advertised him." He was a tolerably new hand at the business, and didn't know the doctor. For several weeks emulsion became a very slow seller. The public thought they had a good thing and bought from the grocer and Green's drug store, and we who declined to stock the new preparation, found ourselves more or less in the cold as far as emulsion was concerned. With the experience of Porkie's Perfect Purple Purgative in my memory I could not be sure whether Rummun was selling his emulsion at cost "to introduce it" or whether he was trying to run his business on an infinitesimal margin. Each dozen bottles represented very nearly three dollars worth of oil, bottles, corks, wrappers and mucilage of acacia, to say nothing of labor, advertising and packing, and Rummun sold the stuff at three sixty a dozen! Oil in barrel lots was worth about a dollar a gallon, and if it rose, as it seemed likely to do at any time, the doctor would be selling below cost.

One day a medical friend of mine entered the store bearing a bottle of the preparation. He was in an unamiable temper, for a patient of his who was in a critical condition had just had a severe hemorrhage following a violent emesis, produced—the doctor said—by Rummun's Emulsion. The lady had been taking S's emulsion for some weeks and holding her own, but from mistaken ideas of economy she had invested in the "sixty cents a quart" variety, with the above results. I did not happen to be particularly busy, so we tackled the emulsion at once, and after a careful comparison with two standard patents, my own make, and an extemporised preparation we were enabled to form a very definite opinion that my friend's patient had been taking cod liver oil soap in tablespoonful doses. To make matters doubly sure we purchased an original package and sent it to the nearest public analyst. He pronounced it "a compound of inferior cod liver oil, saponified with saccharated lime water, and apparently flavored with nitro benzene." He added that there was no trace of gum acacia or any other gum in the mixture and that in his opinion anyone who sold, or attempted to sell, such a mixture as an emulsion would be liable to a prosecution for fraud. My friend placed the correspondence before the Board of Health and the patient's husband, who happened to be a lawyer, entered an action against Rummun and Mr. Verdant Green, the druggist who had supplied his wife with the bottle. The Board of Health took no steps in the matter. Verdant Green settled his case out of court and Rummun got off on some legal technicality after spending five or six hundred dollars in fighting the case from court to court.

It seems that previous to the doctor's complaint several people had been kicking about the indigestible, nauseating qualities of the emulsion. I think Rummun must have spent nearly a thousand dollars in advertising, half that amount in stock, printing and expenses of distribution, and his law costs were over six hundred dollars. His venture left him with several gross of emulsion on hand, goodness only knows how much was "commissioned" over three or four counties, a small stock of cod liver oil suitable for the manufacture of blacking, a one thousand dollar mortgage on his house and a chattel mortgage on his furniture, horse and other personal property.

For two or three years he regarded me as the source of all his woe. My share in the matter had been the lending of a microscope and some test tubes and reagents to the doctor who denounced his preparation. Latterly, I am sorry to say, he has forgiven me, and he called in to see me yesterday about a gold mine he had discovered. The vein shows no free gold and the substance he claims to be telluride of gold bears a strong resemblance to low grade manganese.

My friend the grocer has a couple of dozen of emulsion on hand which he will sell very cheap to the first purchaser. This episode caused some little falling off in the sale of my own emulsion and helped the manufacturers of the staple brands of patent emulsion correspondingly, as far as our town and its immediate vicinity were concerned. Things have righted themselves again, from my point of view, but the very obvious moral of my story is: If you put up an emulsion of your own see that it is an emulsion and don't try to sell cod liver oil soap for internal use.

(Special Correspondence.)

PHARMACY IN AUSTRALASIA.

Sidney, N. S. W., June 19, 1906.

Professor Anderson Stuart, dean of the Faculty of Medicine at the Sydney University, speaking at the annual dinner of the Registered Pharmacists' Society on the 14th inst., strongly urged an amendment of the Pharmacy Act of New South Wales in the direction of including in the University curriculum of pharmaceutical students the teaching of physiology and pharmacology. He gave cogent reasons for the inclusion of these subjects, urging that pharmacists could not be expected to understand the action of the simplest drug without a knowledge of anatomy and physiology. Dr. Dixon, the lecturer in materia medica at the University, supported the professor, and stated that when he commenced the lectures last March he felt like a man trying to climb a steep hill, for he found the students absolutely deficient of a substratum of knowledge of physiology. Mr. Knibbs, the secretary of the Royal Society, also spoke and dwelt upon the necessity of intellectual culture throughout Australasia. He held up Germany as a model of intellectual energy, remarking that Germany's idea was to systematically educate her people and trust to the future to bring about the right results.

Business in Sydney has been almost at a standstill for over a month on account of continuous rain and storms. We have only had about two dry days since the early part of May and pharmacists here felt the pinch as much as any business class. In many city pharmacies I have found the assistants and apprentices killing time by playing cards and dominoes, while the masters, heartsick and sad, have betaken themselves home to soliloquize by the fireside. There is no longer any demand even for disinfectants, as every householder has adequate supplies; the city has been cleansed throughout and the back of the bubonic plague broken. The only people making money are the rat catchers, who get sixpence for every rat alive or dead. If the "Pied Piper of Hamelin" struck Sydney just now his fortune would be assured. By the way, one of our Sydney newspapers stated the other day that an enterprising New York firm was tinning rats for export to Sydney. Joke, or no joke, there's money in it.

A Sydney pharmacist, W. F. Count, who recently took part in a fatal abortion case, has been sentenced to five years' penal servitude. Count came to Sydney from London. The case in all respects was a shocking one, the deceased girl being taken to Count by her two brothers,

who confessed to continued improprieties with their sister.

The Early Closing Act in New South Wales, as its provisions applied to pharmacists, v. z., the closing up at 9 P. M. on five week nights, being defeated by Mr. R. T. Bellemey, one of our most prominent chemists who refused to close his door, is to come before Parliament shortly with a view to its amendment. Plebiscites of the registered pharmacists are now being taken by both the old and the new pharmacists' societies and feeling is running very high. The old society sends out this question: "Are you in favor of closing up at 9 P. M.?" while the new society asks: "Do you consent to your shop doors being compulsorily closed by law at 9 P. M.?" The latter is regarded as the fairer question. A great many masters have replied to this: That while they have no desire to keep open late hours, they resent the idea of being shut up by statute law. It is unlikely in the face of the judgment of the Banco Court in Sydney that any compulsory law will be imposed upon pharmacists.

The New Zealand customs authorities have scheduled capsules containing copaiba, buchu and cubebs at 20 per cent., and dentists' cabinets at 25 per cent. The Tasmanian customs has put 20 per cent. on ground glass stoppered bottles and the same on glass eyes.

The higher education of Australian pharmacists is being vigorously taken up in the Colonies where universities exist. South Australia has followed the example of New South Wales in getting university tuition and university examination in place of pharmaceutical tuition and examination by members of the Council. The budding pharmacists in both Sydney and Adelaide are delighted with the innovation. The Sydney University is furnishing a special laboratory for the teaching of practical chemistry and generally preparing things on an elaborate scale. The old system was a rotten one. Your correspondent has seen examinations of pharmacists conducted in Sydney by men who never passed an examination themselves, knew nothing more than dog-Latin and were painfully ignorant of the English language.

Professor Anderson Stuart, a vigorous and enthusiastic worker, has set himself the task of cataloguing all the scientific works in the different Sydney libraries for the special use of scientific men, medical men, pharmacists, etc. The books are so scattered over the many different libraries that it is impossible to find certain of them without a reference catalogue. The professor finds much cause for regret that our scientific, medical, chemical and pharmaceutical books are not up-to-date, and that the only places where modern works can be found are at the Sydney University and in the professors' private libraries. He strongly impresses upon the pharmaceutical societies the necessity of expending their surplus cash in procuring up-to-date books.

After many years' agitation on the part of the Australian pharmaceutical bodies there seems an early probability of something tangible being done with Great Britain in respect of the interchange of certificates with these colonies. When the pharmaceutical law of the mother country was being amended some two years ago, the reciprocal movement was treated with indifference, but since then many things have happened that tend to bring about a closer bond between England and her so-called dependencies. Recently the question of reciprocity was warmly advocated by leading English pharmacists and the news which we have received is full of encouragement and promise. Until Great Britain accepts the New South Wales pharmacists, British chemists and druggists will not be registered by the Pharmacy Board of Sydney.

Kreolin Pills (Von Spoeth).

Kreolin	6 grams
Dilute alcohol	1 gram
Extract licorice	
Powdered licorice root, of each....	6 grams
Powdered tragacanth	1 gram
Mix and divide into 100 pills.—(Ap. Ztg.).	

Swedish Tooth Drops.

Oil of cloves.....	10 grams
Oil of cajuput.....	10 grams
Chloroform	5 grams
Acetic ether	5 grams
Menthol	3 grams
Camphor	1 gram

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Ung. Resinol.—(A. C. B.) We cannot give the formula for this proprietary ointment.

Carpet Bugs.—(A. E. F.) The late Dr. C. V. Riley is authority for the following remedy: Bare as many rooms as possible at house-cleaning time, and, after carefully removing all dust, spray benzine by means of an atomizer into all of the floor cracks and under the baseboards until every crevice has been reached. The carpets, after thorough beating, should be slightly sprayed in the same manner. Benzine quickly evaporates and leaves no odor. Its inflammability should be remembered and no light be brought near it.

Indigo Paste, Indigo Carmine and Indigotin.—(A. M. F.) asks "what quantities of indigo carmine and indigotin would be equivalent to an ounce of indigo paste?"

It depends entirely upon the character of the sample of indigo paste chosen for comparison. Some lots of the paste are quite rich in indigotin (indigo blue), others are very poor. A. Kilpstein & Co., manufacturers of dye stuffs, this city, inform us that commercial indigo paste ordinarily contains anywhere from 5 to 12 per cent. of indigotin. In the same way indigo-carmine may contain an equivalent of 15 to 25 per cent. pure indigotin. Commercial indigotin runs from 50 to 100 per cent. pure indigotin.

Campho-Phenique.—(J. McC.) This is a proprietary preparation and the formula has not been divulged by its owners. A mixture of camphor and phenol sometimes recommended as an antiseptic, germicide and local anaesthetic, may be made by mixing one part of carbolic acid with two parts of camphor, allowing the mixture to stand some hours and purifying by washing with water. The resulting liquid is of a reddish-yellow color, having the smell of camphor, insoluble in water and soluble in alcohol and ether. This combination is recommended by Bufalina, who asserts that the camphor modifies the caustic and disorganizing character of the phenol without destroying its useful effects. Hager gives this formula: Camphor, in fine powder, 25 parts; carbolic acid crystals, 10 parts.

Tablets of Acetanilid and Sodium.—(F. S.) writes: In making tablets of acetanilid and sodium or other tablet in which sodium is employed, what brand or grade of soda should be used, the commercial, C. P., "Arm and Hammer" brand or saleratus?

We suppose by "sodium" you mean sodium bicarbonate, which is the sodium salt most frequently prescribed with acetanilid in tablet form. Sometimes other salts of sodium are similarly prescribed. But whatever salt is ordered that one is meant which answers the pharmacopoeial requirements regardless of what it may be branded. It does not always follow that because a certain chemical is labeled "C. P." it is really such. It may be, but it is the compounder's duty to determine this fact. In the absence of instructions from the prescriber you will do well to follow the standards furnished by the official guide—the Pharmacopoeia. A chemical which answers its requirements is pretty sure to represent the full physiological value of that substance. The same reply may be given to your other inquiry concerning the brand of hypophosphites which should be used in preparing syrups of these salts. If they are of U. S. P. standard you can depend upon them to produce physiological results.

Mosquito Mixtures.—(W. P.) Various mixtures have been recommended for expelling mosquitos from the room. We cannot vouch for the practicability of any of them, but we give the following formulas for what they are worth: (1) Eucalyptol (or oil of eucalyptus), 1½ fluid ounces; acetic ether, 6 fluid drams; cologne water, 6 fluid ounces; tincture of insect powder (1 n 5), 7½ fluid ounces. (2) Oil of pennyroyal, 1 fluid ounce; oil of lavender, 1 fluid dram; alcohol, enough to make 10 fluid ounces. (3) Camphor, 5 parts; oleobalsamic mixture, 100 parts; amylic alcohol, 10 parts; alcohol, 150 parts. (4) Insect powder, 1 ounce; acetic ether, ½ fluid ounce; alcohol, 4 ounces. Macerate three days, filter and add oil of lavender. 15 minims, and enough alcohol to make 5 fluid ounces. Beside being sprayed or sprinkled about the room to destroy or expel mosquitos, these mixtures may be used as applications to prevent their attacks.

Mosquito Pastilles.

(1) Make with mucilage of tragacanth a paste of 500 parts charcoal in powder, 60 parts saltpeter, 40 parts carbolic acid, and 250 parts insect powder. Divide into suitable sized cones and use as fumigating pastilles. (2) Thyme leaves, coarse powder 2 ounces; lavender flowers, 2 ounces; insect powder, 2 ounces; potassium nitrate, powdered, 1¾ ounces; potassium chlorate, 72 grains; powdered tragacanth, 175 grains. Mix well, add sufficient water to form a mass; divide into pastilles and dry.

BRITISH PHARMACY NEWS.

The Companies Bill.—This bill is full of surprises; it was generally considered that when Mr. Ritchie, president of the Board of Trade, expressed his opinion in the House of Commons that the pharmacy and medical clauses of the bill were not germane to its general tenor, these two sections would be dropped. The bill was referred to the Grand Committee on Trade and everyone thought that it would come back from that body minus the two clauses referred to. But on Tuesday last the committee decided by 17 votes to 12, in spite of Government opposition represented by Mr. Ritchie, to retain the two clauses. Mr. Ritchie's statement in favor of dropping the clauses had lulled pharmacists into a false security, consequently they were not ready with any amendment to the pharmacy clause. The Council of the Pharmaceutical Society considered the matter at the meeting on July 4 and decided to adhere to their previous policy and to oppose the clause when the bill returns to the House of Commons. Many pharmacists look upon this as a mistake and it certainly appears that to amend and not to destroy would be the wiser course of action.

Carbolic Acid.—Many attempts have been made by the Pharmaceutical Society to secure the inclusion of carbolic acid in the list of poisons which can only be sold by chemists, and with regard to which regulations as to labelling have to be carried out. Hitherto the Privy Council, which is the final authority, has refused to listen, notwithstanding that the deaths from carbolic poisoning have for years been much in excess of those from any other poison. But at the last Council meeting of the Pharmaceutical Society a communication was read in which the Privy Council expressed their willingness to agree to the scheduling of all liquid carbolic preparations except those specially packed for agricultural purposes. Carbolic acid was scheduled in Ireland some eighteen months ago without reservation of any kind.

Dr. Daniel John Leech, professor of materia medica at Owens College, Manchester, and chairman of the Pharmacopoeia Committee of the General Medical Council, died on July 2 from cancer of the stomach. Dr. Leech was in his sixty-first year.

Mellin's Food, Limited, declare a dividend for the year of 14 per cent. on the ordinary shares.

Mr. Arthur Albright, head of the well-known firm of Albright & Wilson, phosphorus manufacturers, of Oldbury, died on July 3, aged ninety-three. Mr. Albright commenced business as a chemist and druggist and was for a time with Messrs. T. & W. Southall (now Southall Bros. & Barclay), of Birmingham. He afterwards, before becoming a manufacturer, had a retail shop in Charlbury,

Era Course Graduates and Prize Winners for 1900.

Below we give the names of the successful students for the present year of the Era Course, and to each and all we extend hearty congratulations and good wishes.

The several prizes will be sent to the fortunate winners of them within a short time. The diplomas will be mailed to all graduates as soon as the names can be engrossed thereon, probably within ten days or two weeks.

The names of the recipients of the trip prizes will be announced at a later date.

SENIOR PRIZE LIST.

GENERAL PRIZES.

First Prize.—Sister M. Bernard Numan, Mat. No. 3.
Second Prize.—J. E. Adleman, Mat. No. 26.
Third Prize.—Sister Juliana Fleming, Mat. No. 39.
Fourth Prize.—Vincent Schwackenber, Mat. No. 64.

SPECIAL PRIZES.

Official Preparations.—James F. McGlone, Mat. No. 7.
Materia Medica.—Ralph R. Dykstra, Mat. No. 121.
Organic Chemistry.—Maude M. Price, Mat. No. 72.
Operative Pharmacy.—Otto Landwehr, Mat. No. 77.

MEMBERS OF THE GRADUATING CLASS WHOSE GRADES ENTITLE THEM TO HONORABLE MENTION.

Mat. No.	Mat. No.
4....Sam. J. Apple.	28....J. R. Jackson.

News and Trade Department.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of
Era Readers.

FOREIGN.

China.

- A despatch alleged to have come from Minister Conger, and written in the State Department cipher, was received by Secretary Hay last Friday through the Chinese Minister. It was in answer to the despatch to Mr. Conger forwarded through Mr. Wu on July 11 and reads as follows: "In British Legation, under continued shot and shell from Chinese troops, quick relief only can prevent general massacre." The messenger is not dated, but it is understood that it was sent from Peking on the 15th and is accepted as genuine.
- Secretary Long, in view of Minister Conger's despatch, immediately cabled Admiral Remy to use and urge every possible means for the relief of Peking, and Secretary Hay has called on the other powers to take speedy action.
- Sixty missionaries and one hundred native converts were massacred at Tai-Yuan, in Shansi province, last week.
- The Presbyterian Board of Foreign Missions has given formal permission to all its missionaries in China to leave the country at once if they deem it wise. The Board has received a message from Che-Foo that Christians are being bitterly persecuted, and an official proclamation issued that they must recant.
- A despatch from Hong Kong says that French gunboats have landed 300 Annamese soldiers to protect Shamien, a suburb of Canton.
- General Joseph Wheeler has asked the War Department to assign him to duty in China.
- W. W. Rockhill, Director of the Bureau of American Republics, has been appointed a special Commissioner from this country to go to China and investigate and report upon the situation. He was formerly Secretary of Legation in Peking and speaks Chinese.
- Brigadier-General Chaffee, who is to command our forces in China, has been promoted to be major-general of volunteers.
- Temporary repairs will be made on the battleship Oregon, and she will soon be back at Taku.
- The Chinese are driving the Russians out of Manchuria.
- Railway communication with Port Arthur has been broken, and New Chwang is said to be in imminent danger. Last week the Chinese stopped navigation on the Amur river and captured Blagovestchensk, the capital of the Russian province of Amur, but the town was retaken by the Russians. Russia has declared the border provinces to be in a state of war.
- Lieutenant-Colonel Coolidge, of the Ninth Infantry, reported that in the attack on Tien-Tsin the American losses were Colonel Liscum and seventeen enlisted men killed, five officers and seventy-two enlisted men wounded and two enlisted men missing. In the marines the casualties numbered forty.
- The Japanese landed 15,000 troops at Taku last week.
- Li Hung Chang has started for Peking, where he will try to quell the disorder.
- The Danish mission station at Fung Kwang Tung on the peninsula of Lia Tung has been destroyed. The missionaries escaped to Chemulpho.
- There are indications of serious trouble in Korea arising from the anti-Christian and anti-foreign movements, similar to that of the Boxers.

South Africa.

- Lord Roberts cabled last week that General Methuen occupied Heckpoort on Thursday, and that Generals Ian Hamilton and Mahon continued their march along the country, north of the Delagoa Bay railroad.
- The Cape Colony parliament was opened last week in Cape Town. Sir Alfred Milner, the Governor, prophesied an early close of the war.
- The Boers made a determined but unsuccessful attack on the left flank of Lord Roberts' army on Thursday of last week. Their losses were fifteen killed, fifty wounded and four captured, while the British lost seven killed, thirty wounded and twenty-one missing.
- Lord Roberts reports that 1,500 Boers broke through the cordon between Bethlehem and Ficksburg last week, and were making toward Lindley, closely followed by the brigade of Generals Paget and Broudbwood. Ian Hamilton's column has advanced to Waterval and Haman's Kraal.
- J. M. A. Wolmarans, of the Transvaal Executive Council, has been arrested at his house within the British

- lines near Hatherley. Bar gold worth \$30,000 and a quantity of arms were found concealed in the house.
- A Cape Town despatch says that Irish-Americans are arranging preliminaries for the emigration of over 10,000 Boers to the United States when the war is over.
- The latest Machadodorp advices state that President Kruger will refuse to surrender until his supplies are gone.

The Philippines.

- A Manila dispatch says that Captain Steever, who has been pursuing the Filipino Generals Tinio, Natividad, Aglipay and Alejandrino in the Ilocos district, has scattered the forces of Tinio and pushed on to Adra. General MacArthur declares that he needs all the soldiers he has in the Philippines and cannot spare any more for China. He has sent about 3,000 to China and has more than 60,000 left. The insurgents are still extremely active.
- Buenos Camino has sent to Aguinaldo the amnesty resolutions adopted by the meeting of representative Filipinos on June 21, with Gen. McArthur's answer to them and other documents bearing upon the restoration of peace. It is understood that Aguinaldo will summon his advisers, and that a reply may be expected within a month.
- Filipinos in Manila will give a banquet Saturday in celebration of President McKinley's order of amnesty.
- Capt. Charles D. Roberts of the Thirty-fifth Volunteer Infantry, who was captured by the Filipinos last May, has arrived in Manila on parole. He will not return to captivity.
- It is officially announced that last week 200 insurgents were killed and 130 surrendered or were captured. One hundred rifles were taken. Twelve Americans were killed and eleven wounded.
- A detachment of the Signal Corps, while repairing wires last week, was twice ambushed.

Other Foreign News.

- The plague has appeared at Niteroy, Brazil.
- The hot wave caused a number of deaths in London last week.
- The Rotterdam dock strike is extending, and over 12,000 men are now involved. There are 170 vessels in the Maas river awaiting discharge.
- A Berlin dispatch says that city selling pressed glassware, which a few years ago America bought from Germany, Kumassi, besieged by the natives in the Ashanti rebellion against British rule on the Gold Coast of Africa, has been relieved by the column under command of Colonel Wilcox.
- Mount Azuma, in Japan, broke into violent eruption on Tuesday of last week, and the lava engulfed several villages. Two hundred persons were killed or injured.
- American athletes captured about three-fourths of the prizes at the amateur athletic contests at the Paris Exposition during the past ten days. They would have captured still more if the exposition managers had not broken their agreement to allow American records made on week-days to count in the Sunday contests, as several of our best athletes refused to contest on Sunday. In the handicap contests our men were plainly discriminated against.

DOMESTIC.

Politics.

- The two Democratic factions in North Dakota have effected a fusion and nominated a single State ticket headed by M. A. Wippolman for Governor.
- The Bryan and Stevenson notification meeting will be held in the open air at Indianapolis, August 8.
- John G. Woolley, the Prohibition candidate for President, was formally notified of his nomination in Chicago last Friday night.
- The Kentucky Democrats have nominated J. C. W. Beckham for Governor. The platform recommends the amendment of the much-assailed Goebel election law.
- The Kentucky Republicans have nominated John W. Yerkes for Governor, and adopted a platform practically making the repeal of the Goebel election law the one issue of the coming State election.

Other Domestic News.

- President McKinley and Governor-General Wood have agreed upon September 15 as the time for holding elections for the Constitutional Convention in Cuba. It is said in Washington that the Constitution adopted by the convention will be closely scrutinized in Washington, and Cuba will not be permitted to make treaties with foreign countries, except through the United States, nor will the people be allowed to involve the island in debt, unless authorized to do so by this Government.

It is believed that the United States troops will all be withdrawn from Cuba within eight or nine months.

The foreign commerce of the United States during the fiscal year 1900, which ended June 30, was \$320,000,000 greater than that of the year previous. The total was \$2,244,193,543. The imports of the year increased \$152,000,000, of which increase two-thirds was in manufacturers' materials; and the exports increased \$167,000,000, of which one-half was manufactured articles.

The total value of exports from the port of Havana for the first six months of 1900, as compared with the same period of 1899, shows a decrease of \$519,109.

Many deaths and prostrations occurred in New York and Brooklyn last week from the heat.

The Adjutant-General of the United States Army reports that the total number of organized militiamen in the United States is 106,339, while the number of men available for military service, but unorganized, is 10,343,152.

A reciprocity agreement between Italy and the United States, under the provisions of the Dingley act, was signed in Washington last week.

Heavy rains injured the corn crop in northern Nebraska last week.

Peoria, a town near Dallas, Texas, was destroyed last week by a tornado.

THE DRUG NEWS.

New York and Vicinity.

"A VACATION WINDOW DISPLAY."

In these trying times of competition—and hot weather—druggists vie with each other to make the most attractive displays of their goods to entice trade. To advertise the soda water fountain, Henry C. Miner, at 112 East 125th street, makes an elaborate window display which has proven a valuable stimulator to the soda fountain trade. The display is a summer scene. In consists of a mountain landscape in miniature, the rocks sloping down toward the sidewalk side of the window in truly realistic fashion. Moss is arranged in such a careless manner in the crevices as to look almost natural. From the highest point of the landscape a little log cabin stands forth, from which a pathway of glistening pebbles leads to a bubbling fountain, round the edges of which grow pretty pond lilies, among whose roots swim little gold fishes. There is nothing suggestive of soda water in this scene, unless it be the tiny sign on the house which reads: "This house to let for the summer months. Inquire of the Soda Man," but as the perspiring crowd outside look in at the cool rocks and cooler fountain, they apparently with one mind think of the dry and dusty city, with no hope of vacation for themselves, and the summer half gone, there comes a desire for an artificial transportation that seems to be realized in the products of the soda fountain. It is claimed that ninety per cent. of the people who look in the window come in the store and buy soda water. The display is worthy of much credit for the careful and painstaking manner in which it has been made up, and the power it has to attract trade.

JERSEY CITY DRUGGISTS' ASSOCIATION.

Several matters of interest came up before the regular meeting of the Jersey City Druggists' Association, held in Phillips' Hall, Bergen avenue and Montgomery street, Jersey City, Tuesday afternoon, July 17. The first was the report of John Kimpel, Jr., as delegate to the meeting of the New Jersey State Pharmaceutical Association, held at Asbury Park some time ago. The report, which was written, as Mr. Kimpel is now in Europe, was read by Charles Kuehne. After relating very briefly the details of the meeting, Mr. Kimpel closed with a suggestion that the Jersey City Association hereafter refrain from sending delegates to the State meeting. The proposition was discussed, but owing to the few members present it was decided to delay action, and the report was received and placed on file. Another important matter was the election of Charles Kuehne as delegate to the meeting of the National Association of Retail Druggists, in Detroit, September 12 to 14. No alternate was chosen, delegate Kuehne being given power to name one should he find it impossible to attend himself. President John C. Gallagher, who presided over the meeting, stated that he would attend the Detroit assembly as chairman of the Committee on Trade Marks and Patents. Treasurer W. A. Beardmore presented his report, which showed a balance at the last meeting of \$74.26; disbursements of \$58.87, leaving a present amount in the treasury of \$15.39. The next meeting of the association will be held October 16.

A YOUNG PHARMACIST DROWNED.

A deep gloom was cast over the members of the class of '99 of the Brooklyn College of Pharmacy on Saturday, July 7, by the news that Charles Pezold, one of the members of the class, had been drowned in Canarsie Bay. Mr. Pezold, who was one of the favorite members of his class, was out rowing in company with two other young men. The boat upset, and although not one of the trio could swim, two were saved. Mr. Pezold resided at 20 Ditmar street, and was the sole support of his widowed mother. The funeral was held Tuesday, July 10, and was largely attended, a number of the members of the deceased's class being present. A delegation from the Kings County Pharmaceutical Association, of which Mr. Pezold was a member, was also in attendance.

DRUG CLERKS' OUTING POSTPONED.

The Pharmaceutical Clerks' Association was to have held an outing at Hotel Two Pines, Bergen Point, N. J., on Wednesday, July 17, but owing to the extreme torridity of the weather the event was postponed indefinitely. President Dietz, of the organization, was on hand, as was also one member, Mr. Richards, of Brooklyn, and one young lady. The arrangements for the trip contemplated a bicycle ride from Jersey City to Bergen Point. Three of the party went over the course and returned. It is anticipated the outing will be held at some near date.

NOTES.

—Fred. A. Hessig, of the new firm of Hessig-Ellis Company, which is about to begin a large wholesale and retail drug business in Memphis, Tenn., was in the city last week. Mr. Hessig is a man of recognized pharmaceutical ability. He was formerly connected with the Van Vleet-Mansfield Drug Company, at Memphis, Tenn. Mr. Hessig is accompanied by Henry R. Bauer, who is here to purchase druggists' sundries for the new firm. The officers of the company are J. W. McCarley, president; E. C. Kincannon, vice-president; E. M. Ellis, secretary and treasurer; J. S. Horn, assistant secretary and treasurer; F. A. Hessig, general manager, and E. T. Warnock, assistant manager. The firm expects to begin operations about August 15.

—Among those who visited the trade during the last week were Lyman T. Coppins, of Buffalo, N. Y.; A. R. Bremer, of the A. R. Bremer Co., Chicago; A. N. Slack, Mexico; J. Wey, Arcadia, Fla.; J. P. Primley, Chicago, Ill.; T. S. Armstrong, Plainfield, N. J.; W. Townley Case, traveling salesman for Boehringer & Soehne; John T. Payne, Columbus, O.; Frank J. Betts, Chicago, Ill.; Dr. C. B. Story, Bayside, L. I.; Mr. Briner, of Haverstraw, N. Y.; A. M. Heron, Belmar, N. J.; W. D. Olney, Middletown, N. J.

—A meeting of the Board of Directors of the Humphreys' Homeopathic Remedy Company was held last week to elect a successor to the late Frederick Humphreys, president of the organization, and other officers of the corporation. Those chosen were: President, Frederick H. Humphreys; secretary, F. L. Humphreys; treasurer, H. B. Harding. Mr. Harding was actuary of the company for some time, and his accession to the new position abolishes this office.

—C. W. Dietz, President of the Pharmaceutical Clerks' Association, has a brother William of whom he is very proud. William served in the Spanish-American war, and he has recently joined Company E of the First U. S. Engineers, now located at West Point, and under orders to proceed to China. President Dietz is of course sad to think his brother is going to the war, but he is none the less glad to know that he represents a part of a patriotic family.

—Charles S. Erb, a popular member of the Manhattan Pharmaceutical Association, German Apothecaries' Society, N. Y. College Alumni Association, of which he is president, and numerous other fraternal orders, also a druggist on Amsterdam avenue and Sixty-fifth street, is receiving many congratulations on the announcement of his engagement to Miss Anna T. Conway, of Philadelphia. The ceremony is to take place in September.

—The largest piece of kauri gum that has been shown on this market since 1893 is being displayed by G. W. S. Paterson & Co., at their offices in this city. The specimen is about 1½ cubic feet, weighs nearly 72 pounds, is unscrapped and at the present market value of standard kauri is worth about \$21. The only other piece of kauri known to have been larger than this one was shown here about seven years ago; it weighed 78 pounds.

—Henry C. Tonjes, a well-known soda water manufacturer of 314 East Thirty-first street, died at his home on Wilson avenue, Flushing, Thursday, July 19, after an illness of but a few days. He had been suffering greatly from the heat and expired suddenly. He was fifty-two years of age and had been in the soda water business for some time. He is survived by a widow and five children.

—T. D. Reams, representative for William R. Warner & Co., in Texas, was the guest of B. B. Hamlin, local manager of the firm, one day last week. Mr. Reams reported trade in Texas exceedingly good, and stated that notwithstanding the fact that this was a Presidential year the drug business was decidedly active.

—The Executive Board of the Alumni Association of the New York College of Pharmacy held a meeting in the college Wednesday afternoon. The College journal has been delayed in publication by the loss of a number of plates in transmission by one of the express companies.

—George W. Hlague, Ph. G., member of the class of '98, New York College of Pharmacy, has resigned his position with Thomas P. Rushmore, druggist of Garden City, L. I., and accepted a position as head clerk at the pharmacy of Wm. P. Thompson, Jamaica.

—H. B. Harding, treasurer of Humphreys' Homeopathic Remedy Co., believes he has received the first letter from the Hawaiian Islands bearing the United States stamp. The letter was postmarked Honolulu, July 4, and came to Mr. Harding Tuesday, July 17.

—A. Ammon, who was proprietor for some years of what is now W. O. Luttman's pharmacy, corner of Eighty-first street and Columbus avenue, accompanied by his wife, left, Thursday, July 19, for Europe, where he will enjoy a long visit.

—Lehn & Fink protested some time ago against paying 25 per cent. ad valorem on lysol when they claimed it was dutiable only at 20 per cent. The Board of Appraisers at a meeting on Tuesday afternoon, July 17, sustained the protest.

—The case of E. H. Hammer, first vice-president of the firm of Keesbey & Mattison, and acting for the firm, against David N. Neuberger, a lawyer, was brought before Magistrate Hogan in the Center Street Police Court Monday morning.

—Announcement is made of the engagement of Miss May Carmichael, in charge of the telephone exchange in the New York office of Parke, Davis & Co., to John J. Doran, bookkeeper in the same office. The ceremony will take place in August.

—Ira Uhlman, druggist, at 775 Columbus avenue, has purchased the pharmacy of John H. Quest, at 1917 Amsterdam avenue, formerly owned by Riegin and Klussman, and established 40 years ago.

—A new store will be opened about August 1 by G. W. Jaynes, at 150th street and Amsterdam avenue. Mr. Jaynes was formerly with J. Diner, druggist at 126th street and St. Nicholas avenue.

—Wm. H. Ebbitt has sold the drug store of H. Uhle at 1695 Amsterdam avenue to J. H. DuBois, of New Canaan, Conn., and, acting for Mr. Uhle, has bought Mr. DuBois' store at New Canaan.

—A record of twelve hours soda water sales said to eclipse that of any dispensers in the city was made Tuesday, July 17, by a firm on Nassau street. Over 4,000 glasses were sold.

—Theodore Roth, of the Dalbender pharmacy, 8 Court street, Brooklyn, left Monday for Hurleyville, Sullivan County, N. Y., where he will enjoy a vacation of several weeks.

—The store of J. M. Gardner, druggist at 1,760 Third avenue, was visited by fire early Friday morning, July 20th, and \$175 damage was done; the cause was unknown.

—C. Lewis Stephens is having a pleasant vacation through the upper part of the State. Mr. Stephens is with W. J. Quencer, druggist at 40 West Fifty-seventh street.

—E. J. Bryson, manager for A. P. Kerley & Co., druggists at 215 Boulevard, corner of Seventieth street, is enjoying a few weeks' outing at Bath Beach.

—The exports of drugs, chemicals, etc., for the week ending July 17 amounted to only \$83,768. This is the lowest point reached in some time.

—Mr. Geety, of the firm of Geety & James, 113th street and Eighth avenue, is receiving congratulations upon the arrival of a ten pound baby girl.

—Importations of drugs and chemicals to this port for the week ending July 20 were valued at \$583,337. This is a little below the average.

—Col. E. W. Fitch, manager of the New York office of Parke, Davis & Co., is back at his desk after two weeks spent in Detroit.

—David S. Sears, salesman for R. W. Robinson & Son, returned home last week after an enjoyable vacation at Bellport, L. I.

—B. Altshul, druggist of Broome and Chrystie streets, has greatly added to the appearance of his store by a new metal ceiling.

—W. T. R. Mersereau, of Schieffelin & Co., returned Monday from a vacation of two weeks at Ortleve Inn, Ortleve, N. J.

—Charles Weisz, buyer for McKesson & Robbins, returned Monday after a two weeks' vacation at Five Islands, Me.

—W. O. Luttman, druggist at Eighty-first street and Columbus avenue, is enjoying a vacation at Bay Shore, L. I.

—W. C. Berger, druggist of Passaic, N. J., is on his way to Germany, where he will enjoy a vacation of two months.

—Arthur Neville, city representative of Wm. R. Warner & Co., is doing the work of H. C. Yager, who is in Europe.

—The New Jersey Board of Pharmacy met at Trenton, Thursday, July 18, and examined a large number of candidates.

—R. L. Palmer, druggist at Atlanta, Ga., who had been visiting the trade here during last week, has returned home.

—C. H. White, druggist at Madison avenue and Fifty-third street, is enjoying a vacation at Greenwood Lake, N. J.

—Wm. M. Warren, general manager for Parke, Davis & Co., has returned to Detroit after a week's stay in this city.

—J. H. Uhle, of Amsterdam avenue and 134th street, has sold his store to J. H. DuBois, of New Canaan, Conn.

—G. H. Gilman entertained H. H. Whitman and G. Ermy, Jr., of Yonkers, N. Y., at the Drug Club last week.

—Avon, N. J., supports a new drug store recently opened. The names of the proprietors are not known.

—L. P. Rupp, druggist at Thirty-sixth street and Ninth avenue, is enjoying a rest in the Catskill Mountains.

—Charles Haight is managing a new drug store that was recently opened at 1782 Amsterdam avenue.

—S. Silverman has purchased the drug store of B. Gluck, at 115 Nostrand avenue, Brooklyn.

—O. Alexander has recently sold his drug store at 335 Grand street, Brooklyn, to A. Braunstein.

—Peter R. Lance, the well-known representative of Wm. R. Warner & Co., was in town last week.

—Nicholas Kruskal has sold his drug store at 2196 Eighth avenue to James Livson.

—Col. J. W. George, with Schieffelin & Co., is enjoying the fishing at Block Island.

—R. R. Felter is about to open a new store at Pearl River, N. J.

IN AND ABOUT BOSTON.

Raid on a Drug Store Greatly Affects the Owner.

Boston, July 21.—As the result of a raid by special officers on the drug store of Frank Giard, at Spencer, the owner was greatly, and possibly seriously, affected. While one man was investigating the soda fountain, seeking possible contraband goods, and the other was searching a rear room, they were startled by a heavy fall. Mr. Giard, who is subject to heart failure, had succumbed to the intense excitement and surprise at the search of his place. When the officers turned to Mr. Giard they found him lying stiff with an ugly looking wound on the forehead, which he got by striking his head against the counter when he fell. He also was foaming at the mouth. The officers were not equal to the task of reviving Mr. Giard and sent messengers for two physicians, who, by heroic treatment, brought him around all right. The physicians said the fainting spell was due to heart trouble and was brought on by the excitement incidental to the visit of the officers, who did not prolong their search.

NOTES.

—A patent medicine fakir who has been traveling about Fall River attempted a little flim-flam game at one house where he was asked in by the woman who answered his knock at the door. She supposed him to have some business to transact. He spread out his wares on a table on which happened to be some money which the woman was counting when he knocked. She declined to buy any medicine, so, when replacing his goods in his little bag, he helped himself to a bank bill from the money on the table. The woman's demand for its return was laughed at, the excuse being that he had inadvertently taken the money from his bag along with the medicine. The woman's husband appeared from the next room and the man simply rushed away in his hurry to escape. He did not take the bill, however.

—Thomas D. Tate, a Clinton druggist who not long since was arrested at the instance of the Board of Health for selling adulterated drugs, on which charge he pleaded guilty and had his case placed on file, is again in trouble. On Sunday, July 15, a raid was made by the local officers on his drug store on Mechanic street. There they found thirty-three full cases of beer, and also a large quantity of liquors. It was one of the biggest seizures known thereabouts for some time. Nine men were found at the time of the raid in the back part of the store seated around a table. Tate was arrested on the charge of illegally keeping for sale and selling liquor. He was released on bail.

—While bathing in the river at Ashburnham, G. H. Darling, a clerk in the Union Square drug store at Somerville, was drowned on July 17. He was spending a few days' vacation in camp at that place with a party of friends. Darling was taken with cramps and sank before he could be reached. He was only twenty years old and was graduated from the High School a little more than a year ago, entering the drug store afterward.

—Burglars at Belchertown recently made an attempt at about two o'clock in the morning to enter C. H. Snow's drug store in that town. One-half of a large window was smashed, but the noise awoke a man who sleeps on the second floor. He opened his window and demanded who was there, when the would-be burglars left.

—F. H. Ware has now become proprietor of the Darling drug store at Turner's Falls. The former owner, Mr. Darling, intends to devote his entire time to insurance work.

—Joseph Flynn, who has been a clerk for Frederick & Bower, the Broadway druggists in the Arlington district at Lawrence, has resigned his position at that place.

—Arthur L. McKusick, for thirteen years with the Eastern Drug Co., Hanover street, has accepted a position as salesman with the Weeks & Potter Co.

—Arthur Reynolds, one of the clerks at Bailey's drug store at Rowley, is away from his duties to enjoy a two weeks' vacation.

—G. Wilbur Cate, formerly of the drug firm of Cate & Sullivan, is now to be found in the Fall River store of Samuel J. Smith.

—After a serious illness of about six weeks, Harry P. Elsey, the Springfield druggist, is out and about again.

—Dan F. Murphy, a salesman with Henry Thayer & Co., recently joined the ranks of the benedicts.

—Leonard Daniels is a new clerk added to the force at Moore's drug store, Beverly.

—Charles A. Blair, the Elliot Square druggist, is away on a three weeks' outing.

Other New England Items.

—Horace Bickford, who has been employed in F. H. Wing's drug store at Showhegan, Me., has resigned his position to become a conductor on the Somerset Traction Company's electric road. Arthur Mitchell takes his place in the drug store.

—W. H. Van Strander, some years ago a clerk at Buck's drug store, Winsted, Conn., has been graduated as a doctor of medicine at the Vermont Medical College, Burlington.

—A recent fire at Biddeford, Me., in the Adams Block, caught in the drug store of J. A. Morrill. The building was badly scorched, but the principal damage was caused by water.

—George W. Morse, formerly clerk in the employ of O. N. Davis, at Concord, N. H., has gone to Plymouth, where he has accepted a position in Tufts' pharmacy.

—J. H. Colby, a druggist at Lancaster, N. H., has retired from that business to become associated with his brother, G. H. Colby, in the periodical business.

—Joseph M. St. Germain, a druggist at St. Johnsbury, Vt., is spending a vacation in Manchester, N. H.

PHILADELPHIA.

Gallery of Infant Facial Expression.

Philadelphia, July 21.—Mr. M. N. Kline has added a new department to his office plant. It is called "The Gallery of Infant Facial Expression." Mr. Kline himself is curator of this museum. It is a small but elegantly appointed apartment adjoining his desk, and displays a valuable collection of bromide, platinum and silver prints, as well as tin and daguerreotypes of children ranging in age from one hour to two years. All of the portraits contain autographic advices from the portrayed. There are two pictures of John Maguire, for instance, to which Mr. Kline has added descriptive titles of his own. He calls these two "Before and After." Under No. 1 we read: "John Maguire, aged two weeks; weight five ounces." Under No. 2, "John Maguire, aged three weeks; weight fifty pounds." On the bromide print of a seraph reaching wildly for the skies, is the inscription, "I kept on crying for it until mommer gave it to me." On the photo of a bouncing bolster case of one year tied with strings to keep from flowing into the surrounding landscape, are the words: "My papa won't let me eat anything else, so I guess I've got to go to the Dime as a freak." Here is one on the card of a Pennsylvania Low Country cupid: "Ich bin ein Doofdezinemublasayake kind," the word next to the last is supposed to be an abbreviation of a German synthetic compound. The collection contains other interesting exhibits, which Mr. Kline, if approached in the right spirit, will be glad to uncover.

NOTES.

—"Who owns an empty beer bottle?" is a question which is agitating up-town drug circles, causing hastily-summoned extra sessions of corner debating societies, and bids fair to land a number of the mortar and pestle profession in jail unless taken at once and decided by the legal minds of the P. A. R. D. The bottlers evidently think they own the package after they have sold it, even

though it is not used again for malt beverages. In the northern section the "Protective Association" of this industry is sending out detectives armed with empty beer bottles with certain bottlers' names blown in the glass, with requisitions on drug stores for staple fluids, say spirits of turpentine. The druggist, of course, fills the order and glues his own label on the package, for which act he is promptly arrested and taken before the nearest magistrate. The druggists so far arrested have been immediately discharged, and what the outcome of the matter will be is at present unknown.

—W. L. Cliffe, whose passion for physical geography is only limited by the time at his disposal, is at present making a careful survey of the Lancaster and Lebanon Valleys in company with J. H. Redsecker, his friend and consulting expert. The P. A. R. D. is in receipt of daily bulletins chronicling their adventures and discoveries. The much-discussed question whether there is gold on South Mountain is about to be settled. The scientists travel in differential gear automobile, and the neurasthenics of the various Wernersville sanatoriums have been shocked into comatose at the sight of their coasting and curve-taking speed. They have given the Mt. Penn trail by a four mile handicap and beaten it fifteen minutes to Raser's drug store, doing the whole hill from the hotel down without brakes. Alcohol is the only fuel and connoisseurs state that Mr. Redsecker's patent locker is a jewel.

—The announcement that Mr. Wayne Evans and Mr. Burkstrasser and others from the Chestnut street store of G. B. Evans were on their way to Betterson, Md., created no comment, but when it was brought to notice that the Maryland Legislature was hurrying to Annapolis to amend the game laws of the State, some of the prophets smelled a coincidence. The authorities, it appears, do not worry over the free and easy manner in which the native fisherman sets himself to work at either wler or seine, much less hook and line, but when Northerners swoop down on the lazy Chesapeake for a holiday, the white perch must be protected. However, as the Government has acquired all the loose transports, and as there is no way of getting a sliding in from the N. Y. P. in time, perhaps the 1106 contingent will be satisfied with a few soap boxes full.

—Dr. C. W. Lyon, who committed suicide, Thursday, the 12th, jumping into the Delaware from the ferry boat Arctic, was a member of the firm of E. F. Houghton & Co., manufacturers of petroleum products, Somerset and American streets. The world is indebted to Dr. Lyon for many notable discoveries in the art of extracting oils and greases from crude petroleum products, and it is said that on account of his unflagging energy in the search to which he had devoted his life, his health at last broke down. Dr. Lyon was a graduate of Jefferson Medical College, a member of the Chemists' Club, New York; the Franklin Institute, Philadelphia; the Society of Chemical Industry, London, and other scientific organizations.

—The Philadelphia delegates to the N. A. R. D. meeting, which is to be held in Detroit in September, are Messrs. Stiles, Rumsey, Perry, Cliffe and McIntyre. They are doing a fine lot of team work and intend making their presence a power in the convention. A slicker selection than the above-mentioned quintet from the ranks of Philadelphia's retail druggists, it would be hard to make. They are representative merchants in their several localities, are progressive business men, and they are all firm supporters of the N. A. R. D. Constant intercourse between them and an unremittent swapping of ideas have fully posted them as to the needs of the retail drug trade.

—The valley of the Delaware, from Trenton up, is reported to be an Adamless Eden with enticing Eves languishing in countless droves from the summer houses and porch columns of that resort be-dotted region. That is why all explorers stick to the river with its more serious attractions in the bodies of four and five pound bass. Mr. H. C. Blair, Jr., and canoe have just returned from paddling this gauntlet. Mr. Blair, however, instead of canoeing down the river, worked his way upward for over 150 miles, to a point far beyond the Water Gap.

—William Harris, Twenty-first and Pine streets, has established a branch store at Chelsea, Atlantic City. This

makes a third drug store in blast in that tony burgh. It was given out, when the elite first condescended to build in those tradeless precincts, that there was not to be a shop of any kind in the sacred enclosure. Verily the retailer is blowing whither he listeth.

—W. H. Gano, Seventeenth street and Columbia avenue, is making extensive alterations in his store. The shop will be lengthened the entire depth of the building, new bulks added, appointments of floor and case remodelled, and altogether, when completed, the pharmacy will be fully in keeping artistically and commercially with the growing demands upon it.

—W. Frank Ross, of the firm of George D. Feidt & Co., has, in spite of the prognostications of his friends, at last joined the noble army of benedicts. "At home, 250 W. Logan Square," the cards read, although the happy couple are now out of town on their honeymoon. Mrs. W. Frank Ross was formerly Miss Hattie Wilson.

—Miers Busch, of the firm of Shoemaker & Busch, will spend his August holiday in New England, giving particular attention to the attractions set forth by Maine. Clayton F. Shoemaker, senior partner of the above concern, has leased for the summer an extensive farm near Winonah, N. J.

—The stork visited the residence of A. J. Frankeberger, druggist, Thirteenth and Dauphin streets, on July 6. After said bird had departed it was noticed that a little daughter had been left as hostage and as a promise of increasing joy to the household.

—The dread angel of death visited the home of C. A. Gill, Twenty-ninth and Diamond streets, last week, removing one of its most cherished inmates, Mr. Gill's baby boy. The child had been ill for some time and it was hoped he would pull through.

—Harry Brugler, Twentieth and Tioga streets, from his point of vantage opposite the Reading station, is reaping the benefits derivable from a well-chosen location and inevitably attached to a competently-managed and attractively-handled pharmacy.

—F. A. Eberly, of Eberly Bros., Twenty-sixth street and Columbia avenue, and Twenty-fifth and Oxford streets, braces himself for city work in the tropics by an occasional flying trip to the mountains where his family are spending the heated term.

—H. Chalfant, Fifteenth and Tasker, has opened a branch establishment at Ocean City, N. J. Mr. Chalfant also conducts a hotel in the same town and extensively advertises both of his plants as "Chalfant's up-to-date" hotel and pharmacy.

—The cut rate patent medicine store at 919 Girard avenue, formerly conducted by H. R. Smith, has changed hands, and under a new management will shortly blossom forth as a "regular" pharmacy with prescription attachment.

—There is a general feeling in West Philadelphia in favor of the closing of stores every Sunday afternoon from 1 to 6. There is abundant evidence, also, that the movement will soon receive strong support from other localities.

—It is reported that H. N. Snyder, of Lancaster, Pa., has strong political backing in his desire to succeed Dr. C. T. George on the Pennsylvania State Board of Pharmacy. Dr. George's term expires in the Fall.

—John H. Cohen is the name of the pharmacist who has just embarked in the retail business at Seventh and Welsh streets, Chester. He was at one time with R. H. Henderson, of the same city.

—C. H. Peacock, Tenth and Dickinson streets, has widened, heightened and deepened his pharmacy and is convinced that it pays to beautify and improve.

—Renewals for the second year's membership to the Philadelphia Association of Retail Druggists are coming in far beyond the officers' expectations.

—J. P. Frey, the "many stored man," as he is nicknamed, has been oscillating between Philadelphia and his cottage at Sea Isle City, N. J.

—G. B. Evans has domiciled his family for the summer at Atlantic City, he coming back and forth daily on the train.

—H. B. McAniff will open his new store at Fifth and York streets, about the 1st of August.

BALTIMORE.

The Question of Cut Rates.

Baltimore, July 20. Joseph Jacobs is not only a prominent figure at the annual meetings of the American Pharmaceutical Association, but he conducts one of the largest drug stores in the South. His establishment in Atlanta is among the most notable business places of the Georgia town and he is classed among the substantial merchants and manufacturers of his section. He conducts what is known as a cut rate pharmacy, and his experience with the manufacturers of proprietary articles is of particular interest at this time, when the question of forming agreements and maintaining fixed prices is one of the burning problems. On this subject Mr. Smith, one of his two managers who stopped in Baltimore this week en route of New York, said that his firm experienced no difficulty whatever in getting goods in all quantities. They were getting shipments, he said, direct from the manufacturers of proprietary articles, and as far as he was able to observe all attempts to control and restrict the distribution of such goods under the various plans tried by the retailers in different localities were a failure. He said that his experience had convinced him that the manufacturers would not adhere closely to agreements and he regarded it as unfair to those druggists who conscientiously strive to live up to contracts to maintain the semblance of an arrangement which operates to their disadvantage. It would be far better for all concerned, he said, if all specious devices were abandoned and the law of competition were allowed to assert itself. The violation of agreements on the part of manufacturers by supplying cut rate pharmacists is expected to come up before the next annual meeting of the National Wholesale Druggists' Association and the Proprietors' Association, and will receive special attention. It is obvious that unless the manufacturers can be held to a faithful observance of contracts, adherence to such plans as have for their purpose the exclusion of the cutter can only work injury to the individual.

Maryland College of Pharmacy.

Baltimore, July 20.—At the monthly meeting of the Maryland College of Pharmacy yesterday Charles E. Dohme was re-elected president and the election by the trustees of Charles H. Ware as secretary in place of Henry P. Hynson, who has been made professor of practical pharmacy and dispensing, a new chair, was confirmed. John A. Davis was elected to succeed himself as a member of the Board of Examiners and considerable routine business was transacted. The arrangements for the Fall opening of the college received attention and the new college catalogue was submitted, the work of the compilers calling forth unstinted approbation.

District Pharmacy Commissioners.

Baltimore, July 20.—The report of the Commissioners of Pharmacy in the District of Columbia for the year ended June 30, 1900, was submitted to the District of Columbia Commissioners to-day by Dr. John T. Winter, the president of the board. It shows that forty-seven persons were examined by the board during the year, and of this number sixteen passed the examination and registered as pharmacists, while thirty-one failed. Thirty persons, graduates in pharmacy, were, on presentation of their diplomas, registered as pharmacists. The commission is self-sustaining and has done much to promote the interests of the profession.

NOTES.

—Information received from Chatham, Va., states that Eugene Muse, of the firm of E. C. Muse & Co., a prominent drug firm of that town, has been missing since June 24. On that day he left for Norfolk on a pleasure trip and all trace of him was lost. His brother visited Norfolk in the hope of learning something of the missing man's whereabouts, but was unsuccessful.

—Druggist M. F. Carnes, 565 Roland avenue, has made a number of improvements in his store, which amount to practical reconstruction of the place. He has had a tile

flooring laid, new furniture and fixtures installed, a new front erected, an extension built in the rear and the store room enlarged. The pharmacy is an ornament to the neighborhood.

—Among those who attended the annual meeting of the Virginia Pharmaceutical Association at Ocean View last week was George G. Muth, of Muth Bros. & Co., the well-known Baltimore jobbing druggists. Mr. Muth has a large acquaintance among the Virginia pharmacists and was made royally welcome by them.

—A movement is on foot to get up a trolley party for the members of the Baltimore Drug Trade Bowling Club and their friends. It is proposed to take a ride to Ellicott City, get supper there and to have a general good time.

PITTSBURG.

The Association Ball Game.

Pittsburg, July 21.—The regular meeting of the Western Pennsylvania Druggists' Association was held at 243 Fourth avenue, on Thursday, July 19, at 2.30 P. M. A large attendance, considering the extreme hot weather, was present. There is a great dearth of drug clerks in this locality, and is the main cause of a lighter attendance at the meetings. Great interest is manifested in the ball game scheduled for Thursday, July 26, at Exposition Park, Allegheny, between two teams of druggists, the Pittsburgs and the Alleghenys. E. C. Garber, the financial secretary, has been instrumental in getting up the game and has spared neither time nor trouble. The wholesale dealers will stand all expenses, which will be considerable, as 3,000 tickets have been distributed gratis among the druggists and their friends.

Mr. Bundy, of Bundy & Eaton, Butler street, is the Pittsburg captain and Harry Heckel, of Western avenue, is chief of the Alleghenys. The following is the official list of players and positions: Alleghenys—Coombs, catcher; Watson, pitcher; Shang, first base; Heckel, second base; Steele, third base; Long, short stop; Urban, left field; Boggs, centre field; Sterling, right field. Pittsburgs—Schaefer, left field; Forest, third base; Jamieson, catcher; Heliebaugh, short stop; Ahl, first base; Rectenwald, second base; Ebrine, pitcher; Hughes, right field; Bundy, centre field. The game is called 3 P. M. sharp.

It has been discovered by the association that the wholesale grocers are the real aggressors in the cut-rate business, filling orders and ordering goods shipped from the east direct to the cutters. They have no sympathy with the druggists in their fight and are thereby doing considerable injury to the cause.

NOTES.

—The P. C. Schilling Company is now in possession of the following nine drug stores: Corner Sixth street and Penn avenue, manager, A. T. Schilling; 2801 Penn avenue, F. C. Schilling; 2401 Penn avenue, Wm. Irving Hoft; 3053 Brereton avenue, A. Karabasz; corner Twelfth and Carson streets, south side, A. B. Kline; Wylie and Sixth avenues, C. M. Dorsey; Christy drug store, corner Fourth avenue and Smithfield street, W. F. Heidenreich; 52 South Twelfth street, south side, J. B. Flenniken; 4 Pius street, T. J. Janda. P. C. Schilling is president of the company and spends the forenoons at the main store, corner Sixth street and Penn avenue, and the afternoons among the different branch stores.

—Albert Anthes, a drug clerk who had been worried over his approaching examinations by the State Board and had been drinking, shot himself at his father's home, 13 Forty-fifth street, dying later at the West Penn Hospital. He worked for his brother, Philip Anther, a druggist at Fourth avenue and Ferry street. He was thirty-three years old.

—Mark W. Ray, cashier and assistant manager for the Walther-Robertson Drug Company, was married to Miss Nanna Gueretta Scott on June 26. Mrs. Ray was a popular young school teacher of Allegheny. They are now at home in their recently-erected residence on Orchard Terrace, Mt. Troy.

—The Druggists' Sundry Company, of Pittsburg, received a charter on July 11 from the State. The capital

stock is \$10,000. The incorporators are Samuel Levin, B. S. Levin, L. S. Levin, William H. Barnes, Richard Melrzeva and Jacob Horn.

—Adolph Beck, of the South Side, has sold out his stores at Twelfth street and the one on Plus street, to the P. C. Shilling Co. He will take an extended trip and on his return will look around for a suitable location to resume business.

—Kennedy & White have purchased the store of B. P. Welch & Co. at Irwin street and Western avenue, Allegheny. Kennedy was the former manager of this store. Mr. White was formerly with P. Urben & Son.

—The police were notified to request druggists to cease selling a chemical compound of powder and salt petre to small boys. The boys have a habit of spreading it on street car rails to hear it explode.

—Ed. Kretz and wife have returned from a long trip to Canada and the lake ports. He has just completed the renovation of his store, making it one of the most attractive in the Hill district.

—McKee & Deffin, of Soho, were the victims of the heavy rains last week, their store being so completely inundated that the customers sought relief from the rush of the water on the counters.

—Harry Bonner, a drug clerk, was seriously burned about the hands by the explosion of twenty-five pounds of red fire at the pharmacy of E. E. Eggers, 299 East Ohio street, Allegheny.

—L. T. Greenfield has sold out his Duquesne pharmacy to Wm. Plough, who will continue the business. Mr. Greenfield will resume in business as soon as he finds a satisfactory location.

—The Central Drug store of Fifth avenue, Oakland, of which A. M. Sorg has been manager, has been sold to a Mr. Ferguson, of the East End. A. F. Myers will now be in charge.

—Bichloride of mercury tablets caused the death of Maggie Costella. She disobeyed physician's instructions and drank water and a bottle of beer after taking the tablets.

—Len Hewitt, of Hewitt & Jamison, has returned from his vacation trip down the Beaver Valley, fishing. Owing to the recent heavy rains his efforts were not very successful.

—Ernest Styber is the new manager of the Bell pharmacy at Kirkpatrick street and Center avenue. This store was recently acquired by the P. C. Shilling Co.

—Charles Young, of Fifth avenue and Stevenson street, has installed a 100-horse power dynamo and steam plant. He now has the largest retail store in the city.

—A petition in bankruptcy was filed in the United States District Court by John S. Blair, a pharmacist of Erie, Pa. Liabilities, \$5,422; no assets.

—O. M. Waterhouse has just returned from a three years' trip around the world and will assume active management of his stores again.

—W. H. Hogg, formerly with A. G. Huber & Co., of Fifth avenue and Dinwiddie street, has opened a new store at Highland avenue and St. Clair street.

—Scott Wittmer, of Lancaster, Pa., has been placed in charge of Kelly's Diamond Market Pharmacy, at McKeesport, Pa.

—The drug store of Edward Dickson at Lacock and Anderson streets, was recently broken into and robbed of \$21 in cash.

—J. W. Cheswright, manager of Jos. Fleming & Son's store on Market street, has gone on an extended European trip.

—During the absence of Adolph Schmidt in Europe his store will be under the charge of J. H. Stanton, of Sharpsburg, Pa.

—Wm. H. Ogilvie, formerly with Schaefer, of Fifth avenue, is now with the McKenna pharmacy on Market street.

—Miller Cook, who has been conducting two stores in Hazelwood, has sold them out to Jones & Leetone.

—A. J. Kaercher, of the Kaercher Drug Co., leaves Tuesday for a trip to Georgian Bay, Canada.

—Louis Emanuel has been in Williamsport, Pa., holding the examinations for the State Board.

—Henry Plank is now in the employ of James Seeling, of Wylie and Kirkpatrick streets.

CINCINNATI.

Cincinnati, July 21.

—C. E. Chapin, a well known salesman in the cigar department of the Stein-Vogeler Drug Co., is reported as missing, and it is thought he has fled from the city. It is rumored that he was short in his accounts with the firm and deserted to escape arrest. Mr. Chapin is a married man and his wife is heartbroken over his desertion. He is the father of an interesting child and his friends cannot explain his action, as he has influential and wealthy relatives who are willing to see him through any difficulty.

—Comparing the last Cincinnati directory with the directory of 1895, it shows a decrease in the number of drug stores in this city. In 1895 there were 202 stores against 190 in 1900. During the five years very nearly 50 per cent. of the stores have changed proprietors. During the same five years 33 druggists voluntarily gave up the practice of pharmacy for other occupations or retired from business. There were ten deaths and twenty-three assignments.

—Carl Plath recently received a letter from his brother Otto, who formerly conducted the drug store at 8th and State avenue before Carl, from Phoenix, Arizona, stating he had received the position as physician for a wealthy mining corporation at a salary of \$8,000 a year. Mr. Plath's many friends among the local druggists and physicians will be pleased to read of his success.

—Louis Roessler is having his troubles all at one time. A few weeks ago he was held up by robbers in his store (an account of which appeared in the Era) and now he is nursing a very painful burn in his eye. A few evenings ago, while lighting the gas with a wax taper, some of the melted wax accidentally dropped in his eye, causing quite a serious burn.

—J. M. O'Maley, the druggist of Covington, is nursing a broken finger, resulting from playing base ball. Joe was eager to help the Covington druggists in their contests with the Cincinnati druggists, but will have to satisfy himself as a spectator at the next game.

—Wm. Tottleben, the head clerk at Klayer's Pharmacy, has returned from Camp Middletown. Mr. Tottleben is hospital steward for the 1st Regiment Ohio National Guards and served in his official capacity while the regiment was encamped.

—Claude Deem has opened a store at 5th and Smith streets, in the building formerly occupied by Groenland Brothers and later by M. T. Keeshan. It is understood that John Darragh, a former well known druggist, is also interested.

—O. B. Thuma, the popular young druggist of Mount Auburn, was married on Tuesday, July 19, to Miss Helen Doan. Mr. Thuma has a host of friends among the druggists who wish him success and a happy future.

DETROIT.

N. A. R. D. ARRANGEMENTS.

Detroit, July 21.—The committee on entertainment for the coming meeting in Detroit of the N. A. R. D., as appointed by President Seely, of the local association, stands as follows: Fred. A. Cooke, C. F. Mann, Wm. Dupont, J. W. Seely, M. E. Keyes, P. F. Nasmyth, W. H. Burke, Henry Morris and F. J. Todd. These gentlemen have worked hard to arrange a program which will meet with the approbation of the N. A. R. D. delegates, and of their own members. C. F. Mann is secretary of the committee as well as local secretary, and the visitors will find that he has not left many stones unturned for their pleasure and comfort. As now arranged, it is planned to have three sessions of the association on Wednesday, September 12—morning, afternoon and evening. About 9.30 p. m. the meeting will adjourn for a "smoker," probably given at the Fellowcraft club rooms. An entertainment will be given there by the best vaudeville talent obtainable, lunch will be served, and a general good time enjoyed. The thirsty ones will not suffer, even if the night proves unseasonable. The local jobbers and manufacturers will assist the local retailers' asso-

ciation in making this evening one long to be remembered.

On Thursday morning a business session will be held.

After dinner, probably about 1.30 p. m., the visiting gentlemen and the members of the local association, as well as the city jobbers and manufacturers, will become the guests of Parke, Davis & Co., for the rest of the day. A boat will take them to the laboratories of the big firm, where some two or three hours will be spent in inspection of the various departments—an experience well worth the trouble of coming from any part of the United States to enjoy. After the visit to the laboratories, the party will again take the boat for a trip up the river and Lake St. Clair, probably as far as Grand Point. Lunch will be served on the boat and everything done up in the elaborate style for which Parke, Davis & Co. are known from one end of the country to the other.

The visiting ladies will not have a chance to spend a lonely afternoon and evening while their liege lords are enjoying P. D. & Co.'s hospitality, for the wives of the local druggists will provide entertainment for them in the shape of a tally-ho ride about the city and to Belle Isle.

All day Friday, the last day of the meeting, will be given to business sessions. It is understood that it is not the intention of the N. A. R. D. to come to Detroit to be kept busy sightseeing; instead, it wishes to show the druggists what it has been able to do for them so far in its brief existence, and to present its objects and views for the future. It was thought, however, that it would be a disappointment to most of the visiting delegates if they were not given a chance to see something of Detroit and its far-famed river. The "smoker" on Wednesday evening comes after the usual time for quitting business, so that really the only time taken up for entertainment is that of Thursday afternoon and evening. The committee are sure that every visitor, officers of the N. A. R. D. included, will not begrudge the time spent with P. D. & Co.

Railroad rates will be on the usual certificate plan—to be countersigned by the officials of the railroads and of the N. A. R. D. The overtime allowed by such arrangement—3 days—will give those who wish to take in some of the many river trips from Detroit ample opportunity to do so.

As soon as the N. A. R. D. have the program for the session arranged, the local association will print it, together with the pleasure program as planned above. Anyone wishing further information on the subject will do well to write to Local Secretary C. F. Mann about it. He will very cheerfully answer all questions.

Michigan Doctors Guests of Nelson, Baker & Co.

The Michigan State Medical Society and the Upper Peninsula Medical Society held their annual meetings at Mackinac this year, the latter convening July 10 and the former July 11 and 12. On the last-named day the members of both associations by invitation became the guests of Nelson, Baker & Co., manufacturing chemists, Detroit, for a boat ride through the Les Cheneaux Islands, stopping at the Les Cheneaux Club for dinner. The excursion was most enjoyable, arrangements having been made for members to hold meetings of the different sections in the cottages on the island. Two hundred and eighty-five physicians and their wives were present at the dinner provided by the Detroit firm.

NOTES.

—M. J. Hollister, druggist at the corner of Lincoln and Kirby avenues, Detroit, has sold his stock and fixtures to Burt Douglass, for the sum of \$4,000. Mr. Douglass has been for some time the manager at the store of Henry M. Morris, corner 14th and Grand River avenue, and is a very popular young man. He has a host of friends who expect to see him make a great success of his new venture. Mr. Morris has engaged W. Dunlay, formerly clerk for druggist John Harvey, to take Mr. Douglass' former position.

—Farrand, Williams & Clark have recently made quite a change in the appearance of their city salesroom by replacing the old style square show cases with the very

latest thing in "double mansard" cases. The new cases not only show up the goods to much better advantage, but make much less work for the salesmen.

—F. M. Mosher, traveler for Farrand, Williams & Clark, Detroit, is spending his three weeks' vacation with his mother at Auburn, N. Y. D. A. Harrison, of the same firm, will spend his vacation at Northport Point, on Traverse Bay.

—Druggist C. E. Bird, at the corner of Warren and 14th avenues, Detroit, has been appointed postal clerk in charge of substation C. Mr. Bird will conduct his post office business in his own store.

—Chas. W. Hill, chief of the city department, Michigan Drug Co., will spend his vacation fishing. He will go North, towards the Soo, where he expects to make some extraordinary catches.

—A. S. Brooks, of the Michigan Drug Co., Detroit, has returned from a three months' trip to Europe. Mr. Brooks visited Ober-Ammergau and witnessed the Passion Play.

—E. J. Bennett, of Ann Arbor, has taken a clerkship with druggist L. A. Seltzer.

CHICAGO.

—The fourth annual picnic of the city drug buyers will be held at Neher's Grove, in Lyons, Ill., on Saturday, August 4. Among the features of the entertainment will be a base ball game between the Robert Stevenson Company nine and the Morrisson, Plummer & Company nine.

—The following sub-postal stations were established this week: No. 126 at 420 East Irving Park Boulevard, W. H. Stoffregan in charge, and No. 127 at 359 Roscoe street, Frederick O. Schmidt in charge.

—Fred. F. Behrens has bought the interest of his brother in the store of Behrens Brothers. Mr. Behrens will assume personal charge of the store.

—James Stevenson, of Robert Stevenson & Co., spent a few days in New York last week.

—Weld & Hall, of Elgin, Ill., had a small fire on July 13. The damage was slight.

THE NORTHWEST.

Impure Linseed Oil.

St. Paul, Minn., July 20.—Chemist J. A. Hummel, of the State Dairy and Food Commission, has just made an analysis of a number of samples of linseed oils obtained by Inspector McConnell recently in Mankato and the vicinity. Many manufacturers of linseed oils have fallen into the habit of adulterating their "pure" linseed oils with kerosene, gasoline and other mineral oils which is against the State law. As a result of Mr. Hummel's analysis the commission will begin prosecution against sellers of impure linseed oils. Of nine samples recently tested seven were impure, containing from 5 to 7 per cent. mineral oil. All of the impure samples were taken from boiled linseed oil manufactured by the Holland Linseed Oil Company, of Chicago.

NOTES.

—J. A. Watson, who for years traveled in Montana and Washington for the wholesale drug house of Noyes Bros. & Cutler, and who for the last two years has been a member of the firm of Watson & Gregory, at Spokane, Wash., is now on his wedding tour visiting friends in this section.

—Successions: Hinckley Drug Co., Hinckley, Minn., by A. Brownlee; Doughty & McClintock, Cedar Rapids, Neb., by J. H. McClintock; Mrs. A. M. Hoff, Zumbrota, Minn., by O. E. Hoff; Watson & Gregory, Spokane, Wash., by Watson & Murgitroyd.

—E. F. Scott, the senior member of the firm of Scott & Fry, druggists of Chamberlain, S. D., and one of the pioneer firms of that city, has purchased the interests of his partner and will hereafter have sole control and management of the business.

—R. F. C. Ittis, who, sometime ago, lost his drug stock at Wadena, Minn., by fire, has gone to Dickinson, N. D., to work in J. J. Freeman's pharmacy.

—C. H. Babcock, who was down from Walhalla, N. D.,

this week, has bought Ray Humiston's branch store at Ellsworth and taken possession.

—Abbott & Shelby, pioneer druggists of Arlington, S. D., have sold to Ayr's Finstad, formerly of Hedland.

—H. J. Jackson, proprietor of the Pioneer Drug Store, Pendleton, Ore., has sold.

—L. P. Owen, of L. P. Owen & Co., Marion, Ia., has given a bill of sale.

—Dr. E. M. Johnson, of Cloquet, Minn., visited this city early this week.

—Blakeley & Houghton, The Dalles, Ore., have dissolved.

—A. J. Schilling, has started at Raymond, Minn.

—M. F. Setters, Harrington, Wash., has sold.

ST. LOUIS.

St. Louis, July 21.

—A prominent local quartet of fishermen, who are reputed to be better pharmacists than they are disciples of Isaac Walton, is composed of Louis Schurk, Theo. F. Hagenow, L. A. Seltz and Dr. O. C. Claus. The utmost harmony and cooperation has hitherto existed between these gentlemen, but, if reports be true, the seeds of jealousy and discord have already been sown by the Evil One in their midst. Mr. Schurk, to be brief, has openly accused the other members of appropriating some of his oldest and best fish stories and to have told them, in the presence of witnesses, as their own individual experiences. This is something which Mr. Schurk keenly resents. Those stories, he says, are his by priority of use. They have come to be recognized by the trade generally as his peculiar property. If they are told exactly in his words, it is a plain case of purloining, he declares. On the other hand, should his confederates be simply changing the well known tales just sufficiently to adapt them to their own use, Mr. Schurk avers that it is a straight case of infringement. In either case he believes he can obtain full redress by recourse to the courts.

—A rumor is being persistently circulated to the effect that there will be a new wholesale drug house started in St. Louis in the near future, but nothing of an authentic or definite nature was secured after an exhaustive inquiry instituted by your correspondent. Nearly everybody in the trade has heard such a report the past week or so, but no names can be learned. One statement that is frequently made is that the capital will be furnished entirely by parties outside the drug trade. Somebody heard that the capital stock would be \$500,000. About all that can be stated at the present writing is that it may be simply the evanescent rumor which has been agitating the trade here each year for the past decade, materialized in new form with rather less than the usual detail, or on the other hand it may be straight goods.

—C. F. G. Meyer, president of the Meyer Bros. Drug Company, has gone to Manitou Springs, Colo., with Mrs. Meyer, for a short period of rest and recreation. Carl F. G. Meyer and bride have returned from their wedding trip. J. W. Estes, of the sales department of the M. B. D. Co., is vacating among the large Eastern cities. Mr. Goodlander, who travels New Mexico and Arizona, has returned from a visit to his old home in Pennsylvania. Henry Boardman, manager of the paint department, has got back from a triumphant fishing trip down on the Big Piny. Emil Kleckers is on a river trip to St. Paul. Tony Farrell, the sundry man, is off enjoying himself, and Frank Amler is going to set sail for Michigan Monday. If anybody has been omitted in this catalogue, apologies are tendered.

—Any St. Louis pharmacist who wishes to employ a young man with a fine sense of discrimination should speedily answer a want ad. which appeared in this morning's Globe-Democrat. It reads:—"Intelligent young German, 20 years, wishes to learn drug or grocery business." The employment bureau of the St. Louis Drug Clerks' Society would do well to add his name to their list at once. By addressing X 121, Globe-Democrat, the genius who is not particular whether he scoops butter or rolls pills will doubtless hasten to make himself known. Come to think of it, can it be possible that the noble

profession of the pharmacist has become so mixed up with commercialism that the public does not discriminate between it and the grocery or any other "trade?"

—Druggist E. J. Koeberlin, who recently sold his drug store, corner of Grand and Franklin avenues, to Dr. Bartmer, went to Colorado a couple of weeks ago. Word has just been received in the trade here, to the effect that he has been seized with a severe attack of pneumonia and is dangerously ill.

—Harry Servson is now covering the trade in the southern portion of the city in place of F. L. Richt, who, as reported in the Era, bought the Raymond pharmacy at Sarah street and the suburban tracks.

—On account of the renewal of the street railway strike and boycott, the annual meeting of the St. Louis Apothecaries' Association, which had been set for July 19, has again been postponed.

—The Mountain City Drug Co.'s store was burned, with a reported loss of \$8,000 in the disastrous fire at Prescott, Ariz., last Saturday morning.

—R. L. Mueller has bought the drug store of C. F. W. Bade, at 2,134 Gravois avenue. Mr. Mueller is a well known local drug clerk.

—Robert Huhn, clerk for F. E. Whitcomb, Garrison and Washington avenues, has returned from his vacation.

—Dr. H. M. Whelpley attended the annual meeting of the Illinois Pharmaceutical Association at Chicago.

—William Frese, head clerk for L. A. Seitz, has returned from his vacation.

—W. B. Powell will open a new drug store at Excello, Mo.

HENRY H. WINKELMANN, a brother of J. H. Winkelmänn, of the Winkelmänn & Brown Drug Company, Hopkins Place, Baltimore, and employed by that corporation during the past five years, died suddenly on Wednesday night, July 18, from a stroke of apoplexy superinduced by heat. When found he had been dead some hours. He was fifty-three years old and a widower, residing at 1118 West Lafayette avenue.

DR. PAUL E. KLEMM died at Milwaukee, June 13. For a number of years he was a druggist in the National Home at Milwaukee, Wis., later, and after studying medicine, becoming assistant surgeon in the same institution. He was twenty-eight years old.

DR. EDWARD B. KING, proprietor of a drug store at Green Bay, Wis., for many years, died June 20. He was a well known G. A. R. man and was one of the first to enlist from his section of country in 1861.

E. C. W. KOSSKEE, a clerk in the employ of J. C. Huber & Co., druggists of Fond du Lac, Wis., was killed in a railroad accident at DePere, June 24. He was a graduate of the School of Pharmacy, Wisconsin University.

Castoria.

The following is a sample of Castoria newspaper advertising:

IMPORTANT TO MOTHERS.

The manufacturers of Castoria have been compelled to spend hundreds of thousands of dollars to familiarize the public with the signature of Chas. H. Fletcher. This has been necessitated by reason of pirates counterfeiting the Castoria trade mark. This counterfeiting is a crime not only against the proprietors of Castoria, but against the growing generation. All persons should be careful to see that Castoria bears the signature of Chas. H. Fletcher. If they would guard the health of their children. Parents and mothers in particular ought to carefully examine the Castoria advertisements which have been appearing in this paper and to remember that the wrapper of every bottle of genuine Castoria bears the fac-simile signature of Chas. H. Fletcher, under whose supervision it has been manufactured continuously for over thirty years.—Pharm. Bulletin.

ILLINOIS PHARMACEUTICAL ASSOCIATION.

Chicago, July 21.—The twenty-first annual meeting of the Illinois Pharmaceutical Association was held this week at the Chicago Beach Hotel. The place chosen for the sessions was an ideal one and the committee was congratulated on all sides for the wisdom of its choice.

The first session opened on Tuesday morning, July 17. The address of welcome was given by G. P. Engelhard. The speaker dwelt upon the various phases of the pharmaceutical situation, reviewed the work done by the national associations, pointed out places where present conditions might be made better by judicious and organized effort, and closed with an earnest appeal to all druggists to aid the work of organization and to help their several organizations in their efforts to bring about the repeal of the tax on proprietary medicines.

The address of welcome was responded to briefly but happily by Hon. J. B. Mount, of Joliet, after whom came President Fred. M. Schmidt, of the association, with the president's annual address.

President Schmidt touched upon the topic now uppermost in esteem among druggists—that of organization. He insisted that every trade or business or profession which makes a success is organized in some efficient way. Organization is the battle cry and the necessary path to success lies that way. He urged an active quest for new members for the several associations of retail druggists. He complimented the N. A. R. D. for its work and urged all druggists to join in supporting that as well as the State organization. The revision of the Pharmacopœia was briefly mentioned, and a short history of recent legislation in the pharmaceutical world was given. He urged all druggists to support the Board of Pharmacy in enforcing the pharmacy law, for therein lies the druggists' chief protection against the charlatans. Without the law the druggist's hold on his business would be slim indeed. The speaker closed by thanking all the members for the honor done him and for the cordial support he had received.

Secretary R. N. Dodds, of Springfield, read his report of the doings of the year just past, while Treasurer George C. Bartells, of Camp Point, presented his annual account of the moneys received and paid out and of the cash on hand. He suggested the feasibility of investing the funds of the association in some safe interest-bearing securities, and asked the views of the association on this point.

The reading of the Executive Committee's report, published in the last annual report of the association, was dispensed with and the report approved, and Walter H. Gale, the local secretary, amid much applause, described the plans of the Entertainment Committee for the amusement of the guests during their stay.

The address of the president was referred to a committee of three, and the reports of the secretary and treasurer to a similar committee.

On motion of John I. Straw the consideration of the proposed changes in the constitution and by-laws was deferred until the afternoon session.

The afternoon session was taken up with the reports of various committees and some lively forensic scenes. Albert E. Ebert read the report of the Committee on United States Pharmacopœia, giving an outline of what was done at the convention. L. C. Deck, of Girard, read an able paper as the report of the Committee on Trade Interests, and H. Swannell, as chairman of the Committee on Board of Pharmacy Records, reported that the proceedings, accounts and records of the board for the past year had been thoroughly gone into and found to be correct in every particular.

W. B. Day reported on behalf of the Committee on Apprenticeship and Education. The report of the Committee on Deceased Members was read by R. N. Dodds, twelve members having died during the year.

Hon. W. A. Dyche, president of the State Board of Pharmacy, gave a brief account of the action and policy of the board during the year, described the more rigid system of examination and preliminary requirements, and appealed to all druggists to aid in the support and en-

forcement of the law. Louis K. Waldron next introduced the following resolution:

"Resolved, That all names of all persons on the roll of membership of this association not registered or assistant pharmacists in Illinois, be dropped, subject to reinstatement at the pleasure of the association as provided in the constitution."

This resolution was strongly opposed by C. N. Hallberg, who declared it was aimed at him. He said it was out of order and unconstitutional thus summarily to drop the names of members. After much heated discussion the motion for the adoption of the resolution prevailed. On motion of Mr. Straw the proposed amendments to the constitution and by-laws were referred to the Executive Committee for consideration and report next year.

Thomas Lord, of Lord, Owen & Company, addressed the members briefly and very sensibly upon the need of a better organization and understanding in all branches of the trade.

Bruno Batt, in a vigorous speech, started the tide of financial assistance toward the N. A. R. D. He himself subscribed \$5, W. A. Dyche, \$50, and other members in varying amounts. A committee was appointed to receive the subscriptions and a brief recess was taken.

Messrs. Straw, Schuh, Keeling, Loehr and Sohrbeck were appointed a committee to nominate officers for the ensuing year.

During the third session Mr. Wooten gave an excellent address upon the work of the N. A. R. D. Mr. Holliday, of the National Executive Committee, made an able address and was applauded to the echo.

In the afternoon Mr. Swannell read a paper on "The Retail Druggist in the Country," and Mr. Deck read an anonymous paper (excellent nevertheless), entitled "Give the People What They Want." Henry Biroth read the report of the delegation to the A. Ph. A. meetings.

The committees on the president's address and the reports of the secretary and treasurer were heard. All agreed with the reports and address and the recommendations of each were concurred in and the reports adopted.

Mr. Hitt read a paper on "Emulsions," after which Mr. Bartells moved the adoption of resolutions thanking the press, the wholesalers, the local druggists and all who contributed to the good times all were about to begin having.

Mr. Ebert read an interesting communication from the Marine Hospital service, written by a steward, Charles C. Carlton. The following resolution was adopted:

Resolved, That a change in the title of senior, junior and assistant pharmacist in the United States Marine Hospital service should be made and the pay increased to \$1,200, \$800 and \$720 per annum; and that all associations should lay the matter before the proper congressmen with a view to better recognition of the profession in the Army and Navy.

The report of the secretary on vote of new members of the Illinois Pharmaceutical Association for nominees on State Board of Pharmacy and Advisory Committee, Department of Pharmacy, University of Illinois, was read and the following three gentlemen were by unanimous choice (being the three highest on the list) nominated as the ones from whom the Governor will be requested to make a selection to fill the annual vacancy in the board: Messrs. N. Gray Bartlett, Chicago; A. A. Culver, Danville, and T. H. Patterson, Chicago. The following were nominated for selection on the Advisory Committee of the State University School of Pharmacy: Messrs. H. C. Porter, Rockford; Henry Biroth, Chicago, and G. M. Bennett, of Urbana.

The following officers were elected for the ensuing year by a majority of only one vote over a ticket headed by W. K. Forsyth: President, Walter H. Gale; first vice-president, Henry Swannell; second vice-president, J. V. Moss; third vice-president, Mr. Thomas; secretary, R. N. Dodds; treasurer, George C. Bartells; Executive Committee, Messrs. Hottinger, F. M. Schmidt, Oglesby, Van Nice, Batt, Waldron, Straw, Wright, Keeling, Sohrbeck, Bradford, Culver, H. H. Green, Lueders, Schmiedescamp, Deck, Dodd, Milner, Purdon, Carruthers, Baeder and Metzger.

The entertainment feature was very fine. The evening at Sans Souci Park was enjoyed by all, but the cap sheaf of the whole matter was the day on the lake aboard the steamer Iowa. Here truly joy was unconfined and all went merry as a marriage bell.

ILLINOIS DRUGGISTS SPEAK PLAINLY.

At a meeting of the Northern Illinois Druggists' Association held in Chicago July 16, the following resolutions were adopted:

RESOLUTION A.

Resolved, that the practice pursued by some jobbing houses of supplying proprietaries and other goods belonging strictly to the drug business to wholesale grocers, wholesale dry goods houses and other dealers who will, in turn, supply these goods to department stores and aggressive cutters is hereby condemned.

Resolved, that we denounce the practice common to some drug jobbers of supplying proprietary goods to department stores and other aggressive cutters. This practice is not only highly detrimental to our financial interests, but is in direct violation of that spirit of mutual helpfulness which ought to exist and which generally does exist between dealers and their patrons.

Resolved, that no excuse exists for the practice by some jobbers of selling drugs to consumers. We believe that the wholesale trade should confine its sales exclusively to retail druggists and to manufacturers for manufacturing purposes. The practice of selling to manufacturers goods which they cannot possibly use in their particular line is detrimental to our interests and the continuation of this hurtful practice will be regarded a wilful disregard of the retailer's rights.

RESOLUTION B.

Resolved, that the sales by proprietary manufacturers of their preparations to department stores and aggressive cutters is opposed to the interests both of the jobbing and the retail drug trades, and must be discontinued. The National Association of Retail Druggists has adopted the correct policy of working to make the drug business profitable to all branches of trade, and the practice here complained of makes the operation of these plans impossible.

RESOLUTION C.

Resolved, that the practice which some proprietary manufacturers and drug jobbers employ of supplying goods to mail-order houses, which houses are, without exception, aggressive cutters is hereby denounced. The fact that advertised proprietaries are used by these houses to create a demand for other preparations which are sold in competition with them by means of glaring advertisements recommending the latter as possessing infinitely greater value, and the further fact that this sort of competition impoverishes the druggists of the country communities, ought to deter manufacturers and jobbers from the practice of supplying goods to mail-order houses. The interests of all branches of the trade demand that drugs, medicines and such articles as properly belong to the drug business shall be sold to consumers by legitimate retail druggists exclusively, and any system which takes out of the hands of the retail drug trade the opportunity for supplying these goods is opposed alike to the best interests of manufacturers, jobbers and retailers.

The Northern Illinois Druggists Association is composed of the druggists of the following counties: Lake, McHenry, Boone, Winnebago, Stephenson, Joe Daviess, Carroll, Ogle, DeKalb, Will, Kendall, Grundy, LaSalle, Whiteside, Rock Island, Henry, Bureau and Cook outside of Chicago.

The following officers were elected: H. A. Stillman, President, Joliet; H. J. Baumann, Secretary, Dundee; Wm. F. Jungkuntz, Treasurer, Freeport.

VIRGINIA ASSOCIATION.

The Virginia Pharmaceutical Association held its annual convention at Norfolk, July 18 and 19. President Eley, of Suffolk, read his annual address, which was followed by an address by Simon N. Jones, of Louisville, Ky., on the "Object and Work of the National Association of Retail Druggists." The discussion over the question whether the Virginia Pharmaceutical Association should remain in the national organization consumed a great deal of time and even then was not definitely settled. After nearly every member present had spoken, the whole matter was referred for decision to the president and secretary of the association. Until this question shall have been decided there will be no appointment of delegates to the N. A. R. D. The secretary reported there were 155 names on the roll of membership. Two members had died during the past year. The treasurer reported a cash balance of \$140 on hand. Messrs. Fleet, Miller and Mankin were appointed members of the Committee on Revision of the Pharmacopoeia, and Messrs. Craigbill, Church and Goldsborough were appointed a committee to devise a plan for a druggists' exhibition to be given at

ECONOMICAL DRUG CO., CHICAGO.

the meeting of the Virginia Medical Society in October. The following officers were elected: W. R. Martin, of Norfolk, president; E. L. Robey, of Falls Church, first vice-president; J. L. Hogan, of Danville, second vice-president; C. B. Fleet, of Lynchburg, secretary, and C. H. Lumsden, of Lynchburg, treasurer. Executive Committee—J. L. Avis, of Harrisonburg, chairman; G. T. Mankin, of Falls Church, and C. C. Leadbeater, of Alexandria. The names from which the Governor will select a member of the Board of Pharmacy are C. P. Kerfoot, Martinsville; E. R. Beckwith, Petersburg; G. T. Mankin, Falls Church; R. W. Booker, Lynchburg, and Polk Miller, Richmond. After the installation of officers the exercises concluded with a banquet at the Monticello Hotel.

NORTH CAROLINA PHARMACISTS.

The North Carolina Pharmaceutical Association held its twenty-first annual meeting at Wilmington, July 18 and 19. The principal features of the sessions were the discussions over the violations of the pharmacy law and an address by Simon N. Jones, of Louisville, Ky., president of the N. A. R. D. Fifteen new members were elected. The following officers were chosen: President, H. H. Jordan, Charlotte; vice-presidents, J. H. Harden, Wilmington; H. T. Hicks, Raleigh; W. A. Leslie, Morganton; secretary, P. W. Vaughan, Durham; treasurer, A. J. Cook, Fayetteville; Executive Committee, G. R. Pilkington, Pittsboro; G. R. Wooten, Hickory; J. Hicks Bunting, Wilmington; P. W. Vaughan, Durham. On Board of Pharmacy (five years term), William Simpson, Raleigh. Winston-Salem was chosen as the place of next meeting, the exact date of the convention to be determined by the president and secretary and the secretary of the Winston Druggists' Association. At the conclusion of the sessions the visiting druggists became the guests of the local association at Seashore Hotel, Wrightsville Beach, where a banquet was served.

The School of Pharmacy, Wisconsin University, conferred the degree of Ph. G. on the following members of the graduating class at its commencement exercises held the latter part of last month: Frederick Rudolph Dexheimer, Fort Atkinson; Frank Wilber Eighny, McFarland; Harry Klueter, Madison; Herman Koop, Chippewa Falls; George Alvin Shields, Mazomania; Edwin Andrew Showalter, Milwaukee; Richard Jacques Strauss, Appleton; Albert Nicholas Tandvig, Madison; Caroline Cornell Thomas, Prairie du Chien; John Alexander Thomas, Prairie du Chien; Albert Henry Woltersdorf, Columbus.

The Lightning Medicine Co., of Muscatine, Iowa, manufacturers of Mull's Lightning Pain Killer and Mull's Pioneer Cures, are offering free a unique window display—An Old Pioneer in four colors, half life size, papier mache. The Old Man with his display easel and Latest Bulletin is a catchy thing; appears to be a business puller and therefore a most desirable attraction. Every live druggist who gives his attention to the cut in the display pages of this issue of the Era will promptly appreciate its effectiveness as a window display and will doubtless write for one.

Business Record.

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS DIRECTORY can correct their copies from the record, and the term "D. D. List," used here, refers to this directory.

We exercise due care to insure the authenticity of items here recorded, but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, THE PHARMACEUTICAL ERA,
New York.

CALIFORNIA.—Ione.—Scott & Amick, succeeded by E. G. Amick.
CONNECTICUT.—Hartford.—Duchette & Wilson, 12 New Britain avenue, succeeded by J. C. Duchette.
COLORADO.—Denver.—White & McMahon, 2101 Larimer, succeeded by L. L. McMahon.
DISTRICT OF COLUMBIA.—Washington.—G. C. Havenner, S. E. corner 14th street and R. I. avenue, N. W., sold to Charles B. Chamberlin.
FLORIDA.—Jacksonville.—A. P. Fries Drug Co., 129 E. Bay street, sold to W. O. Woltz.
GEORGIA.—Augusta.—George P. King, Harper and 15th streets, sold to Jones & Pilcher.
INDIANA.—Fort Wayne.—Schroeder Bros., 97 Broadway, sold to H. Hohnholz & Co.
Garrett.—Will & Milliken, succeeded by I. B. Milliken.
IOWA.—Atlantic.—F. Robbins, sold to J. S. Goss.
Carnarvon.—Carl Kinsey, sold to C. M. Wing.
East Peru.—R. R. Rogers & Co., succeeded by R. R. Rogers.
Hopkinton.—Livingston & Williamson, succeeded by H. Livingston.
Keokuk.—Ellsworth & Cilley, 700 Main street, succeeded by O. W. Ellsworth & Co.
Ottumwa.—Taylor & Co., 101 E. Main street, sold to W. D. Elliot.
KANSAS.—Minneapolis.—J. W. Covert, sold to W. T. Campbell.
KENTUCKY.—Fulton.—Kellam & Reid, succeeded by R. A. Kellam.
LOUISIANA.—Shreveport.—George's Drug Store, corner Texas and Edwards streets, style now, Beard & George.
MASSACHUSETTS.—Haverhill.—E. A. Mitchell, 23rd and Main, assigned.
Lowell.—C. F. Blanchard, 418 Middlesex, sold to Falls & Burkinshaw.
Lynn.—Walton & Holyoke, 339 Summer, assigned.
MICHIGAN.—Coleman.—Mrs. E. E. Anderson, sold to Charles G. Putnam.
Ithaca.—Robinson & Watson, succeeded by Parrish & Watson.
Mayville.—A. Veitch, sold to Sherk & Son.
MISSOURI.—Keytesville.—Sneed-Richardson Drug Co., now, Richardson Drug Co.
Shelbina.—W. H. Gregory, of the firm of Dye & Gregory, deceased.
MONTANA.—Fort Benton.—T. B. Shoebotham, sold to D. G. Lockwood.
NEBRASKA.—Cedar Rapids.—Doughty & McClintock, succeeded by J. H. McClintock.
Silver Creek.—D. B. Young, sold to S. M. Torrance.
NEW YORK.—Glens Falls.—Amos & Baldwin, sold to DeCamp & Quinn.
NORTH CAROLINA.—Elkin.—Ring & Mosely, succeeded by W. H. Woods & Co.
OHIO.—Cincinnati.—H. W. Stegemiller, S. W. corner Freeman avenue and Clark street, assigned.
OREGON.—The Dalles.—Blakeley & Houghton, succeeded by G. C. Blakeley.
PENNSYLVANIA.—Norristown.—W. A. Costen, 53 East Main, sold retail business to A. N. Hapele and moved manufacturing business to Pocomoke City, Md.
Pittsburg.—F. H. Eggers, of the firm of F. H. Eggers & Son, 11 Smithfield street, deceased.
SOUTH CAROLINA.—Prosperity.—Dr. L. G. Corbett, sold to A. H. Kohn.
Union.—Carolina Drug Co., sold to F. M. & C. A. Zemp.
TEXAS.—Killeen.—W. H. Nixon, sold to Hicks & Co.
WASHINGTON.—Harrington.—Setters & Hughes, succeeded by M. F. Setters.
WISCONSIN.—Belmont.—Garden & Minor, succeeded by O. E. Minor.
Jefferson.—F. O. Ray, sold to Pope & Snyder.

The J. C. Ayer Co., in their advertisement in this issue, suggest that it is quite possible the druggist is not getting all the benefit he might from the millions of dollars they have spent in advertising Ayer's remedies, and offer to assist him in pushing their goods in the attempt to wake up new business by all proper means at their command.

PATENTS

Trade-Marks, Designs, Etc.

PATENTS.

Issued July 10, 1900.

653,396.—George W. Banker, deceased; G. W. Peck, Roselle, N. J., executor. Crate for tilting demijohns.
653,417.—Thomas H. W. Idris and R. H. Griffith, London, Eng. Siphon for aerated liquids.
653,466.—Edward L. and K. K. Bigelow, Everett, Mass. Measuring spoon.

Issued July 17, 1900.

653,678.—Adolf Israel and R. Kothe, Elberfeld, Germany, assignors to Farbenfabriken of Elberfeld Company, of New York. Thio-urea compound and making same.
653,680.—Charles T. Kingzett, London, Eng. Fumigating device.
653,687.—Walter Middleditch, Detroit, Mich. Pill-making machine.
653,842.—Albert J. Brown, Oakland, Cal. Fountain-syringe.
653,866.—Solomon Heiman, Little Falls, N. Y. Pocket-atomizer.
653,956.—James W. C. Hamilton, Liverpool, Eng., assignor of two-thirds to Bergl Australia, Limited, Sydney, New South Wales. Making foods from blood.
653,989.—Samuel Eden, New York, N. Y. Disinfecting-block.
653,998.—Charles B. Hatfield, New York, N. Y. Corn-shield.
654,023.—Emile A. Ruch, Paris, France. Purifying glycerin.
654,056.—Thomas J. Duffy, Boston, assignor to F. E. Smalley, Chelsea, Mass. Bottle attachment.
654,088.—Gustav Bischof, London, Eng. Converting white lead into oil paste.

TRADE-MARKS.

Registered July 10, 1900.

34,873.—Certain Named Toilet Preparations, Howard H. Brush, New York, N. Y. The word "Nanief."
34,874.—Eye Wash, William C. Lehmann, New York, N. Y. The word "Eyetonal."
34,875.—Preparation for Treating the Hair and the Scalp, Augustus F. Duprey, Napa, Cal. The word "Mertol."
34,876.—Phosphorized Elixir of Strychnia Compound, Charles H. Whitman, Omaha, Neb. The word "Ozotone."
34,877.—Certain Named Proprietary Medicines, Martin H. Smith Company, New York, N. Y. The word "Ergoapiol."
34,878.—Medical and Pharmaceutical Preparations for Veterinary Purposes, Robert Groppler, Berlin, Germany. The word "Lysoform."
34,879.—Sticky Fly Paper, Frederick W. Lipps, Baltimore, Md. The word "Flyon," the pictorial representation of a sheet of fly paper with two flies costumed as male and female in the attitude of dancing, a cake walk, and the words "I'm stuck on you."
34,880.—Certain Named Chemical Products and Fertilizers, Wilhelmsburger Chemische Fabrik, Hamburg, Germany. The representation of a hunter holding a wild bull in an erect attitude.
34,881.—Certain Named Chemical Products and Fertilizers, Wilhelmsburger Chemische Fabrik, Hamburg, Germany. The representation of an archer and the initials "G. W."

Registered July 17, 1900.

34,914.—Dentifrice, Charles Wright Chemical Company, Detroit, Mich. The arbitrary word "Dentomyrh."
34,915.—Internal Remedy for Catarrh, Smith Bros., Fresno, Cal. A representation of two photographs, the letters "S. B." and the signature of "Geo. H. Smith."

DESIGNS.

32,947.—Bottle or Similar Article, Richmond E. French, Medina, O. Filed June, 1900. Serial No. 19,778. Term of patent, 14 years. The design for a bottle or similar article.

LABELS.

7,687.—Title: "Cream of Mexican Cactus." (For Complexion Cream). Ed. E. Dismuke, Waco, Texas. Application filed May 28, 1900.

- 7,708.—Title: "Red Jacket Mineral Water." (For Mineral Water). H. W. Knight & Son, Seneca Falls, N. Y. Application filed June 4, 1900.

HOW TO RECOGNIZE SMALLPOX.—"The period of incubation of smallpox—time from exposure to the first symptoms of the disease—is twelve days on the average. It may be longer or shorter. In about three days more the eruptions begin to show as small red specks, and then as pimples or papules, at first on the forehead and wrists, gradually extending over the body so that the eruption becomes general in about twenty-four hours. On the fourth and fifth days of the disease (counting from the first symptoms), the eruption is papular, and the characteristic 'shotty' sensation is obtained by passing the fingers over the skin. During the next twenty-four hours the papules become vesicles, with clear summits. From the sixth to the eighth day these vesicles or watery blisters become yellow, and the eruption has then become pustular, the pustules often presenting a slight depression in the centre, that is, they are 'umbilicated.' The fever having declined when the eruption first appeared, now rises again. Severe pain in the small of the back is somewhat characteristic of smallpox. In modified smallpox or varioloid, the eruption aborts at various stages, or falls to follow a typical course." (Bulletin Maine Board of Health.)

Graphite Stove Polish.

Ceresin	12 parts
Japan wax	10 parts
Oil of turpentine.....	100 parts
Best lampblack	12 parts
Finest levigated graphite.....	10 parts

Melt the ceresin and Japan wax together, remove from the fire, and when half cooled down stir in the lampblack and graphite, previously rubbed up with the oil of turpentine. Stir until the mixture is cold.

STATE OF TRADE.

No Change; Seasonable Business.

New York, July 24.—There is no perceptible increase in the volume of general business during the past week, and prevailing conditions have been of a seasonable character. Fluctuations in prices were comparatively few, but in a number of instances of more than ordinary importance. Quinine has continued strong and prices of this leading commodity are again higher. There was a bark sale in London on the 16th inst. and values of the raw material were further advanced under an active demand, which was said to be chiefly for American account. The advance in bark was immediately followed by a marking up of quotations for quinine, German manufacturers again taking the initiative. The outlook is considered decidedly favorable to still higher prices, mainly on account of the strong statistical position of bark, but the condition of affairs in the far East is not without some influence. In the event of war with China and the consequent sending of large numbers of troops to that country, it is expected that the demand for quinine would be enormous. This, together with the falling off in shipments of bark from Java would undoubtedly materially strengthen the quinine situation. Opium also is stronger and quotations have scored a substantial advance as a result of improved conditions abroad. Cables have been received from Smyrna reporting that market active, excited and higher, with further liberal purchases, presumably for shipment to China. The buying for Chinese account is attributed to a shortage of the Persian crop and a material advance in values to figures considerably in excess of those quoted for the Turkey variety. The London market also was cabled decidedly stronger, and during the period under review spot quotations have been advanced 25¢/35c. per pound, with some holders declining to shade outside figures. Powdered is correspondingly higher and the general outlook is very favorable to further improvement. Another stimulating feature is a material reduction in former conservative estimates of the yield from the current crop, in one instance the reduction being fully 1,000 cases. One of the results of the stronger position of opium was an advance of 10c. per ounce in manufacturers' quotations for morphine, and there are indications that further improvement is probable.

Cables received from London reporting a 50 per cent. advance in the price of bismuth metal has caused a corresponding improvement in values of the various preparations, but manufacturers have not yet completed their new schedule.

Outside of the developments in quinine, opium and bismuth, the market has not presented much in the way of new features, and, as previously noted, a seasonably quiet feeling has prevailed, with transactions mainly in accordance with the light current requirements of consumers. Manufacturers of boric acid have revised their quotations and the corrected figures show a fractionally higher range of both crystals and powdered. Nutgalls are higher owing to an increase in the import cost, and the outlook is considered favorable to an early improvement in values of gallic, pyrogallie and tannic acids. Higher quotations for tin have caused an advance in manufacturers' prices of muriate and other salts of that metal.

Nothing of interest has transpired in the department of essential oils beyond a moderately active movement in seasonable descriptions, lemon moving quite freely, but chiefly on contract orders. Anise and cassia have ruled fairly steady at the figures quoted last week, and primary markets for the latter have been cabled stronger. Among the roots, golden seal and serpentaria have ruled firmer on account of reduced supplies, while senega is easier under free offerings of new crop from producing markets, but some are of opinion that the easier feeling reported in the latter is partly due to manipulation. All China products continue fairly firm, but without much activity.

Only a Fair Week.

Boston, July 21.—The week has been one of only fair amount of trade. The extreme heat of the early part of the week completely upset the community, but this did not help the druggists much, except that it made the trade at the soda fountain large. This branch of the retail drug business more and more plays an important part in trade, as every retailer will admit when questioned.

There appears to be more of a demand for nitrate of soda. Higher quotations abroad are in part responsible for this, although the price here has not changed. Nearly all other chemicals are firm and fairly well sought. There is no special feature among drugs, and the demand is only seasonable. Quinine is stronger, on an advance. Morphine and opium are without feature. Alcohols keep steady on a not over-eager demand for them. Gambler is reported to be firmer, other than which, with perhaps the exception of indigo, there is no interesting feature in the line of dyestuffs. Hops are considerably stronger. Waxes are inquired for only in moderate quantities.

Quite Up to the Mark.

Philadelphia, July 21.—Business men have been universally complaining of nerve-fag this week owing to

the appalling height of the thermometer, and have gone about their work perfunctorily, declining to answer questions. One wholesale merchant, however, did state languidly that they had to keep open late one night on account of rush orders, and he added that he hoped it would not soon happen again in such temperatures. Therefore there is not much interest taken in affairs, even if trade is good, the physical conditions being so demoralizing. The soda water bars are running night and day and there is a swooping demand for syrups, ice cream and patented soda specialties. Quinine is very firm in this market, and, in spite of predictions to the contrary, so is opium. There is an apparent scramble to purchase this latter staple, the bulling reports from first sources more than offsetting the loss of trade possible in China. Druggists and others interested in supplying the Government were pleased to learn of the activity at Uncle Sam's Philadelphia arsenals and navy yards. At one arsenal alone, the Frankford, there have been hurry orders issued for 30,000,000 cartridges, and the probabilities are that this concern will work night and day for some months to come, consuming enormous quantities of acids, alkalies, paraffines, which will be purchased shortly on requisition. Business can be written as quite up to mark for this time of the year and considering the Sheol-like calorific.

Very Good in Baltimore.

Baltimore, July 23.—Business among the jobbing druggists and the manufacturing pharmacists during the past week has been very good. Orders have come in freely and the movement of goods has been large in the aggregate. All the indications are favorable for a continuance of profitable trade. The general tendency is toward higher prices, and as nearly all the Baltimore houses carry large stocks, they are in a position to take advantage of the rise, dividing their gains with customers. The retailers are buying quite freely, and the demand for Summer drinks helps to put them in easy financial circumstances. The retail trade conditions are, in fact, more favorable than they have been for some time past. A fair demand for heavy chemicals prevails and the country store trade is correspondingly good.

Good Prospects for Fall Trade.

Detroit, July 21.—There is but little to say of the drug trade in Detroit during the summer months. A great falling off in business is anticipated—and realized. This year, however, although it is still July, the jobbers are reporting that the fall season has started in unusually brisk, and that some big orders have been taken for holiday goods. Manufacturers are running with almost a full force at work, and say that 1900, so far, is the best year they have ever known.

Trade Quiet in Chicago.

Chicago, July 21.—The demand for staple goods and sundries has been fair this week. Seasonable goods have sold well, as the weather has been pretty warm. Retailers are complaining of a poor trade. Manufacturers are in some measure resting on the laurels gathered earlier in the year.

The vacation season is on and many employees and others are away at the Summer resorts recuperating. Business is quiet, but not dull and will come up again in proper season.

Perceptible Improvement in the Northwest.

St. Paul and Minneapolis, Minn., July 20.—Since the last review of conditions here they have improved perceptibly. Every retailer questioned has a good word to offer. One of them in St. Paul says his trade has increased 30 per cent. in the past three months. Collections, particularly the out-of-town ones, are much better. Prescriptions are more active again, and every branch of the trade is so well sustained that all the druggists are feeling very cheerful. The jobbers likewise continue reaping substantial harvests. The chief wholesale house here reports that last month was \$10,000 ahead of June, 1899, and the year up to date reveals a gain of \$150,000 over the corresponding period of last year, which, as has so frequently been stated, was the "banner" year. Prices of Western products have undergone no change this week.

The Usual July Manner.

St. Louis, July 21.—The wholesale drug houses are very busy, judging from appearances. It would be more correct to say that everybody left in the houses is very busy. Everybody else is on their vacation. Many travelers are off the road temporarily for similar reasons, and business is moving along in just about the usual July manner. Local trade is not suffering as much as formerly from the strike and boycott, although the latter still holds sway, particularly in the southern and northern portions of the city.

MARKET REPORT.

NEW YORK MARKET.

New York, July 24.—As usual at this season of the year the wants of the consuming trade are light and business continues limited to actual requirements, but the tone of the general market remains steady, and notwithstanding the prevailing midsummer dullness, there is an entire absence of discouraging features. Very few changes in prices have occurred during the past week, but they were chiefly among the leading commodities and of more or less importance.

OPIUM.—Owing to further improvement in the condition of affairs in primary markets, additional strength has been developed and jobbers have advanced quotations to \$3.50@3.60 for 9 per cent. and \$3.60@3.70 for 11 per cent. Active and excited markets have been cabled from Smyrna and Constantinople, and the outlook here is considered favorable to still firmer conditions, owing to increased demand for shipments to China.

POWDERED OPIUM.—Values are higher in sympathy with the gum, and the market is firm with jobbing quotations showing a further advance to \$4.00@4.80 for 13 per cent. and \$5.30@5.50 for 16 per cent., according to size of order.

MORPHINE.—Moderate quantities have continued to find a steady consuming outlet and the higher market for opium has stimulated a stronger feeling among holders. Manufacturers have advanced quotations 10c. per oz. and the revised jobbing range is \$2.05@2.15 in ounces and \$2.30@2.40 in eighths, according to brand.

QUININE.—A further advance in values of bark resulted in manufacturers again marking up their quotations 2c. per oz., and jobbers' prices are correspondingly higher. The revised figures are 35¢@36c. for bulk in 100-oz. tins, 37¢@38c. in 50-oz. tins and 42¢@43c. in ounce vials, according to brand.

BORACIC ACID.—Manufacturers' prices are fractionally higher and the revised jobbing range is 11¼¢@11½¢ for crystals in cases and 15¢@18c. for broken lots; 11¼¢@12c. for powdered in cases and 16¢@20c. for broken lots.

GRAINS OF PARADISE.—The market is slightly better supplied and the tone is easier, but jobbing quotations remain unchanged at 45¢@50c.

BUCHU LEAVES.—Short are firm with the tendency of values upward, but jobbing parcels are still available to a limited extent at prices within the old range of 25¢@30c.

NUTGALLS.—Primary markets are cabled higher and spot prices for round lots show an advance, but in a jobbing way supplies are yet obtainable at 30¢@35c. for whole, 32¢@37c. for bruised and 35¢@40c. for powdered.

TIN CRYSTALS.—Manufacturers have advanced quotations 2c. per lb. owing to the increased cost of the metal, but jobbing parcels are available at the old range of 35¢@40c.

MANNA.—Under the influences heretofore noted jobbers have further advanced quotations to 75¢@85c. for large flake, 45¢@50c. for small flake and 40¢@45c. for sorts.

OIL WORMWOOD.—Quotations for jobbing quantities have undergone revision and show a further decline to \$6.75@7.00 for pure and \$5.75@6.00 for ordinary.

SERPENTARIA ROOT.—Jobbers have reduced quotations to 45¢@50c. for whole, 47¢@52c. for ground and 50¢@55c. for powdered.

BISMUTH PREPARATIONS.—There has been a sharp advance in the metal and manufacturers are busy arranging a new schedule of prices for their various products.

—The Territorial Board of Pharmacy of Oklahoma examined thirteen applicants for registration at Guthrie, July 10. The following were successful: Chas. W. Driesbach, Pawnee; Henry W. Harmon, Oklahoma City; Wilson H. Haus, Stillwater; Elisha B. Moore, Violet; Owen A. Panton, Ponca City. Horace A. Sommers, of Carlisle, and Nelson Sturgeon, of Miami, I. T., were granted certificates of registration upon their diplomas from the Pharmacy Department of Oklahoma University. An assistant's certificate was granted to Roscoe L. Martin, of Shawnee, who holds a diploma from the same university. The secretary has been ordered by the board to send letters to merchants in the territory who are selling medicines in violation of the law, calling their attention to that part of the law which requires that all medicinal and pharmaceutical preparations shall be sold only by a registered pharmacist or under his direct supervision. "Perfumes, toilet preparations, medicinal soaps," etc., are held to be included under the term "pharmaceutical preparations." The Governor has reappointed E. E. Howendobler and F. B. Lillie members of the board for the term of three years dating from July 11. The next meeting will be held at Kingfisher, October 9.

THE ERA COURSE IN PHARMACY.

The lectures will hereafter be issued in monthly installments, and the entire work of the Course can be completed within twelve months.

NEW CLASSES FORMED EACH MONTH.

The first installment of lectures will be issued in October, and the remainder at intervals of thirty days thereafter.

Recitations and examinations are conducted by correspondence directly with each regularly matriculated student.

Especially valuable as a preparation for examination by a board of pharmacy, to those who cannot attend a college of pharmacy, and to all desiring to review their former study of the subjects embraced in the curriculum.

TOTAL EXPENSES FOR FULL COURSE, \$10.00.

For fuller particulars see announcement on advertising page 18.

Write for new descriptive Prospectus, now ready.
Address, THE PHARMACEUTICAL ERA.

INDEX TO VOLUME XXIII.

All subscribers who wish the Index to Volume XXIII, from January to June, 1900, are requested to send us a postal card to that effect.

THIS COLLEGE IS AN EXPANSIONIST.

Whatever may be the differences of opinion in a political sense, the Philadelphia College of Pharmacy evidently believes in the policy of expansion, so far as its own individual welfare is concerned. It does not propose that its sphere of usefulness shall be limited by the boundaries of the United States, but sighs for new worlds to conquer and is reaching out. It is on the hunt for students from Cuba, the Philippines, and others of United States possessions where the Spanish language is spoken, and issues its yearly prospectus and announcement in this language. It seems a little strange to read the titles of Professor Remington, who is put down in the prospectus as: "Maestro De Farmacia. Fisico, Decano De La Facultad. Professor De Farmacia Teorica Y Practica, Y Director Del Laboratorio De Farmacia."

We can only commend this progressive and hustling institution for this renewed evidence of its active spirit, but if it is seeking students among non-English speaking people we do not see how it can avoid establishing a chair for the teaching of the English language, or have a double force of lecturers so that the course of instruction may be given entirely in Spanish. If the Cuban or Filipino knows enough English to be able to follow the regular curriculum of the college, we hardly see why a Spanish prospectus should be sent him. If he does not know English he must be taught before the college course could do him any good. This problem, however, is one which we have no doubt the P. C. P. can solve to its own satisfaction.

AFTER THE CHINAMEN.

On July 23d the Appellate Court sustained the Illinois Pharmacy Board in a case against a Chinese laundryman who sold opium. The decision of the court is that: (1) Opium is a drug, and not merchandise, and (2) any place where drugs and medicines are sold is a drug store in the meaning of the law.

This decision is somewhat more important than it looks at first sight. We venture that in most of the large cities the traffic in drugs among the Chinamen is wholly without supervision by the board of pharmacy. Some may believe that so long as Chinamen confine this traffic among themselves it will not make very much differ-

ence what is the result thereof. It is contrary, however, to all principles of law and procedure to make exceptions, and if we are to have a pharmacy law and enforce it, it must be enforced against all classes, whatever their condition of race, sex, color and servitude. If the board of pharmacy, however, especially in large cities like Chicago, New York, San Francisco, attempts to regulate the traffic in opium, especially the smoking opium, among the Chinese, there will be great difficulty and little result. But to be logical and consistent, we do not see how the board can escape its duty. In Illinois, at least, it has the weight of legal decision back of it to render its task somewhat easier.

This Illinois decision is next in importance to that published some time ago in the *Sadler Castoria* case, which readers will remember was to the effect that proprietary medicines can only be sold by registered pharmacists, not in general stores.

THEY DON'T MIX.

We have received a type-written circular which announces that a certain druggist has just purchased a store in a Virginia town. The new owner makes a bid for patronage by dwelling somewhat at length upon the superior stock he carries of the purest of drugs and chemicals. He sets forth the nature of his prescription checking methods, and in other ways attempts to impress upon the recipient of his letter his superior professional ability and his reliability in the matter of dispensing of medicines. We especially liked this letter and read it carefully, way down to the signature, but then were somewhat amazed, and the effect of the preceding was nullified, by a prominent P. S. reading: "We sell patent medicines at cost." This statement incites all manner of conjectures, and is a great temptation to indulge in wordy moralizings, but we refrain. Doubtless some of our readers may be interested in this most unhappy combination of the highest kind of professionalism and the worst variety of trade evils.

THE N. A. R. D.

Only five weeks before the annual meeting of the National Association of Retail Druggists, to be held at Detroit, September 12 to 14. From reports coming to us we believe that an exceptional degree of interest exists regarding this association and the annual meeting, and it is expected that there will be a large and enthusiastic attendance. The druggists of the country generally seem to be expecting that they will be told at Detroit that great progress has been made during the past year, and that the surcease of their sorrow, in a cut rate sense, is near at hand. There is considerable reason for this spirit of optimism, as the proprietors and the jobbers have in large proportion obligated themselves to put into early effect the regulations desired by the N. A. R. D., and many of them have already done so. There will probably be a definite

report on this at the Detroit gathering. At any rate the other two branches of the trade are doing their part, and doing it well, and it seems to be up to the retailer to do his share. It must be remembered that this is a tripartite agreement, and it cannot be made operative without the earnest co-operation of the three several factions. Every affiliated organization should see to it that it be represented at the Detroit meeting by a delegation indicative of its full strength. Each organization is entitled to one delegate for every 100 of its membership, so do not be stingy, but send all you are entitled to.

THE NEW ERA COURSE.

We have been very much gratified by the hearty acceptance given the new announcement of the revised *Era Course* in Pharmacy. The changes made seem to meet with no objection or criticism, but on the contrary have proved to be right in the line of what was most desired. Especially acceptable is the provision whereby a new class is started each month, so that students who do not begin with the first month are not obliged to wait a whole year before entering the class. Matriculation orders are coming in with satisfactory promptness, and the first month's class, which starts in October, will be very much larger than we had any reason to expect. We urge all students who desire to enter upon this work to send in their matriculation orders at once, so that all preparations may be made in the way of the printing of lectures, etc., to carry on the work systematically, without any delay, and to the best advantage of the student. Do not wait, but matriculate now.

THE EARLY DAYS OF PHARMACY.

In this issue is offered the second paper in the series under the title, "The Early Days of Pharmacy." These papers are being prepared with very great care; they are the result of long search of literature bearing upon the subject; they have required much delving into old books in various languages, and because of the great amount of time and labor spent upon them they may be taken as authoritative in their statements, comprehensive in their nature, and filling a want, in the historical sense, which has not heretofore been adequately satisfied. It is no easy task to go way back into the past and trace the evolution of pharmacy, but the writer has done it well, and we are confident that these papers will prove not only very interesting but instructive to the great majority of their readers.

OUR LETTER BOX.

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors.

Please be brief and always sign your name.

FROM ERA COURSE PRIZE WINNERS.

I beg to acknowledge receipt of your communication of the 17th inst. The award is all the more acceptable and agreeable to me because it comes as a surprise. Doubtless most prize winners write in this vein. However, in my case, I can assure you that this award came as a genuine surprise, for I never supposed that I would carry off a prize in physics. If I had captured a prize in chemistry or botany it would have been just as agreeable, but not a surprise, because I have heretofore studied all three sciences, and in the final examinations came out behind in physics. Possibly this former failure proved the proper incentive in the case now before us. I beg to thank you very much for the "Loving Cup." I will write you when I receive it, and will write Captain J. W. Tufts a letter of thanks also. J. M. STANSFIELD.

Braidentown, Fla.

It is with a deep sense of gratitude that I acknowledge the receipt of a copy of "The National Dispensatory," express prepaid, as the second general prize in the junior class of the Era Course in Pharmacy. I would be lacking in the attributes of human nature did I fail to experience a feeling of personal pride over having secured the second general prize, and I would indeed be an ingrate did I fail to convey to you, as well as the donors, my thanks for the physical evidence of such reward. While I never had any thought of competing for a prize, I entered the course with a grim determination to master the studies embraced therein. I studied hard and tried to be honest with myself in the preparation of both recitations and the examinations. Thanking you and also the director for the uniform courtesy extended me during the entire course, I am CHAS. S. LEWIS.

Canon City, Col.

Your letter informing me that I had been awarded first prize in *Materia Medica* received. The Era Course is just the thing for the home study of pharmacy, being easy to understand, and yet so complete as to cover all the important points. I know for myself, because I had been studying different books, such as the pharmacopœia, dispensatory, etc., but I did not seem to progress very fast, while your course helped me so much that I succeeded in passing the Iowa Pharmacy Board examination the first time. I would advise every one who intends to study pharmacy at home to take the Era Course, and feel guaranteed they will not be disappointed in it. I thank you for your congratulations, and wish the Era Course the best success. RALPH R. DYKSTRA.

Orange City, Ia.

I take great pleasure in thanking you for the prize you awarded me in chemistry. It was an entire surprise to me, and so much more my delight. I consider this prize a very great honor, and it has already served as an encouragement to continue my study in pharmacy. I received the prescription scales by express and found them to be a very fine set of Phoenix Scales, which I appreciate very much, and for which I have at once sent a letter of thanks to Whitall, Tatum & Co., New York. Thanks for your congratulations.

LAURA B. HEMENS.

South Lyon, Mich.

It is with great pleasure I acknowledge the receipt of your notice of the result of the award of prizes by the Era Course Director, in which I had the honor of being awarded the fourth general prize in the senior class, a

copy of Lyons' New Synonym Book, donated by Nelson, Baker & Co. The Era Course has been invaluable to me. VINCENT SCHWACKENBURG

Pueblo, Colo.

The copy of Caspari's "Treatise on Pharmacy," donated by Lea Bros. & Co., awarded me as the third general prize in the junior class, I have just received, and it is very much appreciated. Kindly accept my sincere thanks for the book and your congratulatory notification of the award. Accept my best wishes for your future success.

HENRY OSTERMAN.

Seymour, Ind.

I received your letter reporting the result of the Era Course examinations. It gave me pleasure and was a great surprise to me to hear such a good report. I will acknowledge receipt of the medal to you, and also to the donors, William Warner & Co., as soon as I receive it. OTTO LANDWEHR.

Carlstadt, N. J.

Accept my sincere thanks for the prize I was fortunate enough to receive. It arrived Saturday. I am sending acknowledgment of it to the donors, Messrs. Nelson, Baker & Co., to-day. I trust I may be as successful next year. SISTER ANNA DE SALES

St. Joseph's Hospital, Paterson, N. J.

Please accept my thanks for the copy of the Era Formulæ, awarded me as a prize in Pharmaceutical Microscopy in the Era Course. It arrived during my absence from home. THOS. W. MURPHY.

East Brady, Pa.

THE PRICE LIST.

Editor *Pharmaceutical Era*:—Having seen so much about indexing a Price List, I thought I would give my views. I would give printed instructions on first page, like this: Everything in this book will be listed in their order and proper pronunciation. As Kow Kure, will be listed under "Cure," as Cure, Cow (Kow Kure). Compound, Paine's Celery; Bitters, Burdock Blood; Liniment, Kitchels', and so on. No druggist in looking for Nitric Acid would look for it under "N," or Muriatic Acid under "M." He would look for them under Acid, and just so with a Compound, and so on. F.M. MCGREW.

Canal Fulton, Ohio.

BANANA FLOUR.—The banana, which grows in almost all tropical countries, is very nutritive, and forms a nearly perfect food. It contains more than 25 per cent. of assimilable organic matter. According to Humboldt, it is forty-eight times more nutritious than the potato, while Crichton Campbell has stated that the banana is twenty-five times more nutritious than the best wheaten bread. The analysis by Thoms shows the presence in the flour of banana of 9.01 per cent. of nitrogenous matter. The best wheaten flour contains no more than 9 to 11 per cent. It is preferable to manufacture the starch from unripe fruits, because the starch is converted into sugar in ripening. In Venezuela the flour is the banana is given especially to children; it is equally good for aged people, convalescents, nursing women, and is of great service in the feeding of those suffering from complaints of the stomach. In Central America, Columbia and Venezuela the banana flour is prepared on a large scale, and sold under the name of Musarina. The flour of the banana may be used in the same way as wheaten flour, except for the preparation of bread, for which it is unsuitable, inasmuch as it contains no gluten. Various formulae are taken from the *Tropenpflanzer* for preparing banana flour for dietetic use. Thus a teaspoonful of the flour in a cup of chocolate or cocoa facilitates the digestion of these drinks, and renders them more nutritious. This addition enables cocoa to be taken by those whose stomachs are in a weak state. A sustaining drink may be made by adding a teaspoonful of the flour to an egg yolk beaten up, mixed with milk, and sweetened with sugar. The sale of banana flour in London is insignificant on account of its high price and the fact that its uses are not yet understood.—(*Revue des Cultures, Pharm. Journal*).

(Specially Prepared for the Era.)

THE EARLY DAYS OF PHARMACY.

(Continued from page 60, July 19.)

SECOND PAPER.

THE APOTHECARY IN MEDIAEVAL SPAIN.

The history of Mediaeval Europe, a long and monotonous series of petty wars, religious and political struggles and persecution, is redeemed by one remarkable feature, the gradual growth of civic freedom, which ripened, after centuries of evolution, into the individual liberty and comparative toleration of the modern civilized world.

The Trade Guilds.

the associations of town artisans and tradesmen who first discovered that "Unity is Strength," were the pioneers of self government. Usually in return for financial assistance during a war, they wrested from their kings or lords a charter which gave them certain rights and liberties useful to their trade and commerce. How these privileges—jealously guarded and constantly increased—made the towns centres of wealth and of freedom and brought about a new and better state of things, may be read in any history. Our object is simply to show that among the various guilds or corporations of a mediaeval town one was usually formed by

The Grocers and Apothecaries.

In England, France, Spain and other countries we invariably find these two trades linked together, in friendly enough fashion at first, when sugar, spices, etc., were rare and costly and not considered daily necessities. Later on, when these became articles of every day consumption, the essential difference between the two trades naturally brought about dissension and finally separation.

While the fierce struggle of centuries between Moor and Christian was still going on, the Spanish Guilds or "Colegios" were being formed in the larger Christian cities. Barcelona, then, as now, a very important town, had a Colegio of Grocers and Apothecaries as early as the thirteenth century. It was in 1327 that Don Alfonso gave to the apothecaries of Valencia the right to examine and "receive" or refuse all wishing to practice throughout his kingdom; he formed them, in fact, into a sort of Board of Pharmacy. They were possibly assisted by the local doctors, for we notice in the "fuero" or charter of Don Martin, King of Valencia, in 1407, that no apothecary or grocer was to make syrups or mixtures without being examined and that the examiners were the medical men, together with two master apothecaries or grocers. These two latter, we learn, were elected yearly by their fellow craftsmen. Fines were imposed in all cases where conviction was obtained.

The office holders of the Colegio had thus power to inspect pharmacies, examine candidates, etc. In fact, except for the power of the faculty of medicine, they practically regulated their own profession and it is interesting to note that an attempt is being made at the present moment in Spain to re-introduce the Colegio.

Punishment for Poisoners.

Alonso X. of Aragon decreed that apothecaries who dispensed "scammony or strong medicine" without a doctor's prescription should be tried for homicide if death resulted. No distinction was made between the would-be murderer and the would-be suicide. Both buyer and

A MEDIAEVAL PHARMACIST'S LABORATORY.

seller were held equally guilty and treated as murderers. The punishment for this crime in those days was a "dishonorable" death. "They shall be given to the lions or dogs," says the old law. The difficulty of conviction in poisoning cases in those days doubtless rendered it necessary to make a public example of the criminal.

The Fall of the Moors.

While pharmacy was being organized and reformed by these and similar edicts, the Moors were being forced back, step by step, into Southern Spain. In the eleventh century the Mahometan masters of the Caliphate of Cordova split themselves up into little kingdoms and the division of the Moors ensured the triumph of the Christians. From the days of the Cid to the time of Columbus the work went steadily on, and the surrender of Granada to Ferdinand and Isabella in 1492 marked the end of seven centuries of Moorish domination in Spain. It is evident that a large number of Moors, as well as some Jews, must have remained in the country and possibly a certain amount of toleration may have been granted to those skilled in healing. The real services rendered by the apothecary have often thus protected him in troublous times, and readers of Scott's "Talisman" will remember the Archbishop of Tyre's views on

"Pagans and Infidels."

"Mediciners," says this diplomatic crusading prelate, "like the medicines which they employ, are often useful, though the one were by birth and manners the vilest of humanity as the others are in many cases, extracted from the basest of materials. Men may use the assistance of pagans and infidels in their need, and there is reason to think that one cause of their being permitted to remain on earth is that they might minister to the convenience of true Christians. Jews are infidels to Christianity, as well as Mahomedans, but there are few physicians in the camp except Jews and such are employed without scandal or scruple."

THE MASTER OF THE COLEGIO. (ABOUT 1300.)

But as a rule the Catholic Church in Spain was intolerant of heresy, and "turn or burn" was the rule as the Inquisition gained power. So many found it convenient to conform, outwardly at least, to the State religion. We may cite Oзар Anii, the Murcian Moor who wrote a work on medicine (the "Treasure of the Poor"), who signs himself Master Juliano (evidently a Christian name received in baptism) and invokes Christian saints in his preface.

In the Days of Columbus.

Spain was becoming one of the leading nations of Europe, and civilization and internal legislation made rapid progress. In 1493 the apothecaries were freed from certain dues (alcabalas) on the medicaments they sold unless the contrary were stipulated on the excise sheets.

About this time, too, the Spanish Universities were founded, Alcalá, Salamanca, etc.

It was at Salamanca in 1498 that Francisco Lopez de Villalobos published his Summary of Medicine. In the work purgatives, ointments, plasters, electuaries, etc., are described in verse; it was not an uncommon thing in this century to rhyme these pharmaceutical receipts. The first pharmacist in Spain to write on his art, however, appears to have been Benedicto Matheos, who published a sort of Pharmacopœia in 1457. We may just note that it was during the fifteenth century that mercurial remedies for syphilitic disorders were first used in Spain. How widespread was the scourge may best be judged by the fact that for once unqualified practice was tolerated. Thus Gonzalez Diez, a weaver of Seville, effected marvellous cures in the San Salvador Hospital with an ointment (doubtless mercurial).

We may now pass to the sixteenth century, the epoch when

Spain's Mighty Empire

included not only the whole Iberian Peninsula, but also Germany, the Low Countries and Flanders, Milan, Naples and Sicily, Tunis and the New World. Antwerp, the great port of Europe, was in Spanish hands, her great galleons ploughed every known sea (was not the ocean itself termed the "Spanish Main?") and only after the defeat of the "Invincible Armada" in 1597 did she forfeit her claim to be considered the mistress of the seas.

Many American Drugs

of great utility were at this time brought from the New World and introduced into Europe—sarsaparilla, sassafras, china root, guaiacum, Peruvian bark, etc., etc.

A glimpse of the state of pharmacy in Spain at this moment of the zenith of her history is therefore of particular interest, and

A Curious Old Work

published in 1542 enables us to throw some light on this subject. This is the "Modus Paciendi" of Bernardino Laredo, the "humblest and least worthy" (in his own estimation) of the Franciscan lay brothers at the convent of Valverde, near Seville. The work treats (we quote his own words, "in the first part of numerous curative secrets, in the second portion of dietetics heretofore unknown;" and was, "printed in the Very Noble and Most Loyal City of Seville, at the stall of Juan Cromberger, whom God pardon," and dedicated to the Archbishop of the diocese.

The worthy Franciscan describes the medicines then popular—laxatives, pills, powders, troches, narcotics, syrups, oils, decoctions, ointments and plasters, also comforting confections, dry conserves and collyres (solid medicaments having the form and size of a date or prune). The Latin formulæ, the therapeutic indications and doses and the method of preparation are given. (We may remark that no official Spanish Pharmacopœia existed till about half a century later.)

We quote as a specimen, Laredo's method of clarifying

BROTHER BERNARDINO.

ing his Syrup of Violets. "Pour 5 lbs. of infusion on to 4 lbs. of good sugar and boil slowly in a well tinned saucepan. When ebullition commences, add the froth of two whites of eggs beaten up with two measures of water."

One of the most striking passages in this little known work is, however, the description of the over crowded state of the profession and of the existence of

The Cutting of Prices 350 Years Ago.

"It would doubtless be far better," writes Brother Bernardino, "if the apothecary instead of charging one real (five cents) for an object, should ask two reals, and supply a perfect medicament; instead of selling a cheap remedy, not in conformity with what is exacted by his conscience, the doctor's reputation and the patient's health."

"This is why it is regrettable that there are so many apothecaries. For they are so numerous that a purgation or other remedy which is sold for two reals at one corner of the street, is given in the middle of the same street for a real and a half, while without leaving the immediate neighborhood one can find a pharmacy where it can be obtained for a real, and even for less! The purchaser looks for cheapness, and nothing else, but it really often costs him dearly in the end. For in this way the vendor deceives the purchaser, the purchaser deceives his doctor and loses his reputation, and the patient loses the health he would fain regain.—*Animadvertant practitantes.*"

We have thought the good lay brother's little sermon worth reproducing in extenso, for it is certainly remarkable—a man who may, in his boyhood, have seen Columbus walking in the streets of Seville, thus describing pharmaceutical grievances which we are accustomed to look upon as distinctly modern.

Nor was this state of affairs produced by lack of stringent legislation, as a glance at the regulations framed by Charles V., dona Juana, and Philip II. will show.

The apothecaries living within five leagues of the Royal Court were examined by the protomedicos, who likewise inspected the drugs, etc. The protomedicos were accompanied by an apothecary who received an indemnity of 500 maravedis per day.

Outside this limit the corregidores (magistrates), with two regidores (municipal officers) and a qualified local medical man, performed the same functions. The justices were directed to make careful inquiry as to whether the doctor had a son or son-in-law who kept a drug store whether any apothecary sold medicines without a doctor's prescription, etc.

The minute and methodical attention which Philip II. devoted to details of government is evident in his pharmacy laws as elsewhere. He decreed that no one should be received as a master apothecary unless he were a Latin scholar, had passed four years in a qualified pharmacy and was over 25 years of age. On presenting himself for examination a deposit of four crowns in gold was exacted, and was not returned to the candidate until he had passed.

Nor were the precautions to ensure the use of good and fresh drugs less stringent. The date of fabrication (year, month and even day), was to be inscribed on every pot of compounded medicaments and signed by the apothecary. The fine for transgression of this regulation was 16,000 maravedis, one-third of which went to the informer and one-third to the judge who sentenced the culprit. It is to be hoped that this arrangement did not open the door to any abuse of justice at the expense of a falsely-accused apothecary. The regulation that no apothecary could legally claim for medicine after three years' interval seems more reasonable, as a blow aimed at the system of long credit and consequently exaggerated bills. Finally, we may note the grim monarch's

SPANISH STUDENT OF THE GOOD OLD TIME.

ungallant decision that "no woman shall keep a pharmacy," even after passing the regular official examination. Perhaps his unlucky marriage with Queen Mary, of England, had made a woman-hater of him.

In 1629 the University of Valencia had a botany professor whose special duty was to teach apothecaries the use of simples, and in 1650 Philip IV. declared pharmacy "a scientific art," and decided in consequence that apothecaries were not liable to certain taxes paid by artisans and tradesmen.

But space forbids us to pursue our subject further, and we will conclude by naming three or four works where the student of Spanish may find some details of

Seventeenth Century Pharmacy.

Smokers will doubtless learn with interest that Juan de Castro, pharmacist to the Holy Inquisition at Cordova, wrote as early as 1620 on the "Virtues of Tobacco."

Considering how little the fragrant and soothing weed was appreciated in Europe at this date, one wonders if these Inquisition officials and their satellites were so very narrow-minded after all. He also published a work on "Alkermes" and described the "Celebrated Ointment of the Countess Guillerme de Varinga" (1625).

JUAN DE CASTRO WRITES ON THE "VIRTUES OF TOBACCO."

Then there was Brother Esteban de Villa, apothecary at the monastery of San Juan de Burgos and the "Hospital of Sixtus IV."

His works are "The Examination of Apothecaries" (1632), "On Plants (1636), and "Simples Unknown in Medicine" (1653 and 1654); while Arevalo's "Practice of Pharmacy," published at Madrid in 1643, is intended as a counterblast to Guy Patin's "Charitable Doctor," a work directed against pharmacists as a class, of which we may have occasion to speak when tracing the history of French pharmacy.

NOTES ON GOLD-SODIUM CHLORIDE.

By LYMAN F. KEBLER.

If any one will take the trouble to obtain quotations from the various manufacturers or consult their price lists, it will become apparent at once that there must be either a considerable margin of profit for some, or that the gold-sodium chloride varies much in composition. The difference in prices or information on the labels is such, however, that the various makes come into direct competition with one another. For example, 1 ounce of gold-sodium chloride, U. S. P., in $\frac{1}{8}$ -ounce vials, is quoted by several makers (wholesale price list) at \$5.90, \$6.10, \$7.50, \$9.00 and \$14.50 respectively. Again, some makes, without any specifications as to quality, are generally quoted a few cents below those containing information as to quality.

It must be remembered that the 1890 Pharmacopœia requires this article to contain 30 per cent. of metallic gold, and a commercial article may contain less for photographic purposes, but the latter should be so labeled as not to be brought into direct competition with the

more costly article. If a certain article is prepared for photographic purposes or for some other purpose, let it be so labeled as not to be misleading.

In order to get positive information about this article, the writer secured a number of samples, and a careful examination of the same gave the following results: (See table.)

The amount of material contained in each vial was estimated by removing the stopper, determining the gross weight, then carefully removing the chemical by means of water, drying the vial and obtaining its weight. From these weights the amounts of gold-sodium chloride in each vial can readily be calculated, and if there should be an error in any direction, it is quite likely to be in favor of the chemical.

The metallic gold was estimated as follows: Transfer the contents of a vial into a 250 C.c. evaporating dish, by means of 100 C.c. of a 1 per cent. solution of pure sulphuric acid. In this mixture dissolve 2 grams of pure oxalic acid, then place the whole on a steam bath for two hours, or until all of the gold is reduced to the metallic state. Decant the clear liquid as closely as possible, wash the gold with distilled water, dry, ignite and weigh. This method works well, but the volumetric process for this purpose appeared to be valueless.

From a careful perusal of the data contained in the table above, it can readily be seen that all the samples were of good quality, but there is a wide variation in the percentage content of gold.

In order to fully comprehend the actual difference in money existing between the various samples, it is only necessary to compare the figures below:

Number.	100 Ounces Gold-Sodium Chloride Contained Pure Gold.	Cost at \$21 Per Ounce.
1.....	21.29	\$447.09
2.....	26.13	548.73
3.....	24.68	518.28
4.....	32.91	691.11
5.....	29.02	609.42

The greatest difference, based on the cost of the gold only, amounts to \$244.02, or, by eliminating the highest, which appears to be somewhat abnormal, the difference becomes \$162.33. In other words, the purchaser of 100 ounces of the article containing the smallest per cent. of gold is paying \$162.33 for something he is not getting. In this case, as in so many others, the cheapest is the most expensive.—(Am. Jour. Pharm.)

Moth Powder.

Black pepper.....	100 parts
Quassia wood.....	100 parts
Cloves	50 parts
Orris root.....	20 parts
Ammonium carbonate.....	20 parts
Camphor	5 parts

SUCCESSFUL ADVERTISING.*

BY FRANK E. NABERS.

The object of advertising is to sell goods, and to be successful the advertisement must be strong enough to accomplish that purpose.

The advertisement must be alluring and seductive enough to overcome the natural disinclination to buy, and therefore, my object in this paper is to put as simply and as clearly before you as I can that which seems to me to be the most important factors in successful advertising.

Advertisers are born, not made. Skill may be acquired in almost every other line of life, but unless that subtle something (call it genius or art), is in the brain at birth, nothing will ever put it there afterward.

Each locality governs in a large measure the character of the successful advertising done within its limits, and hence no general rule may be laid down which would tend to make advertising equally profitable in cities and in villages; however, in a general way, these general ideas apply to wherever our class of commodities are sold. In the first place the advertisement to be successful, must be clearly written and boldly printed. Clearness and conciseness are the two great important factors and should never be overlooked. The Americans have been so highly educated by expert advertisers, that unless your advertisement is vigorous enough to attract the attention of the sated reader; unless it be attractive enough to catch the eye, it will go unread.

In fact, I seriously question if over ten per cent. of the newspaper advertisements in our small towns ever prove profitable, and the reason is obvious; the advertising is poorly done. It is inartistically done; it does not attract; it is absolutely negative and necessarily fails.

Where it is feasible, advertisements should be illustrated by bright original cuts; zinc cuts are cheap and easily procurable, and the investment is almost always a profitable one. I knew of 2,000 bottles of a fifteen-cent preparation being sold from a single cut.

An advertisement should be characteristic of the article or business for which made, and should be changed frequently.

A well written, crisp, clear circular printed attractively on good paper is a profitable method of advertising.

Do not make them longer than can be read in two minutes, and be sure and seal the envelopes, using a two-cent stamp as postage.

This methodical circularizing is an excellent method for pushing new articles, care being taken to make them clear and short.

We are busy people and will give to no one a long hearing.

Do not send the same circular twice. It tires.

Signs by the roadside, on fences, rocks and roofs are productive of much good, and would be found more profitable were they kept in repair and freshly painted every year. An old rusty, dirty sign does a house little, if any, good.

Our Northern friends keep, as a rule, their store cleaner, better arranged, and more attractive than we in the South do. It behooves us to hustle more.

Clerks should always wear clean linen and neat clothing. The use of tobacco in any form in the store should be absolutely prohibited, both by the proprietors and clerks. No salesman should go without his coat to wait on either a man or a woman.

Get rid of your loafers. They are the most unprofitable form of advertising with which I am familiar. They are in the way, they talk about your business, they sponge too much; run them off. Start them gently towards the rear, keep them from the front, if possible, send them to the livery stable; that's where they belong.

Don't advertise unless you have something to advertise.

When you have anything to say, say it, nothing else and stop. Oh, I know it's hard to do, but you must do it for your pocket's sake.

Don't stretch facts, make your advertisements honest and sincere. People will soon learn that your advertisements are to be depended upon.

Don't forget to impress your preacher. He is often a most excellent advertising agent.

Don't neglect to keep close to the women, that is, as close as they will allow you to. But gentlemen, I beg of you, do anything they ask of you, and do it willingly too; do anything from holding her baby to doctoring her dog.

Don't forget your doctors. Do everything consistent with your dignity to gain and retain their earnest good will and confidence, for much of your success depends upon their attitude towards you.

INTERNATIONAL CONGRESS OF PHARMACY.

(Paris, 1900).

This Congress will be held from August 2 to August 8, principally at the Paris Superior School of Pharmacy. M. Planchon, president elect, having died recently, the chairman will be M. A. Petit, a leading Paris pharmacist, who was for long years president of the French Pharmacists' General Association. He is proprietor of the well known *Pharmacie Mialhe*, close to the Opera Comique, and is interested in a large pharmaceutical works just outside Paris.

M. Crinon, the general secretary (to whom all communications should be addressed at 45 Rue de Turenne), is well known as the editor of the "*Repertoire de Pharmacie*," an old-established pharmacy journal.

The Austrian Government is to be represented by Herr Vogl Perheim, president of the Imperial Sanitary Council, the Roumanian Government by Mr. Poplin, many years a hospital pharmacist. The Royal Society of Brussels' Pharmacists sends M. Derneville, its president, and also M. Duyk, who will be remembered by all as the indefatigable and courteous Secretary of the 1897 International Pharmacy Congress. The British Pharmaceutical Society is to have its president, vice-president and treasurer, (Messrs. Martindale, Newsholme and Atkins) as the Parisian delegates. M. Vournazos will represent the Greek Association of Pharmacists.

French Military Pharmacy is to be represented by M. M. Butcher, Bayrac and Georges, while M. M. Bayav and Durand were nominated as Naval Delegates. M. Marty, an army pharmacist, has been named Vice-President of the Congress. Most of the provincial French Societies will, of course, send representatives, and many foreign nations not included in above list.

A pleasant whole-day outing has been arranged, a visit to the Garches establishment of the Institute Pasteur in the morning, lunch at the pleasant little riverside town of St. Cloud, followed by an inspection of the famous Sevres Porcelain Factory, about a mile down the river, return to Paris by special steamer, musical dinner at the Jardin d'Acclimatation. All pleasant leafy spots for a hot August day.

THE BEHAVIOR OF PERFUMES TOWARDS LIQUID AIR.—Liquid air has little, if any, solvent action on ether, alcohol, and other organic solvents. Various perfumes are appreciably soluble in liquid air, and in spite of the low temperature of about -190°C ., the escaping gases are strongly scented. The volatility of a perfume is of great importance as regards its intensity. The vapor tension of high-boiling perfumes must be quite imperceptible at -190°C .; their evaporation at this temperature is regarded by the author as due rather to solubility in the air than to vaporization. Hannay and Hogarth have shown (J. Prakt. Chem.; Jour. Soc. Chem. Ind.) that the vapor of solvents above the critical temperature dissolves non-volatile substances, or those volatile with difficulty, which are soluble in the liquid solvent. Thus, naphthalene is retained by coal-gas in quantity far surpassing that due simply to its vapor tension. In consequence of the solubility of perfumes in liquid air, it is concluded that they are also retained in an analogous condition in gaseous air. To 10 to 20 cc. of liquid air in a vacuum vessel, one drop of perfume was added; the solution was filtered in another room, received in a vacuum vessel, and taken into a third room, in which perfumes were not kept. On shaking the vessel the odor evolved was very strong. When an ionone solution was evaporated from strips of filter paper, the odor was very perceptible; it disappeared after the evaporation of the air, whilst the crust of snow covered the paper, and again appeared as the paper dried.

*Paper read at the nineteenth annual meeting of the Alabama Pharmaceutical Association at Mobile, May 15.

A NEW HISTORY OF FRENCH PHARMACY.

M. André Pontier's "Histoire de la Pharmacie" appears at an opportune moment, and may be considered the book of the year 1900. At the last monthly meeting of the Paris Society of Pharmacy, M. Yvon, the chairman, called attention to the publication, and briefly reviewed its nature and scope; while every visitor to the Retrospective Chemical Exhibit at the 1900 exhibition may notice the bulky volume in the conspicuous position which its importance merits.

For M. Pontier's ambition has been to gather into one volume all the numerous archives of French pharmacy. Works on this subject are by no means lacking, as every student of pharmaceutical history will be aware. But Grave's "Etat de la Pharmacie" intentionally terminates at the date of 1803; Cap's history is half a century old; and so is Philippe's "Histoire des Apothecaires," so apparently flippant, so really instructive. Alfred Franklin's volume on "Medicaments" is also brimful of curious facts, but can hardly be termed a history of pharmacy.

M. Pontier has spent at least ten (we might say twenty) years of patient labor in compiling his facts, and he has omitted singularly little of real importance. In 750 pages (about the size of the Era) he traces the "Origins, Middle Ages and Modern Times" of French pharmacy. The first twenty-one pages, describing the Pharmacy Exhibit at the 1889 World's Fair, will doubtless be irreverently skimmed by the hasty reader; but the

to readers of Philippe, etc.; but they will find many additional facts recorded by M. Pontier, more particularly as regards the Revolutionary period of 1777-1803. We note, for instance, on page 252, that the first French pharmaceutical journal was founded in 1797.

"From the Law of Germinal (1803) to the first French Pharmaceutical Congress" (in 1858) is the title of the third portion. Some foreign readers may regret that M. Pontier has not wholly, or partially, reproduced the notable Act which has regulated French pharmacy for nearly a century, and which is so constantly referred to in the subsequent 170 pages. But it is of course more especially for his compatriots that the author has written this history.

The fourth chapter supplies a long felt want, a history of French pharmacy during the last half century, brought well up to date. Few are more competent to treat such a subject than the veteran honorary president of the Paris Pharmacists' Syndicate; who was also vice-president of the great National Association of French Pharmacists. Here we have condensed (yet necessarily voluminous) reports of the questions raised and answers voted at the French and International Congresses. This portion, showing as it does the disappointments and ambitions, the hopes and fears of two generations of French pharmacists, should have been put in the hands of every foreign delegate to the 1900 International Congress. This concludes the main portion of the work; several detached chapters on special subjects follow. The interest of the history of French Military Pharmacy (1591-1900) is enhanced by a comparison with the systems of other European nations. The article on Naval Pharmacy will be novel to the majority of readers; the sketches of Convent Pharmacy and Hospital Pharmacy are also interesting.

These last three chapters deal with France alone. A sketch of the existing conditions of pharmacy abroad, which follows, is mostly drawn from known French authorities, and one or two foreign writers. In the page devoted to the United States M. Pontier has much to say of the merits of the American Pharmacopoeia, and many of his compatriots will echo his commendation. He uses this example to point one of his favorite morals—the superiority of independent effort over official and State-directed action, stating that while the U. S. Pharmacopoeia has been carefully revised seven times over since 1870, the "French State has managed during the same period to publish but three editions, each copied and arranged one from the other."

The tone of the work is solid, painstaking, critical, and a trifle grave, as a real pharmacist is apt to be when he speaks of the future of his profession. For M. Pontier is not, like Dr. Philippe, an M. D., who loves to exercise his sarcasm at the expense of the weaknesses of past and present generations of apothecaries. He is a retired pharmacist, fully aware of the trials and troubles which beset the honest practitioner of his art, full of respect for its past greatness, full of anxiety for the prosperity of its future. In his "Conclusions" he preaches the two great doctrines of self-help as opposed to State aid, and of the union which, the proverb tells us, "is strength," and calls upon all members of the profession to be worthy of their calling and united to insure its future welfare.

The illustrations are few, but well chosen. The fully colored frontispiece shows the arms of the old Paris Corporation of Apothecaries. The woodcuts are a fac simile reproduction of the charter granted to this body in 1629, of two of the old pharmacy theses which hang in the library of the Paris school (17th and 18th century); of the title pages and illustrations of some famous old French works on pharmacy; and of a 17th century pharmacist's diploma.

THE SERVIAN GOVERNMENT has now withdrawn its order prohibiting the importation of carbide of calcium into Servia.

GERMAN TARIFF CHANGE.—Under a recent law, dated June 14 1900, effecting certain modifications in the German imperial customs tariff, the duty on sulphuric ether has been raised from 20 m. per 100 kilos. to 125 m. for ether in casks, and to 180 m. per 100 kilos. if in bottles, jars or other vessels.—(Chem. and Drug.)

M. ANDRÉ PONTIER.

"Introduction" which follows, dealing with the laws and regulations under which pharmacy is practiced nowadays in France, is worthy of careful perusal. The thirty pages of biographies of illustrious French pharmacists would likewise be invaluable for reference if some alphabetical or chronological order had been adopted; though an index of names at the end of the volume somewhat lessens this objection.

The "Preamble" is a clearly and tersely written sketch of Græco-Roman and ancient pharmacy, leading up to the origin of pharmacy in France. This is exhaustively treated in four lengthy chapters. The first deals with Provincial Pharmacy from 1340 to 1803 (the date of the present French pharmacy law). It should be noted that in olden times each French province had its own laws and customs, just as Massachusetts and Texas nowadays regulate their own internal affairs. Hence these numerous chapters,—the history of Montpellier drawn from the works of Marty, E. Planchon and F. Gay, and so on to Lyons, Toulouse, Dijon, Nîmes, etc.; local writers being quoted in each case. This is a new idea, and well carried out.

The history of Parisian pharmacy (between the same dates) forms the second chapter. This will be less novel

I.—The Era artist, at the request of the Editor, sets out to learn something about the drug business. He makes known his purpose to a prominent druggist, and is given the freedom of the store.

THE QUALITY OF DRUGS.

Report of Committee on Adulteration, Minnesota State Pharmaceutical Association.

Samples ranging in number from one to twelve of each of the following-named medicaments were examined according to the U. S. P. and found to correspond to the requirements, except where specifically noted.

- Pepsin, powdered.
 - Pepsin, scales.
 - Pepsin, saccharated.—Of six samples, two were below strength named on label.
 - Chloroform, for Anesthesia.
 - Ether, for Anesthesia.
 - Sweet Spirit of Nitre.—Of six samples, two were of the pharmacopoeial strength and four contained less than 3 per cent. of ethyl nitrite.
 - Glyconin.
 - Alcohol.—Of four samples, one contained only 83 per cent. ethyl hydroxide; sp. gr. 0.81.
 - Extract of Malt.—Of six specimens, one was below diastasic power claimed.
 - Powdered Opium.
 - Tincture of Opium.—According to the U. S. P., 100 Cc. of Tincture Opium should yield by assay from 1.3 to 1.5 grammes of crystallized morphine. Six samples assayed gave results as follows:
- | | |
|----------------------|---------------------------------|
| In 100 Cc. of No. 1, | 0.79 gm. crystallized morphine. |
| " " " 2, | 0.91 gm. " " |
| " " " 3, | 0.78 gm. " " |
| " " " 4, | 1.29 gm. " " |
| " " " 6, | 0.83 gm. " " |
- Opium, Gum.—Three samples assayed respectively 11, 10.5 and 9.01 per cent. crystallized morphine.
 - Paraldehyde.
 - Terobene.
 - Thymol.—Of two samples one did not volatilize wholly upon heating in open capsule, but left considerable residue, probably paraffin.
 - Cresote.—Three samples were either wholly or very largely carbolic acid.
 - Balsam of Copalba.—One sample was not amorphous, transparent and friable after the volatile oil had been driven off. It contained very little volatile oil, as after

the attempt to drive it off the balsam was in much the same condition in which it was originally. It is likely that the volatile oil had been driven off and the residue mixed with some fixed oil, as fixed oil was found to be present.

Caffeine.—Of two samples, one contained organic matter and other alkaloids.

Acetic Ether.

Absolute Alcohol.

Extract of Nux Vomica.

Extract of Opium.

Terpene Hydrate.

Tincture of Ferric Chloride.

Solution of Ferric Sulphate.—Of two samples, one contained only 21.6 per cent. of the salt.

Soluble Iron and Quinine Citrate. The one sample examined contained 9.9 per cent. quinine (dried at 100° C. to constant weight).

Resorcin.

Salol.

Salicin.

Respectfully submitted,

FREDERICK J. WULLING.

Chairman.

Pharmaceutical Laboratory, University of Minnesota.

RENNIN.—Experiments by Coriat show that rennin is an independent enzyme distinct from pepsin, and that it possesses a different action on the solution of casein, or on casein in milk, precipitating it as a definite compound or curd. There are also enzymes in plants and bacteria that are almost identical in their action. In a recent paper (N. Y. Med. Jour.) he speaks of his experiments to ascertain why rennin is a special enzyme when others are similarly effective, and how it contributes to the further conversion of soluble proteids. It had occurred to him that this precipitation has something to do with peptone production, and the experiments were undertaken to determine the question.

LAVOISIER'S STATUE AT PARIS.

The statue of Lavoisier was unveiled at Paris on July 27th during the session of the International Chemistry Congress.

This monument to the "Father of Modern Chemistry" is the work of Barrias, one of the first living French sculptors. All visitors to the Great Sculpture Hall, of the new Fine Art Palace at the Exposition, will notice his vast and impressive monument to Victor Hugo, and his masterpiece of colored statuary "Nature Unveiling." We may also mention his two remarkable allegorical figures at the entrance of the Faculty of Medicine and Pharmacy at Bordeaux.

The international subscription opened by the French Academy of Sciences, already amounts to over \$18,000, a result which cannot but gratify M. Berthelot, the distinguished chemist who has taken an active part in the movement, and who, by the way, has just been elected an "Immortal"—in other words, one of the forty members of the Académie Française.

The site chosen for the statue, just behind the well-known Madeleine church, facing the rue Tronchet, is appropriate as being between the house where Lavoisier lived at the time of his arrest, and the cemetery where he was interred after his execution.

BIOGRAPHICAL NOTES.

Antoine Laurent Lavoisier was born at Paris August 26th, 1743. His father was a law official ("procureur"). He was left almost alone at a very early age—his mother died in 1748 and his only sister in 1760—and was brought up by a maiden aunt; he seems to have been a quiet, studious youth. Arrived at the age of manhood, he studied various sciences, but finally directed his attention more particularly to chemistry, which he had first learned from Rouelle at the Jardin des Plantes. For instance, when in 1767 he made a geological excursion in Alsace, Lorraine and Switzerland with Guettard, we find he bought \$100 or more of German and Swiss chemical works unknown in Paris. It should be remembered that in these days communications were difficult, and it took a month to receive a letter from Strasbourg to Paris. Lavoisier travelled on horseback, and even took geological notes without dismounting in many cases.

In these days the French Academy of Sciences in-

cluded three classes, the twelve honorary members, usually nobles of mark like Richelieu, Mazarine, Malesherbes, etc.; eighteen "pensioners," men of science like Bernard de Jussieu and Guettard; twelve associates, and twelve adjoints. Lavoisier was elected an adjoint in 1768, his various papers on "Gypse, the "Lighting of Towns," etc., etc., having already called attention to his scientific abilities.

The same year he became one of the tax-farmers, who then managed the collection of French taxes. This seems to have been a lucrative and sufficiently honorable, but necessarily unpopular post. We need not, however, dwell on his duties in this line, but rather very briefly note his scientific career.

In 1772 he became associate, and in 1778 pensioner of the Academy of Sciences; later on he was elected chairman, and one of the bas reliefs on the new statue represents him in the presidential chair.

His discovery of the composition of water in 1775 raised a perfect uproar among the partisans of the "phlogistic" theory. It is even said that when the news reached Berlin Lavoisier's effigy was burnt in public by his scientific opponents. In 1777, with the collaboration of Busson and Bezout, he notes the errors and variations of thermometers, and establishes a fixed principle for their construction. The two he presented to the Paris Astronomical Observatory are, we believe, still installed in the cellars of that establishment; the Academy received a dozen or more. In 1778, when Mesmer (the originator of "mesmerism") came to Paris, the committee appointed to examine the subject included Bailly, Darcet, Lavoisier and Benjamin Franklin. The latter was among the numerous friends of Lavoisier, in fact Madame Lavoisier painted a portrait of the American philosopher, which should still exist at Philadelphia or elsewhere. Washington seems also to have been in correspondence with Lavoisier about 1785.

Lavoisier's great discovery of the composition of air need only be briefly recorded here. Berthollet, the chemist, long the champion of the phlogistic theory, was finally converted by Lavoisier in 1782. In the following year Lavoisier repeats before a number of savants the combustion of hydrogen by oxygen. At this time he belonged to the Society of Agriculture; he had bought a country house some years before, and he often read scientific papers on rural subjects to the visitors at the chateau. The science of aerostation also attracted his

IV.—He meets with a serious mishap.

V.—He has a queer feeling in his internal machinery, and for several reasons decides to postpone the pursuit of knowledge indefinitely.

attention; he studied the best method of obtaining hydrogen, and Louis XVI. wrote him in 1789 to express his admiration at the discovery, which had "increased the sphere of useful knowledge." Lavoisier was the author of the nomenclature used in modern chemistry; we might almost say of the science itself. He studied the part which oxygen plays in respiration and combustion; he discovered that numerous chemical substances were really oxides, and confirmed by experiment Newton's idea that diamonds are carbon.

The Revolutionary period commenced in 1789. In vain did Lavoisier perform an active and useful service in establishing the bases of the Metric System, and in various other matters. Marat, the "Friend of the People," denounced him in 1791—Lavoisier had taken an active part in establishing a wall round Paris to facilitate the collection of the town dues. The year of the Reign of Terror (1793) sealed the savant's fate. The tax-farmers were imprisoned; and after some months of captivity were condemned to death in a body and duly guillotined on May 8th, 1794.

Of all the dwelling places of Lavoisier in Paris, not one survives. The house in the rue Neuve des Bons Enfants, where he spent the first period of his married life, has been demolished; his residence at the Arsenal, which was the principal scientific centre of Paris from 1775 to 1792, was burnt during the Commune of 1871; the mansion on the Boulevard de la Madeleine, where he was arrested in 1793, is now occupied by a modern structure (No. 21 on the Boulevard).

One of the bas-reliefs on the new monument represents Lavoisier working in his laboratory, and his wife writing under his dictation. No biography of the great chemist would be indeed complete without some reference to his devoted partner. He married Mlle. Paulze in 1771; she was then a girl of 14, with "bright blue eyes" and "fresh complexion," says a biographer. Her husband was 28, but the marriage appears to have been a very happy one, and Madame Lavoisier was the diligent collaborator of her husband in his laboratory. She was no mere blue stocking, but a charming hostess and companion, a clever artist (the bas-relief in question is reproduced from one of her sketches), and by no means lacking in force of character, as was testified by her determined appeals to the French Government for justice to her husband (she was herself imprisoned and only escaped by a lucky turn

in the tide of politics), and her quarrels with her second husband (Count Rumford). One of their causes of dispute, by the way, was Madame Rumford's firm refusal to drop the name of her first husband.

THE CAMPHOR MONOPOLY.

Within a year the camphor trade of the world has become a monopoly. The trees which yield this fragrant and useful gum are to be found all over Asia and the East Indies, but the principal production from them is confined to the island of Formosa, which belongs to Japan. China was never able to furnish more than 200,000 pounds a year, and Japan now produces about 300,000. But Formosa's annual output for several years past has been between 6,000,000 and 7,000,000 pounds. Little is to be had at present from any other source, and there is no prospect of any change in the situation for a long time to come.

In deciding to exercise control over the production of camphor Japan has been actuated by two motives. In the first place she wants to obtain revenue therefrom, as France does from the match and cigar industries. But she also seeks to avert the killing of the goose which lays golden eggs for her. In other words, she has undertaken to protect the camphor forests, which were in danger of extinction. A recent consular report from Tamsui declares that no fewer than 1,500 armed guards are to be placed on duty on the edge of the forests, in order to enforce regulations which have recently been adopted. The destruction of young camphor trees and of shoots from old stumps has been prohibited by law. The gum is obtained by felling the larger trees, splitting them up and boiling the wood. In the past it has been common to cut down young trees for fuel, but this practice is now to be stopped.

So long as the law is complied with, anybody may collect gum and prepare it for market, but it can be sold only to the Government. For that purpose offices are established all through the camphor district, with headquarters at Taipeh. Delivered at this point crude camphor brings 30 yen per picul, or \$15 for 133 pounds. A limit is placed to the annual output, however, and when this is reached the Government may refuse to buy. Moreover, there must be a rigid inspection of the camphor before it is paid for. And to insure the taking of pains in its preparation standard samples have been distributed among the producers. The Government has a refinery at Taipeh, where the stuff is subjected to further purification. It is then compressed by hydraulic power into tunkin blocks (13.33 pounds). These are wrapped in oiled paper, and packed by tens in zinc lined boxes for the market.

The distribution and sale of the product are conducted by an agent to whom the Government lets a contract. Bids from prominent commercial houses were invited last year, and the highest came from an English firm of high standing. The contract has three years to run, and may then be awarded to some one else if more advantageous terms can be secured. The price which the contractor must pay Japan for the semi-refined gum is \$17.50 per picul and \$42.50 for the crude. The refining process wastes about 35 per cent. of the weight, and the Government also must consider the cost of running its camphor bureau and refinery. It is estimated that all of these items add about \$12.50 per picul to the \$15 paid to the producer. Hence the Government clears about \$20 a picul on the refined gum, and probably more on the crude article. This should yield an annual revenue of at least \$800,000.

The contract provides that the Government may place from 30,000 to 50,000 piculs of camphor with the agent every year, determining in advance just how much it will supply. For 1900 the output has been fixed at 40,000 piculs, or 6,320,000 pounds. The contractors have the privilege, of course, of making their own price for the consumer. At present they show no disposition to exact any large profit. They offer to lay down in New York, Hamburg and London refined camphor for \$53.92, and crude for \$43.85. These figures represent an advance of from 12 to 15 per cent., and include the cost of transportation. The prices announced do not cover import duties, however.—New York Tribune.

(Special Correspondence).

BRITISH PHARMACEUTICAL NEWS.

London, July 12, 1900.

The Chemical Society.—At the meeting of the Chemical Society on July 5th, Dr. Otto Pettersson, of Stockholm, delivered the Nilson memorial lecture. Lars Frederick Nilson was born in 1840, and died last May. He held the chair of analytical chemistry in the University of Upsala, and was subsequently Professor of Agricultural Chemistry at Stockholm. He is best known in connection with his work on the rare metals. He was the discoverer of scandium.

Previous to the lecture Professor Charles F. Chandler was admitted a fellow of the Chemical Society without the ordinary routine of election.

Arsenic in Phosphate of Sodium.—On July 6th, in the Marylebone Police Court, London, were heard two cases against retailers for selling effervescent phosphate of sodium containing arsenic. One of the defendants is Mr. Howse, a pharmacist; the other Lewis & Burrows Drug Stores, Limited, a company having about twenty shops in London and vicinity. Much interest has been excited in England recently by the discovery that much of the phosphate on the market contains arsenic, and two or three cases—fortunately not fatal ones—of poisoning from taking the drug have occurred. Two or three wholesale firms are implicated, the actual suppliers in these two cases being Davy, Hill & Co., one of the oldest firms in London. In the case of Mr. Howse, the analyst's certificate stated that there was present the equivalent of 8½ grains of As_2O_3 per pound, and in the drug store case 3½ grains per pound. A large amount of evidence was brought forward, the case being taken up by the Chemists' Defence Association, and the fact was brought out that the British Pharmacopoeia contains no test for arsenic under the head of sodium phosphate. It appears pretty clear from the evidence, although neither point can be said to be absolutely proved, that the arsenic is derived from the use of impure sulphuric acid in making the phosphate, and that it exists as arsenate. It would thus not be removed by recrystallization, as the two salts are isomorphous. It was also shown that the contamination varied in degree with different samples, though all contained more or less. The magistrate reserved his decision until July 12, when a fine of \$50 and \$25 costs was imposed on each of the defendants. Possibly American druggists may be in a similar position as to impure phosphate of sodium.

C. G. Moore, M. A., has examined nearly fifty samples from all sorts of sources. He finds that every one of them contained arsenic varying from 5½ down to 1 grain per pound. This is not a dangerous proportion, and he suggests that all phosphate not containing more than 1 grain per pound should for the present be allowed to pass. The following is a simple method of estimating proposed by Mr. Moore:

Dissolve 10 grains of the sample (whether sodium phosphate or effervescent phosphate) in about 40 cc. of hot water, add 20 cc. of strong hydrochloric acid, and pass washed sulphuretted hydrogen gas through the liquid kept at 70° centigrade for not less than 10 hours. If the temperature is kept fairly constant the sulphuretted hydrogen gas will itself bring about the reduction, and the use of sulphurous acid or any other reducing agent is not required. If arsenic is present the liquid first becomes opalescent, then milky, and finally after some hours the yellow trisulphide of arsenic settles to the bottom, leaving the liquid quite clear. The precipitate is filtered off and washed with cold water containing a little sulphuretted hydrogen, till quite free from acid (at least 250 cc. of wash-water will be required).

The precipitate is usually bright yellow, and consists of arsenic trisulphide with some sulphur. The latter is removed by drying the filter-paper, folding it up and extracting in a Soxhlet with carbon-disulphide. As the precipitate is very small in quantity, and cannot readily be removed from the filter-paper, it is best to weigh the paper (which should be the best hydrofluoric acid extracted, about two inches in diameter) in a weighing bottle.

NOTES.

The report of the Apollinaris & Johannis, Limited, for the year ending March 31st last, shows that 25,431,757 bottles of Apollinaris water were sold, against 22,463,408 in the previous year. The sales of "Apenta" water and the Johannis compound waters also show increases. The net profit amounted to \$853,830, and a dividend is recommended on the ordinary shares of 6 per cent.

Some lads studying for examination in the Bede Higher Grade School, at Sunderland, undertook some unauthorized chemical experiments in the school laboratory. One of them mixed some $KClO_3$, KNO_3 and phosphorus in a mortar. He used his hands instead of a pestle, but an explosion took place, as might have been expected, and he was severely injured.

The Pharmaceutical Society held their last Minor examination under the 5 guinea fee this month. At the next examination in October the fee will be 10 guineas. The society will hold no more Preliminary examinations, the last having been held on July 10th; henceforth candidates must enter for the test of one or other of a number of outside examining bodies.

The report of the directors of A. J. White, Limited (Siegel's Syrup), for the year ending March 31st last, shows that a considerable alteration in the holding of the shares has taken place, the American element again becoming predominant. There is a balance available of \$74,165, after paying the preference dividend.

Prof. C. F. Chandler, of Columbia University, New York, who has been in England in connection with the meeting of the Society of Chemical Industry, has had last Saturday the Doctor's Degree in Science conferred upon him by the University of Oxford. *Honoris causa*.

Mr. Andrew J. Kirkpatrick, J. P., head of the chemical firm of Kirkpatrick & Co., of Glasgow, and a member of Kirkpatrick, Barr & Guthrie, chemical agents of London, died at Shandon, Scotland, on July 9th.

At the examinations of the Pharmaceutical Society, held in Edinburgh this month, one Major candidate out of three passed, and seventy-five Minor candidates out of 217 were successful.

Mr. John Borland, an ex-councillor of the Pharmaceutical Society, and head of the firm of Rankin & Borland, of Kilmarnock, Scotland, died on July 10th, aged 80 years.

Mr. J. A. Dewhirst has been elected president of the Chemists' Assistants Association.

THREE CONVENIENT THROAT FORMULAS.

Compound Boric Acid Pastilles.—Slightly stimulant and antiseptic. Each pastille contains:

Acid benzoic.....	1/2 grain.
Acid boric.....	1 grain.
Coca erythroxylon.....	1 1/2 grains.
Black currant paste.....	q. s.

One pastille dissolved upon the back of the tongue twenty minutes before using the voice, is useful in clearing the tone when hoarse or husky.

Compound Aconite Pastilles.—Anodyne and anesthetic. Each pastille contains:

Morphine bimeconate.....	1/100 grain.
Cocaine, hydrochlorate.....	1/100 grain.
Tincture of aconite.....	1/6 minim.
Black currant paste.....	q. s.

Useful for both local and constitutional effects in acute pharyngitis, rhinitis and laryngitis.

Compound Guaiacum Pastilles.—Powerful local alterative. Each pastille contains:

Resin of guaiac.....	2 grains.
Morphine bimeconate.....	1/100 grain.
Tincture of aconite.....	2 minims.
Oil of cinnamon.....	1/4 minim.
Powdered cinnamon.....	1 grain.
Black currant paste.....	q. s.

The cinnamon disguises absolutely the taste of the guaiac, and at the same time adds to the therapeutic efficiency of the pastille. Guaiac in this combination is very pleasant, very potent, and very prompt in reducing the inflammatory engorgement in tonsillitis, acute pharyngitis, and in the removal of arthritic throat affection. The peculiar acid of black currants seems to enhance the efficiency of all these forms of pastilles, and the currant jelly or paste renders the above formulæ permanently plastic, soluble and pleasant.—(The Laryngoscope; Ther. Gaz.)

PARKE, DAVIS & CO'S LIBRARY FOR ITS EMPLOYEES.

Among the unique features of Parke, Davis & Co.'s establishment, says the Detroit News-Tribune, is the Laboratory Reading Association, an organization of employees which selects its own board of directors and manages its own affairs. The present board is composed of Joseph Helfman, president; J. M. McDonald, vice-president; G. W. Mutter, treasurer; Miss M. E. Spalding, secretary; Miss M. T. Buckley, who has been librarian for ten years; Walter G. Norvell and Miss B. Massnick.

The firm has reserved a commodious apartment for the exclusive use of this association, and 1,440 of the best popular books of the day have been collected.

At present there are about 400 members in the association, approximately representing the same number of families. Estimating five persons to the family, this gives us a circle of about 2,000 readers.

Members are allowed to retain books for two weeks, whereupon they may be renewed for another two weeks, unless they are recent additions to the library, in which case they cannot be renewed.

But this is not the only benefit of membership. There are many current magazines, which may be retained for four days, without the right of renewal. The list includes 33 different monthly and weekly periodicals, of which 160 copies are purchased monthly, the principal magazines being represented by several copies. As in the case of the books, all classes of readers are provided for, even the camera fiends, for whose sole delectation two photographic journals have been added to the list.

The association was founded September 14, 1885. Its originators were: D. O. Haynes, then superintendent of Parke, Davis & Co.'s laboratory, and now of New York City; Dr. A. B. Lyons, J. L. Webber, J. B. Russell, deceased, and W. H. Holden, the present superintendent.

Membership in the Laboratory Reading Association is limited to the 1,700 employees of the firm in the Detroit and Walkerville establishments. The dues are but 25 cents a quarter-year. Every penny of the income, with the exception of the librarian's stipend, is appropriated for the purchase of reading matter. A new catalogue that includes the title of every book purchased within the past two years has just been published, and supplied gratis to every member of the association. The books and magazines are collected and distributed to the members in their respective departments of the laboratories by the messengers of the firm.

PALATABLE MIXTURES OF COD LIVER OIL.—

The following methods are recommended (Prog. Med.): (1) Cod liver oil, 100 grams; saccharin, 0.40 centigrams; acetic ether, 2 grams; essence of peppermint, 5 drops. (2) Cod liver oil, 240 grams; beef peptone, 160 grams; sugar, 60 grams; essence of gaultheria, 25 drops; alcohol, 30 grams; water, enough to make 480 grams. (3) Cod liver oil, 150 grams; calcium hypophosphite, 3 grams; sodium hypophosphite, 1.50 grams; glycerin, 70 grams; essence of peppermint, 5 drops; gum arabic, 50 grams; distilled water, q. s. to make 300 grams.

IS ALCOHOL A FOOD.—Gasser (Med. Stand.; Journ. Am. Med. Assoc.) has studied the food value of alcohol, and concludes that in moderate quantities it is a form of food, but when used in excess a poison. While, when used in moderation, it is not specially injurious, still there is no practice which is more seductive and alluring in the formation of a habit, and while it may afford some pleasure and gratification, it is not necessary. A safer, more free and happier life can be obtained by total abstinence. He does not speak favorably of even a moderate use of alcohol for its possible food value.

URSOL DYE FOR THE HAIR.—A dye for the hair, recently patented in England, and claimed to not attack the skin or stain linen, consists of a solution obtained by adding to 1 liter of water 10 grams of ursol (phenylene dianiline), 8 grams of pyrogallol acid, 3 grams of alum, and 3 grams of powdered manganese dioxide. For dyeing, the hair is rubbed several times with the above mixture, and then twice with hydrogen peroxide.

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Violet Ammonia.—(L. C. C.) See May 3 and June 28, 1900, issues of this journal, pages 474 and 701, respectively.

Formulas for Proprietary Medicines.—(E. P. W. and C. K.) We cannot give the formulas for Green's Nervura or Wei de Meyer's Catarrh Snuff.

Removing Stains from Horses, Cattle, etc.—(W. H. R.) Your query is very indefinite. Please repeat it with definite information as to the cause of the stains or what they are, and we will endeavor to help you out.

Fly-Stone.—(W. H. R.) Fly-stone, not "fly-stones," as you have it, is an old name for a native ore of cobalt and arsenic. It is familiarly known in commerce under the name of "cobalt," and is used for poisoning flies, by roughly grinding it and putting a small quantity in a saucer with sweetened water. It is listed in the Era Blue Book at 18 to 22c per pound.

Coloring Tablets Green.—(F. S.) It is probable that a tablet containing bichloride of mercury and ammonium chloride may be colored green by mixing with the granulated salts, a little sugar of milk previously tinted with malachite green (aniline dye) or with a mixture of turmeric and indigo carmine. Some experimenting is necessary to determine the quantity of pigment to employ.

Potassium Acetate and Quinine Sulphate.—(W. E. E.) submits the following prescription and asks if it is not incompatible.

Resin of podophyllum.....	2 grains.
Alcohol.....	q. s.
Potassium acetate.....	$\frac{1}{2}$ ounce.
Elixir of calisaya.....	4 ounces.
Water, enough to make.....	8 ounces.

Yes, it is incompatible, the potassium acetate precipitating the quinine of the elixir of calisaya as quinine acetate. The character and amount of the precipitate thrown down depends upon the kind of elixir used and the quantity of alcohol present in the finished mixture.

Library Paste.—(R. B.) (1) Gelatin $1\frac{1}{2}$ ounces, rice starch 4 ounces, oil of cloves $\frac{1}{2}$ dram, water 32 fl. ounces. Incorporate the starch with the water, add the gelatin, and heat gently over a water bath until a jelly-like compound results. (2) White dextrin 5 or $5\frac{1}{2}$ pounds, water, at 160 degrees F., 1 gallon, oil of wintergreen 30 minims, oil of cloves 30 minims. Dissolve the dextrin in the water; after cooling add the oils, pour into suitable bottles, cork and then stand in a cool place. In from one to two weeks the solution will have congealed. Or this "ripening" process may be expedited by exposing the bottles in an ice chamber to a temperature of about 40 degrees (Fehl). Other formulas may be found in previous volumes of the Era. Consult the Indexes.

Rose Leaves Jars.—(R. R. L.) (1) Spread thinly the fresh collected leaves of roses on porous paper placed in shallow trays and expose to the sun or warm air until sufficiently dry. They are then placed in a jar in layers alternating with layers of common salt. Powdered orris root, extracts and other ingredients may be added according to taste. (2) Whole rose leaves, dried, 1 pound, dried lavender flowers 1 pound, crushed orris root (coarse) $\frac{1}{2}$ pound, broken cloves, cinnamon, allspice, each, 2 ounces, table salt 1 pound. (3) Rose leaves 1 pound, lavender flowers 1 pound, cloves $\frac{1}{4}$ pound, cinnamon $\frac{1}{4}$ pound, benzoin $\frac{1}{4}$ pound, pimento $\frac{1}{4}$ pound, com-

mon salt $2\frac{1}{2}$ pounds, oils of lavender, sandalwood, geranium, bergamot and lemon, of each, 1 dram, vanilla 3 ounces, musk q. s., essence ambergris $\frac{1}{2}$ ounce. Reduce the solids to a coarse powder and mix.

Whisker Dye.—(R. M. R.) The following formulas are for "one bottle" preparations: (1) Black pyrogallie acid 35 parts, citric acid 3 parts, boro-glycerin 110 parts, water 1,000 parts. Mix and dissolve. If the black produced by this solution is not deep enough, add more pyrogallie acid, if too deep use a little less. The hair should be washed with some alkaline solution in the morning before applying the dye. (2) Silver nitrate 36 grams and copper sulphate $2\frac{1}{2}$ grams are dissolved in 250 Cc. of water; sufficient ammonia is added to redissolve the precipitate first formed, and the whole made up to 1 liter with distilled water. The copper sulphate is said to prevent the dull reddish brown tint produced on the hair when the silver nitrate solution has been used for some time. (3) Brown. Lead acetate 2 drams, sodium hyposulphite 1 ounce, glycerin 2 ounces, rose-water 11 ounces. The lead and sodium salts are dissolved in separate portions of the water and filtered; they are then mixed and the glycerin is added.

Cleaning a Flag.—(A. T.) asks how he may bleach or clean an all-wool flag which has been darkened in the course of time by smoke from a factory.

It is likely that no method of cleansing will restore the flag to its original brightness. Any bleaching process is inapplicable, as the colors of the flag would be affected thereby. It is possible that by carefully washing the flag in a strong decoction of soap-tree bark one may be able to clean it somewhat. Another method recommended for cleaning brightly colored woolen shawls, scarfs and the like, may be also tried. It consists in washing or rubbing the article with a strong solution made by boiling 1 pound of soap, previously scraped or cut in small pieces, in a small quantity of water. When sufficiently cool $1\frac{1}{2}$ ounces of spirits of turpentine and 1 ounce spirit of ammonia are added and the article is thoroughly washed in the mixture. Then rinse in cold water and when all of the soap has been washed out, again wash in water to which some common salt has been added. Then remove and fold between two sheets, being careful not to let two folds of the cloth come together. Mangle, and afterwards iron with a very cool iron.

Blue Ink.—(H. & A.) We give several formulas for making blue ink. The particular shade of the ink depends entirely upon the kind of pigment and the quantity used in a given preparation. In practice it is a good plan to make a rather concentrated solution of the dye and then dilute to the shade required. By experimenting in this way you are pretty sure to hit upon just what you want.

Indigo Blue Ink.—Indigo-carmin 10 parts, gum arabic 5 parts, water 50 to 100 parts. Dissolve the gum arabic in the water, then the indigo-carmin, and dilute the solution with sufficient water to produce an ink of the desired shade.

Resorcin Blue.—Resorcin-blue M. (coal tar dye) 1 dram, distilled water 6 drams. Mix and agitate occasionally for two hours, then add hot distilled water 24 ounces, oxalic acid 10 grains, sugar $\frac{1}{2}$ ounce. Shake well. This ink may be perfumed by rubbing up a drop of oil of rose or other odoriferous substance with the sugar before dissolving it in the hot water.

Blue Writing Ink.—Dissolve basic or soluble Prussian blue in water and add a little mucilage of acacia.

Blue Ink for Copying.—Cotton blue (aniline) C. B., 12 ounces, glucose 2 ounces, glycerin $\frac{1}{2}$ ounce, hot water 2 quarts. To the solution of the dye in the hot water add the other substances and strain through a piece of silk. If too thick when cold, dilute to the proper consistency with water. In preparing this ink it is absolutely necessary that the water should be kept hot while dissolving the tinctorial matter. Solution is best effected by trituration, which should be continued until all the dye has been taken up by the water. The straining must be performed hot, otherwise the filtering cloth quickly becomes clogged. (Lehner.)

Chlorine Water with Quinine Sulphate.—(L.) writes that he received from his doctor a prescription for 12 ounces of chlorine water with 20 grains of quinine sulphate. He made the chlorine water extemporaneously by placing in a 16-ounce bottle 30 grains of potassium chlorate and then adding slowly 55 drops of muriatic acid, C. P. He then added the water in 3 equal portions at intervals of 30 minutes and one hour, shaking thoroughly after each addition and lastly adding the quinine sulphate. He made several bottles of the mixture and each one "spoiled" within 24 hours. What is the trouble?

The trouble is due to the reaction between the chlorine and quinine sulphate, the former being entirely reduced to hydrochloric acid. Chlorine water should not be prescribed in mixtures of this character as all organic substances cause a rapid disappearance of the chlorine. The extemporaneous method employed in making chlorine water is not to be commended. The resulting product is not equivalent to the official preparation and it also contains potassium chloride and free hydrochloric acid. Chlorine water is one of the reagents used with quinine in producing the well-known "thalleioquin" color reaction. This test may be found described in the dispensaries and works on organic chemistry.

Chewing Gum.—(W. E.) The manufacture of chewing gum is by no means the simple operation it would seem from an examination of the formula. Much personal experience in manipulation is necessary to success, and the published formulas can at best serve as a guide rather than as something to be absolutely and blindly followed. Thus, if the mass is either too hard or soft, change the proportions until it is right; often you will find that different purchases of the same article will vary in their characteristics when worked up. But given a basis the manufacturer can flavor and alter it to suit himself. The most successful manufacturers attribute their success to the employment of the most approved machinery and the greatest attention to details. The working formula and the processes of these manufacturers are guarded as trade secrets, and aside from publishing some general formulas, we can give little information.

Paraffin Chewing Gum.—Paraffin is dissolved at a gentle heat with a small quantity of sweet oil and glycerin, the amount of each depending upon the season, less being required in warm weather than in cold. The gum (Peruvian balsam, liquidambar, or whatever gum you desire to use) is then added and stirred in until the mass becomes homogeneous. Next add white sugar in powder, stir in, and finally add the flavoring extract (oil of wintergreen or any desired flavor). The mass is then poured out on a candy slab, rolled out into sheets and cut into pieces of the desired size.

Chicle Chewing Gum.—(1) Gum chicle $3\frac{1}{2}$ pounds, paraffin wax 1 pound, balsam tolu 2 ounces, sugar 12 pounds, water 3 pints, flavoring a sufficient quantity. By the aid of heat dissolve the sugar in the water; pour the resultant syrup upon an oiled slab; add the chicle, paraffin wax and balsam tolu, all melted together, and mix thoroughly. This manipulation produces a tough, plastic mass, which, after incorporation of the desired flavoring—oil of peppermint, wintergreen or other flavor—may be cut into the proposed form. (2) Chicle $3\frac{3}{4}$ pounds, white wax 1 pound, sugar 10 pounds, glucose 2 pounds, water 3 pints, balsam Peru 1 ounce. Flavoring, a sufficient quantity. Prepare as in the preceding. Some other formulas are given in this journal Dec. 23, 1897, page 958.

SALE OF SPOILED MINERAL WATERS.—A new law concerning pharmaceutical drugs has just been published in Bohemia, whereby the sale of spoiled mineral waters will be prohibited. No mineral water which has remained in a drug store a certain period of time shall be delivered to the buyer, and the latter, if he finds the water is no longer fresh, should bring it back immediately. Moreover, physicians will be appointed over certain districts to give their opinion on the waters sold in their place of residence, and they are authorized to sample the mineral water. If anything is wrong, an official report is to be made out and sent to headquarters. (Ther. Gaz.)

Gordon's

CHEMICALLY PURE

Glycerin.

The Oldest Brand. The Purest Glycerin.

Every druggist should use it and dispense it. There's no good reason why he shouldn't do so, as it is easily obtained from jobbers in any quantity desired and it costs no more than other brands. All that's necessary is to specify "Gordon's" on your orders to jobbers. They all supply it.

The Standard for Nearly Fifty Years.

The W. J. M. Gordon Chemical Co.,
CINCINNATI, OHIO.
Established 1848. Incorporated 1891.

MULTIPLE PERFECTION FILTER.

(The Karl Klefer Patent.)

Simplest, most complete and economical system in use for the filtration of

EXTRACTS,
WINES,
WATERS,
SYRUPS,

and all other liquids.
Repacked and a new filter in five minutes.

BUYING ADVERTISING SELLING.

Between buying and selling there is advertising. The first is comparatively easy; the second quite difficult; the third most difficult of all, but it can be made easier if the advertising is well done.

SAMPLE ADVERTISEMENTS FOR DRUGGISTS

is a little book which helps the druggist to improve his advertising. It contains 180 illustrated sample advertisements, written especially to advertise nearly everything a druggist sells. The phraseology and ideas stimulate the druggist's ideas, and if he is busy, the advertisements furnish him with "copy" ready for the printer. Every advertising druggist will find help and profit in this book.

Price 50 cents per copy, postpaid.

D. O. HAYNES & CO., Publishers,

NEW YORK.

Your Success

Depends upon the kind of merchandise you sell your customers. A bottle of

DUROY PORT WINE

sold means a permanent customer. People will have old Duroy Port Wine. Send us an order for six gallon keg and try it.

Address THE DUROY & HAINES CO., Proprietors.,
SANDUSKY, Ohio.

IN order to maintain regular prices we adhere to the "rebate contract plan."

We pay the war tax first, last and all the time.

We manufacture an excellent laxative remedy and advertise extensively to make business for the drug trade and ourselves.

We do not claim to excel in other things, but we endeavor to do one thing well and to give satisfaction to the trade.

We appreciate the friendly interest which druggists generally have taken in the sales of our remedy and we thank them most cordially.

We are,

Yours truly,

California Fig Syrup Co.,

SAN FRANCISCO, CAL.

NEW YORK, N. Y.

THE ERA FORMULARY

5000 Formulas for Druggists.

THIS book with its great variety of working formulas is an incentive and help to the druggist in manufacturing his "own" preparations and in fact enables him to become the manufacturing chemist of his neighborhood. Its wide scope is indicated by the following synopsis of contents:

800 Formulas for	Unofficial Pharmaceuticals
456 " "	Veterinary Remedies
1013 " "	Toilet Articles
417 " "	Proprietary Preparations
772 " "	Family Medicines
495 " "	Domestic and Household Prep.
389 " "	Technical and Indus. Processes
202 " "	Paints, Varnishes, etc.
456	Miscellaneous.

PRICE, \$5.00 PER COPY, DELIVERED.

Era Readers.

FOREIGN.

China.

Conflicting reports as to the safety of the foreigners in Peking are still rife, but the official Chinese reports insist that the ministers are living and are being protected by the Imperial Government. Although these reports are not generally believed, they have aroused a hope that the worst may not have happened in Peking.

The United States Government has absolutely refused the Chinese proposition to suspend military operations against Peking in return for the delivery at Tien-Tsin of the foreign ministers.

The anti-foreign movement has spread to the northern provinces of Ho-nan and Shan-si. The southern provinces are still peaceful, but restive. A border war between the Russians and Chinese is raging along the Amur river.

Later reports show that after the allies took the native city of Tien-Tsin on July 14, the most disgraceful scenes of pillage, loot and plunder took place. The American and Japanese soldiers behaved admirably, but the other forces gave themselves up to indiscriminate slaughter, pillage and excess.

A telegram has reached Berlin saying that the German Catholic missionaries in Shan-Tung are still alive, and that six of them are in the interior.

Emperor William, in a farewell address to an expedition that started for China last Friday, exhorted the soldiers to give no quarter to the foe, so that the Chinese would always fear German valor.

In speaking last week of the ability of the Treasury to stand large additional drafts in case of war with China, Secretary Gage said that he had no doubt the Treasury could maintain in the field an army of 75,000 additional men for at least a year without feeling the strain.

The Navy Department received a dispatch from Captain Wild of the Oregon last week saying that the structural strength of the battleship was intact.

It is reported in London that Russia has borrowed ten millions sterling from the Imperial Bank of Russia since the commencement of the troubles in China.

The Collector of Customs at Port Townsend, Washington, has received instructions to prevent the shipment of arms and ammunition to Asiatic ports from Puget Sound, which may be used in China to harm Americans residing there.

Surgeon-General Sternberg says that 100 additional medical officers are wanted for duty in the army in the Philippines and in China.

Chinese advice received in London from Shanghai say that a general rising throughout the Empire is certain, and that missionaries have been ordered to take refuge at Shanghai or Hong Kong.

Three thousand American troops have arrived at Taku, as well as eight transports with British troops. Both detachments are deficient in artillery.

The American forces in China, when complete, will probably amount to about 17,000 men.

The Sultan of Turkey is considering the subject of sending a Turkish force to China to co-operate with the Powers. He is said to be much affected by the reports of Chinese atrocities.

The Post Office Department will soon issue an order extending the privilege of domestic rates of postage to all United States soldiers serving in China.

St. Petersburg despatches represent the situation in Manchuria as far more serious than has been supposed. It is asserted that the Chinese have occupied Hailor, where the Russian railway staff is surrounded and in desperate straits.

South Africa.

Lord Roberts has reported his arrival at Balmoral along the railway line to Middleburg, French and Hutton clearing the army's flanks and the Boers retreating.

The Durban correspondent of the London Standard says an important discovery of copper has been made in northern Natal.

A sharp attack was made in the House of Commons last week upon the South African policy of Mr. Chamberlain, but he was sustained by a large majority.

The supplementary British estimates necessitated by the war in South Africa, amount to £11,500,000, making a total of £34,500,000 voted for this purpose, and bringing the total army estimates up to £76,300,153.

The Boer General De Wet cut Lord Roberts' line of communications last week and captured 100 Highlanders and a supply train.

The Philippines.

Negotiations are in progress for the purchase by the United States from Spain of the Islands of Sibutu and Cagayan in the Philippines, near the Borneo coast.

An American soldier having been killed at Aroquita, in Northern Mindanao, a company of infantry went to the place and killed eighty-nine natives. Subsequently a gunboat shelled Aroquita, burning the warehouses.

Municipal government has been established at Vigan, in Northern Luzon.

Charges of conspiracy to defraud the Government were made last week by the Philippines Company, a freight carrying concern, against Lieutenant-Colonel Amos S. Kimball, Quartermaster, U. S. A., and were flatly denied by Colonel Kimball.

The Island of Basilan, Department of Mindanao and Jolo, has been transferred from the control of the military to the control of the naval commander of the Asiatic station, and the establishment of civil government on the island will be conducted by the naval authorities.

Other Foreign News.

The Colombian revolutionists were decisively defeated by the Government forces last week, and the rebellion has collapsed. The Government has proclaimed amnesty to all those who took part in the rebellion except foreigners, who will be expelled from the country. About 600 lives were lost by both sides during the rebellion.

President Zelaya, of Nicaragua, has been renominated; his election is considered certain.

The Governor of Bombay Presidency reports further rains and an improved situation in several of the India famine districts.

The long disputed boundary line between Nicaragua and Costa Rica has been satisfactorily arbitrated, and the maps were signed last week by the Government engineers and the arbitrators. The event was made the occasion of great ceremony.

President Castro has officially proclaimed the re-establishment of peace throughout the Republic of Venezuela. All political prisoners have been set free.

DOMESTIC.

Politics.

Mr. Bryan has announced that in his speech accepting his nomination he will devote nearly all his attention to imperialism. He has hardly mentioned free silver in his speeches this year.

John Barrett, who was Minister to Siam under President Cleveland, has come out for McKinley, and announced his intention to speak for the Republican ticket.

Governor Roosevelt has aroused great resentment among the Democrats by referring to them in a speech as "traitors at home and cowards abroad." The Democratic papers are replying by printing the pictures of prominent Democratic military and naval commanders.

The National Committee of the Gold Democratic party of 1896 met in Indianapolis last week and decided not to put a ticket in the field this year. The general sentiment at the meeting was that all friends of the gold standard should vote for McKinley.

The anti-imperialists who feel that they cannot support Bryan on account of his free silver sentiments will probably nominate an independent ticket.

The Kansas Populists, Democrats and Silver Republicans have united and nominated John W. Briedenthal for Governor. The New York Prohibitionists have nominated J. C. Kearby. The Michigan Democrats have nominated Mayor Maybury of Detroit.

A fusion between the three parties in Idaho is assured. The Populists will withdraw their ticket, and the Democrats and Silver Republican ticket will be elected. The regular Republicans cut very little figure in Idaho.

Other Domestic News.

On Tuesday of last week a negro named Robert Charles killed two policemen and wounded a third in New Orleans while resisting arrest. On the evening of the next day a crowd of boys and young men gathered to hunt for Charles, but not being able to find him they attacked every negro in sight, shooting, stabbing and beating a dozen or more, some of them fatally. On Thursday the disorder continued in the same manner. On Friday, however, Charles was found, and after he had killed three more persons and fatally wounded four, he was himself shot to pieces by the mob. The mob then turned to the negro quarter, burned several negro houses and a fine negro school, and killed an aged negro woman. Order has since been restored.

The effort of President Gompers, of the American Federation of Labor, to bring about a settlement of the Chicago labor troubles has apparently failed. The contractors refuse to have any dealings with the Building Trades Council, but wish to negotiate with the unions.

The first railway mail service has been established in Hawaii. The line runs around the island of Oahu, carrying the mails between Honolulu and Kahuku, via Pearl City, Waiapahu, Honouliuli, Waianae and Waiahua, a distance of seventy-two miles each way.

The Bethlehem Steel Company has secured an order for 2,000 tons of Krupp armor for the Russian Government. Its bid was in competition with European makers.

Charles H. Hoyt, the playwright, has been committed to a retreat for the insane at Hartford, Conn.

Secretary Root has ordered the arrest of ex-Director of Posts Rathbone, at Havana, on charges growing out of the postal frauds.

The resignation of Ambassador Draper, our representative in Rome, has been received at the State Department.

The election of delegates to the Cuban Constitutional Convention will be held September 15, and the convention will meet in Havana on November 5. It is expected that our rule will be withdrawn from the island in about eight or nine months.

Geronimo, the famous Apache chief, who has been a prisoner for fourteen years, has gone insane at Fort Sill, Indian Territory.

THE DRUG NEWS.

N. A. R. D. NOTES.

Chicago, July 28, 1900.

The Maine Pharmaceutical Association, at its recent meeting, adopted the following resolutions:

WHEREAS, The work done and the results accomplished by the National Association of Retail Druggists during the past year have been such as to inspire confidence in the success of its plans for improving the financial condition of the drug trade, and

WHEREAS, The said National Association and its executive officers are entitled to the confidence and encouragement of every organization in the United States which seeks the betterment of the commercial status of the retail druggists; therefore by the Maine Pharmaceutical Association be it

RESOLVED, That the loyalty of this association to the National Association is hereby reaffirmed.

RESOLVED, That the treasurer of this association is directed to pay to the treasurer of the N. A. R. D. 50 cents for each active member of the Maine Pharmaceutical Association for the fiscal year ending December 31, 1900.

RESOLVED, That the president appoint one delegate to the N. A. R. D. convention to be held at Detroit, Mich., September 12-14, 1900. Expenses to be paid by the Maine Pharmaceutical Association.

Signed: F. H. Wilson, S. R. Crabtree, J. F. Young, Committee.

The Secretary requests that in calculating the amounts due the National Treasury, the secretaries of local associations observe carefully the provisions of Article VII. of the Constitution. Every local society is expected to pay the dues of its entire active membership. The state associations pay only for those of their members who are not members of the local societies belonging to the N. A. R. D. If in remitting the dues of his society the secretary of a local organization should deduct for those of his members who belong to the state association, and the secretary of the state association should, in turn, deduct for those members who belong to this particular local society, the national organization would be loser by just that number of members who belong at the same time to both these organizations. It is the intention of the Constitution that no member shall be assessed in more than one association, but the local associations are expected to take the initiative by paying for all their active members.

The Northern Illinois Druggists' Association, organized in Chicago on the 16th inst., is composed of the druggists of twenty counties lying nearest the Wisconsin state line. The organization committee was well attended. A Constitution and By-Laws were approved, and stirring resolutions were adopted. The work of the association in the interim between the quarterly meetings is delegated to an executive board consisting of one member from each county. The following is Article III. of its Constitution:

This organization is an integral part of the National Association of Retail Druggists, and this relationship between the two bodies shall be perpetuated. As a loyal member of the N. A. R. D. it is bound by the Constitution, By-laws and rules governing that organization, or which may from time to time be adopted by it.

The Illinois Pharmaceutical Association at its twenty-first meeting, the most successful in its history, enthus-

astically reindorsed the National Association and praised the National Executive Committee for what it had accomplished. The dues of the membership were ordered paid, and a donation of thirty-six members of the organization, amounting to \$216, was placed in the hands of the committee to be sent to the National Treasurer. The addresses of Chairman Holliday and Secretary Wooten and the discussion thereon occupied one entire session of the meeting. A resolution was adopted directing the President to appoint a committee in each county of the State to bring its druggists into affiliation with the N. A. R. D.

The Committee of Entertainment of the Detroit and Wayne County Druggists' Association have arranged some very pleasing entertainments for Wednesday evening and Thursday afternoon and evening during the coming convention. The National Executive Committee in recognition of the desire of the members of the association that the N. A. R. D. shall be known as a business organization, set apart a very small portion of time for social enjoyment, but the Detroit druggists and manufacturers are arranging to make the best possible use of their opportunities to demonstrate their pleasure in meeting their fellow-druggists of the country by extending to them the hospitality which so fittingly expresses this pleasure.

The Tennessee State Druggists' Association closed its annual meeting on the 19th. Retiring President Nelson, writing to the National Secretary, says:

"It has been the most successful year the druggists of the State have enjoyed in many years, and would have been more so had we not felt handicapped by legislation. . . . The association endorsed my administration, and all seemed grateful to the N. A. R. D. The secretary was instructed to remit to the National Treasurer 50 cents for every paid up member. We want to get enough paid up to entitle us to at least two delegates. Our local association (Jackson) will remit in a few days and we shall try to send a delegate from here. Tennessee will have several representatives at the Detroit meeting this year.

Attention has been recently directed in a forceful manner to the urgent necessity of members of the National Association giving their patronage to those manufacturers and jobbers who favor its plans and who cooperate with its executive officers. The combined power of the retail trade is irresistible, and this power must be exerted to advance the work of the national organization, if it is to accomplish the purpose of its creation.

Four State Pharmaceutical Associations will hold their meetings 12 August. The following are the dates and places of meeting:

North Dakota—August 7-9, Fargo.

South Dakota—August 7-9, Brookings.

Montana—August 7-9, Butte.

Michigan—August 14-15, Grand Rapids.

The California Pharmaceutical Society will hold its quarterly meeting on the 9th of August at San Francisco.

Chairman Holliday attended the meeting of the Iowa Pharmaceutical Association at Clear Lake, July 10-12. Endorsement was given to the work of the National Association, and resolutions providing for the appointment of three druggists in each county to form local societies were adopted. The treasurer was instructed to pay the dues of the membership. The president will appoint a delegate to the Detroit Convention.

President Jones attended the meetings of the Virginia and North Carolina Pharmaceutical Associations. The dates of the two meetings were so close together that the results of his trip were less satisfactory than they otherwise would have been; but his cordial reception at all the places which he visited is gratifying evidence of the esteem in which our cause is held in the two States.

The Chatham County (Savannah), Ga., Pharmaceutical Association is one of the new members of the N. A. R. D. This vigorous organization embraces all but two of the druggists of Chatham County. The work of correcting local conditions is progressing.

Dr. M. L. Porter, of Danforth, Maine, Secretary of the State Association, has been appointed by President Boynton to represent the Maine Association at Detroit.

From present indications the Dominion of Canada will send several delegates to the 1900 meeting of the N. A. R. D.

New York and Vicinity.

DISPUTE OVER A PRESCRIPTION.

A physician and two druggists figure in an exciting argument that started about three weeks ago and may end in a suit for damages, as one of the druggists says his reputation as a pharmacist has been seriously injured by the doctor, who, it is alleged, has accused him of adulteration. The principals in the matter are Alexander Lyle, M. D., 117 East Eighty-first street, H. Ohnstein, Ph.G., Seventy-ninth street and Lexington avenue and M. Robbins, Ph.G., Eighty-first street and Lexington avenue. Some time ago a patient of Dr. Lyle's presented the following prescription to Mr. Robbins for filling: "Acid Hydrochlor. dil 3v, Pepsin, Fairchild, 3v, Aqua Menth. Pip. Ad. 3iii, M. et sig. 3i, in water before each meal." Mr. Robbins compounded the mixture and gave it to the patient, who on the next call of the physician showed it to him and he is alleged to have stated that Mr. Robbins was not a reliable druggist, as the medicine was not properly mixed. He advised his patient not to go to Mr. Robbins, as he did not fill the prescription correctly. Mr. Robbins learned of this and called on Dr. Lyle to ascertain the reason for the attack, and he was informed that the prescription as written was a perfect solution, which Mr. Robbins did not give. The druggist explained that the proportions given would not produce a perfect solution, but the doctor stated the same prescription had been compounded by Druggist Ohnstein and not a trace of insoluble matter showed. Mr. Robbins said this could not be and invited the M. D. to come to his store some evening and he would prove that the prescription would not do as Mr. Ohnstein said, if the proper ingredients were used. The doctor came, saw, but refused to be conquered, and is said to have been crying against Mr. Robbins ever since. Mr. Robbins wrote to Fairchild Brothers and Foster, who make the pepsin called for and received an answer that the prescription would not make a solution. Mr. Ohnstein was seen last week by an Era reporter and asked about the prescription, but his only answer was that it should be made a solution. He was asked whether the prescription instructed materials that were soluble or not, and he gave the same reply. Mr. Robbins believes he is right, and the letter from the Fairchild people upholds him, but nevertheless his business is suffering from the accusations made against him and he thinks he could recover damages if he should begin a suit against the persons concerned.

DRUGGISTS KEEP A POULTRY FARM.

One of the most novel as well as interesting pursuits for a drug firm to engage in is that which was described by L. G. Smith, manager for J. M. Owen & Son, wholesale and retail druggists at Shelbyville, Ky., when he was in this city last week. Mr. Smith stated in the course of conversation about the prominence of his firm, and with a great deal of pride, too, that it not only dispensed drugs, but also raised, sold and shipped turkeys for the Eastern market. Mr. Smith is an enthusiast on turkey raising; he knows it in its every phase, and is as conversant upon the subject as a professional might be expected to be. He said the business began with his firm some time ago in a small way, and was more of an experiment than anything else, but it grew to such alarming proportions that it was found necessary to incorporate it as a regular part of the business of the firm. The plan of operation is to secure orders during the winter, spring and summer in the Eastern market for the turkeys, and then ship them in the fall; the firm doing the killing, picking and packing. As a proof that it is no small enterprise, Mr. Smith stated that last year the output of the company was forty car loads, representing half a million pounds, and valued at \$65,000. He hopes that this year the output will be still larger. Mr. Smith left on the S. S. St. Louis Wednesday morning, July 25, for Europe, where he intends spending two months' vacation.

RETAIL DRUGGISTS' ASSOCIATION.

The members of the Retail Druggists' Association laid the foundation of a concentrated movement for early closing on the East Side when they unanimously elected A. H. Solotaroff, A. Hammer, L. Lurie, J. Messell and B. J. Bockshitzky a committee to decide upon plans that will be most expedient for closing their drug stores at an earlier hour in the evening. Mr. Bockshitzky introduced the subject with a motion to the effect that all druggists on the East Side be notified in writing or visited by a committee requesting them to close at 11 o'clock. This brought on a discussion in which nearly every member present took part and in which the original motion was amended to read 10 o'clock, and so many different ideas were advanced that it was concluded to leave the affair in the hands of a committee, which action was unanimously adopted. The meeting was presided over by J. Hammer, who later gave an interesting report of the doings of the Associated Drug Company. Reports from committees were heard, showing the organization to be in a flourishing condition, and Financial Secretary Solotaroff reported the receipts of the meeting \$12. One proposition for membership was received; Henry Walker, druggist, corner Broome and Walker streets.

THIEVES LOOT A DRUG STORE.

Frank G. Froehlich, proprietor of the drug store at Third avenue and 167th street, was aroused from his slumbers by a policeman early Sunday morning, July 29, and informed that his store had been robbed during Saturday night of money, drugs and cigars to the value of \$150. The robbery was not discovered until daylight Sunday morning, when a policeman noticed bottles on the shelves in confusion and he investigated. Mr. Froehlich found a quantity of his best cigars gone and a number of toothbrushes and bottles of cologne were also missing, with several dollars cash. The money till of a branch office of the Western Union Telegraph Company in the store was robbed of \$26.88. Mr. Froehlich is at a loss to know how the robbers could have worked without being seen by the police, when there were two gas jets in the store burning brightly and an arc light on the corner that lighted up the whole place. Mr. Froehlich sleeps over the store, but he didn't hear the thieves. The store was broken into and robbed January 5, this year.

NOTES.

—Among the visitors in town during the last week were: E. Lehman, Memphis, Tenn.; John Marion, Cranford, N. J.; Joseph Walker, with A. Walker & Co., Freehold, N. J.; S. I. Vanderbeck, Islip, L. I.; Allen Looker, Bloomingdale, N. J.; A. G. Cassell, Vicksburg, Miss.; E. M. Wallington, president of the Vineland Grape Juice Co., Vineland, N. J.; Dr. T. C. Wood, of Haverstraw, N. Y.; H. A. Spilker, Pittsburg, Pa.; J. L. Coutant, of New Rochelle; Mr. Mayo, associated with W. L. Wood, of Pawtucket, R. I.; Robert Murphy, of H. B. Merchant & Co., Clinton, Mass.; George F. Brown, druggist, Rahway, N. J.; J. D. Blauvelt, druggist, Nyack, N. Y.; C. H. Van Buren, salesman, in Connecticut for Lehn & Fink; John MacLean, druggist, Chicago, Ill.; Mr. Hutchinson, Ohio representative of Parke, Davis & Company, and S. H. Sables, druggist, Mt. Kisco, N. Y.

—While Ewen W. McIntyre, Jr., son of Ewen McIntyre, the well-known druggist, was at breakfast in a restaurant on West Fifty-eighth street, Friday morning last, a well-dressed young man mounted his bicycle standing on the curb and rode away. Mr. McIntyre started in pursuit, but an Amsterdam trolley car had already stopped the thief by hitting him amidstships as he was crossing the track. The wheel was swept under the fender and ruined and the young man was sent sprawling to the pavement. Instead of berating the motorman he scrambled to his feet and started to run. Mr. McIntyre arrived on the scene by this time and hastily informing the crowd collected that the injured man was a bicycle thief, continued the pursuit, which resulted in the capture of the fugitive in Central Park.

—Special committees of the Kings County Pharmaceutical Association, Manhattan Pharmaceutical Association, German Apothecaries' Society, and the Alumni Association of the New York College of Pharmacy, which had in charge the matter of visiting the management of the American Druggist with a view to obtaining relief from the alleged abuse heaped on the society in the columns of the paper, met in the rotunda of the Astor House Tuesday afternoon, July 24th, but could not see A. R. Elliott, president of the American Druggist Publishing Company, because of his absence from the city. However, when Mr. Elliott returns the efforts of the committee to establish communication with him will be renewed.

—S. H. Carragan, manager of the traveling salesman for the local branch of Parke, Davis & Co., had a thrilling experience while away on his vacation at Rangely Lake, Maine, last week, from which he has just returned. Mr. Carragan was beset by a bear, and although he will not discuss the subject himself, his friends say it was a real lively one and gave Mr. Carragan one of the warmest as well as most exciting afternoons he had spent in some time.

—Notwithstanding the fact that this is a Presidential year, when business is supposed to experience a slight depression, nothing of the kind has been noticed in the drug trade so far. On the contrary the wholesale and jobbing firms in the city report an over abundance of orders. This is regarded as unusual for this time of the year, but is considered an excellent demonstration of the generally prosperous condition of the country.

—William R. Warner, president of William R. Warner & Co., who is at the Paris Exposition, sent a letter to B. B. Hamlin, manager for the New York office of the firm, last week, in which he stated the exposition, in his opinion, was not the success claimed for it. He was greatly disappointed in the show of chemicals, which were all exhibited together instead of each country displaying its own.

—The McKinley and Hobart and Sound Money Drug, Paint, Oil and Chemical Campaign Club has strung an attractive banner from its headquarters in the Seabury & Johnson building in Maiden Lane to the building opposite, this being the signal that the real work of the club had been begun, and noonday meetings are now held daily.

—The Apothecaries' Bicycle Club could not hold its customary weekly "run" Thursday, July 26, because of the unfavorable weather. The trip was to have been to Greenwood Lake, N. J. The next "run" of the club will

be to Kensico to-day, and the start will be made from 110th street and Fifth avenue at 9 o'clock.

—The Veg-A-Tab Remedy Company was incorporated under the laws of this State during last week to manufacture patent medicines. Its main offices are at Morristown, N. Y., and the capital stock is \$4,000. The incorporators are E. H. Miller, H. E. Worden and F. M. Ames, all of Morristown.

—Ferdinand Julius, pharmacist of 536 Broadway, Brooklyn; Edward Fuehrer, of this city, and William H. Ueschle, pharmacist of Long Island, have returned from a delightful sojourn of nine days in Bermuda. The party arrived home on the steamer Trinidad Wednesday, July 25th.

—The Lacto-Morrow Company, manufacturers of patent medicines, was incorporated under the laws of New York last week. The company is located in this city, and has a capital of \$10,000. The incorporators are Manuel C. and Mureai Polancode Velas and C. O. Van Ness.

—Lehn & Fink began tearing down their old building at 120 William street, Tuesday, to make room for the new eight-story structure which is to be erected on the site. The business done at 120 William street will hereafter be carried on at 75 John street.

—The importation of drugs, chemicals etc., to this port for the week ending July 21 reached \$583,337, which is about 40 per cent. less than for the week previous. The largest item in the list was \$42,557 worth of nitrate of soda.

—It has been asserted during the last week that a lively rate war is being carried on among the retail druggists in Haverstraw. As there are not many druggists there, it is possible that the "war" will result disastrously.

—The drug store of Geety & James, at No. 2,090 Eighth avenue, was visited by fire Monday evening, July 23, and \$1,500 damage was done before it was extinguished. It is not known how the blaze originated.

—Colonel E. W. Fitch, local manager for Parke, Davis & Co., entertained Allan C. Murdoch, manager for J. N. Murdoch, wholesale druggist at Parkersburg, W. Va., at the Drug Club last week.

—Many of the retail druggists in the State have been inquiring of the trade in this city of the condition of the opium market. Most of the inquiries refer to the coming possibilities of the drug.

—Fire damaged the drug store of Bockshitzky & Co., at No. 230 Livingston street, early Monday morning, July 23. It is thought the blaze was caused by exploding chemicals.

—For the week ending July 24th, the exportation of drugs from this port amounted to \$49,470, which represented about 50 per cent. of what it was the week previous.

—John C. Miller has accepted a position as travelling salesman with O. H. Jadwin in the State of Pennsylvania. He formerly covered the same territory for McKesson & Robbins.

—C. R. Lush, druggist at Hempstead, L. I., was in the city during last week. He recently returned from a fishing trip at Martha's Vineyard, and reported an excellent catch.

—C. C. Hinchman, of the Michigan Drug Company, of Detroit, who had been in this city for several days last week, has returned to Detroit.

—H. M. O'Neill, druggist at Columbus avenue and 104th street, with Mrs. O'Neill, returned from a vacation at Saratoga early in the week.

—"Colonel" J. W. George, with Schieffelin & Co., is enjoying his annual two weeks' fishing excursion at Block Island.

—A. and J. Bakst, druggists at 249 Henry street, and sister, Gussie, are at Long Branch for a three weeks' vacation.

—Charles T. Lord, of Lord & Eely, druggists at Seventh avenue and Thirty-sixth street, is on a vacation up the State.

—Adam Breitenbucher has recently purchased the store of Fred. W. Becker at 130 Tremont avenue, Newark, N. J.

—C. H. White, druggist at Madison avenue and Fifty-third street, spent last week at Greenwood Lake, N. J.
 —G. E. Tappenden, druggist at 98 Columbus avenue, moved Monday to his new store on the opposite corner.
 —J. D. McCreery has moved his drug store from 2,754 Eighth avenue, New York, to 514 Broadway, Brooklyn.
 —The Neuschotz Pharmacy has recently been opened at 280 Grand street. S. Korngut is proprietor.
 —J. J. Molloy, with McKesson & Robbins, is spending a three weeks' outing in Ontario, Canada.
 —Louis Schapira has opened a wholesale drug store at 480 Broadway, Brooklyn.

IN AND ABOUT BOSTON.

Spencer Druggists in Trouble.

Boston, July 28.—Spencer druggists appear to be in trouble. Frank Collette, the owner of a drug store at the corner of Mechanic and Chestnut streets, had his place raided by special officers who found right beside the soda fountain two quarts of gin, one quart of port wine, two gallons of brandy, five pints of whiskey and a small quantity of alcohol. At the trial the officers were unable to prove a sale and so Collette escaped.

Thomas Desaulnier, in the same court, was fined \$50 on the charge of selling as a beverage malt extract which contained more alcohol than the law allows. A sample bottle was sent to the State chemist to be analyzed. It was found to contain 5 3-8 per cent. alcohol, while the law only allows 1 per cent. Desaulnier said at first that he kept it only as a patent medicine, but when the officers testified to having found empty extract bottles around the store, he acknowledged that he kept it on ice and had sold it as a beverage, but said that he bought it in the first place with the intention of using it for prescriptions. The case was appealed and will now be tried by the Superior Court.

NOTES.

—As the result of the recent arrest of T. D. Tate, the Clinton druggist, he was up in the District Court in that town, was found guilty of keeping liquor with intent to illegally sell the same and was fined \$75. Through counsel, he appealed and furnished bail. The government showed in the trial that on Sunday, July 15, seven officers raided Mr. Tate's place of business and found nine men in the rear room of the store drinking beer out of bottles. The officers at that time seized thirty-three cases of beer, a barrel of whiskey and a quantity of other liquors contained in jugs and bottles. There was a whole outfit for serving liquors to be drunk on the premises.

—William D. Tate, a clerk at Asa O. Marshall's drug store in Beverly Farms, recently lost his pocketbook containing \$11 somewhere in the main business square of that fashionable resort. Although he has offered a liberal reward for its return, his property has not come back to him.

—In the District Court at Brockton, this week, Enos B. Winslow, the druggist who had been thought by the Deputy Fire Marshal to be the cause of the destruction of the Keith Block by fire last May, was discharged after a long hearing in which there was no evidence of his guilt.

—George H. Reno, clerk in Barker's drug store at Springfield, has been given a good position by Postmaster Hyde of that city, who has appointed Mr. Reno to be forwarding clerk in the post office to succeed W. A. Hendricks, who recently resigned.

—Clerks in L. U. Wood's drug store in Globe Village district at Fall River recently cauterized the wounds in the hand of a stranger who, while walking on the street in the vicinity of the pharmacy, was bitten by a large dog.

—After having been for some time at West Springfield, Edmund Sweeney, who has been assistant at the Elm Pharmacy in that town, has given up his position. He has removed to Becket, where he will make his home.

—What is known as "White's Corner Drug Store" at Haverhill is being extensively renovated, the improvements including repainting and frescoing. Fine new showcases have also been put in.

—As the result of a soda water tank explosion at the store of L. Isenberg, 19 and 20 Stillman street, an employe who was at work filling the tank was severely injured, receiving a broken leg.

—C. C. Goodwin (Geo. C. Goodwin & Co.), of the Eastern Drug Company, is at Menahant, Cape Cod, Mass., to remain a month or six weeks. His wife accompanied him on his vacation.

—After a week's vacation passed at Haverhill, Walter Stickney, a clerk at Stickney's drug store in Beverly, is again attending to his duties at that place.

—Thomas Murphy, of Glover's drug store at Lawrence, has taken his family to Salsbury Beach, where they are all enjoying the delights of that place.

—Wallace Brackett, who is a clerk in C. H. Beagles' drug store on Broadway, Lawrence, has been camping out at Lake Merry-Making.

—Joseph Ryan has been given a position as clerk at J. H. Mitchell's drug store in Haverhill and has begun his duties at that place.

—Henry R. Dennett, head clerk for L. N. Drury, Roxbury, is taking a three weeks' vacation at his home, Saco, Me.

—After an enjoyable fortnight's vacation, Arthur Reynolds, clerk at Bouley's drug store at Rowley, has returned.

—Frank Wasson, clerk at Wheeler's drug store, Massachusetts avenue, has gone to Nova Scotia for three weeks.

—Edward Brown, a clerk at Cooper's Pharmacy in Dalton, is now back from his summer vacation.

—J. B. Naismith, Chelsea, has just returned from a seven day trip to Skowhegan, Me.

PHILADELPHIA.

The Dispensary Evil.

Philadelphia, July 28.—There are upward of two hundred and fifty hospitals, homes and free dispensaries in Philadelphia. Almost all of the hospitals maintain free dispensaries and vie with each other in the effort to secure "trade," so that their Annual Report will make a brilliant showing, and they can go before the money-donating powers of the State out rivaling in beneficent work their other-denomination neighbor and thus secure from the pockets of the taxpayer the wherewithal to continue their philanthropic and humanitarian mission.

The taxpayer, however, is an unorganized mass, and is very easily robbed by the mandarins, but there is a movement on foot among those directly injured by this flagrant abuse of what was intended to be an especial charity, namely among the physicians and pharmacists, to bring the matter before the State Legislature and see if a statute cannot be enacted to in a measure entail the evil.

Apocryph of this condition, a prominent druggist expressed himself as follows: "It is impossible to compute the number of people who are annually treated in this poor man's paradise, or to get an exact idea of the number of prescriptions yearly given away. I know of one dispensary which charges five cents for the prescription and does a business of about 100 per month. I think, personally, that the small charge is a great deal worse than the gratis business and likely to lead to more damaging results. There still remain many people who would not take charity at any price, but who, if they received a dollar's worth of treatment and drugs for five cents would feel that they had done their financial duty, and then run and tell their neighbors what a bargain they had struck. It is impossible for the hospitals to draw the line between the real paupers and the well-to-do liars who come and bum for advice and medicine. Hence to my mind the five-cent evil may eventually ruin the business of physician and pharmacist. There is a hospital not far from here which does a straight gratis business. In fact, the institution claims that it treats more patients in its dispensary department than any other hospital in the world, with the exception of Guy's Hospital, London. The poor, 'who are with us always,' are compelled, or used to be, to bring their own bottles, and many a bottle we have sold for five cents that was eventually filled at the hospital. The drug store thought at one time to make a charge for the package, but the

ultimate authorities put their foot down on it and now if the bottle is not brought the patient gets it.

"The dispensary above referred to charges only five cents, no matter what the prescription contains. Of course you know that the city pays a New School as well as an Old School physician in every ward of the burgh to look after the poor and advise them gratis, and there is also a drug store in each ward at which the pauper can get his prescription for nothing into the bargain.

I am glad to see that the P. A. R. D. is taking hold of this matter, and that it will appoint a committee to act in conjunction with the State Pharmaceutical Association, and I am also delighted to notice that the State Association intends to act in harmony with the State Medical Association, and that they will do some combination work at Harrisburg when the lawmakers next meet. The business is bad for everybody. Bad for the taxpayer, bad for the overworked young doctor in the hospital who can only half treat a case owing to the fearful rush, ruinous, of course, to the legitimate physician and pharmacist, but really worst of all for the people, for it will surely breed a constantly increasing crop of helpless bums, liars and paupers."

NOTES.

—One of the handsomest pharmacies on the "beach" is that owned by Leeds & Deemer, opposite the new steel pier, Atlantic City. It is done on the white and gold scheme, is elegantly carpeted and is fully worthy of the growing magnificence of that eighth world wonder. Nine years ago, by the way, speaking of Atlantic City, there was only one drug store on the whole length of the board walk. It was board walk then, loose boards and knot holes, with perpendicular hills over each street crossing, and there was scarce a glimpse of the ocean for the variegated lumber yards between the off-rail and the sea. Now it is Esplanade, steel, with wrought iron rails and hard wood flooring laid bias, and to match, there are five superb pharmacies outfitted in the latest style—enamel, French plate and costliest of woods. No wonder blase voyagers from the effete dynasties across the same sea pay good money to take in the show and test American soda at the different beach pharmacies. Keeler's Beach Pharmacy was the first drug store on the sands, and it was only open in Summer. Now, the five aforesaid big stores are open all the year round, and are doing an immense trade.

—The summer of 1900 has been an exceptional one for fish stories, so Mr. D. E. B. says, and he knows almost everything in the drug line. Mr. Bransome, however, positively refuses to state details of the salmon catch made by Messrs. R. W. and J. W. Johnson, just returned from a piscatorial survey of North East Canadian waters. No one would believe in Philadelphia, it seems, the statement of the number of salmon caught or the weight of some of the heaviest. From a hastily-made calculation, however, it appears that the fish cost at least \$50 each.

—H. Kratz, of the prescription department of 1106 Chestnut, and some of the others who did, and some of the others who didn't, go to Betterton, tried their luck at Anglesea last week. There is no knowing what gigantic effort in the fish story line might have been in circulation on their return had they been able to cross the bar. The bass and other five-fathom denizens, were treated to five or six predigested hotel breakfasts instead of the steel-hooked clams and crabs intended for them. Next time 1106'll fish in the inlet, from a rowboat.

—E. Drake, one of the star salesmen of the Quaker City, and the man who attends to the ocean ends of the S. K. F. Co. routes, does most of his work at Atlantic City in the evening. The Esplanade has no attractions for him if there is an order to be roped, and he is frequently seen at work as late as eleven o'clock.

—N. Newlin, the popular "Howard" of Evans' 1106 shop, will spend August at Beach Haven with his family. The mossbunker and menhaden fish oil, chum and fertilizer products are making hasty additions to their plants and preparing to run overtime, to ease "Howard" of his by-product.

—There is an unique household at Atlantic City in the pharmaceutical establishment of Willard Wright, drug-

gist, a homeopath and old schooler and the aforesaid dispenser, all living happily under the same roof. Mr. Wright don't care for he can fill prescriptions from both physicians.

—H. B. Leeds, of Atlantic City, has been steadily improving in health and is now in a condition to take in the Catskills and top off a successful convalescence with unlimited lungfuls of that delicious New York air.

—Dr. C. H. Dirmitt, Nineteenth and Federal streets, has taken a cottage at Buzzard's Bay which he will occupy with his family during the month of August. Dr. Dirmitt will close his store during his entire absence.

—J. B. Beckett, of Second street, Camden, is an enthusiastic collector of autographs, and has secured an exceedingly extensive and notable collection through his persistent and intelligently directed efforts.

—Arthur Herritt, who has been the owner of several stores in Philadelphia for the last two or three years, has disposed of his remaining pharmacy and will embark in the embalming fluid business.

—C. W. Halliwell, Sixteenth and Wharton streets, is an expert with the shotgun, and has been invited to meet some of the cracks of the country in a clay pigeon shooting contest.

—Walter A. Smith, of V. H. Smith & Co., and president of the Philadelphia Drug Exchange, is spending a couple of weeks at the home of his wife's relatives, at Lewisburg, Pa.

—Charles Morrell, of Fifty-second and Master streets, has been very ill, but his friends in the trade will be glad to hear that he is on the high road to complete recovery.

—Dr. Paul Litchfield, whose store is at Twelfth and Kaighns avenue, Camden, has occupied a new home on Washington street with his bride. Both are lovely.

—Andrew Scull, manager of Jarrett's pharmacy, Camden, was at Sea Girt last week in his capacity as Hospital Steward of one of the New Jersey regiments.

—George J. Pechin, of Camden, is hospital steward of the Camden Gatling Gun Co. He has been putting in his week at the encampment at Sea Girt.

—John N. G. Long, Twentieth and Diamond streets, has completed the renovation of his store, necessitated by the fire of several weeks ago.

—A new store has just made its debut at Germantown avenue and Carpenter street, Pelham. One Mr. Binns is the proprietor.

—Lonis Oliphant, Ninth and Callowhill streets, is a frequent visitor at Ocean Grove, where his family have a cottage.

—Benjamin Dreyfuss, manager of Dr. B. J. Murray's Falls pharmacy, is away on a ten-day trip to Boston.

—C. A. Eckles, he of the many stores and much activity, will spend a few weeks at Atlantic City.

—Frank Yealy is the very efficient manager of the Wilson pharmacy, Ninth and Filbert streets.

—William Myers, of Fourth street and Susquehanna avenue, is opening a new store.

—A. G. Keller, Second and Race streets, is a lover and driver of fine horse flesh.

—M. F. Brantin, of Camden, is back "at home" after an extended wedding trip.

—C. B. McLaughlin, of Camden, is spending his vacation at Atlantic City.

BALTIMORE.

Suicide of a Drug Clerk.

Baltimore, July 27.—William Bond Martin, until recently employed as clerk in the drug store of James M. Griffin, 636 West Fourth street, Wilmington, Del., was found dead in his room in the Carrollton Hotel, of Baltimore, this morning. He had taken chloral, presumably with suicidal intent. He had been at the hotel for several days and had seemed cheerful. What induced him to end his life is not known. He was about twenty-eight years of age and had come from Trappe, Md., four years before. He had started on a two weeks' vacation on Wednesday of last week apparently in the best of spirits. A graduate of the Maryland College of Pharmacy, he had well-known family connections in different parts of the State. Among the dead man's effects were a little over

\$2 in money, a gold watch and chain and various other trinkets. The drug taken by the suicide was purchased the day before in a drug store near the hotel.

The Wedgewood Club Afloat.

Baltimore, July 27.—One of the most enjoyable outings ever held by the members of the Wedgewood Club was enjoyed yesterday, when the club steamed down the Bay on the yacht Runaway, which had been placed at the disposal of the members by its owner. It had been the intention to invite the ladies, but the programme was changed, and the Wedgewoodites climbed aboard with the freedom of boys just out of school. The start was made at 2.30 o'clock in the afternoon and the course was laid for Tolchester Beach, some twenty-five miles from the city. There supper was served at the hotel and jollity reigned supreme. Afterward the trip was continued to Betterton, and late at night the tired but happy aggregation returned home. In the party were A. J. Corning, Henry P. Hynson, John G. Beck, Owen C. Smith, August Schrader, A. E. Streett, M. N. Fouch, John Conlyn, J. Webb Foster, Charles Morgan, John C. Muth, Emory Bond, J. H. Winkelmann, Jr., John F. Hancock, Charles H. Ware, Dr. A. R. L. Dohme, John M. Weisel, James Bailey, John D. Thomas, Albert E. Thompson and John S. Muth. The invited guests were Prof. E. B. Reed, Prof. John W. Chambers and Dr. J. B. Schwatka, who is also sheriff of Baltimore.

Catching a Sea Turtle.

Baltimore, July 26.—R. H. Jordan, of Charlotte, N. C., the genial president of the North Carolina Pharmaceutical Association, was the hero of an exciting adventure during the sojourn of the organization at Wrightsville Beach, last week. He was leaning back in an easy chair, the smoke from his perfecto floating lazily out over the waters of the Atlantic ocean, when the penetrating notes of a female voice, which betokened great excitement, fell upon his ear. The voice called his name. He hurried down to the water's edge and found one of the ladies of the party trying with might and main to prevent a big sea turtle from regaining the element from which it had been cast up by a big wave. The question being one of the turtle or the lady, Mr. Jordan went gallantly to the rescue. Catching the reptile by the tail he held on like grim death. But his strength was not equal to that of the huge creature, which was slowly drawing him seaward, when further assistance arrived, and through the combined efforts of several druggists, one of whom, a three hundred pounder, planted himself firmly on top of the turtle, the latter was secured. It furnished the material for a capital dinner the next day. It was found to have 300 eggs and weighed 306 pounds.

Revision of the Pharmacopoeia.

Baltimore, July 28.—The Special Committee on Revision of the United States Pharmacopoeia appointed by the Maryland College of Pharmacy, held a meeting this morning, at which the members discussed ways and means for carrying out the work assigned to them. It is the intention of the committee to confer with as many members of the College as can be reached and get their views with regard to the proposed changes. In this way the opinions which prevail among druggists generally can be ascertained and employed as a basis for recommendations to the Committee of Revision.

NOTES.

—During a violent thunderstorm which passed over Hagerstown, Md., on Tuesday afternoon of last week two druggists of that town received a bad scare. D. C. Aughinbaugh's handsome residence on Prospect street was struck by lightning, which ran down the chimney into the kitchen without doing serious damage. Another electrical discharge entered J. W. Cook & Bros.' drug store under the Hamilton Hotel, smashing an electric fan and setting fire to the woodwork in the front window. The blaze was extinguished with a bucket of water. No one was hurt.

—George L. Muth, senior member of the Baltimore wholesale drug firm of Muth Bros. & Co., is touring in New England and Canada. When last heard from he was in Montreal. It is his intention to invade the Hudson Bay country and return by way of the White Mountains. He has for companions several fair relatives and writes that he is enjoying himself greatly.

—Miss Amanda Horn has bought the property occupied by her father, the late Dr. Louis Horn, as a pharmacy and physician's office. Since his death she has conducted the store on her own account. Her manager is A. H. Downs, formerly clerk with George Johnson, Baltimore and Exeter streets.

—Among the several hundred guests sojourning at Wrightsville Beach, near Wilmington, N. C., is M. N. Murphy, of the Burwell & Dunne Company, of Charlotte, N. C. He manifested a deep interest in the proceedings of the North Carolina Pharmaceutical Association during the annual meeting.

—The body of a drowned man was found in Hampton Roads on Wednesday of last week and taken to Norfolk. The remains are thought to be those of Dr. Eugene C. Mese, the young Chatham, Va., druggist, who left for Norfolk on a pleasure trip in June and has not been heard of since.

—Druggist C. J. Mauney, of Albemarle, N. C., who came to Baltimore a week or ten days ago with a boy named Ernest Kirk, who had been bitten by a mad dog, in order to have the lad treated at the Pasteur Institute here, has left for home, the patient being entirely out of danger.

—W. A. Costan, a former resident of Pocomoke City, Md., for some time engaged in the retail drug business at Norristown, Pa., has returned to his native place and is now manufacturing high grade extracts, perfumes and toilet articles.

—The Parker Manufacturing Company was incorporated recently at Raleigh, N. C., to manufacture medicines and turpentine. Its laboratories will be located in the capital of the Old North State.

—The Lafayette Drug Company has been chartered in Washington with a capital stock of \$100,000. Among the incorporators are E. B. Hay, E. A. Aldham and J. W. Bramer.

—Among the out-of-town visitors in Baltimore last week was Dr. P. D. Fahrney, of Frederick, Md.

DETROIT.

Detroit, July 28.

—So far this season the baseball team of the Michigan Drug Company has been beaten but once, when the Deltas (the reserves of the Detroit Athletic Club) did them up by a score of 6 to 3. Last Saturday the druggists met the senior team of the D. A. C.'s and managed to knock out 12 runs against their 9. At the end of the sixth innings the score was 5 to 1 in favor of the D. A. C.'s, but the druggists got three runs in the seventh, six in the eighth and finished gloriously with two more in the ninth.

—The firm of Nelson, Baker & Co., manufacturing chemists, Detroit, has presented to the University of Michigan a \$500 fellowship in the School of Pharmacy. It is understood that it is the desire of the firm that the fellowship shall be applied to the physiological testing of drugs, and the Board of Regents will undoubtedly act in accordance with that desire. The fellowship is for the year 1900-1901 only.

—Grant Stevens, one of the most popular drug clerks of Detroit, and of late manager for the Hollister Pharmacy on Lincoln avenue, has bought the drug store of Dr. Kepp, Gratiot avenue. Everybody hopes and expects that Mr. Stevens will make a success of his new venture.

—Balcom & Meredith is the name of a new drug firm in Detroit, opened to-day, July 28, at 1413 Michigan avenue. The new comers are from Ohio.

—Dr. John E. Clark, dean of the College of Pharmacy, Detroit, sails to-day, July 28, for a three months' trip to Europe.

CHICAGO.

CONVENTION ECHOES.

Chicago, July 28.—The following resolutions passed at the last meeting of the Illinois Pharmaceutical Association were unintentionally omitted from the report. The resolutions were proposed by T. H. Patterson, of Chicago:

WHEREAS, The excellent work done and the satisfactory results accomplished by the N. A. R. D. during the past year inspire confidence in the ultimate success of the plans for improving the financial condition of the drug trade; and

WHEREAS, The said National Association of Retail Druggists and its executive officers are entitled to the confidence and encouragement of every organization in the United States which is trying to improve the commercial status of retail druggists; therefore, by the Illinois Pharmaceutical Association, be it

RESOLVED, That the loyalty of this organization to the N. A. R. D. is hereby reaffirmed.

RESOLVED, That the president of this association be, and he is hereby, directed to appoint three druggists in each county of the State to bring the druggists of the several counties into affiliation with the N. A. R. D., either through local organizations which may already exist, or through organizations which may be formed for that purpose.

RESOLVED, That the treasurer of this association be, and is hereby, directed to pay to the treasurer of the National Association of Retail Druggists, 50 cents for each active member not already affiliated with the N. A. R. D. through some local society, the same being the dues of this organization for the fiscal year ending December 31, 1900.

RESOLVED, That the president shall appoint delegates to the N. A. R. D. convention to be held at Detroit September 12, 1900, in the ratio of one delegate to each one hundred or fraction of a hundred members.

RESOLVED, That the members of this association be urged to advance by every means in their power the interests of the National Association.

Messrs. Wooten and Holliday received a little ovation. Their addresses were listened to with the utmost attention. Mr. Wooten said in substance, after reviewing the work of the N. A. R. D., that those who would succeed must be guided by past records of success and failure.

"The launching of those movements for benefiting the drug trade, some of them carefully built by skilled hands, several of them manned by skillful seamen whose unselfish sincerity it is a pleasure to remember, was attended by the unfurling of banners and the plaudits of thousands of druggists whose hearts bounded with re-awakened hope; but these trusted galleons came not again to port. Each in turn was wrecked where the others had gone down—off the Island of Disorganization."

The speaker went on to say that a compact and practical retail organization will force other branches to follow suit, when there will be more likelihood of justice and fairness to all. The rocks of failure are—Indifference, Lack of Faith and Discouragement. These being overcome, success is assured. It is indispensable to organize the drug trade of the entire country.

The closing part of Thomas Lord's address was substantially as follows:—"Times are changed and I wish to congratulate you upon the changes. Your goods are made for you, while we of fifty years ago spent many hours of grinding labor in preparing things which now the manufacturer furnishes. I thank you for your cordial greeting. Your organization is cause for great rejoicing to you. With unity and organization you have abundant cause to hope for success. I hope most sincerely that your deliberations will be crowned with success, and when you return to your homes it may be with the knowledge that you have done something for the betterment of the Illinois Pharmaceutical Association."

An Important Decision.

Chicago, July 27.—In an opinion handed down this week in the case of Ye Wo v. The People, the Illinois Appellate Court, by Judge Windes, held that it is legal to take out a warrant for the arrest of an offender under Section 2 of the pharmacy law; that a Chinese laundry comes under the statute when drugs are sold therein; that opium for smoking is a drug and a single sale constitutes a violation of the law. Ye Wo, a Chinaman, was fined \$20 and costs before Judge Holdom and a jury. An appeal was taken, with the result above stated. The Board intends to rid the city of opium joints, since the city authorities seem unwilling or unable to do so. Twelve similar cases have been begun and a vigorous crusade will be carried on.

Illinois Board Member Gets Threatening Letter.

Chicago July 28.—The following letter was received recently by a member of the Board of Pharmacy. The names and amounts are here omitted:—

"Mr. _____

Chicago, Ill.
"Dear Sir:—The report of Illinois State Board of Pharmacy just to hand for 1899. In perusing the same I find you have extracted from the treasury of the downtrodden druggists of the State about \$_____ per diem and expenses. The boss robber," _____, (naming a former member of the board), "extracted only about \$_____ the first year when he was on the board, you almost again as much in your first year on board. What will it be in the fifth year of your service? You will have it all or there won't be any board left. I am sorry that _____ is not entitled to be called the boss robber, but you outclassed him in the first heat. Next week the Chicago outraged druggists will spring a mine which will land you and your colleagues on the board of pharmaceutical hold-ups either in _____ or the lake. Yours, from _____

Many druggists from the Northwest side."
In connection with the above, it may be said that the powder in the mine was probably wet—perhaps with the sweat of preparation. At any rate the Board is not known to have been annihilated by either element, but was, perhaps, rather soothed than ruffled by a judicious admixture of the two in Room 24.

NOTES.

—The following clipping is taken from the Daily News of July 27:—

As a result of an unexpected visit to Hyde Park by Chief of Police Kipley two days ago the "blind pig" has been practically stamped out. Lieut. Clancey of the 50th street police station yesterday sent out several detectives to run down "blind pigs" in his district and five persons were arrested. They were: Fred J. Nortman, 747 43d street; Mrs. Walbusca Tremel, 648 47th street; Felix Rosenfeld, 734 47th street; Rudolph Landaure, 502 47th street; Bernard Horwitz, 445 43d street. The cases of the arrested persons were continued to Tuesday. A noticeable feature is that all of the arrested persons are either grocers or delicatessen dealers, while the "bar pharmacies," against which the Hyde Park Protective Association has fought so bitterly, and a score of which are known to be now in operation within the prohibition districts of the towns of Lake and Hyde Park, continue to operate. Secretary Arthur Burrigge Farwell, of the Protective Association, promises to make some startling disclosures before the police are through with the present cases. C. W. Jones, secretary of the Englewood Law and Order League, was again arrested last night on warrants sworn out by H. G. Shulte, a saloonkeeper, charged with inducing a minor to purchase liquor. Secretary Jones on similar charges before in each instance has been discharged.

Seventeen-year-old Gustave Huebener has been missing from his home in Peoria since May 12, and on Monday night the Chicago police were asked to locate the boy. His parents believe he drifted into Chicago in search of congenial employment. Gustave acquired a liking for chemistry and wished to become a druggist. He secured a position in a St. Louis wholesale drug house. In February, however, the family moved to Peoria. The boy came also, but was forced to do menial work in a cooper's shop. He left home on the day of his disappearance to look for a house for the family. Mrs. Ackerman said: "Gustave was a good boy, and so smart. He did not like to work in the shop. He always wanted to be a druggist, and he worked hard to study and saved his money to go to college some day. He could not get the kind of work he wanted and I think he has gone to Chicago. At times I fear he may be dead, or he would surely let his mother know his whereabouts."

A country member of the Illinois Pharmaceutical Association in discussing the action taken by the association at its recent meeting in this city by which all non-registered pharmacists were dropped from its roll of membership, said: "As a member not interested in the strife of factions, I believe results would have been obtained if that famous resolution had not been passed. Better results could have been secured if the letter charging the Board of Pharmacy with outrageous actions, of which they had not even cognizance, and circulated among the members on the day of the meeting, had been read and the author expelled for this wilful slander and

general unbecoming behavior. That would have done the work of the resolution and would have been carried with a big majority." The speaker claims that he expresses the opinions of other members of the association besides himself.

—Dr. T. N. Jamieson, the father of the Chicago Veteran Druggists' Association, eleven months ago became the grandfather of twins. July 23 he became grandfather again. Three boys inside of eleven months is a record breaker. Dr. Jamieson's son, Stillman, the father of the boys, married the only daughter of H. H. Green, another veteran druggist and now Commissioner of Joliet Penitentiary.

—Dr. George Dyche, only brother of W. A. Dyche, president of the Illinois Board of Pharmacy, has returned from Europe, where he attended Vienna University. He is a talented young physician and a worthy son of the well-known Dr. D. R. Dyche.

—Miss Bernice Benson, daughter of Dr. A. J. Benson, a well known druggist who resides at 2400 Indiana avenue, was severely injured in a wreck on the Chicago and Eastern Illinois Railroad last Thursday.

—J. B. Sutton, 61st street and Monroe avenue, slipped on a wet pavement the other day and injured his elbow. Mr. Impee, a former Englewood druggist, has charge of Mr. Sutton's store in his absence.

—George Pennwell has sold the Omer, Bilby & Company store at Colorado avenue and Madison street, to H. E. W. Spilver, formerly of Mansfield, Illinois.

—F. G. Weiss, Morgan and Harrison streets, has gone on a trip up the St. Lawrence River to the Thousand Islands and other points of interest.

—Charles Rice, of 63d street and Stewart avenue, has gone to Niagara Falls and Canada on a two weeks vacation.

—E. O. Carlson, 51st street and Lake avenue, has gone to Michigan for a two weeks' vacation.

—M. C. Smucker has purchased Thomas V. Wooten's drug store at 943 West Madison street.

—A. T. Kerth, 51st and State streets, has gone to Cairo, Ills., for a two weeks' stay.

—Dr. H. N. Schlamer has succeeded E. F. Richter at 146 Fullerton avenue.

—C. H. Bertram has opened a new drug store at 1901 Milwaukee avenue.

—Edmund N. Gathercoal has opened a new drug store in Wilmette, Ills.

THE NORTHWEST.

Druggists in a Railway Accident.

St. Paul, Minn., July 27.—F. M. Parker, the druggist at Fifth and Wabasha streets, this city, and his clerk, Martin Butler, had an exciting adventure Tuesday, both being injured in a railway accident. Neither was seriously hurt, however. A collision with fatal results had occurred at King's Coulee, near Wabasha, Minn., on the St. Paul road, and pending the clearing up of the wreck a train was made up to handle the passenger traffic between Red Wing, Mr. Parker's former home, and Hastings. Messrs. Parker and Butler were on this train when it came in collision with a switch engine at Hastings. Speaking of the matter, Mr. Parker said:

"Butler was looking out of the window at the time, and but for the fact that he pulled in his head as the engine applied the air brakes would undoubtedly have been dashed against the window casings and killed. The shock when the air was applied threw me forward out of my seat, which was in the front of the coach, and into the car window. My head broke the glass and I received a cut on the cheek and painful bruises. Butler, who sat next to me, was thrown against a water cooler and bruised. The next instant the engine ahead backed into us. We were both thrown heavily and I received a severe concussion on the chest. Butler likewise received severe injuries."

"Spotter" Work.

St. Paul, Minn., July 27.—The State Board of Pharmacy this week created a decided sensation in Dodge County, in the southern part of the State. For a week previous a Minneapolis detective in the employ of the board had been visiting the country merchants of the county and having them compound various medicinal preparations and also purchasing of them various drugs which the State Pharmacy law does not allow them to sell. As a result thirteen keepers of country stores were cited to Kasson and fined \$50 each for their infraction. There are now thirteen country stores in Dodge county where the drugs are safely packed away, necessitating their patrons visiting a registered pharmacist for their future supplies of green corn and spavin specifics.

NOTES.

—Joseph J. Conger, who owns the drug store at Selby avenue and St. Albans street, this city, has gone to Pieton, Ont., his former home, on a month's vacation. Meanwhile his store is in charge of his brother, Fred. A. Conger, who has a store at Selby avenue and Macubin street. In a few weeks Joseph will be joined by Stephen B., the third member of the firm of Conger Brothers, and who runs a store on University avenue. The Congers will thus have a pleasant family reunion at the home of their boyhood, where their parents are still living. But Fred. will be left out, for he must remain and oversee all three of the St. Paul stores. He'll really have to work.

—The number of successions in drug stores this week was unusually large. Following is the list: W. A. Henderson, Clarinda, Ia., by the W. A. Henderson Co.; Howard & Mitchell, Neola, Ia., by Purdy & Mitchell; J. A. Peterson, Greeley, Neb., by G. Griffin; D. B. Young, Silver Creek, Neb., by S. M. Torrance; Taylor & Co., Ottumwa, Ia., by W. D. Elliott; William Biles, Pender, Neb., by Charles M. Bilger; C. C. Horton, Belgrade, Neb., by R. L. Osborn; Brt & Dvorak, Wilber, Neb., by John H. Brt; Anderson & Burroughs, Washington, Ia., by Bowland & Shields; Ray Humiston, Ellsworth, Minn., by C. H. Babcock; M. Christianson, Wyndmere, N. D., by E. L. Haney.

—David Englund was in the city on a short visit this week from Clinton, where he is in charge of Lindholm's drug store during the sickness of the owner.

—Wesley St. Clair, clerk for Joseph J. Conger, St. Paul, has returned from an enjoyable vacation at Sylvan Lake.

—A. Rasmussen has left Wardner, Idaho, and gone to Butte, Mont., where he is employed in Breen's drug store.

—Stevens Bros. and Dr. G. B. Kuykendall have been burned out at Pomeroy, Wash. Partially insured.

—C. S. Rutherford is now working in a West Side drug store, St. Paul.

—The Mayville Drug Co. is starting at Mayville, Ore.

—W. J. Bowen has returned to the city from Madelia.

—J. M. Arbes has left this city and gone to Claremont.

—F. I. Johnson is now at Medford, Wis.

—Tobin & Co., Eldora, Ia., have sold.

SOUTHERN CALIFORNIA.—C. H. Mathis, for ten years with Wolf's pharmacy, Los Angeles, recently moved to Needles, Cal., to carry on the business of the Needles Drug Co.—H. Goodman, druggist at Phoenix, A. T., is spending his summer vacation on this coast.—W. E. Noblett, of Riverside, recently purchased the drug store of Mrs. Mae Madden, of Covina.—Messrs. F. A. Gardner & Co., of Riverside, will open a new store in that city September 1.—Messrs. Schlott & Clutte, of San Bernardino, successors to Schlott & Schlosser, have purchased the store of White & Bailey and will continue it as the Owl Drug Store.—George Phillips, at present with Jones & Son, of Ventura, was recently married and will remove to Santa Barbara to enter the employ of C. C. Newman.—Dr. G. V. Hall recently purchased the store of C. E. Bean, Los Angeles. Mr. Bean will continue for some time with Dr. Hall.—The cutting of prices on patent medicines still continues among the dealers in the central part of Los Angeles, dollar preparations being offered at prices even dimes lower than the original cost.

ST. LOUIS.

St. Louis, July 28.

—Dr. H. M. Whelpley has received a number of inquiries as to when the report of the U. S. P. convention will be published. He stated that this will not be until Dr. H. C. Wood returns from Japan, which will be sometime in September. Dr. Whelpley has just issued the proceedings of the last meeting of the Missouri Pharmaceutical Association. Under the rules of the association only those members who have paid their dues for 1900 are entitled to a copy.

—Robert C. Reilly, the well-known druggist of Meramec street and Virginia avenue, was married Thursday morning of this week to Miss Theresa Marie Saler, of St. Louis, at St. Agnes' church. In the evening a reception to the friends of the happy couple was held at the bride's home, after which they went to the handsome home which Mr. Reilly has had built for his bride on Meramec street.

—The annual afternoon and evening excursion of the Alumni Association of the St. Louis College of Pharmacy will take place Saturday, August 18, on the steamer City of Providence, which will leave the wharf at the foot of Olive street at 2.30 P. M. The trip will be down the river to the fine little resort of Montesano. A special entertainment is being prepared for the occasion.

—Druggists who have strong convictions that all races should be free and equal should write at once to an Eastern concern which is advertising for agents in the St. Louis dailies, and secure the control for their locality of a "specialty backed by absolute guarantee to straighten kinky negro hair; nearly all profit, and sells on sight."

—E. N. Merriman, of the Morris, Morton Drug Company, wholesale druggists of Fort Smith, Ark., is in the city on business. Mr. Merriman is well known here, having been one of the traveling force of the J. S. Merrill Drug Company prior to becoming a member of the Fort Smith house of which he was one of the founders.

—The bill authorizing the sale of the Union Market property for \$730,000 has been defeated in the Municipal House of Delegates. It was reported that the bill, which originated in the Council, was inspired by a syndicate who wished the property for the erection of an immense department store or arcade.

—It rained Thursday night, but the excursion of the Alumni Association was a success nevertheless. It is doubtful whether the steamer City of Providence ever carried a more select crowd, although there were 1,460 on board. Seitz, Hagenow and others did the honors and did them to perfection.

—Charles Hahn, the well-known druggist, was in St. Joe this week attending the meeting which resulted in the organization of a State Retail Merchants' Association covering all lines and which will tackle among other things the solution of the much agitated department store question.

—It is getting perilously near the time of year for someone to start the rumor that the Richardson Drug Company are making arrangements to open up in St. Louis on January 1. No one has started it yet, as far as known, but it is just as well to be up-to-date in these matters.

—C. W. Wall, treasurer of Meyer Bros. Drug Company, leaves to-night for York Beach, Me., where he will spend a few weeks resting up. E. W. Schall and R. E. Hayes also leave to-night, the former for Eastern resorts and the latter for Eureka Springs, Ark.

—Louis Brey, formerly head clerk for A. E. Suppiger, did not stay in the poultry business very long. The mortar has attractions which the cackle of feathered beings failed to counterbalance and he can now be found at the pharmacy of E. A. Bernius.

—Charles Niedringhaus, cashier for the Moffitt-West Drug Company, is away on his vacation. E. C. Fallon, formerly with the Morrison-Plummer Company, Chicago, is now with the Moffitt-West Drug Company, cost pricing and figuring.

—Friends of E. J. Koberlin, who is in Denver, Col., were rejoiced to receive word this week that he is recovering rapidly from the attack of pneumonia with which he was greeted on arriving in that State.

—Dr. Max Starkloff, the City Health Commissioner, is off on a six days' fishing trip. Some interesting data, the results of careful study of the problem of water adulteration, are expected on his return.

—J. J. Weingartner, the Belleville, Ill., druggist, has returned from his trip to Mexico. He had a good time and says he is going to do the same thing over again when he gets a chance.

—At the August meeting of the Alumni Association of the College of Pharmacy arrangements will be made looking to the suitable celebration this Fall of the association's silver jubilee.

—W. C. Lackey, who represents Eli Lilly & Co., Indianapolis, in Southern territory, with headquarters at Little Rock, Ark., is here on a few days' visit to the St. Louis office.

—The much delayed annual meeting of the St. Louis Apothecaries' Association will be held the afternoon of August 3 at the St. Louis College of Pharmacy.

—The annual meeting and election of officers of the St. Louis Credit Men's Association will be held Saturday evening, August 18, at the Mercantile Club.

—H. T. Marshall, of Farmington, Mo., advertises that he wishes to buy a drug store in a Missouri town.

—Frank L. E. Gauss, representing the Searle & Hereth Company, has returned from his northern trip.

—Will Horstman, clerk for J. V. Fischer, Park and Compton avenues, is vacationizing.

—Edward Mallinckrodt and wife are at Narragansett.

From the Cradle to the Grave.

All maladies from infancy to old age are covered by the series of Dr. Humphreys' Specifics, and so there is no dull season in the sale of these goods. "77" for Grip and Colds sells better in the Winter, and Nos. 4 and 6 for Summer complaint this time of year, so that it behooves the wideawake druggist to always keep up his stock of Humphreys' Specifics; keep his cabinet or sign displayed and some nice, clean Manuals of directions on the counter. They are sent free on request. Address the Humphreys Medicine Co., New York.

Merck & Co. announce that they have opened a complete branch house in Chicago, at 227 Randolph street. This has been made necessary by the continued growth of their business throughout the West, which demanded additional facilities for filling orders with promptness and certainty. Their Chicago branch will now receive, ship and invoice all orders for Merck's goods at its own warehouse, answer inquiries for information, furnish exact quotations and in every way take care of the business coming from this territory in just the same manner as the main house has done heretofore. The accounting alone will remain with the New York house, where all remittances are to be made. They request, therefore, that hereafter all correspondence and business not purely financial or scientific, from any point more convenient to Chicago than to New York, be addressed to their Chicago house.

The new branch will be in charge of Mr. J. W. Parry, well known as an old employe and who has been familiar for years with the field in which he is called upon to operate. He will have for his support a sufficient force from the most experienced members of the present New York staff.

Mr. R. S. Johnston, very well known throughout the West as their traveling representative, will continue to represent them on the road, and it must be admitted that his able and energetic efforts have contributed, in a very large degree, to make it necessary to establish this branch warehouse.

Nelson, Baker & Co., of Detroit, have made a present to the University of Michigan of \$500 for the support of a fellowship in pharmacy during the coming year. The line of research to which the fellowship is to be devoted has not yet been decided, and probably will not be until the September meeting of the regents.

Business Record.

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the **ERA DRUGGISTS' DIRECTORY** can correct their copies from the record, and the term "D. D. List," used here, refers to this directory.

We exercise due care to insure the authenticity of items here recorded, but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, **THE PHARMACEUTICAL ERA,**
New York.

ARKANSAS.—West Fork.—J. S. Cannon, sold to Dr. W. E. Jones.

COLORADO.—Denver.—W. H. Shreve, 270 South Eleventh street, sold to W. R. Trocksel.

CONNECTICUT.—Danielson.—A. G. Beckley & Co., succeeded by A. G. Beckley.

Hartford.—Silvie Sissa, corner Church and Trumbull, sold to Cantarow & Co.

ILLINOIS.—Aurora.—C. A. Goodwin, 23 South River, succeeded by Goodwin & Rochester.

INDIANA.—Evansville.—W. N. Burkhardt, 101 Upper Sixth street, sold to Charles V. Gottman.

Vera Cruz.—P. E. Butts removed to Elberfeld, Warlick County, Ind.

INDIAN TERRITORY.—Wynnewood.—R. B. Lee & Co., sold to M. A. Jarrett.

IOWA.—Underwood.—A. A. Wyland, sold to W. F. Cash.

KANSAS.—Arkansas City.—I. Behrens & Co., new store, Attica.—A. M. Chadwick, sold to J. Z. Hills.

Augusta.—M. T. Chance & Co., sold to G. M. Smith.

Burden.—Henderson & Purdy, succeeded by J. M. Henderson.

Burns.—W. T. Powell, sold to S. B. Bailey & Son.

Florence.—G. W. Kates, sold to McClintock & Mulhern.

Harper.—A. Weatherly & Co., sold to Slack & Griggs.

Wellsford.—F. T. Roberts, sold to A. H. Woods.

Wichita.—F. Henrion, succeeded by W. S. Henrion.

Geo. R. Farham, Douglas, corner Fourth avenue, sold to Phil. Ahern.

MAINE.—Farmington.—S. O. Tarbox, damaged by fire; insured.

MARYLAND.—Frostburg.—A. F. Parker, deceased.

MASSACHUSETTS.—Fall River.—Cate & Sullivan, 624 Bedford, succeeded by Sullivan & Clark.

MICHIGAN.—Lansing.—F. J. Eilenburg, 314 Washington avenue, South, succeeded by Eilenburg & Reynolds.

Menominee.—H. B. Cato, 501 Main, sold to W. H. Roberts.

MISSISSIPPI.—Quitman.—Lott & McNair, sold to M. E. Scott.

MISSOURI.—Richland.—S. S. White & Bro., sold to A. W. Brownfield.

NEW YORK.—Richmond.—Aretas Rowe, sold to George H. Roberts.

Winthrop.—George H. Russell, burnt out.

NEBRASKA.—Belgrade.—C. C. Horton, sold to R. L. Osborn.

Wilber.—Brt & Dvorak, now J. H. Brt.

OKLAHOMA.—Norman.—J. D. Cotney, new store, — Snapp & Reed, removed to Yukon, Okla.

Watherford.—Hadlock & Davis, succeeded by Davis Bros.

SOUTH DAKOTA.—Arlington.—Abbott & Shelby, sold to A. Tinstoch.

TENNESSEE.—Athens.—W. A. Cunningham, deceased.

—The Scio College of Pharmacy held its annual commencement exercises at College Hall, Scio, O., Thursday evening, July 26. The members of the graduating class, which had for its motto, "All for one, and one for all," were: Georganna Amos, Frank Carney, Samuel J. Cole, Joseph D. Ferrall, John S. Fittro, Archie D. Johnson, Joseph H. McElroy, Albert L. Moore, Clara E. Nixon, Lyman A. Noble, Emma G. Robinson, Benj. E. Steele, Henry W. Storing, Gilbert H. Wilson, Eugene E. Wilson and Daniel H. Warren.

—The Tennessee State Druggists' Association held its fifteenth annual meeting at Kingston Springs, July 18-20. There was a good attendance and the members enthusiastically endorsed the work of the National Association of Retail Druggists. Jesse L. Nelson, retiring president, will be present at the meeting of the N. A. R. D., in which association he is chairman of the Committee on Commercial Relations. He says he finds the busy druggist has but little time to devote to association work, but duty demands that he should do all he can.

OBITUARY.

JULIUS FAHLEN, who for the last twelve years has been associated with A. A. Kleinschmidt in the firm of Fahlen & Kleinschmidt, proprietors of the Southern Hotel Pharmacy, St. Louis, died, July 26, at Albuquerque, N. M., where he went in March in search of health. Mr. Fahlen was born at Ruethen, Westphalia, Germany, in 1847. He came to this country with his parents in 1857, and the family settled in Baltimore, where Mr. Fahlen attended the Maryland College of Pharmacy, graduating in 1867. After graduating he traveled for several years for a manufacturing concern. Early in the seventies he purchased a half interest in the drug business of Theodore Hoerner at Memphis. In 1877 he associated with A. A. Kleinschmidt in the drug business at Memphis. In 1886 the firm bought the Southern Hotel Pharmacy and Mr. Fahlen came to St. Louis, where he has since remained. Mr. Kleinschmidt following him a few years later. Mr. Fahlen was married in 1879 to Miss Lena Walter of St. Louis. Two children blessed the union—a son Fritz and daughter, Lottie. Mr. Fahlen had been in poor health for some years. A year ago he went to Texas seeking health, but, returning, found that he would have to go to a milder climate. In March he went to Albuquerque and seemed to be improving, when a sudden change for the worse set in a few days ago, resulting in death. Mr. Fahlen's wife and children were with him when he passed away.

The funeral occurred as soon as the remains arrived in St. Louis.

PETER B. KNAPP, one of the oldest retail druggists in New York, of the firm of P. B. Knapp & Sons, 363 Hudson street, died at his home, 2001 Madison avenue, Saturday, July 21, at the age of eighty-nine years. Mr. Knapp was born in Palenville, Greene County, N. Y., in 1811, and for many years lived on a farm. By studying at night and during spare moments he acquired enough education to become a country school teacher. When a young man he came to this city and obtained employment in a grocery store, where he labored until he secured \$100, when he started in business for himself in a small store in Hudson and King streets in 1839. The business prospered and Mr. Knapp became a favorite with his associates in the neighborhood, a relationship he maintained until his death. At the time of the draft riots during the Civil War, Mr. Knapp was instrumental in many ways in helping to restore order. He was a friend to the negro and also to the soldier. He was of the old type of business man, conservative, conscientious and scrupulous in his word. At the time of his death he was associated in business with his sons at the spot where he began so many years ago, Hudson and King streets. It was a favorite custom of Mr. Knapp's to spend a few months each year on a farm a few miles outside of this city. His interest in national and local affairs was well defined. A widow and six children survive him. The funeral was held Tuesday afternoon, July 24, from his late residence on Madison avenue.

GEORGE EGER, prominent druggist of Cincinnati, died July 26th. He was born August 27, 1836, in Germany, where he was graduated at the University of Tuebingen. He came to this country in 1855, and until 1863 lived in Madison, Ind., where he married. In that year he went to Cincinnati and resided there ever since. Socially he was prominent in German literary circles, and was a member of the German Literary Club. That body and the College of Pharmacy drafted suitable resolutions and attended the funeral in a body.

THOMAS H. FENELON, a well-known and respected druggist of Somerville, Mass., died on July 23. Mr. Fenelon succeeded his late father, John J. Fenelon, as proprietor of the drug store in Union Square, Somerville. He was born in Boston about thirty-two years ago. He was unmarried.

PATENTS

Trade-Marks, Designs, Etc.

PATENTS.

Issued July 24, 1900.

- 654,120.—Fritz Ach, Mannheim, assignor to C. F. Boehringer & Soehne, Waldhof, Germany. Alkylchloropurin and preparing same.
- 654,121.—Fritz Ach, Mannheim, assignor to C. F. Boehringer & Soehne, Waldhof, Germany. Making alkyluric acid.
- 654,122.—Lorenz & F. Ach, Mannheim, assignors to C. F. Boehringer & Soehne, Waldhof, Germany. Dichloroxyypurin and making same.
- 654,123.—Fritz & L. Ach, Mannheim, assignors to C. F. Boehringer & Soehne, Waldhof, Germany. Formic aldehyde compound of uric acid and making same.
- 654,230.—Charles J. Cooze, Carterton, New Zealand. Non-refillable bottle.
- 654,258.—John P. Ihart, assignor of one-half to A. H. Elliott, New York, N. Y. Separating water from emulsions, etc.
- 654,266.—Harold B. Mason, Peterborough, Canada. Non-refillable bottle.
- 654,361.—Theodore P. Schott, Chicago, Ill. Non-refillable bottle.
- 654,409.—Sidney Mason, Philadelphia, Pa., assignor to Welsbach Light Company, Gloucester City, N. J. Bunsen burner.
- 654,439.—Alexander Classen, Aachen, Germany. Converting starch into fermentable sugar.
- 654,489.—William Ransley, East Orange, N. J. Soda fountain.
- 654,510.—James A. Bonner, Direct, Texas. Non-refillable bottle.
- 654,518.—Alexander Classen, Aachen, Germany. Converting cellulose into sugar.
- 654,570.—Philip B. Hunt, Minneapolis, Minn. Baking preparation.
- 654,571.—Philip B. Hunt, Minneapolis, Minn. Phosphate baking powder.
- 654,572.—Philip B. Hunt, Minneapolis, Minn. Phosphoric-acid baking powder.
- 654,573.—Philip B. Hunt, Minneapolis, Minn. Baking powder.

TRADE-MARKS.

Registered July 24, 1900.

- 34,942.—Stomach-Bitters. R. Klinghole & Co., Manitowoc, Wis. A shield-shaped design and the monogram of the letters, character and abbreviation "R K & CO."
- 34,943.—Proprietary Medicine for Certain Named Diseases. Louisa Cosby, Quincy, Ills. A portrait of the registrant, with her facsimile signature, "Mrs. Louisa Cosby."
- 34,944.—Liniment. William J. Hull, Cambridge City, Ind. The words "Hoosier Boy" and the representation of a boy.
- 34,945.—Certain Named Medicinal Compound. Frank G. Ferrante, Union, Hudson County, N. J. The word "Antediluvian."
- 34,946.—Ointment. Paris Medicine Company, St. Louis, Mo. The name "Pazo."
- 34,947.—Hair-Tonic. Newbro Drug Company, Butte, Mont. The representation of healthy and diseased hair-roots.
- 34,949.—Soap and Soap Powders. Chauncey E. York, Warrior's Mark, Pa. The title "Malena."

LABELS.

- 7,716.—Title: "Arnica Tooth Powder." (For Tooth-Powder.) Mesmin Chemical Co., Detroit, Mich. Application filed June 9, 1900.
- 7,717.—Title: "Arnica Tooth Paste." (For Tooth Paste.) Mesmin Chemical Co., Detroit, Mich. Application filed June 19, 1900.
- 7,717.—Title: "Dr. Talley's Wonderful Discovery Live Animal Hoof Catarrh Cure." (For a Medicine.) E. Talley, Clinton, Iowa. Application filed June 27, 1900.

SON OF A DRUGGIST INJURED IN RIOT.

George Lyons, son of I. L. Lyons, of I. L. Lyons & Co., leading wholesale druggists, in New Orleans, was shot in the arm in the riot in New Orleans attendant on the shooting of the negro murderer Charles last Friday. Young Mr. Lyons was in the crowd that Charles fired upon. His wound was not serious.

We call particular attention to the advertisement of A. C. Estberg, Waukesha, Wis., on another page. He has a proposition to make to one druggist in each town. All he wants is the name of the best newspaper in the town.

COMMERCIALISM AND PROFESSIONALISM.

In response to the toast "The Druggist" at the banquet of the New York Pharmaceutical Association held at Newburg, N. Y., June 28, 1900, Mr. S. H. Carragan enunciated many telling and pertinent truths so far as relates to the commercial side of the pharmacist. He deals with the subject unstintingly and fearlessly destroys all the cherished traditions or personal regard for professionalism, and places above all—commercialism. We agree with the gentleman that without business tact and business ability no one can succeed. Is it possible to separate professionalism from commercialism? Is not the one necessary to the other as an element to success? Physicians and lawyers, who we agree are to be classed as professional, without business tact what would their professional services bring them? Think of a lawyer, with sufficient knowledge of law to defend a client, who would not know what his professional services were worth? What measure of success would accrue to the physician who, proficient in the art of healing, fails to appreciate the value of his services? Is the artist, from whose hand emanates a master-piece, to rest with the mere applause of the art connoisseur? Nay, nay, professionalism and commercialism are as inseparable as hydrogen and oxygen in the construction of water.

It is not denied that great danger lurks in what Mr. Carragan calls "fool's paradise of professionalism," but to attempt to destroy, to tear down, the established fact that pharmacy is a profession would result in a discouragement for acquiring a fuller knowledge of the mysteries of his calling. What is the meaning of colleges of pharmacy, pharmacy boards, and pharmacy laws? Are these not all necessary to a higher education and greater proficiency? Mr. Carragan admits he never had a day's experience in a retail drug store and consequently views the pharmacist from the standpoint of a layman. He charges the colleges of pharmacy with teaching the notion (?) of professionalism. The truth of the matter is, some of our colleges of pharmacy, realizing the deficiency of the student in business training, are establishing courses in business training—such a course is already established in the Philadelphia College of Pharmacy.

I quote some paragraphs from Mr. Carragan's address, in which he maintains that the pharmacist educated by attendance upon a full course in a college, graduated, and who has successfully run the gauntlet of a rigid examination of a pharmacy board, is still nothing more nor less than a mere store keeper, without any of the dignity of professionalism.

"And now let me ask whence comes this longing for the bauble of professionalism? Whence this foolish and absurd talk of mere store-keepers? Trace them both and you will find their root in some pharmaceutical school where young men are encouraged in the deplorable illusion that a college course will lift them above the hard, strenuous, but inevitable competition of mercantile life."

As Mr. Carragan proves an alibi, so far as having had experience in the retail drug business is concerned, it must be taken for granted that he knows nothing of the training acquired in a school of pharmacy. To charge the schools of pharmacy with teaching that a technical education in itself will lift the student to success in business, is both irrational, absurd and out of harmony with what every student of pharmacy should know, that besides a college of pharmacy training, he must have business qualifications. We gather from the remarks of Mr. Carragan that to be a successful pharmacist, it is first and foremost necessary to be schooled in business training. It would, however, endanger the possibilities of success to be looked upon as a better business man than a thoroughly competent pharmacist. He would be viewed alike by physicians and laity, with suspicion.

Quoting further from Mr. Carragan's address: "Do not debauch your calling. Do not let down the bars to every dunce. Do not introduce into the circulation of the body pharmaceutic a strain of base-blood. It lies with you to enrich the breed. The apprentices of the present will be the druggists of the future. If you pick them with care, if you close your pharmacies to all save the alert, intelligent and capable, you are fulfilling a genuine duty to your successors, to your professional

A. E. EBERT, CHICAGO.

posterity." This is good, sound logic, and, while it advises a careful selection of the material for our future druggists, it also intimates that we owe it as a duty to our "professional posterity" to exercise caution and discretion in our selection.

In conclusion, let me say that there is room for vast improvement in the commercial education of the pharmacist, but it need not necessarily be at the expense of his professional training, and should not have precedence over a proficiency in the art of preparing and dispensing medicines.

Unfortunately opportunities for demonstrating to the public any superior proficiency as a pharmacist are few, and without a requisite amount of tact one is reminded of Gray's Elegy:

"Full many a gem of purest ray serene,
The dark unfathomed caves of ocean bear.
Full many a flower is born to blush unseen,
And waste its fragrance on the desert air."

A graduate from a reputable school of pharmacy cannot yield to an attempt by any one to relegate to oblivion the degree he obtained after a successful examination. If pharmacy is not a profession, is there any calling under the stars that is purely professional, separated completely from commercialism? I think not. Knowledge is a commodity, it may not be weighed and measured by the scales and yard stick, but it has a value determined by competition, and by a reasonable amount of business ability, a proper estimation of what it should bring in dollars and cents. Mr. Carragan in the main is right, and pharmacists must sooner or later learn that business training is a necessary adjunct to professional proficiency. But the schools of pharmacy should not be charged with deluding or misguiding ambitious students into the belief that a "college course will lift them above the hard, strenuous, but inevitable competition of mercantile life and to be lulled to sleep in a fool's paradise of professionalism, only to awake in a purgatory of failure and disappointment."

D. J. THOMAS.

—The Tennessee Board of Pharmacy, represented by J. F. Voigt, Chattanooga, president; B. H. Owen, vice-president, Clarksville; A. B. Rains, Columbia; Al. A. Yeager, Knoxville, met at Kingston Springs, July 17, 18, 19. There were twelve candidates for examination. The class was examined in the usual branches, with the exception of operative pharmacy, it not being practical to give examination in this branch; identification of drugs was substituted. As a result of the examination the following are entitled to registration as registered pharmacists: Hiram C. Bradford, Ripley, Tenn.; P. D. Vincent, Maryville, Tenn.; W. L. Ritter, Memphis, Tenn. Assistant pharmacists—W. C. Helfner, Knoxville, Tenn.; Frank McGredy, Nashville, Tenn.; Henry C. Flite, Nashville, Tenn. The next meeting will be held at Memphis, third Tuesday in October.—Robert L. Eves, Secretary.

STATE OF TRADE.

Trading of Seasonably Light Proportions.

New York, July 31.—In a wholesale way the general consuming demand has been seasonably light and the volume of business of only meagre proportions, but considerable interest has been manifested in a number of articles and the outlook for the coming autumn and winter season is considered satisfactory. There has been no important change in the position of quinine and the movement into channels of consumption has not increased materially, but outside holders maintain strong views and the consensus of opinion is that values will further improve in the near future. This is based on the fact that bark shipments from Java continue light and that prices of this raw material are likely to be higher; also that the demand for consumption will probably be greater on account of the unsettled condition of affairs in the Orient. Manufacturers are not inclined to enter additional contracts at current quotations and round lots are difficult to obtain from either first or second hands. Opium has continued firm at the advanced prices noted last week but the demand abroad appears to have subsided and primary markets are cabled slightly easier. Powdered also is firm, and the same is true of morphine and other products. Bismuth preparations have been very much unsettled. Since the 50 per cent. advance in values of the metal, reference to which was made in last week's report, manufacturers have been unable to agree upon a new schedule of quotations. This has resulted in an open market and a consequent wide range of prices, due to keen competition. Another result was a break in the agreement on prices of the various iodine preparations, and these also are unsettled and irregular. It is rumored, however, that negotiations are in progress with a view to reconciling the differences among manufacturers, and it is intimated that the outlook is favorable to an early restoration of former harmonious relations.

In the department of essential oils a fair degree of activity is noted in all seasonable descriptions, especially the Messina essences, and the latter are firmer in price owing to corresponding conditions at primary sources of supply. Bergamot and lemon are about 5c. per pound higher. Clove oil is firmer in sympathy with the spice, but an improvement in values is held in check by competition among manufacturers. Cassia has shown considerable activity and a substantial advance in price, due to the stronger position of the article in producing markets. The business, however, has been chiefly among dealers. Sassafras also has moved quite freely and heavy transactions are reported in both natural and synthetic. Quotations are somewhat higher and dealers are of opinion that a further advance will occur shortly.

Among the roots serpentaria and senega show increasing firmness and values of the latter have advanced on account of scarcity and reports that consumers have not yet supplied their wants. Beilgan valerian is in reduced supply and firmer. Cummin seed is scarce and higher both here and abroad, and holders of the limited spot stock offer very sparingly. Chinese cantharides are firmer and are held at the same range of prices quoted for the Russian variety. Cacao butter is moving upward under the influence of strong markets abroad and the probability of comparatively light offerings at the August sale in London and Amsterdam. Manufacturers of muriate and other salts of tin have further advanced their quotations 2c. per pound. Thymol is scarce and higher. Ceresin wax has scored a further substantial advance owing to stronger primary markets for the crude material.

Pretty Good in Boston.

Boston, July 28.—This has been a week of pretty good trade, all in all, and people have found that in one way and another people have shopped quite a good deal at the retail stores. The exodus of so many people from town at this season of the year has caused a demand for all manner of toilet articles and small things which people like to take away with them.

Trade in drugs and chemicals is found to have been this month just what is looked for in mid-summer, neither brisk nor dull, but simply seasonable. This has prevented much fluctuation in general prices, and has brought about a steady condition. There is no marked activity in dyestuffs or tanning materials, either, just now. Alcohols are quiet, and so are waxes. Hops are not especially lively, but there is a strong undertone to them in the market.

Philadelphia Has a Dull Week.

Philadelphia, July 28.—The only ripple on the dull business lake of last week was the issuance by one large manufacturing chemical house here of advanced prices for bismuth preparations. There is talk of a combination of manufacturers of this article and a probability of uniformity of action on iodine preparations and the maintenance of a schedule as formerly. Quinine continues strong, with opium a little weaker. The rest of the staples, as sold in this market, are unaffected by outside conditions.

Retail druggists complain of a dull week, but expect it at this time of the year. There is little or no sickness, so that the bulk of the store's support comes in over the soda bar, trade in which, in some localities, has been exceptionally good.

Preparations for war, evident on all sides, appear to frighten no one nor to affect business in a general way. The same can be said of the usual election scare. The country is in a strong and prosperous condition and the week's dullness is merely temporary and largely the result of the thermometer.

Wholesale Trade Very Satisfactory.

Baltimore, July 30.—Last week was very satisfactory with respect to the out-of-town wholesale drug trade, but the local movement attained only limited dimensions. One or two days developed a rush, but the rest of the time brought in comparatively few orders. The manufacturers of pharmaceuticals had a somewhat similar experience, although business with them was more uniform and the aggregate of transactions quite large. The current summer has in fact been altogether satisfactory from a trade point of view. Jobbers and manufacturers complain of rather small profits, but goods are moving freely, and the exhibit for the year will be encouraging. The retailers are doing well, generally speaking, and the manufacturers of heavy chemicals are also busy.

A Reasonably Busy Week.

Detroit, July 28.—A fairly good trade in the country departments of the wholesalers has made the week a reasonably busy one. The city departments have been rather quiet, and city doctors are not really enjoying the unusually healthful condition existing here at present. Many of the country merchants seem to be taking advantage of the summer dullness in looking over their stock and ordering the deficiencies. Were it not for this, the wholesalers would have more time on their hands.

Retailers Well Satisfied.

St. Paul and Minneapolis, Minn., July 27.—The retailers here are mostly fairly satisfied with the condition of business. Some of them, however, state that their work is "just medium." The weather is very warm, and as a consequence fewer people are moving on the streets. Collections are not as good as they should be, but have often been much worse. Jobbers report their business as maintaining a pretty good volume. The falling off from the activity of the phenomenally busy months of March and April is not half so pronounced as jobbers, remembering their experience in almost every year of the past, had looked for. The indications of a large Fall trade are bright. Prices remain unchanged.

No Specially New Feature.

St. Louis, July 28.—There is no especially new feature in the trade situation from recent reports. Wholesalers claim the outlook for Fall to be very good. Southern travelers say that the outlook is better than had been thought possible and that the cotton crop prospects have become materially better in the last week or so. A bomb shell was exploded in the iodine ranks yesterday by the announcement of a reduction in price to the jobber of iodide of potash from \$2.30 to \$2.10, the price on which a few weeks ago manufacturers claimed they were losing money. The quotation is for immediate delivery and no contracts, it is stated, can be placed at this figure. Local retail trade is quiet. The city is reported to be terribly healthy and druggists and physicians alike are complaining.

DR. WILLIAM H. COTTON, well known in Newport, R. I., died on July 25 of Bright's disease. He was an old-time druggist who had been long established in Newport. Formerly, Dr. Cotton's store was much sought and his advice asked by many people in preference to a physician, and his own preparations even to-day are very popular. He was a generous man and the sick and needy were sure of relief without money if they could not afford to pay. His acquaintance extended far beyond New England, and by the fashionable summer colony at Newport he was much esteemed. He leaves a large estate. A widow, a son and a daughter, with other relatives, survive him. Dr. Cotton was prominent as a Mason.

—The Indiana Board of Pharmacy held a meeting at Fort Wayne, July 12. The following candidates were successful in registering as pharmacists by examination: Jacob B. Clem, Fort Wayne; C. H. Young, Goshen; L. E. Frazier, Mishawaka; Claude O. Gillett, Valparaiso. Assistant pharmacists—David Kaplansky, Mich'gan City; W. A. Pearson, Van Wert, O.; Charles H. Nies, Fort Wayne, and Ed. Rainer, Valparaiso. The next meeting of the board for the examination of candidates will occur at New Albany, October 11.

MARKET REPORT.

NEW YORK MARKET.

New York, July 31.—Current trading continues limited to the seasonably light requirements of consumers and consequently the aggregate volume of business is of only meagre proportions, but the general market retains a steady undertone and the outlook for the coming season is considered of an encouraging character. Fluctuations in prices have continued restricted to a few commodities with the changes mostly in favor of holders.

OPIUM.—Jobbers have further advanced their quotations to \$3.55@3.75 for 9 per cent, and \$3.65@3.85 for 11 per cent. The demand, however, is light and unimportant and the market has a tame appearance.

POWDERED OPIUM.—Small parcels to meet current requirements of consumption comprise the bulk of the business in progress, but the additional advance in values of the gum has caused a further marking up of jobbing quotations to \$4.70@5 for 13 per cent, and \$5.20@5.50 for 16 per cent, according to size of order.

MORPHINE.—Values are firm at the recent advance and a continued steady movement into consuming channels is noted with jobbers quoting on the basis of \$2.05@2.15 in ounces and \$2.30@2.40 in eighths, according to brand.

QUININE.—There has been no further change in values and the consuming demand has continued seasonably light, but there is no abatement of firmness on the part of holders, and the prevailing opinion is that the scarcity of raw material and the unsettled condition of affairs in China will cause prices to harden in the near future. Meanwhile jobbers offer sparingly at 36c. for bulk in 100-oz. tins, 38c. in 50-oz. tins and 43c. in ounce vials, according to brand.

BISMUTH PREPARATIONS.—In consequence of the sharp advance in the metal noted last week, the market is decidedly stronger and jobbers have marked up their quotations to \$2.05@2.20 for subnitrate, \$2.25@2.40 for subcarbonate and \$2.15@2.35 for subgallate.

IODINE PREPARATIONS.—Owing to keen competition among manufacturers the market is easier with values irregular and jobbers have reduced their quotations to \$2.40@2.60 for potash, \$3.80@4 for ammonia in pounds and 30¢@35c. in ounces; \$3.10@3.25 for soda in pounds and 24¢@27c. in ounces; \$3.10@3.30 for sublimed in pounds and 25¢@30c. in ounces, and \$3.45@3.60 for iodoform in pounds and 27¢@30c. in ounces.

OIL BERGAMOT.—Primary markets are cabled higher and the increased import cost has caused jobbers to advance quotations to \$2.25@2.50 for good and \$2.50@2.75 for best.

OIL CASSIA.—The market is firmer owing to corresponding conditions abroad and jobbing quotations have been advanced to \$1.40@1.65.

OIL SASSAFRAS.—Natural is higher in sympathy with stronger producing markets and the revised jobbing figures are 55¢@60c. as to quantity. Synthetic is unchanged but firm at 42¢@50c.

CANTHARIDES.—Chinese is firmer owing to diminished stocks and the difficulty in obtaining fresh supplies, and prices have been advanced to 65¢@75c. for whole and 75¢@85c. for powdered. The same range is quoted for the Russian variety.

CACAO BUTTER.—Bulk is higher abroad and the spot supply is exceedingly light. Cakes in 12-lb. boxes are correspondingly firmer and the revised jobbing range is 48¢@49c. by the box and 53¢@55c. for less.

THYMOL.—The available supply of desirable grades is very light and holders are firmer in their views, prime in jobbing quantities being held at the advanced range of \$4¢@4.10 by the pound and 35¢@40c. in ounces.

TIN CRYSTALS.—Manufacturers have again advanced their quotations 2c. per lb. and for small parcels jobbers are quoting 37¢@42c., as to quantity.

CUMMIN SEED.—There has been an advance in the import cost owing to the unfavorable crop reports, but jobbing quotations remain unchanged at 17¢@20c. for whole and 20¢@25c. for powdered.

—The fourth quarterly meeting of the New Hampshire Commission of Pharmacy was held at Concord, July 25. The following-named candidates passed a successful examination and will receive certificates as registered pharmacists: F. Elmer Eaton, Providence, R. I.; Charles H. Bacon, Fitchburg, Mass.; Charles C. Blonquest, Manchester, N. H. Of the junior candidates the following were successful: Carl M. Thompson, Walpole, N. H.; Roy J. Boynton, Hillsboro Bridge, N. H.; Adrian S. Coburn, Exeter, N. H. The next quarterly meeting will be held at Concord on Wednesday, October 24, 1900.—George F. Underhill, Secretary.

THE ERA COURSE IN PHARMACY.

The lectures will hereafter be issued in monthly installments, and the entire work of the Course can be completed within twelve months.

NEW CLASSES FORMED EACH MONTH.

The first installment of lectures will be issued in October, and the remainder at intervals of thirty days thereafter.

Recitations and examinations are conducted by correspondence directly with each regularly matriculated student.

Especially valuable as a preparation for examination by a board of pharmacy, to those who cannot attend a college of pharmacy, and to all desiring to review their former study of the subjects embraced in the curriculum.

TOTAL EXPENSES FOR FULL COURSE, \$10.00.

For fuller particulars see announcement facing third cover.

Write for new descriptive Prospectus, now ready.
Address, THE PHARMACEUTICAL ERA.

INDEX TO VOLUME XXIII.

All subscribers who wish the Index to Volume XXIII., from January to June, 1900, are requested to send us a postal card to that effect.

PUBLISH THE PAPERS.

A correspondent informs us that he has been very favorably impressed by our recent editorial urging that the papers read at pharmaceutical association meetings be given to the pharmaceutical press for publication. We are sure that if such a course be followed by all the associations, they will be gainers as well, for they will receive many more papers from their members, these papers will be of a better quality, and the profession generally will profit from this more liberal interchange of experiences, views and suggestions. Very few pharmaceutical journals will reprint papers read at these meetings if they do not come to hand until the published proceedings of the association are out. The papers are then old, and in these days the pharmaceutical journals like to be pretty close up to date. They want all their material fresh and while it is still news.

COMMERCIAL TRAINING IN A COLLEGE OF PHARMACY.

During the past few months a great deal of interest has been manifested in the question of a course in commercial instruction which has been instituted in one or two of the colleges of pharmacy, and which officers of other institutions are favorably considering. Druggists have come to realize very acutely that the young men entering pharmacy are as a rule poorly equipped in business training, a lack which hampers them all through their after life, unless they are able by much toil and tribulation to remedy it. It is of course very generally conceded that the druggist in these days should be a good business man, for a large proportion of the drug business is of a purely commercial nature. It is desirable that he should have had a proper training in business matters before entering the college of pharmacy for his technical professional education, but unfortunately in a majority of cases he has not had this previous training. Nothing remains, then, except to give the proper instruction in the college, or let him go into the drug business without it, and then acquire it only through painful and expensive experience. There seems no immediate prospect that a good knowledge of business affairs will be required for entrance to the college, and therefore some of the colleges are instituting a course of study to supply this obviously greatly felt want.

Prof. Remington, in a paper published on another page in this issue, treats of the subject at considerable length, and his words are well worth the careful consideration of readers. At the last meeting of the American Pharmaceutical Association considerable time was devoted, it will be remembered, to a consideration of this subject, and it proved one of the most interesting features of the gathering. It is notable, too, that the British Pharmaceutical Conference, which has recently held its annual meeting in England, listened to some wise counsel on the same subject from its president in his formal annual address. A number of colleges in this country are about to institute this feature as a portion of their curriculum.

One thing is sure, that the druggist must know something of business procedure and business forms, and if he does not get it before entering college he may hereafter expect to have this knowledge drilled into him while attending such institution. We do not believe that this branch is a logical portion of the course in the college of pharmacy, but inasmuch as this education cannot under existing conditions be obtained elsewhere, it is better to give it in the college than to let pharmacists enter into practice with no knowledge whatever in this direction.

ILLEGAL SALE OF COCAINE.

During the past week dispatches from Cincinnati announced that several druggists in that city were to be arrested on the charge of selling cocaine without labeling or registering. These dispatches announced that the cocaine habit had grown to such an extent among the colored people of that city, that much of the crime committed could be traced to its influence, and that several of the druggists mentioned had made a specialty of supplying cocaine in direct encouragement of this vicious habit. The inspectors and detectives reported that in some instances they had no difficulty in getting the drug at drug stores, and that in some places the people were even allowed to play the slot machines for it. In other instances they did experience some difficulty, and it was some time before they obtained the secret which opened the way for them to buy the article. They are said to have discovered that the method to follow was to walk into the store and hold up the index finger without saying a word, and that this sign meant that five cents' worth of cocaine was wanted, two fingers calling for ten cents' worth, and so on. Four druggists are prominently mentioned in connection with this investigation.

If the facts alleged are proven it discloses a lamentable plane of morality among some so-called druggists. Individuals who will cater to a trade of this character, violating both moral and legal law in doing so, are beneath contempt, and should be subjected to the severest penalties. The druggist, as no other merchant, has in his charge the lives and welfare of the people, and any act on his part which jeopardizes or impairs the public well-being should be cause for direct pun-

ishment. Unfortunately there are in every large city one or two or a few druggists who seem to have no moral sense, and for the sake of a few pennies of gain will prostitute their business reputation and character without hesitation. It is this class which should be weeded out by the strong arm of the law without hesitation. The great majority of druggists are law-abiding, honest and honorable men, and they are especially anxious to have the black sheep separated from the rest of the flock. We hope the alarmingly sensational stories from Cincinnati are not true in all their published details and extent, but if true, let a most striking example be made of the wrong-doers.

THE ADULTERATION OF SODA SYRUPS.—The fourth annual report of the Connecticut Agricultural Station (Bull. Phar.) gives the results of some investigations into the character of soda syrups purchased in different parts of the State. Of the ninety-two samples of syrups sold at soda fountains which were examined, thirty-six were not found adulterated, while fifty-six contained glucose, salicylic acid or coal tar dyes and artificial flavors, made from chemicals instead of from fruit. The artificial extracts made to imitate strawberry, raspberry and some other fruit syrups or flavors are in many cases, say the commissioners, quite unlike the flavoring matters of the true fruits in chemical composition and are apt to produce unpleasant consequences—indigestion and diarrhoea. Often within a half-hour of taking them their artificial nature becomes very evident to the senses of taste and smell. We quote from the report: "Those dealers who have built up a flourishing business use, as a rule, good materials and dispense beverages which are both wholesome and delicious. Syrups containing artificial flavoring and coloring matters are not acceptable to the better class of trade and are dispensed chiefly in the tenement districts, at shore resorts, wheelmen's rests, etc. Of the twenty-three samples of bottled syrups put up for use at soda fountains or for family use, eight were not adulterated and fifteen contained either benzoic, boric or salicylic acid, used as a preservative, or were colored with coal tar dyes and contained artificial flavors. The bottled carbonated drinks, whose name is legion—birch beer, cream soda, ginger ale, lemon soda, orange soda, root beer, sarsaparilla, etc.—naturally contain the same kind of adulterants as were found in the syrups. Of two hundred and ten samples tested, one hundred and nine contained the adulterants named above. Among the coal dyes identified were magenta, acid magenta, tropæolin, ponceau, Bordeaux red, and anilin green. The quantity in a glass of soda water or in the syrup for a glass of soda water was, in many cases, sufficient to dye a six-inch square of white woolen cloth a most brilliant color—scarlet, magenta, crimson, orange or green, according to the dye.

NOTICE TO STUDENTS OF THE ERA COURSE

Since the publication of our last announcement, the following Seniors have completed their recitations and examinations, and are entitled to diplomas:

John Weems Brewer,	Matriculation No. 98.
Elbert C. Howell,	" " 146.
Robert McFarlane,	" " 35.
William L. Warner,	" " 100.

The following students have also completed the work of the Junior Year:

John J. Dooley,	Matriculation No. 394.
Tony Neutzling,	" " 92.
Miguel A. Romero,	" " 23.
Joseph R. Shenneck,	" " 383.
George W. Simmons,	" " 440.
Henry Laurence Viereck,	" " 145.
Charles R. Whitmer,	" " 170.

Pharmaceutical Celebrities.

S. A. D. SHEPPARD.

The gallery of Pharmaceutical Celebrities would be incomplete without the portrait of S. A. D. Sheppard, of Boston, well known as he is on this continent. His peculiar initials are responsible for his being familiarly known as "Sad" Sheppard, though one has but to meet him to find that the title does not fit his case. He greets everyone with a sparkling, smiling eye and a warm "glad hand."

Mr. Sheppard is a natural born financier and would have made a successful banker, though he is too thorough a pharmacist for it to be said that he has missed his vocation. When, in 1886, Mr. Sheppard was elected treasurer of the American Pharmaceutical Association, its finances were in a chaotic tangle, requiring just such a mathematical genius as he to unravel. Before long things were straightened out and new methods adopted for the conduct and care of the association's funds. When his successor comes along (long deferred it is hoped) he will find a perfect set of books all ready-made for him to keep. At school "Sam." was easily the head of his class in mathematics. It is said that his master in giving out problems in geometry would purposely introduce one occasionally beyond the calibre of the class, but the young mathematician, however, never "got left," being on hand next morning with the proper solution of the problem.

Though not one of the early founders of the American Pharmaceutical Association, he is the recognized parent of its reorganization in 1885. At that time the feeling was in the air that the association was too ultra-scientific, paying too little attention to the commercial side of the business. Mr. Sheppard mapped out the plan of dividing the work of the annual meetings into sections on scientific, educational and commercial matters, each section having its own sub-organization. His plan has proved a success, a crisis in the history of the association was successfully passed and new life entered.

Like all men of his type, Mr. Sheppard is a quick reader of men, and a logical reasoner. Just at the proper moment during a knotty discussion in meeting (in which even pharmacists will sometimes indulge) one may expect "Sam," who has been quietly "sizing up" the situation—to bring things to a focus in a few of his long-headed remarks.

Many good things might be said of this much-honored man and the positions of trust faithfully filled by him for his fellows, but they are outside the scope of this article.

OUR LETTER BOX.

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors.

Please be brief and always sign your name.

MORE PRIZE WINNERS.

My pleasure on receiving your favor of July 16 announcing that I had been awarded the First General Prize was equaled only by my surprise. I have been much pleased with the Course throughout, particularly because I found in it what I had long sought, namely, a systematic method of study. I feel that I have profited by it and secured a basis upon which I hope by future study to build that education which every pharmacist should possess. I shall gladly recommend the Course on every possible occasion. I will write a letter of thanks to the donors, J. B. Lippincott Company. I thank you for past favors and your kind congratulations.

SISTER M. BERNARD NUNAN.

Carney Hospital, South Boston, Mass.

I have received from Lea Bros. & Co., Philadelphia, a revised copy of Hoffman & Power's "Examination of Medicinal Chemicals" and consider it a prize well worth meriting. It is a good incentive for a continuation of the study of chemistry, and is in itself an admirable teacher. I thank you and the donors.

JAS. F. MCGLONE.

734 W. 120th street, Chicago, Ill.

I have the honor as well as the pleasure of acknowledging the receipt of the Silver Medal or Senior Class second prize, "Era Course in Pharmacy." While I esteem the honor highly yet at the same time I value the profit and instruction derived from the lectures equally as high, possibly more so.

Burbank, Ohio.

J. E. ADDLEMAN.

Please accept my thanks for the copy of Prof. J. U. Lloyd's "Etidorpha," awarded me as first prize in organic chemistry. It was a very pleasant surprise.

MAUD M. PRICE.

Dundee, N. Y.

COMMERCIAL USE OF LIQUID AIR.—Professor Patterson, of the Physics Laboratory of the University of Michigan, stated in a recent lecture upon liquid air that up to the present time no proof has been made of the mechanical or commercial value of the substance. He said that one pound of ice is 1 2-10 per cent. more valuable than one pound of liquid air; in other words, that it requires 1 2-10 per cent. more heat to melt a pound of ice and bring it to the normal temperature than is required to vaporize a pound of liquid air and bring it to the normal temperature. Ice at \$5 per ton is not very cheap, but considerably cheaper than liquid air at \$500 per ton. He said also that the cost of that amount of liquid air which is required to do the work of \$1 worth of steam in an ordinary steam engine would be approximately \$1,000. The professor's final statement was that liquid air may prove of value in chemical and scientific work and in certain mechanical devices requiring power in small space regardless of cost, as in submarine boats and torpedoes. In the ordinary affairs of life, however, he did not think it was of any practical value; at least, it has not been proved to be. (Bull. Phar.)

(Specially Reported for the Era.)

SOCIETY OF CHEMICAL INDUSTRY.

London, July 20.

This year's annual meeting marks an epoch in the history of the Society of Chemical Industry, from the fact that Prof. Charles F. Chandler, of Columbia University, New York, the first American president, occupied the chair. Prof. Chandler met with a most enthusiastic reception, and as more than one-fifth of those connected with the society belong to the New York Section, which, although one of the youngest, is second only to the London branch in importance, it is quite safe to say that it will not be many years before we see another American in the presidential chair.

The meeting was opened at the Royal Institution, in Albemarle street, London, on Wednesday morning, July 18. Professor Chandler occupied the chair, and the first business of importance was the election of

The New Officers.

The following were chosen: President, J. W. Swan, F. R. S.; vice-presidents, Prof. C. F. Chandler, Prof. G. G. Henderson, Walter F. Reid and Boverton Redwood (replace John Heron, David Howard, Ivan Levinstein and Dr. Edward Schunck in the list); honorary treasurer, Samuel Hall (re-elected); honorary foreign secretary, Dr. Ludwig Mond (re-elected).

The Council's Report

showed that the total number of members is 3,449, against 3,312 last year. The membership of the sections is as follows: London, 865; New York, 741; Manchester, 450; Scottish, 293; Liverpool, 260; Yorkshire, 201; Nottingham, 170, and Newcastle, 105.

The Treasurer's Report.

The revenue of the society for 1899 (including \$21,527 from subscriptions and entrance fees) amounted to \$25,515, and the expenditure (including about \$12,000 journal expenses and \$3,811 collective index) to \$26,651. There was thus a small deficiency, but as the expenses on the Collective Index are an exceptional item, this is not likely to recur. The society has invested funds amounting to nearly \$50,000.

The preliminary business disposed of, Prof. Chandler rose to deliver his

Presidential Address.

This was very lengthy, and will appear in full in the Society's Journal, where it will occupy considerably more than twenty pages. Prof. Chandler did not read it in full, but the following short abstract will give a good idea of its wide scope and of the speaker's thorough grasp of his subject:

The President said that it was with great diffidence he arose to address the Society of Chemical Industry in the historic theatre of the Royal Institution. Founded by his distinguished countryman, Count Rumford, that edifice was sacred to the memory of Sir Humphry Davy, Michael Faraday, Professor Tyndall and many other famous workers, who had given them the facts and theories which constituted the foundations of the science to which they were all devoted. More recently that lecture hall had been the scene of the triumphs of Professor Dewar in producing the lowest degrees of temperature yet attained, and in compelling the reluctant hydrogen to assume the liquid and the solid state.

For the first time in the history of the Society the council had filled the presidential chair with a non-resident across the sea, who lived at such a distance that it had not been possible for him to take any part in the administration of the affairs of the Society. He had decided to call the attention of the Society to what was being done in the United States for the advancement of chemistry. While for nearly a century they had in America distinguished chemists, such as Professor Hare, of Philadelphia; Professor Benjamin Silliman, of New Haven, and others, it was not until about the middle of this century that any substantial attempt was made in the United States to give laboratory instruction in chemistry. The result of the lack of organization in American scientific schools at that time was the exodus of the students to European schools, especially to Germany.

He detailed some of the steps which had been taken to improve scientific education in the States, referring particularly to the founding of the Columbia School of Mines. The most striking feature of this system of higher and technical education was to be found in the fact that most of their institutions had been founded and

maintained by liberal gifts of money from wealthy citizens, and that only a small number had been endowed or supported by the public funds. Schools of chemistry were now so numerous that it was almost impossible to state with any accuracy the precise number that they had. Almost every university, college or technical school had its chemical laboratories where special instruction of a more or less elaborate character was given. All their larger institutions had special courses for the education of chemists. There were sixty-four colleges of agriculture and mechanical arts founded upon gifts from the United States Government of the Public Lands; every one of these was a school of chemistry. He thought he was safe in saying that they had more than 100 schools of chemistry. In all they had 480 universities and colleges and forty-three technical schools not included in this list.

No one could estimate the value to the industrial development of the United States of the education of such an army of thoroughly trained engineers and chemists. Most important investigations in agricultural chemistry had been conducted by the chemical division of the United

HENLEY-ON-THAMES.

States Agricultural Department under the direction of the chief chemist, Harvey W. Wiley. The example set by Lawes and Gilbert, in the noble work which they had accomplished at Rothamsted during the last half century had led to the establishment in the United States of agricultural experiment stations all over the country, and a large amount of original investigation in subjects more or less allied to agriculture and physiological chemistry had been accomplished at these stations, of which there were now fifty-nine. There were 148 chemists connected with these experiment stations, all devoting their entire or chief attention to chemical work. One of the most important objects in view in establishing these stations was to protect the farmer from the cupidity of the dealers in artificial fertilizers. The chemical industries of the United States had made very material progress in recent years. New industries had been established and old ones developed and enlarged, and of these he gave minute details.

A vote of thanks for the address, moved by the new president, having been replied to, the next item on the program was the presentation of the

Society's Medal

to Dr. Edward Schunck for his researches on the chemistry of coloring matters. Mr. Thomas Tyrer next presented to Prof. Chandler, on behalf of the Society,

A Souvenir

consisting of an album containing portraits of distinguished members of the Society, a duplicate being given to Mr. Bellby, who had acted as deputy president in consequence of Prof. Chandler's residence in America.

The meeting next year will be held in Glasgow.

The meeting having concluded, the members next inspected the Davy-Faraday laboratory of the Royal Institution, and subsequently partook of luncheon at the president's invitation in the Grand Hall of the Criterion.

The afternoon was spent in visiting various industrial and official establishments, and the members again met in the evening in the Victoria Hall of the Hotel Cecil for the

Annual Dinner.

Prof. Chandler again presided, and there was a distinguished list of guests. Included in the 200 gentlemen who sat down were Lord Alverstone (the Master of the Rolls), Right Honorable Jesse Collings, M. P., Sir Frederick Abel, Professor Dewar, Sir Ernest Clarke, Alderman and Sheriff Sir W. Treloar, Sir W. Preese, Sir W. Roberts-Austen, Mr. J. Fletcher Moulton, Q. C., M. P., Professor Armstrong, Professor J. Millar Thompson, Sir Philip Magnus, Dr. Ludwig Mond, F. R. S., Professor Perry, and as representing pharmacy, Mr. G. T. W. Newsholme, president of the Pharmaceutical Society; Mr. E. M. Holmes, president of the British Pharmaceutical Conference; Mr. W. Martindale, Mr. N. H. Martin, Dr. F. B. Power, of the Wellcome Research Laboratories; Mr. G. B. Francis and others. The American Ambassador was expected, but was compelled at the last moment, owing to the pressure of his official duties, to cancel his acceptance to assist in honoring "his old friend, Professor Chandler." The toast list was an extensive one. First came "The Queen and Royal Family," by the chairman; next "The President of the United States," by Mr. Jesse Collings, M. P., responded to in the absence of Mr. Choate by the chairman. These were followed by "The Houses of Parliament," proposed by Sir Frederick Abel and responded to by Lord Alverstone and Mr. Moulton; "The Society of Chemical Industry," proposed by Mr. Swan and replied to by the chairman. The last toast proposed was "Our Guests," by Dr. Ludwig Mond, and replied to by Alderman Treloar and Mayor Nathan.

In the course of the proceedings Mr. Boverton Redwood announced, amid loud cheers, that it was proposed to signalize the first occasion of their having an American president of the Society by cabling the following message to Mr. McKinley: "The Society of Chemical Industry, assembled at its annual banquet, presided over by Professor Chandler, of Columbia University, sends its respectful greetings to the President of the United States, not unmindful of the fact that of the 3,500 members of the Society, 800 are Americans."

GREAT MARLOW.

On July 19 a further number of commercial enterprises were viewed, and in the evening the Lord Mayor and Lady Mayoress received the members of the Society at the

Mansion House.

while Friday was devoted to an excursion to Oxford, where its magnificent colleges and other interesting buildings were visited.

Altogether the meeting of the Society with its president from across the Atlantic has been a most cordial one, and doubtless Prof. Chandler will take with him pleasant memories of his visit. On Saturday a party leave to visit Paris, in connection with the International Congresses in that city.

NOTES.

At the July examinations of the Pharmaceutical Society of Ireland nine candidates out of fourteen passed

the registered druggist's examination, and six out of twenty-one that for the pharmacist's license.

Burroughs, Wellcome & Co. held their annual fete on July 14 at the magnificent Wellcome Club and Institute at Dartford. The club, the most complete possessed by any firm, was a gift to the employees by Mr. Wellcome, the head of the house, and was opened in June last year. The whole function this year was an immense success, no less than 1,000 persons, over 500 of them in the firm's employ, participating. Sir Henry M. Stanley, M. P., the African explorer, in proposing the toast of the firm, spoke in high terms of the services rendered to all those who traveled far from civilization by B. W. & Co.'s medicine chests.

Mr. Peter Boa, of Edinburg, has been re-elected chairman, and Mr. Robert McAdam, of Glasgow, vice-chairman, of the North British Branch of the Pharmaceutical Society of Great Britain.

CLIVEDEN REACH AND HOUSE.

A. J. White, Limited.—The third annual meeting was held on July 16. The Hon. T. L. Woodruff presided. The relations to the company of the late directors and particularly of the late managing director, H. K. Packard, were gone into, and although a proportion of the shareholders desired to enter legal action against that gentleman, it was finally resolved to adopt an agreement proposed by the new board whereby Mr. Packard refunded \$7,500 to the company. The profits last year were \$224,165, and a dividend of 2½ per cent. on the preference shares was declared.

Henry Lamplough, Ltd., of Pyretic Saline fame, made a profit last year of \$7,035 and a dividend of 3 per cent. was declared at the annual meeting on July 18.

VANILLIN is developed in the leaves of the vanilla plant by a ferment, or by mineral acids. It has now been proved that a similar combination exists in the fruit. Busse obtained from the Botanical Gardens of Berlin an unripe vanilla pod which was ground and extracted with alcohol at normal temperature. The extract was treated with lead acetate, the excess of lead removed by hydrogen sulphide, and the alcohol removed from the filtrate by heat. A portion of the aqueous fluid was gently heated with a small percentage of sulphuric acid, another equal portion with hydrochloric acid, and a third with a few grains of emulsin and warmed. In all three cases the odor of vanilla was very strong. The product was purified by dissolving in ether and washing the solution with water; on evaporation of the ether a pure vanilla odor was obtained. (Sci. Am.)

BUTTER—According to Herr Reinmann, there is no relation between rancid taste and the odor of butter and the quantity of free acid found in it. The greater the amount of casein and of milk sugar in butter, the more quickly does it become rancid. It does not appear that light and air exercise any direct influence upon the process. Butter made from sterilized cream will rarely become rancid, but if brought into contact with rancid butter it will turn in a few days. (Sci. Am.)

(Specially Reported for the Era.)

The British Pharmaceutical Conference.

The thirty-seventh annual meeting of the Conference opened on Monday, July 23, in London. Like its older analogue the A. Ph. A., the B. P. C. holds its annual gathering in a different town each year, and only once before, in 1874, have the members met in London. In its early days, indeed down to some eight years ago, it was the custom to meet each year in the same place, and shortly after the British Association. In 1874, however, the British Association fixed on Belfast for its meeting place. At that period pharmacy was in an entirely unorganized state in Ireland, the Pharmacy Act was not passed until 1875, and the only legal compounders of medicines were the Licentiates of Apothecaries' Hall, who were and are medical practitioners keeping open shop. There was much feeling between them and the druggists, whom they regarded as interlopers, and it was decided that it would be inadvisable for the Conference to go to Belfast, so the annual meeting took place in London.

It is not necessary to give any description of the British metropolis, those of the Era readers who have not visited England will be able to gather an idea of the chief characteristics of the largest city in the world from the illustrated articles published in the Era in the Fall of last year.

The arrangements for each Conference, so far as regards the entertainment of visitors, are in the hands of a local committee, a considerable sum, this year amounting to over \$2,000, being collected towards the cost of entertainment. The local executive (selected from the local committee) consisted of W. Martindale, F. C. S., F. L. S., chairman; J. F. Harrington, vice-chairman; Walter Hills, F. C. S., J. H. Mathews, honorary treasurers; J. C. Umney, F. C. S., with W. Warren and H. Cracknell, as honorary secretaries.

The Hotel Metropole, one of the best appointed hotels in London, was selected as the conference headquarters and several of the social functions have been held in its

no doubt that London's Town Hall and its Chief Magistrate would have been equally open to receive pharmacists, yet, probably from a fear that the Conference might overshadow the Pharmaceutical Society, it was determined by the local executive, who are most of them

E. M. HOLMES.

THE SOCIETY'S HOUSE.

rooms, the official and scientific proceedings taking place in the Pharmaceutical Society's house in Bloomsbury Square.

The Local Arrangements.

There is one feature of the programme which has aroused a considerable amount of dissatisfaction. It has always been the custom for the municipal authorities to officially welcome the Congress to the town in which the meeting is held, but this year no arrangements were made for the Lord Mayor to receive the visitors. His Lordship, last week, entertained the Society of Chemical Industry at the Mansion House, and even the Grocers' Federation was similarly honored, but although there is

strong Society men, that this should be a distinctly Bloomsbury Square meeting. This decision is regrettable, because a sight of the interior of the Mansion House and a welcome from the Lord Mayor would have been much appreciated by provincial pharmacists. Otherwise the programme has been a good one.

The Officers.

A few words about the principal officers will probably be of interest. E. M. Holmes, F. L. S., the president, has been curator of the Pharmaceutical Society's Museum since 1872. When Mr. Holmes took charge it was quite unimportant, but he has brought it to a pitch of excellence in which it is second to none in the world as a collection of medical substances. Mr. Holmes is known everywhere as one of the leading authorities on materia medica, and as a proof of this we have only to mention that in 1897 the German Apotheker Verein bestowed on him the first Flückiger medal. He was lecturer for some three years on materia medica to the Pharmaceutical Society, but finding that he could not do justice to the joint appointment of lecturer and curator, he gave up the lectureship and was succeeded by Prof. H. G. Greenish. Mr. Holmes' best known work, perhaps, has been on the mosses and the British seaweeds his labors, with Mr. Batters, a co-worker, resulting in raising the number of known species of the latter class from 400 to 750. He is an ex-councillor of the Linnean Society, a referee to the Pharmacopoeia Committee and American pharmacists have recognized his work by selecting him an honorary member of the A. Ph. A., and of the New York and Philadelphia Colleges of Pharmacy.

Walter Hills, F. C. S., one of the vice-presidents, is

head of the historic firm of John Bell & Company, of Oxford street. He was president of the Pharmaceutical Society from 1896 to 1899.

John Moss, F. I. C., F. C. S., the second vice-president, was treasurer of the Conference for several years.

J. F. Harrington, another vice-president, who is also London vice-chairman of the local executive, is president of the Western Chemists' Association of London, and a member of the Council of the Pharmaceutical Society.

The fourth vice-president, Mr. R. J. Downes, unfortunately died at the beginning of the year. He was up to within a short time of his death president of the Pharmaceutical Society of Ireland.

J. C. Umney, F. C. S., the Conference treasurer, is one of the foremost of the younger generation of pharmacists. His work on essential oils is perhaps that by which he is best known. His firm is Wright, Layman & Umney, Limited.

W. A. H. Naylor, F. I. C., F. C. S., has done sterling work for the Conference, for which he has been one of the honorary secretaries for fourteen years. He has charge of the laboratories of Heaton, Squire & Francis, Limited, of which company he is also a director.

Francis Ransom, F. C. S., who has been joint honorary secretary with Mr. Naylor since 1890, is an ex-examiner to the Pharmaceutical Society and a member of the firm of Ransom & Son, essential oil distillers and manufacturing pharmacists of Hitchin.

William Martindale, F. L. S., the chairman of the local executive, was president of the Pharmaceutical Society from June, 1899, until June, this year. His "Extra Pharmacopœia" has run through nine editions and is a work equally popular with the physician and the pharmacist.

J. H. Mathews, honorary local treasurer, and W. Warren and H. Cracknell, joint honorary local secretaries, are all retail pharmacists in the West End of London.

The proceedings of the Conference opened on Monday evening, July 23, with a

Reception by the President

in the Whitehall rooms of the Hotel Metropole, which was largely attended by the members and their wives and daughters. The proceedings, which were enlivened

G. CLARIDGE DRUCE.

Allen, vice-president of the Pharmaceutical Society; S. R. Atkins, treasurer of the Pharmaceutical Society, and many others prominent in the pharmaceutical world. The first business was the

Official Welcome

by Mr. Newsholme on behalf of the Pharmaceutical Society, to which were added a few words by Mr. Martindale and Mr. Harrington, speaking for the local executive. Mr. Holmes in returning thanks, suggested that a telegram should be sent to Mr. T. B. Groves, who presided over the previous meeting in London, and whose great age prevented his presence. This was unanimously agreed to. Having disposed of this matter, Mr. Holmes rose to deliver his

Presidential Address.

Mr. Holmes dealt first with the great progress which had been made during the century in chemistry and then touched on the general progress in science. From this he passed to the position of pharmacy in this country, pointing out that of the 15,500 registered chemists in the kingdom, scarcely one-tenth derived their incomes from the practice of pure pharmacy, the remainder living out of general trade and a small number depending largely on counter prescribing. In some parts of Scotland there was a fair proportion of genuine pharmacy and also in a less degree in certain parts of England, but this only obtained where doctors did not dispense for their patients. There was little doubt that the practice of medicine and pharmacy by the same individual was disadvantageous to both professions and to the community.

The cry of the present day was for cheapness, but in drugs, where purity was so essential, this was a mistake. The recent contamination of phosphate of sodium with arsenic was due to the use in course of manufacture of a cheap sulphuric acid containing arsenic. In countries where a legal tariff of charges for medicines was in force, no such danger occurred, as the manufacturer and retailer could each be sure of a reasonable profit.

With regard to the keeping distinct of the professions of pharmacy and medicine he thought much could be done by a conference between the medical and pharmaceutical authorities. He considered that the two bodies, if working in conjunction, would be able to secure disciplinary powers which would enable them to deal with offenders.

F. RANSOM.

by music, passed off very pleasantly and concluded about 11 P. M.

On Tuesday morning the more serious business commenced. It had been intended to meet in the Examination Hall of the Pharmaceutical Society's House. It was found that this room would not be nearly large enough, so the Throne room of the Holborn Restaurant was engaged, and here, soon after 10 A. M., the members assembled. Supporting the president were G. T. W. Newsholme, president of the Pharmaceutical Society; Dr. John Atfield, editor of the British Pharmacopœia; Mr. W. Martindale, ex-president Pharmaceutical Society; C. B.

J. C. UMNEY.

W. MARTINDALE.

W. A. H. NAYLOR.

With regard to the Pharmacopœia as a legal standard, he was of opinion that while all medicines should be judged according to the Pharmacopœia, it should not be held a standard for any articles sold for other purposes.

An international Pharmacopœia could scarcely yet be considered within the range of practicability, but he thought something might be done to render more uniform the various formulæ of different pharmacopœias as regards powerful and toxic preparations.

Mr. Holmes then proceeded to deal with the unjust assumption of the pharmacist's titles by limited companies and passed from this subject to the consideration of proprietary medicines, condemning such of these as were of a quack nature.

The present state of pharmacy is an anomalous one. It consists partly of a trade and partly of a professional side. What the present day pharmacist needed most was a commercial education, such as was provided by the Philadelphia College of Pharmacy. The future of pharmacy, too, must depend largely on the ability of its followers to keep themselves up to date in scientific discoveries. There was much work to be done in connection with bacteriology, microscopy, radiography and other branches which the chemist and druggist should be competent to perform, and his very existence depended on his power of accommodating himself to new conditions.

Mr. Holmes concluded with a short notice of the year's obituary. This included Thos. Greenish, E. C. C. Stanford, Richard Reynolds, R. J. Downes and John Borland, all of whom have been noted in previous issues of the Era.

At the conclusion of the address, Mr. C. B. Allen moved and Mr. S. R. Atkins seconded a vote of thanks to the president which, having been put by Dr. Attfield, was carried. Mr. Holmes briefly replied.

It was noted that among those present in the room were Mr. Garston, of Kimberly, who was in that town during the whole siege, and Mr. Elias Bremridge, the octogenarian ex-secretary of the Pharmaceutical Society.

Mr. F. Ransom next read the

Executive Report.

which showed that although a large number of new members had been elected, the net increase in numbers was only five, the total on the membership list being 1,307. The financial statement was not a very satisfactory one, the deficit having increased from \$126 to \$274, and it was pointed out that if this state of affairs went on it would be impossible to continue on the present basis.

Reception of Delegates.

The delegates from the Pharmaceutical Societies of Great Britain and Ireland and also from the various local associations throughout the Kingdom were received.

The next business was the reading of the report of the Unofficial Formulary Committee.

It was stated that Mr. Martindale having resigned the chairmanship of the committee Mr. N. H. Martin, of Newcastle, had been appointed to succeed him. After a lapse of six years a new edition of the Formulary containing many new and many revised formulæ would be issued at the end of the year.

The Reading of the Papers

submitted to the Conference was then proceeded with.

ABSTRACTS OF PAPERS PRESENTED TO THE BRITISH PHARMACEUTICAL CONFERENCE.

OBSERVATIONS AND SUGGESTIONS RELATING TO THE BRITISH PHARMACOPŒIA (F. B. Power, Ph. D., director Wellcome Research Laboratories). This was a lengthy and valuable paper, but one which does not readily lend itself to abstraction. It dealt with a number of errors in the text of the B. P. Dr. Power concludes that while no one expects that a pharmacopœia will be absolutely immaculate, yet there are more errors in the B. P. 1898 than there ought to be and many of these could have been avoided by reference to standard works or by simple experiments.

PHENOL SUPPOSITORIES (F. R. Dudderidge, F. C. S.). The B. P. orders two grains of wax in each suppository, these, however, set with difficulty in warm weather. Author suggests the use of oil of theobroma alone as basis. Theobroma suppositories set harder and the melting point is 29 degrees lower than that of suppositories containing wax.

BERBERINE PHOSPHATE (F. Shedden, B. Sc., Wellcome Research Laboratories). Author shows the formula to be $C_{20}H_{17}NO_4 \cdot 2H_3PO_4$.

MERCUROUS IODIDE (F. B. Power, Ph. D., director Wellcome Research Laboratories). Dr. Power finds that precipitated mercurous iodide is uniform in composition and stable when properly protected.

PHARMACOGNOSY OF OFFICIAL STROPHANTHUS SEED (P. E. F. Perédès, Wellcome Research Laboratories). Mr. Perédès gives a careful examination of strophanthus seeds from a single pod and finds that every histological character upon which the identification of different varieties of strophanthus seeds has been based is found to exist in seeds from one pod.

OPIUM (E. Dowzard, F. C. S.). The B. P. states that dried and powdered opium should yield 9.5 to 10.5 per cent. of anhydrous morphine. Good samples of commercial opium yield much more than this; twenty-five samples examined by author gave from 12.3 to 14.9 per cent.

OLIVE OIL (E. Dowzard, F. C. S.). The B. P. gives specific gravity at .914 to .919. The latter figure is too high; fifty-two samples examined by author varied from .915 to .912.

SACCHARIN (E. Dowzard, F. C. S.). Mixtures of "550" and "350" saccharin can be estimated by the following process: 1 gramme of the saccharin is agitated with 10 Cc. of acetone; 5 Cc. of the clear solution is evaporated and the residue weighed, the weight of the residue multiplied by 200 giving the percentage of pure saccharin. This method is useless for soluble saccharin.

VISCOSITY OF ESSENTIAL OILS (E. Dowzard, F. C. S.). Author suggests the viscosity taken with a Relschauer's viscometer as a useful test for the purity of essential oils. He gives figures for various oils.

COPAIBA; ITS ASSAY AND TESTS (E. Wightman Bell, F. C. S.). Author suggests that the following process should be adopted to estimate the essential oil: Heat on a water bath and finally in a water oven at a temperature from 98° to 99° C. until the weight be constant. Genuine samples of American copaiba oil have a rotation of -9° to -16°. Distilled gurjun oil has one of -92°. It is almost impossible to obtain absolutely pure balsam, but a copaiba up to the B. P. standard is readily obtainable. A resin factor obtained by dividing the amount of resin by the saponification number is a useful test.

BRITISH GUIANA COPAIBA (E. Wightman Bell, F. C. S.). Except that it is less levogyre, British Guiana balsam answers all the requirements of the B. P. and is of a higher grade of purity than much which will pass the official standard. The rotation of the American copaiba is over-stated in the B. P.

ASALETIDA PREPARATA (H. W. Jones, F. C. S.). Author digests asafetida in five times its weight of 90 per cent. alcohol in a closed vessel and filters into ten times its volume of water acidulated with HCl. The precipitate is dried. This contains the resin and essential oil and is recommended for making pills and tincture.

COMMERCIAL LIQUOR FERRI PHOSPH. CUM QUINIA ET STRYCHNINA (H. J. Henderson). A concentrated liquor four times the strength of B. P. syrup cannot be made. Ten commercial samples were examined, only three were of the standard strength in alkaloids (4.596 per cent.) and each of these contained chlorides instead of sulphates.

ASH OF B. P. DRUGS (C. G. Moor, M. A., and Martin Priest, F. C. S.). This paper involved an immense amount of work as some hundreds of figures are given of the ash yielded by B. P. drugs, many useful results for the guidance of the compilers of future editions of the B. P. are included in the communication.

THE OFFICIAL PROCESS FOR THE DETERMINATION OF STRYCHNINE IN PREPARATIONS OF NUX VOMICA (E. H. Farr, F. C. S., and R. Wright, F. C. S.). Authors have performed a large number of experiments and conclude that the assay process of the B. P. gives results which, although not absolutely accurate, are sufficiently so for all practical purposes.

SOME PHARMACOPŒIAL TINCTURES (J. C. McWalter, L. R. C. S., M. P. S. I.). This consists mainly of estimations of the amount of residue yielded by official tinctures.

ALMOND OIL AND ITS SUBSTITUTES (W. C. Allen and E. T. Brewis, F. I. C.). An exhaustive examination of almond oil and other kernel oils with figures obtained by experiments for specific gravity, saponification value, Hehner bromine thermal test and Hübl iodine value, together with results with the nitric acid and Bleber tests.

NOTES ON SOME INDIAN DRUGS (Wm. Mair, F. C. S.). Author gives notes on Indian drugs with special reference to the compilation of the Indian and Colonial addendum to the B. P. In addition to drugs already selected he recommends the recognition of *Ho larmena antidys enterica*, *Garcinia mangostana*, *Carica papaya*, *Eugenia Jambolana*, *Gynocardia odorata*, and *Adhatoda vasica*.

THE PHARMACOPŒIA AS A STANDARD (D. B. Dott, F. R. S. E.). Mr. Dott expresses a doubt as to the legality of the B. P. for articles mentioned in it when they are intended for medicinal use. He urges the establishment of a court of reference, which should decide whether a prosecution for adulteration should take place when an article has been purchased. At present the food and drugs inspector has a free hand.

NEW APPARATUS FOR ESTIMATING CHLORINE AND NITROGEN (J. F. Tocher, F. I. C.). Describes an

apparatus entirely of glass which is claimed to be an advance on those now in use.

LIQUOR PANCREATIS B. P. (F. C. J. Bird, F. I. C.). Author recommends the addition of ether to the B. P. test.

THE BARIUM CHLORIDE TEST FOR CARBONATE IN SPT. AMM. AROM. B. P. (F. C. J. Bird). This test for ensuring the presence of the proper proportion of carbonate is much improved by the addition of solution of AmCl, which facilitates precipitation.

(To Be Continued).

EXAMINATION QUESTIONS

BOARD OF PHARMACY, DISTRICT OF COLUMBIA.

PHARMACY.

- 1.—Define the difference between Percolation and Maceration. Name three preparations made by each process.
- 2.—How is Tincture Chloride of Iron, U. S. P., made?
- 3.—Name the official preparations containing Tartar Emetic.
- 4.—Why is deodorized Tincture of Opium preferred to Tincture of Opium? Give the mode of preparation of Tincture of Opium; Camphorated Tincture of Opium; Deodorized Tincture of Opium.
- 5.—Name eight solvents used in the U. S. P.
- 6.—What are Colloids? Name those official.
- 7.—What is an Excipient?
- 8.—Give formula for Donovan's Solution, Fowler's Solution and Lugol's Solution.
- 9.—Give formula for Basham's Mixture.
- 10.—State uses of Rhubarb and Tincture Rhubarb Aromatic.

CHEMISTRY.

- 1.—What chemical effect does an acid have upon an alkaloid? What is a Glucoside?
- 2.—Name three alkaloids in Cinchona Bark. Which Salt of Quinine has the greater quantity of alkaloid in it, Muriate or Sulphate?
- 3.—From what source is Codeine gotten? Name the most important alkaloid in Nux Vomica.
- 4.—What is an Atom; Monad; Tetrad; Molecule?
- 5.—What is the common name of H_3PO_4 ; HNO_3 ; H_2SO_4 ; $HgCl_2$; $CaSO_4$; HCl ; H_2O_2 ?
- 6.—Complete the following: $2NaCl + H_2SO_4 =$
- 7.—Complete the following: $Na_2SO_3 + H_2SO_4 =$
- 8.—Define Analysis; Synthesis.
- 9.—Write chemical formula for the iron in Tincture of Iron.
- 10.—Is Caffeine an alkaloid or a glucoside?

MATERIA MEDICA.

- 1.—Define the following classes of drugs and name three drugs in each class:

(1) Diuretics.	(6) Diaphoretics.
(2) Astringents.	(7) Expectorants.
(3) Tonics.	(8) Hypnotics.
(4) Anesthetics.	(9) Emmenagogues.
(5) Analgesics.	(10) Alteratives.
- 2.—Give ordinary doses of the following drugs:

(1) Opium.	(6) Hydrarg. Bichlor.
(2) Morphine.	(7) Vin. Colch. Sem.
(3) Arsenic.	(8) F. E. Ergot.
(4) Tr. Opii Camp.	(9) Cocaine Hydrochl.
(5) Tr. Aconite Root.	(10) Elaterin.
- 3.—Translate the following prescriptions into Metric System and note anything wrong with them:

(a) R	Tr. Opli Camphor.....	5vi.
	Tr. Guaiaci	3iiss.
	Syr. Tolu, ad.....	3iil.
	M. Sig. 3i. t. i. d.	
(b) R	Tr. Belladon.	
	Tr. Ferri Chl., aa.....	3i.
	Sig. 10 Drops. t. i. d.	
(c) R	Liq. Potass. Ars. nitris.....	3i.
	Ferri Sulph. Exsiccat.....	3iiss.
	Magnesie Carb.	3iil.
	Elix. Simplicis ad.....	3iil.
	M. et Sig. Teaspoonful every two hours.	
- 4.—Give the usual doses of tinctures and the principal exceptions.

STRONTIUM AND BARIUM IN PLANTS.—The question whether strontium and barium can replace calcium in plants has been made the subject of inquiry. Dr. M. Suzuki gives a contribution to this question in a recent number of the Bulletin of the College of Agriculture of Tokio. (Sci. Am.) Experiments were carried out with several species of plants and in soils containing varying amounts of calcium; the results show that strontium and barium can never replace calcium, as they are strongly poisonous, although the poisonous action may be lessened to a certain extent by the addition of lime salts.

(Special Correspondence.)

INTERNATIONAL CHEMICAL CONGRESS AT PARIS.

Paris, July 20.

The congress season is now in full swing at the Paris Exhibition. Next week we are to have the great Congress of Applied Chemistry, the week following, as all your readers are aware, is devoted to the Pharmaceutical Congress; the gigantic Medical Congress, which threatens to beat all previous records, comes on about the same time.

The Congress of Pure Chemistry.

which commenced on Tuesday, 17th July, was a pleasant social function, where many well-known savants met. If they did not work very hard, who shall blame them? for with a thermometer ranging from 85° to 95° in the shade, the stoutest scientist is prone to prefer a shady cafe to a crowded Congress Hall. Besides, the scholastic vacation not having commenced, our professors are still busy, and the Committee of Organization, in other respects most praiseworthy, did not perhaps quite grasp the immense importance of communicating their intentions to the public (more particularly the scientific) press long enough beforehand to enable all and sundry to apply for membership.

Still it was a pleasant, cosy, friendly little gathering.

The Opening Meeting

at the Congress Palace, the pretty riverside building shown in our engraving, was typical of the whole proceeding. No long speeches—M. Berthelot, the president of the Organizing Committee, was absent through illness—but a few words of welcome from M. Armand Gautier and H. Hanriot and then a social chat round the sideboard where champagne was offered by the members of the Paris Chemical Society to their foreign and other guests. Here everyone was introduced or introduced himself. There one met the newly-elected vice-presidents of the Congress—M. Killian and M. Graebe, of Switzerland; M. Konavalof, of the St. Petersburg University; M. Franchimont, from Leyden, Holland; Prof. F. W. Clarke, from the Columbian University, and the two French savants already mentioned, M. Hanriot, assistant professor at the Paris Faculty of Medicine, and M. Armand Gautier, the distinguished chemistry professor at the same faculty. The young and ubiquitous secretary,

while among the foreigners were Drs. Otto Witt, Berlin; Fresenius, of Wiesbaden; Steiger, of Amsterdam, several Russian, Italian and Swiss savants, Messrs. Hartley and Werner, from Ireland; Abbe Choquette, from Quebec, and Prof. Fireman, from Washington. Prof. Clarke we have already mentioned, and Prof. Morley, of Cleveland, O.; Prof. Rising, of Berkeley University, California, and Dr. Wiley, of Washington, were likewise members of the

M. BERTHELOT.

PALACE OF CONGRESSES.

M. Gabriel Bertrand, of the Pasteur Institute, and his assistants, M. Mourou, of the Paris School of Pharmacy, M. Hebert and M. Delepine, were ever active and amiable, while the treasurer, M. A. Petit, was well known to us all as the future president of the 1900 International Congress of Pharmacy. Many indeed were the well-known faces, MM. Troost, Moissan, Haller, Jungfleisch, Lindet, Poulenc, Lauth, Adrian, Béhal, etc., etc.,

Congress. The congressists separated at noon only to meet three hours later at the Exhibition, where the remarkable French Chemical Section, of which we shall publish an account in a week or two, was visited in detail and was found most interesting by the members, for, placed as they were under the able guidance of the French colleagues, they saw all under exceptionally favorable circumstances.

The three following mornings, Wednesday, Thursday and Friday, were devoted to meetings at the rooms of the Paris Chemical Society. The principal question discussed was the possibility of a

Uniform and International Chemical Nomenclature which, like the International Pharmacopœia, seems still a long way off, for modes of thought and modes of expression differ with race, language and nation, and the "Parliament of Man, the Confederation of the World," seems as far away as ever.

A great feature of the Congress were the

Three Lectures on Science.

M. Raoult, of the Grenoble Faculty of Sciences, delivered his lecture on "The Chemical Teaching of Cryscopy and Tonometry" at the Paris School of Mines on Wednesday afternoon. To-morrow (Saturday) Prof. Moissan, of the Paris School of Pharmacy, will lecture on "Metallic Carbides." To-day (July 20) M. Armand Gautier's on

The Combustible Gases of Air

was the afternoon function, and a very interesting one it proved. M. Gautier has shown by his analytical experiments that the air of great cities contains methane gas mixed with hydrocarbures even richer than the

methane itself, and very probably free hydrogen as well. This probability becomes a certainty when purer and purer air is analyzed. The air of forests only contains half as much hydrocarbon as town air. Marsh gas in particular is there replaced by essential vapors which may roughly be expressed by $C_{10}H_{16}$ and $C_{10}H_{14}O$, but the greater part of the combustible gas is free hydrogen. On the mountains, and especially on rocky summits 7,000 feet high, only two cubic centimetres of hydrocarbon gas (calculated in methane) are to be found in 100 litres of air, accompanied by 18 or 20 cubic centimetres of hydrogen gas per 100 litres.

At the seaside the hydrocarbons disappear altogether. Pure air in the higher regions of the atmosphere contains such slight traces of hydrocarbons as to become undiscernable and 19 Cc. of free hydrogen per 100 litres. According to Johnston Stoney this hydrogen should (following the kinetic theory of gas) disappear from the atmosphere. If it exists, on admitting this theory, one may ask how hydrogen can be found in the air. M. Gautier has succeeded in showing that the subgranitic regions are a perpetual source of hydrogen, resulting from the action of water and rain and even pure water on certain azotures which granite contains, Fe_2Az_3 , for example. Granite attacked by water in a sealed tube at $300^{\circ}C$. gives off a mixture of hydrogen, azote, carbonic acid and sulphuretted hydrogen, with a slight quantity of hydrocarbons and methane, gases formed under pressure in granitic subsoil escape into the atmosphere through volcanos or fissures in the soil. "Thence," remarks M. Gautier, "according to Stoney's theory, the hydrogen should slowly escape into celestial space."

These lectures were varied by

Scientific Pilgrimages

to establishments of interest. Thursday afternoon the new Biological Chemistry Institute, just opposite the Pasteur Institute of Paris, was visited; to-day it was the Laboratory of Chemistry at the Faculty of Medicine. To-morrow morning our friends and fellow congressists,

evening everyone is free. Many pharmacists profited by the occasion to meet the chemical celebrities. The speeches of M. Gautier and M. Engel (M. Berthelot was absent) were eloquent and often amusing. Dr. Graebe suitably replied. We will spare Era readers the names of the 200 odd guests, for many have already been mentioned. We merely quote a few other foreigners to show the international character of the gathering. Germany had sent Herr Von Buchka and Hofrath Caro, Switzerland, Professors Guye and Lunge; Holland, Mr. Yssel de Schepper; Sweden, Mr. Otto Pettersson; Russia, Mr. Mendeleff; Italy, Professors Oddo, Paterno di Sessa and Cimiclan; England, Prof. Mendola. Delegates from several other countries—Belgium, Mexico, Spain, Roumania, Cuba, Aus-

tria, etc., etc.—were, we believe, also present, and the United States were represented by Professors Clarke and Fireman. After the dinner, an informal but most cheerful chat over a cup of black coffee and a cigar or cigarette in the adjoining saloon gave those separated at table a chance to improve acquaintance, which was by no means neglected, as all present can testify.

NEW PROCESS FOR SULPHURIC ACID.—A number of improvements have been recently devised in the manufacture of sulphuric acid, which promise to be of great importance in that industry. (Sci. Am.) The first of these is now being used in Germany, and consists in the substitution of cast iron recipients for concentrating the acid for those constructed of platinum; the high price of the latter metal has led the manufacturers to look for a substitute, and it has been found that the cast iron recipients answer very well in cases where it is not necessary to have an acid absolutely free from iron. The iron used should be free from impurities and as hard as possible. In the process used the acid is first concentrated in lead recipients to 61° Baumé, then introduced into the cast iron vessels, where it is further concentrated to 64° ; it finally passes into two other concentrators, where it reaches 97° to 98° Baumé. The smaller recipients last three or four months and the large concentrators from six months to one year, the loss being less than that of platinum and the cost comparatively small. The second process, which is still more important, has been devised in England. In this the lead chambers are entirely suppressed and nitrous vapors are used as an oxidant, the process resembling that which is now used for producing the Nordhausen, or fuming, sulphuric acid. The Baden Anilin and Soda Works have perfected the system and applied it on a large scale in the production of ordinary sulphuric acid. The process is especially advantageous in the production of concentrated acid directly, thus doing away with the concentrating process; it gives an acid which is very pure and especially free from arsenic.

CHEMICAL FOOD.—The deplorable food waste in our daily life is justly criticised and chemical research and industry are doing their best in devising chemical foods. The last few years have seen a number of artificial foods produced, but most of them are of no value to the poor. Chemists are becoming more and more anxious to find sources of nitrogenous foods. The artificial food industry is chiefly developed among the large concerns that supply dye stuffs and employ a number of research chemists. (Sci. Am.)

M. ARMAND GAUTIER.

MM. Haller, Troost, Riban, etc., show us their laboratories at the Faculty of Sciences, and in the afternoon the School of Sciences will be examined and the Congress separates.

The Banquet

yesterday (Thursday) evening at the Hotel Continental was the most numerously attended function, as in the

(Special Correspondence.)

THE FOURTH INTERNATIONAL CONGRESS OF APPLIED CHEMISTRY.

Paris, July 23, 1900.

The Congress of Pure Chemistry, which terminated at Paris on July 21, was but a prelude to the far more important congress devoted to Applied Chemistry, which opened to-day. It will be remembered that the first International Congress of Applied Chemistry was held at Brussels in 1894, the second at Paris in 1896 and the third at Vienna in 1898. It seems extremely probable that this will become one of the most important of international scientific congresses, for the number of inscriptions at Paris this year will be nearly 2,000.

M. Berthelot had accepted the post of honorary president, but has been prevented by ill health from taking any active part in the proceedings. M. Henri Moissan, the acting president, is too well known in America to need any introduction to your readers. As he still occupies his post (which he is shortly to quit, much to the regret of all) at the School of Pharmacy, this building has become one of the most important meeting places of the Congress.

The Opening Meeting.

however, took place in the great amphitheatre at the Sorbonne (Paris Faculty of Sciences), the largest and handsomest of the halls of the University of Paris. M. Moissan made a very lengthy but interesting speech on the past and future of chemistry, after which M. Dupont, secretary of the Organizing Committee, read his report. He complimented the French provincial and foreign local committees on the vigorous way in which they had done their work and named among others Professors Rising and Clarke and Dr. Doremus, of New York, as having rendered services to the cause. Many Governments and scientific societies had sent special delegates and he wished a hearty welcome to one and all, French and foreign.

The election of officers was then proceeded with. M. Berthelot was naturally retained as honorary president and M. Moissan as acting chairman. The two vice-presidents are M. E. Durin (president of the French Association of Sugar Making and Distillery Chemists) and M. Lindet, who will be remembered as the president of the 1896 Chemical Congress. M. François Dupont was retained as general secretary, for, as M. Moissan reminded the meeting, this was a post for someone used to hard work. Then came an interminable list of honorary vice-presidents, Dr. Emil Fischer, of Berlin; Dr. Maercker, Dr. Ludwig, Dr. Leo Liebermann, of Buda-Pesth; Prof. Koninck, of Liege, Belgium; Dr. Christomanus, of Athens; Prof. Paterno, of Rome; MM. Carnot, Dehérain, Ditté, Haller, Riche, Gallois and Gautier, of Paris; Prof. Mendeleef, of St. Petersburg, etc., etc., not forgetting Messrs. F. W. Clarke, Rising, Chandler and Doremus.

In conclusion M. Moissan insisted on the advisability of forming a permanent International Committee for these congresses and one representative from each country was named to form a temporary band of workers.

The Sections

met the same afternoon at 2 P. M. at the various places appointed. The School of Mines, Boulevard St. Michel, was reserved for Section II. (Inorganic Products), and Section III (Metallurgy, Mining and Explosives). Sections IV. (Organic Products), V. (Sugar Industry) and VI. (Fermentation Industries) met at the rooms of the Society of Encouragement, 44 Rue de Rennes. The Photographic Section (IX.) had a room in the Palace of Congresses at the Exhibition, the remaining four sections were accommodated at the Paris School of Pharmacy, which had been decorated with flags and velvet door hangings for the occasion.

The two great lecture amphitheatres afforded plenty of space for Section I. (Analytical Chemistry) and Section X. (Electro-Chemistry). Needless to say M. Henri Moissan

presided over the latter group, while Agricultural Chemistry was discussed in Section VII. under the chairmanship of M. Dehérain, of the Academy of Sciences.

Section VIII. (Hygiene, Medical and Pharmaceutical Chemistry and Food Adulteration) was located in the handsome Salle des Actes. As Professor Riche informed his audience, this is the hall where examinations are held and societies meet, and the walls, entirely covered with paintings of Parisian pharmacists, form a gallery of portraits of pharmaceutical celebrities which is perhaps unique. In this section M. Halphen, chief chemist at the laboratory of the Ministry of Commerce and Industry, opened the proceedings by a paper on "The Analysis of Fatty Matters," and Dr. Arnaldo Piutti, of Naples Uni-

THE SORBONNE.

versity, followed with a treatise on "The Products of Combustion of Locomotives from a Hygienic Standpoint." Among the audience were M. Patein, chief pharmacist of Lariboisière Hospital, who is to speak on "Sugar and Hydrates of Carbon in Urine," M. Desgrez, of the Paris Faculty of Medicine, who is to treat of "The Utilization of Fats in the Organism," and the "Purifying of Confined and Vitiated Air." M. Barille, who has studied the effects of metal boxes used for canned foods; Prof. Deniges, of Bordeaux; Prof. Bor, of Amiens; MM. Dufau, Guilbert, etc., and several foreign visitors, principally German and Austrian, among others Herr Hans Heger, editor of the Vienna Pharmaceutical Post. Other papers promised in this section are Sonnie Moret's on the dosage of uric acid and M. Castaing's on iron in urines; M. Moreigne will speak of azotous matter, M. Golles on albumoids. The other papers are very varied: M. Bloche's is on "Oxygenized Water;" M. G. Bertrand's on the "Intervention of Soluble Ferments in the Preparation of Medicaments;" M. Berge on "The Sterilization of Water by Peroxyde of Chlorine;" M. Christomanos on "Sterilization of Artificial Ice;" M. Gerard on "Blood Ferments;" M. Portes, hospital pharmacist, on "Quinine Analysis," etc., etc., etc. We may devote a brief notice to the motions brought forward by

Prof. Clarke, of Washington.

in the Analytical Chemistry Section, regarding the desirability of unitary atomic weights in calculating the results of analysis, the use of unitary indicators in volumetric analysis, and the fixing of unitary standards for certain substances. With regard to atomic weights, he thought that the standard might now be changed. He

PASTEUR'S TOMB.

could understand that oxygen 16, though difficult to explain to students, was once a good base, but during the last twelve years the proportion of oxygen and hydrogen had been more accurately fixed, and he would ask if hydrogen 1 should not now be the standard right through. He remembered when the old Berzelian system was given up in favor of the present system; of course the changes meant a lot of new values. He admitted that the German Committee was in favor of oxygen 16, and that Americans were divided on the point.

M. Lunge, of Zurich, referred to Mr. Clarke as one of the great authorities on the subject and gave his opinion on his remarks.

M. E. Muntz, who presided in this section, thought the question was not yet ripe for solution.

Prof. Fabre, of Toulouse, thought the views of the German Committee answered to the present state of science and that oxygen 16 was preferable from a practical point of view.

M. Engel, vice-president of the Paris Chemical Society, said the German Committee was an international one and represented all the societies of the world.

M. Hanriot did not agree with M. Muntz that the question should be left over. This International Committee welcomed all expressions of opinion and the Congress should present theirs.

This idea gained general approval, and a show of hands being called, the Congress decided that it was desirable to retain oxygen 16.

Prof. Clarke then raised the next point, that of unification of methods of analysis for certain substances. The instance he quoted of chromium analyzed at 52.5 in one part and 51.1 in another (the difference in the value amounting to \$800) may be familiar to some of your readers. He described how seven years ago the American Chemical Society decided to report annually on this matter; how Germany, England, and he believed France, were all working independently in the same way. He suggested that international co-operation would be desirable to fix the same value everywhere.

M. Hanriot said thanks were due to Mr. Clarke for raising this question. They all had a common interest in unifying the processes of chemical analysis.

M. Fabre said that this was a matter on which all

Governments might be best approached through the usual diplomatic channels and this proposal was voted.

The 250 Papers

and discussions noted in the official programme need not be named here. H. W. Wiley, of Washington, a very regular attendant at these Chemical Congresses, has brought a notice on "The Correction of Polarimetric Reading According to Temperature." Mr. Wyatt, Ph. D., of New York, is to send a description on "Brewing in the United States and Quick Fermentation at Low Temperature" which seems to have aroused general interest, and M. Molssan will speak on "Some New Experiments on Fluor."

The Programme

likewise includes banquets, receptions and visits as usual. This afternoon M. Levgues, the Minister of Public Instruction, was to receive the Congress at the Sorbonne, but was prevented from attending. The congressists were, however, offered light refreshments and conducted over the various laboratories by the professors of the Faculty of Sciences. To-morrow (Tuesday) there is to be a banquet at one of the Exhibition restaurants at noon, and the Exposition itself will be afterwards visited under competent guidance. Wednesday a visit to the Pasteur Institute will be followed by a reception at the Hotel de Ville; Thursday all are invited to Chantilly, the grand old mansion some twenty-five miles out of Paris, which the Duc d'Aumale bequeathed to the Institute of France. Friday the monument to Lavoisier, already described in this journal, will be inaugurated, and Saturday, 28th July, the closing meeting and banquet will take place.

(To be Continued.)

A COMMERCIAL TRAINING COURSE IN COLLEGES OF PHARMACY.*

By JOSEPH P. REMINGTON.

Colleges of pharmacy were created for the purpose of training young men in their vocation. Naturally and primarily, their first function is to make students proficient in technic, and when the colleges were founded in America, chemistry and materia medica were recognized as foundation studies, and they are considered as such to-day.

The early history of pharmaceutical education reveals a curious but, nevertheless, strong tendency to thwart and oppose the efforts of the far-sighted pioneers who saw in the education and training of the young the gradual uplifting of the craftsmen who were entrusted with the responsible duties of making and dispensing medicines.

Very slowly the colleges fought their way, and it required nearly half a century of earnest self-sacrificing labor to demonstrate the fact, which should have been recognized from the beginning, that education was a key which would solve mysteries and develop great possibilities.

In some cases, undoubtedly, self-interest on the part of the employer, or petty jealousy, led a preceptor to advise an assistant to keep away from colleges; that he, himself, had no use for these expensive and time-consuming new-fangled ideas, but that he could learn from his "boss" far more than those upstart teachers could give him; and even to this day men can be found who use the same talk. Many a poor student in the past has been compelled to earn every penny for his college education and has succeeded in spite of enormous drawbacks and hindrances; but the colleges steadily continued their work, becoming stronger every year, and succeeded in spite of the most dire prophecies of disaster and failure.

Nearly every advance was met with determined opposition, and how sad it is to hear the wail of some old rule-of-thumb druggist, who has discovered, late in life, that all along he had been on the wrong side, and many an honest opponent has confessed to the writer in language something like this:

"If, when I was a young man, I could have foreseen the value of an education and could have begged or borrowed the money to go to college, I would have done so

*Read at the annual meeting of the Pennsylvania Pharmaceutical Association, June, 1900. Reprinted from Amer. Jour. Pharm.

and have been saved years and years of toil, and what has taken me a long time to learn through the happenings of experience I could have acquired in two years of training. Naturally, I do not want to admit that I do not know my business. I can't acknowledge that these young fellows just out of college know as much as I do. I cannot afford to do it, and in some things they do not know as much as I do; but I have seen to it that my son has not been deprived of the advantages which I threw away, and I sent him to the best college that I could find. But then, the colleges in my days were small affairs and the system of instruction imperfect; but I must say that there are some things taught in the colleges which I have no use for. The point that I see clearly is that those early days of one's life, when the mind is receptive and accustomed to study (having just come from school) are the least valuable in a man's business life, and then is the time when the foundation can be laid strong, sure and deep."

The writer has no desire to dwell upon this aspect, for it has its pathetic side, and, happily, education is rapidly working a cure. Now, if this presents a true picture of the past, is it not true that the same reasoning is equally applicable to branches of pharmaceutical instruction other than those recognized as theoretical, or knowledge obtained through the study of books? The answer to this is found in the magnificent equipment of our laboratories in the colleges and the great strides made in practical teaching in our universities and technical schools.

No college can be considered to-day worthy of the name which does not place in the hands of its students the mortar, pestle and spatula, the test-tube and the burette, and the microscope and culture apparatus; and it must not be admitted for a moment that the laboratory instruction, while useful in giving a student polish and finish, fails to equip him with knowledge which will be valuable in his future life as a bread winner.

But the writer wishes to call attention at this time to a branch of education which has been in the past sadly neglected; it is that of commercial training. That pharmacy is a business as well as a profession comes home strongly to that student who is so unfortunate as to have a lop-sided mind, and who vainly thinks that all he has to do to reach highest success is to study books and, like the closet naturalist, get his knowledge of life from studying the works of others.

What an awakening comes to such an one who, after winning gold medals and prizes galore in his examinations, finds when he gets behind the counter that his magnificent memory for facts will not avail him as much as he thought when he comes to roll pills, fold powders and meet the perplexing details of every-day counter practice. And it is this phase of college education which is the great stumbling block to the employers who are successful, practical business men. One frequently hears from such men the remark: "Send me a good clerk. I don't want a gold medal man."

The aim in every good college of pharmacy should be to neglect no department of knowledge which might make its graduates successful pharmacists, and no effort should be spared to entirely cover the ground. Impressed with these convictions, the writer, ten years ago, expressed the opinion that business methods should be taught in our colleges of pharmacy. Gradually this thought has been working its way. With some educators the idea at once took root; others again approved, but deemed the time inopportune; others still were to be found who thought it outside the functions of a college of pharmacy to teach business methods. Possibly the greatest number to-day are willing to give any rational plan for accomplishing the object a fair trial.

Within four years this opportunity has been taken advantage of by the writer in the Philadelphia College of Pharmacy, and fortunately, through the liberality and progressiveness of the trustees of the Philadelphia College of Pharmacy it was made possible to establish an optional course on commercial training. This course has been successfully inaugurated by Prof. F. G. Ryan, and so far as it has gone has thoroughly demonstrated its practicability.

The object of the course is to teach students in pharmacy simple methods of bookkeeping, which will enable the pharmacist to know at any time and at short notice

whether he is making money or losing it; proper methods of drawing checks, drafts, promissory notes and even how to write orders on wholesale druggists; in fact, to so train him in correct and accurate methods that when he takes a position or opens a store he will not be absolutely at sea in these most important particulars. How few retail druggists throughout the country have ever been systematically instructed in these vital details.

Every wholesale druggist who has been made acquainted with the plan of the new course speaks of it in most encouraging terms. Those who oppose every innovation simply because it never has been done before will, of course, be in evidence. One can almost anticipate the objections of the chronic objectors. "Why don't the employer teach assistants bookkeeping?" The answer to this is, what percentage of employers are using to-day simple, proper methods of keeping their books? How many druggists know at the end of the year how much money they have lost or made? What percentage of losses are made in a year through carelessness and improper methods of keeping books? How many clerks are imbued with a proper sense of the responsibility and duty to their employers to accurately record sales?

Unfortunately, the scientific and professional pharmacist too often inherits a contempt for such routine work as bookkeeping, and if fortune smiles upon such an one and business purses in upon him in spite of his limitations, does he not frequently have to employ some bookkeeper who knows nothing of pharmacy and is good for nothing else in the store? And if the employer knows nothing of bookkeeping, has he not literally turned the keys of his business life into the hands of the enemy?

It is probably too much to expect at once complete approval of the ideas which are advanced in this paper; but the writer sincerely trusts that in the near future no college graduate shall be permitted to receive his diploma until he has passed a satisfactory examination in commercial training; and of the college which first successfully inaugurates such a course and compels the students at some time to pass an examination in this department, it is safe to say that her graduates will be sought for and preferred by employers because, while they have been thoroughly trained in the knowledge which will enable them to perform all of their duties as chemists and pharmacists, they are not likely to become commercial failures and lose the results of their hard-earned labors by failing to know "what they have made," add to "what they have made," and, in fact, "cover the whole ground."

One other objection may be heard: "Why don't the man who needs training of this kind go to a commercial college?" The answer to this is that none of the commercial colleges have ever thought it worth while to establish a course suited for pharmaceutical students and it is not likely that they could make such a course remunerative to the commercial college because of the limited number of students who would voluntarily take such instruction.

The courses in commercial colleges are, moreover, very elaborate and usually cast upon lines involving large operations, and the instructors in such colleges are not familiar with the special needs of pharmaceutical business. This paper may be concluded by quoting a remark of a college graduate of ten years' standing, who said: "I only wish that I could have taken a course in commercial training instead of the special course which I took at college. I am sure I would now be making a comfortable living, for it would have enabled me to have saved many business losses and some bitter experiences that I have gone through, because I thought business details and methods too insignificant to give them time and thought at a time in my life which I could have easily spared for this practical work."

It is probable that the great depression through which the drug business has been passing in late years has brought home to many the need of such training, and the words of the graduate above quoted will doubtless find an echo in the minds of many similarly situated.

THE FLAX SEED CROP of the world grows year by year, but the demand keeps up with the supply. North and South America and Europe are the great producers as well as the main markets.

QUESTION BOX.

department is to furnish our subscribers with reliable and tried formulas for all matters relating to practical pharmacy, dispensing difficulties, etc. Information is not acknowledged by this department. COMMUNICATIONS RECEIVE HER DO WE ANSWER queries in this subscribers. In this department necessarily made to information issues of the Era. Copies of these in cents each.

of Pharmacy.—(O. A. C.) The **uri** and Nebraska Boards of Pharmacy, Sedalla, Mo., and H. H. respectively.

Camel's Hair Brushes.—(Painter.) Brush manufacturers say that camel hair is never used in brushes, the hair of Siberian squirrels' tails being employed for making what are called camel's hair brushes and pencils. There are several colors used—red, black and gray—all of which are first sold at the great fairs in Eastern Russia, thence finding their way to the European and American markets in bales weighing from two hundred to three hundred pounds.

Keeping Flies Off Horses and Cattle.—(A. W. H.) Infusions of bitter substances like quassia, smartweed, etc., have been used, it is claimed with satisfactory results. They are applied by means of a spray, sponge or brush. Preparations like the following have been recommended: (1) Oil of clove, tincture of eucalyptus, of each, 3 parts; oil of cassia, 5 parts; alcohol, 150 parts; water, 200 parts. (2) Carbolic acid, 1 ounce; oil of pennyroyal, 2 ounces; spirit of camphor, 2 ounces; oil of tar, 4 ounces; glycerin, 2 ounces; lard oil, 4 ounces. (3) Melt 50 parts of tallow or other cheaper fat with 25 parts of resin, add 50 parts of crude soda and 25 parts of borax, boil with water; add 75 parts of carbolic acid and 30 parts of calcium sulphide solution and finally 80 parts of extract of tobacco.

"Soft Corn Cotton."—(X. Y. Z.) We know of no definite formula under this title. It is quite probable, however, that the ordinary solution of gun cotton in ether with salicylic acid (corn collodion) as prepared by the formula of the National Formulary will answer the purpose. Another formula is gun cotton, 2 drams; salicylic acid, 1½ ounces; extract of cannabis indica, 5 drams; Canada balsam, ½ ounce; castor oil, 2 drams; ether, 9 ounces, alcohol, 4 ounces. Put the gun cotton in a bottle and pour half the alcohol upon it. Shake, add the ether, and again shake until dissolved. Add the rest of the ingredients in the order named, dissolving the salicylic acid in the remainder of the alcohol. The mixture should be applied with a camel's hair brush night and morning, the feet being bathed in warm water every second or third night and as much of the corn picked off as will peel away.

One of the methods of treatment particularly recommended for "soft" corns is to paint them with a solution of silver nitrate in 8 parts of distilled water every fourth or fifth day, in the meantime keeping the toes apart by means of a little cotton smeared with petrolatum, zinc ointment, or other bland fatty substance. Tannin placed between the toes where the corn is located has also been recommended as a "cure" for "soft" corns.

Depilatories.—(C. K.) Barium sulphide (in fine powder), 1 to 3 parts; starch powder, 3 parts. Mix. Make into a paste with water at the time of using, spread over the part required and remove at the end of five or ten minutes. (2) Sodium sulphide, 6 drams; powdered lime, 3 ounces; starch, 2 ounces; powdered orris, 1 ounce. (3) Barium sulphide, 1 ounce; zinc oxide, 1 ounce; starch, 2 ounces. The sulphide of barium should be fresh. To use the paste should be spread as thick as the blade of a knife over the parts from which the hair is to be removed. The softened hairs should be scraped from the skin with a dull knife or bone spatula, the parts washed

with warm water and afterwards thoroughly dried. Cold cream should then be applied to the reddened surface. The length of time the paste should remain upon the skin is best determined by the severity of their action. Great care should be exercised in their application and their effects should be carefully watched, for sometimes deep and painful ulcerations occur by their incautious use. Depilatories containing arsenic (orpiment) are very dangerous and their use should be avoided.

Marine Glue.—(C. T.) True marine glue is a combination of shellac and caoutchouc in proportions which vary according to the purpose for which the cement is to be used. Some is very hard and some is quite soft. The degree of softness is regulated by the proportion of benzole used for dissolving the caoutchouc. Where but a small quantity is needed the following formula is said to give very good results:

Dissolve 1 part of India rubber in 12 parts of benzole, and to the solution add 20 parts of powdered shellac, heating the mixture cautiously over the fire. Apply with a brush. The following recipe is said to yield a strong cement: Ten parts of caoutchouc or India rubber are dissolved in 120 parts of benzine or naphtha with the aid of a gentle heat. When the solution is complete, which sometimes requires 10 to 14 days, 20 parts of asphalt are melted in an iron vessel, and the caoutchouc solution is poured in very slowly in a fine stream and under continued heating until the mass has become homogeneous and nearly all of the solvent has been driven off. It is then poured out and cast into greased tin moulds. It forms dark brown or black cakes, which are very hard to break. This cement requires considerable heat to melt it, and to prevent it from being burned it is best to heat a piece of it in a water-bath until the cake softens and begins to be liquid. It is then carefully wiped dry and heated over a naked flame, under constant stirring, up to about 300° Fahr. The edges of the article to be mended should, if possible, also be heated to at least 212° Fahr., so as to permit the cement to be applied at leisure and with care. The thinner the cement is applied the better it binds.

Treatment of Tobacco Habit.—(Habitué.) There seems to be no very well defined course of treatment for this habit, as almost everything has been suggested for the purpose, from chewing a root to the application of prohibitory legislation. The habit of excessive indulgence would seem to need a different treatment from that suggested for a case of a moderate indulgence in the weed. While it would be hard to outline all the effects of tobacco upon the system of the average user, yet it can be safely stated that it exercises a depressing action upon the heart and respiration. These symptoms, of course, must be met. Cases of excessive indulgence in the habit are followed by muscular weakness, tremors and reduced capacity for physical exercise. In cases of this kind the condition of the nervous system would seem to demand treatment. Cases of chronic tobacco poisoning are usually made known by various symptoms, inflammation of the mouth, follicular pharyngitis, bronchial catarrh, rapid, weak and irregular action of the heart, dyspepsia and weakness of sight. Color blindness has been attributed to the excessive use of strong tobacco. In such cases, as in all others, whatever treatment is undertaken, it should be supplemented by a complete cessation of the use of tobacco and followed by the administration of some nerve tonic with open air exercise. If there is much overaction of the heart it is generally steadied by small doses of opium, with digitals or strophanthus given under the direction of a physician.

Prepared versus Precipitated Chalk.—(W. H. G.) Prepared chalk is a native, friable carbonate of calcium freed from most of its impurities by elutriation. No process is official in the present Pharmacopœia, but a process formerly official prepared it in the following manner: "Take of chalk a convenient quantity, add a little water to the chalk and rub it to a fine powder. Throw this into a large vessel nearly full of water, stir briskly, and, after a short interval, decant the supernatant liquor while yet turbid into another vessel. Treat the coarser particles of the chalk remaining in the first vessel in a similar

manner, and add the turbid liquor to that previously decanted. Lastly, set the liquor by, that the powder may subside, and, having poured off the water, dry the powder." The object of this process is to effect the separation of the gritty particles in ordinary chalk by elutriation. The moist powder is usually formed into cones by the process known as trochiscation.

Precipitated chalk is readily prepared by double decomposition, the official process of the British Pharmacopoeia employing calcium chloride, sodium carbonate and water. The equation may be thus represented:

Calcium carbonate is precipitated and sodium chloride remains in solution. The fineness of the powder in the preparation of prepared chalk is greatly promoted by using hot, dense solutions. Prepared chalk is chemically not so pure as precipitated chalk, for the process of elutriation effects the purification of the chalk only to a certain extent as it does not separate the insoluble fine particles. Prepared chalk differs considerably in appearance from precipitated chalk, even after it has been reduced to a fine powder. It is usually not so white as the latter and it adheres to the fingers when handled. On account of this adhesiveness it is used for many purposes.

PHARMACY.

POISONOUS PLANTS.—The botanist of the United States Department of Agriculture, in his report for 1899, states that sixty-seven cases of poisoning by plants were investigated by his department, against forty-one in 1898, and thirty-four in 1897. Of these, forty-one pertained to men and twenty-six to farm stock. The fatalities included more than 4,000 farm animals and twenty-one human beings. The percentage in England is about one-half as large.

DISTINGUISHING BETWEEN IRON CITRATE AND POTASSIUM TARTRATE.—G. Griggi (Pharm. Zeit.; Drug. Cir.) proposes the following method of distinguishing iron citrate and iron and potassium tartrate, one from the other. Dissolve a few scales of the specimen in 5 Cc. of water, warming gently, if necessary. Then add 5 Cc. of a 1:20 sodium salicylate solution. If the salt is iron citrate, the solution at once acquires a more or less dark red color. A solution of iron and potassium tartrate treated in the same way remains uncolored or develops a darker color only after some time.

THE LARGEST CRYSTAL.—At Acworth and Grafton, N. H., very large crystals of beryl have been found. One from Grafton weighed 2,900 pounds and another from the same locality was 45x24 inches and weighed by calculation about 2½ tons. In Utah crystals of gypsum, sulfate of lime, over four feet long have been found. What is probably, however, the largest crystal yet recorded (says Eng. and Min. Jour.) was mentioned in a paper by E. O. Hovey, on the Harney Peak District, South Dakota, read before the New York Academy of Science. This was a crystal of spodumene, lithium-aluminum silicate, which, by actual measurement, was thirty feet in length.

SULPHURIC ACID MANUFACTURE.—Prof. Lunge, at a recent meeting of the Society of Chemical Industry, at Liverpool, made some interesting remarks on sulphuric acid manufacture. He stated that we are confronted with the greatest revolution which has taken place since the acid became a commercial product. This is the total abolition of the vitrol chamber and of the use of nitrous fumes as oxygen carriers. By the use of the catalytic power of platinum, perhaps also by that of ferric oxide and other substances, a great many industries will probably be able to make their own sulphuric acid by the new process, as it is simpler and can be successfully carried out upon a small scale.

THE BOERS ARE DRUG STOREHOUSES—at least, so we are to judge from the reports contained in the English medical journals. It is asserted that the Boers

are very fond of taking medicine and are extremely anxious to use a long list of remedies. It is claimed that, to the average person, the number and variety of medicine bottles and boxes to be found in the Boer residences is something simply alarming. It is further stated that the Boers look upon illness as an important event in their routine lives. They are accused of pointing with pride to the empty medicine containers which are kept as souvenirs after an illness. If all of this is true we should expect the enterprising patent medicine manufacturers to follow the Boers no matter where they may trek and court their acquaintance. It is wonderful that so few American medicines have found their way to the Transvaal. (Meyer Bros. Drug.)

INDICAN may be obtained from indigo leaves in colorless, spear-shaped crystals by treating an aqueous decoction with barium hydroxide, filtering off impurities and removing excess of the base with carbon dioxide; the filtrate is evaporated to dryness and the crude residue extracted with methyl alcohol, adding ether to the extract to precipitate the last traces of foreign substances. The solvents are then distilled off and the final residue dissolved in water, the solution being allowed to deposit the glucoside. It crystallizes with 3H₂O, melts at 51° C., and passes into a gummy mass at 100° C. When dried in a vacuum over sulphuric acid, indican loses its water of crystallization and then melts at 100° to 102° C. Analysis seems to indicate the formula C₁₁H₁₅NO₆. The glucoside is moderately soluble in water, acetone or the alcohols, and has a bitter taste. When air is passed through a solution of indican in dilute hydrochloric acid containing a little ferric chloride, 91 per cent. of the glucoside is converted into indigotin, a certain amount of indigo red being simultaneously produced. (Sci. Am.)

CHINESE DRUGS.—The Portland Oregonian says that one day recently the employees in the office of the appraiser of customs were busy examining a shipment of Chinese medicines and the place smelled like a fertilizer factory. There were the usual number of dried snakes, the looks of which would be certain to kill or cure any intelligent patient. There were also a number of plump lizards, spitted on rods and expanded with slips of bamboo till they resembled tennis rackets; a lot of "sea horses," a long, slender fish with a head like a horse and a prehensile tail; bundles of centipedes flattened out and pasted on sticks; cans full of preserved polliwogs and angleworms and many other curious panaceas, each of which smelled worse than the other. There were pills as large as prunes, handsomely decorated; roots and "yarbs" of many kinds, which would paralyze a Quaker doctor, and boxes and bottles of unknown mixtures which would paralyze anybody. The forty separate and distinct smells of the town of Cologne are nothing as compared to the odors arising from about \$100 worth of Chinese medicine, which made some of the men handling the stuff sick. Foul smell seems to be a requisite in most medicine, and if the beneficial effects of medicine are proportionate to its odor the medicine of the Chinese should be the best in the world.

Dandruff Pomade.

Benzoated lard	1200 parts
Precipitated sulphur	49 parts
Lanolin	200 parts
Alcohol, 90 per cent.	200 parts
Salicylic acid	10 parts
Oil of rose geranium	10 parts
Rose water	600 parts

Shoe Dressing.

Shellac	2 ounces
Gum turpentine	¾ ounce
Sandarac	¼ ounce
Lampblack	¼ ounce
Oil of turpentine	¾ ounce
Alcohol	20 ounces

IT MIGHT DO.—JAMES.—No, James, we cannot tell you "of any antiphlogistic that will remove the flavor of onions." The only remedy that we think might prove efficacious would probably be gum asafetida, 1 ounce; garlic, 6 ounces; neatsfoot oil and petroleum, each, 2 ounces. Moisten with the oil and chew the whole quantity. But this is not an antiphlogistic. Sorry we cannot oblige you, James. (Clinical Recorder.)

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of
Era Readers.

FOREIGN.

China.

The dispatches from the ministers in Peking leave no doubt that they are living. They have defended the legation buildings successfully for a month or more against large forces of Chinese regular troops, who are armed with artillery. This shows that the Chinese soldiers, even when armed with modern guns, are not so formidable as some have feared.

The relief forces have at last started for Peking. The Russians and Japanese started first and the others are following. The long delay in Tien-Tsin was due to inability to choose a commander for the allied forces. As no decision on the point could be reached, the various forces are going ahead independently.

A large Chinese army is said to be blocking the road to Peking, but nothing is known of its efficiency.

The small Russo-Chinese war along the Siberian border is waxing hotter. Honors are about even between the contestants.

Advices from Chee-Foo state that public opinion, as represented by the officials, merchants and missionaries at the treaty ports, is united in demanding that severe punishment be meted out to the Chinese Government. They believe that Peking should be destroyed and Nankin is suggested as the new capital. An intensely bitter feeling prevails against Li Hung Chang.

The Chinese authorities say that the ministers are held as hostages, and that they will be put to death if the allies advance on Peking. As the ministers have successfully defended themselves against the Chinese since June, the Powers consider this an idle threat and will not delay the advance.

It is reported from Shanghai that fifty missionaries have been murdered in the Shan Si Province. Another report says that 10,000 native Christians have been slaughtered in a town near Peking. It is said that a massacre of missionaries took place last week at Pao Foo, a city about seventy-five miles southwest of Peking.

The gunboat Bancroft is to be put into commission at the Charlestown Navy Yard, and it is supposed she is to be sent to China.

The transport Meade sailed from San Francisco last week with troops for Taku, China.

A message from Peking, under date of July 21, has reached Tien-Tsin, giving details of the siege of the legations. It shows that seven Americans have been killed and that the United States forces now occupy a strong position on the city wall. Provisions are sufficient and hospital arrangements excellent. Total killed and wounded is ninety-eight.

The Philippines.

A wave of insurgent activity is sweeping over the islands, but chiefly in Luzon, and it will probably continue until after the Presidential election in the United States. The troops in the vicinity of San Isidro have been frequently attacked, and the Filipinos have managed to escape without receiving their usual rapid punishment.

On Wednesday of last week Techon's band of insurgents captured five men of the Twenty-fourth Regiment, Lieut. Altataetter and three other engineers and eleven cavalrymen, and took them into the mountains. The Americans made a gallant defense against the rebels and were not captured until their ammunition was completely exhausted.

General MacArthur is preparing an extensive expedition for the purpose of driving the insurgents out of Bulacan province.

Supt. Atkinson finds that there is a universal demand for schoolhouses. He is arranging meetings with the chief Presidents for the purpose of endeavoring to provide instruction for the children in their districts.

The results of the campaign during last week show thirty-nine rebels killed and thirty-five captured. Sixty rifles were captured. The Americans lost seven killed, including an officer, nine wounded and twenty-one captured, including an officer.

On September 1 the commission headed by Judge Taft will become the legislative body of the Philippines, with power to take and appropriate insular monies, to establish judicial and educational systems, and to make and pass all laws.

The only three banks in Manila have formed a combination to reduce arbitrarily the rate of exchange for

American gold. This has caused widespread indignation and many difficulties for commerce and minor business. The banks, however, are obdurate.

At the suggestion of Archbishop Chapelle, Judge Taft has been examining the heads of the religious orders as well as Mgr. Nozalada and other ecclesiastics, preparatory to the time when it will be necessary to take definite action regarding the affairs of the friars and the Church. It appears that the real estate holdings of the friars are smaller than had been expected.

South Africa.

General Prinsloo, the Free State commander under General De Wet, was cornered by Lord Roberts' army last week and surrendered with about 3,000 men. De Wet is still very active, cutting off small detachments of British, ridding Lord Roberts' line of communication and upsetting his plans wherever possible.

General Botha, the Transvaal commander, is in the mountainous region east of Pretoria and shows no signs of giving up the fight.

Baden-Powell is besieged again by the Boers, this time in Rustenburg. General Ian Hamilton has gone to his relief.

A Pretoria despatch says that President Kruger and Commandant General Botha have issued a proclamation promising to pay all damage done to farms by the British, provided the burghers remain with the commandos.

The Boers have evacuated Machadodorp and are retreating to Lydenburg.

Other Foreign News.

An attempt to assassinate the Shah of Persia was made in Paris last week, but the would-be assassin was caught and disarmed before he could fire his revolver. The Shah has abandoned his visit to England because of the anarchist activity.

The police say the assassination of King Humbert of Italy was only one detail of an anarchist plot to assassinate all the monarchs of Europe. Twenty-seven anarchists, it is said, left the United States for this purpose at the same time as Bresci, King Humbert's assassin sailed.

Victor Emmanuel, the new Italian king, is being well received by the people.

Four cases of plague and two deaths have occurred in London.

The Duke of Saxe-Coburg and Gotha, second son of Queen Victoria, died last week.

The Nicaraguan Government has seized the property of the Maritime Canal Company at Greytown, on the ground that the concession has expired. President Zelaya, in his opening address to the Nicaraguan Congress, formally proclaimed the existence of the Cragin-Eyre canal concession.

The imports into Havana during June amounted to \$4,420,088.

Sultan Rabah, principal chieftain in the Central Soudan, has been killed and his troops put to flight by the French expedition sent against him.

DOMESTIC.

Politics.

North Carolina, by a majority of about 60,000, adopted last week an amendment to the State Constitution that will disfranchise practically all the negroes in the State. The negroes were frightened by "red shirt" parades and armed demonstrations, and few of them attempted to vote on the amendment. North Carolina is the fourth Southern State to disfranchise its negroes; the others are South Carolina, Mississippi and Louisiana.

Controller Coler, of New York, has announced his willingness to run for Governor of the State on the Democratic ticket if the campaign is made on an anti-Ramapo platform. Mr. Croker, however, does not seem to be enthusiastic over this idea.

The New Hampshire Democrats have nominated Dr. Frederick E. Potter for Governor. The Kentucky Populists have nominated A. H. Cardin. Senator Wellington, of Maryland, has declared himself opposed to President McKinley's re-election, but is not sure whether he will support Mr. Bryan.

Other Domestic News.

The metal workers of the United States practically completed organization last week in Indianapolis. There will be twenty-eight unions.

The population of Milwaukee, Wis., according to the count just completed at the Census office, is 285,315, an increase of 33.54 per cent. since 1890. The population of Louisville, Ky., is 204,731, an increase of 43.602, or 27.06 per cent. over the census of 1890. The population of Cincinnati is 325,902, against 296,008 in 1890. Cincinnati people are much disappointed. They expected the population to reach at least 350,000.

Damage to the extent of \$1,000,000 is said to have been done to the Illinois broom corn crop by a storm last week.

An intensely hot wave prevailed in Wyoming and the Dakotas last week. The thermometer reached 106° in the shade in several places, and in Pierre, S. D., on Wednesday, it registered 111°.

General John B. Gordon, Commander-in-Chief of the United Confederate Veterans, will be the guest at the thirty-fourth annual encampment of the Grand Army of the Republic at Chicago, August 27.

The amount of gross gold in the United States Treasury has reached \$631,170,764, which is the highest amount in the Treasury in the history of the Government.

The monthly statement of the public debt shows that at the close of business July 31, the debt, less cash in the Treasury, amounted to \$1,109,346,730, an increase for the month of \$1,635,452. This increase is accounted for by the increased disbursements incident to the beginning of the new fiscal year.

John Clark Ridpath, the historian, died in the Presbyterian Hospital in New York City, last week, after a long illness.

Superintendent Brockway, for thirty years in charge of the Elmira Reformatory, has resigned.

Ex-Governor Roger Wolcott, of Massachusetts, has been appointed ambassador to Italy in place of General William F. Draper, who has resigned.

THE DRUG NEWS.

New York and Vicinity.

SODA WATER IN THE HOT MONTHS IN THE DEPARTMENT STORES AND LARGE DRUG STORES.

The summer soda water season now in full swing has marked a condition in this city that is as unexplainable as it is novel and interesting. It shows two distinct soda drinking districts that are as widely different as could possibly be imagined; uptown in the shopping area where the busy housewife flits to and fro under the depressing influence of an almost tropic sun, more soda has been consumed than in any other year; downtown where the man of affairs labors in the stifling, dusty air of the office, the season's business has been dull, and proportionately there are just as many soda-drinkers among the downtown populace as in the uptown bargain hunters. The basis of this statement is a composite deduction from the interviews given below. To take the uptown section first.

A. P. Corcoran, chief of the soda department at Riker's drug store, who is an expert in the business and can mix any kind of a drink from a lemon sour to an egg shake, the most expensive drink of the 125 he makes, said: "Our business has been unusually good this year, in fact, it has gone way ahead of previous seasons and we haven't made any special effort to attract trade either. Of course we are adding to our drink list all the time and can give persons almost any mixture they desire in the soda line. We seem to have a steady trade all the while and just now our business is not as brisk as a few weeks ago, as a good many of our customers are out of town, but we will have plenty to do for sometime yet. I am entirely satisfied with the showing we have made." This store dispenses only 10 cents and upward soda drinks and keeps regulation hours.

On the other hand the Siegel-Cooper Company does out five cent glasses, but its business has been far above that of last year according to Emery Thompson, who has entire charge of the large fountain and sixteen men who dish out the foamy drinks, who says: "We've simply done a land office business at that fountain this year and we're not through by a long shot yet. We've had just enough hot weather to keep our trade going on an average of between 6,000 and 7,000 glasses daily and on some of the real warm days we've disposed of 14,000 glasses of soda. Last year isn't a marker to what this one has been, but last year was good. We think our large trade is held by the character of the soda we dispense. We have all kinds of drinks, but our customers like the plain every-day soda flavors better than the mixtures."

Here are two sides of the soda question in the shopping district, the department store and drug store. Now to get the situation complete a visit was made to Huyler's, where Miss M. O'Connor presides over the girl soda dispensers, and where it is safe to say more of the "swell set" drink than in any other place in town. The statement made at this store was: Our business has been better this year than it has ever been before, and

we feel satisfied with it. There is yet a busy season before us, we think. Our trade is always about the same, but there is one thing noticeable: If persons want a first class glass of soda they come here for it, and they say so, too. Our syrup rooms are always open for inspection, as we use none but the best and purest materials in making our productions."

This is the uptown situation. The first place visited downtown was Perry's, where the doors are never locked and the soda fountain is kept on the jump almost continuously. The man who has the soda business at the end of his finger tips is D. A. Greaven, manager of the store, and his statement is the following: "We have sold more soda this year than ever before, and that means that business has been extremely good. While we have not had a whole lot of hot weather, it has been more uniform than in previous years, thus giving us a much better trade. Some of the warm days have been on Sundays, when we have done excellently. Our average soda output will reach about 6,000 glasses daily."

W. D. Tankard directs the workings of the soda business at Hudnut's on Broadway below Fulton street, and his idea about the season's trade is a good one. He said: "If some one would start a hot-air machine at the Battery and send a scorching hot wave up Broadway so that everybody in the office buildings and out would get so dry that they would come rushing in here for soda, I wouldn't kick, but as it is I have a good big kick coming, and I am using it all the while because our soda business isn't what it ought to have been, comparing this year with last, by a whole lot. The weather man was generous during July, but in May and June he ought to have been mobbed for the beastly lot of junk he sent us and called it weather. Now look at this month. No one will drink soda water these days but the "steadies," and they drink winter and summer. Still, for all that, our trade has not been real bad. It has been as much as any one else in the neighborhood. We think we have as good soda as can be produced in this town, and we can give almost any kind of a mixture a person may call for."

Frank Zimmerman, chief dispenser for Reid, Yeomans & Cubitt, at 140 Nassau street, said: "This has been a dull season; not extremely so, but there has not been near the business there was last year. The fact is, we have not had enough hot weather to make people drink soda, and when it has been real warm the days fell on Sunday, when we were closed. Rain has had a bad effect on the business also. This has been an unusual summer, and I don't think enough has been done in the soda line to pay expenses." This store keeps business hours and does not sell soda on Sundays.

At Milhau's, John Willis is the superintendent of the soda business, and he said: "Business has been fairly good, but not up to other years. I cannot account for it unless it be that we have not had just the right kind of weather at the right time. Our trade has not been bad, though; still we could have been much busier and supplied lots more soda water if people had come to get it."

John D. Stemp engineers the soda fountain in Hegeman's on Broadway, near John street, and he, like others of his brothers, was complaining because business had not been better. "Why, we could have done a lot more if the weather had been any way hot," he said, "but it came in fits and jerks what we did have of it, and consequently the business has been the same way. The steady trade is better, but this cannot be had the way I would like it unless we have good hot weather, and we haven't had much of that. Business has been fair, though, and I guess we've had our share of what there was."

Down at Wilson's, corner of Wall street and Broadway, business has averaged very well, so the soda man, Charles Rosston, says, "but," he continues, "it is not to be compared with last year, when we had lots of hot weather and a good business. While the hot weather lasted this year our trade was excellent, but the heated season was not uniform, hence the difference in the soda business."

The soda business has suffered from the "cut rate" habit in the uptown district, where it is sold with ice cream accompaniment at Macy's at 8 cents the glass. It is said that trade is not any heavier by this reduction of tariff.

The ordinary retail druggist throughout the city has enjoyed his customary patronage, but nothing notable is to be reported.

GOVERNMENT OFFICERS SEIZE PHENACETINE.

The subject of phenacetine was treated quite generously in the daily papers during last week, the occasion being a seizure of the drug with a quantity of sulphonal, salol and other drugs by the Custom House officials in a warehouse on Fourteenth street. What added interest to the case was the statement that Alfred R. Goslin and Henry Bogert, both of whom were recently indicted for conspiracy to depress Brooklyn Rapid Transit stock, were the holders of the drugs. Customs Inspector H. C. Davidson, who made the seizure, positively connects Goslin with the case, as he said the goods were removed from Goslin's house to the storehouse. Goslin, however, denies that he ever had anything to do with importing phenacetine, and his brother-in-law, T. J. Gibbins, supports this statement as far as the seized goods are concerned, for he says they belong to him. Mr. Gibbins questions the right of the Customs House officials to lay hands on the goods, which he affirms are nearly all of American manufacture, and on the part that has been imported and is dutiable, the duty has been paid. He asserts that the Government officials have no right to seize his goods. No arrests have been made in the case, and it is not known just what form of procedure is to be adopted. The list of drugs seized by Inspector Davidson is given below:

Case No. 1—284 1-oz. packages of sulphonal, 107 1-oz. packages phenacetine, 84 4-oz. packages salol, 50 1-oz. packages trional, 8 1-oz. packages carbonate of guaiacal.

Case No. 2—400 1-oz. packages not marked, 32 empty pasteboard boxes.

Case No. 3—119 packages thymidine labelled as of American manufacture, 30 packages of 1-lb. bottles of salol, 6 1-lb. packages of phenacetine, 25 1-oz. packages tritolene labelled as of American manufacture, 1 1-oz. paper of morphine sulphate, 1 1-oz. bottle bismuth naphthol, 2 packages phenacetine and salol tablets, 4 packages of tablets not marked.

ANOTHER NOVEL SIDE LINE.

Mention was made last week of a drug firm in Shelbyville, Va., which raised, killed and shipped turkeys to the Eastern market, conducting the business as a part of their regular drug trade, and this company was given the credit of being the only one in the country which followed such a novel pursuit, at the same time dealing in pharmaceuticals. Attention has been lately called to E. E. Boynton, druggist, Camden, Maine, who keeps "Fine Angora Cats and Kittens always on hand." Mr. Boynton claims equal recognition with the turkey raisers, as he also "raises" his cats and he regards his "farm or museum" or whatever you may call it with as much pride and satisfaction as he surveys his neat little drug

store, and thinks it all his own. He, unlike the turkey raising druggists who have only been in the business a few years, has made a careful study of the traits, habits, manners, characteristics and genealogy of Angora cat-doms and has kept a number of excellent specimens on hand for a long time. In fact Mr. Boynton's cats are regarded such wonderful creatures that they are made one of the interest points to be observed when in Camden. Mr. Boynton is one of the leading druggists of the town and he is respected and well liked by his townsmen. It may be said he is careful to see that his pets do not stray out into the world o' nights.

NOTES.

—Two drug firms in this city, Schieffelin and Company and McKesson and Robbins, are trying to discover how a firm outside of the drug trade should compete with them in bidding for a contract for supplies, to secure which it was necessary to quote the very lowest prices, and how the outsider secured the business by bidding so far under them as to completely outclass them. They are unable to explain it and so are other firms in the trade who know of the circumstances. A short time ago proposals were asked by the Department of Charities for the Kings County Hospital, and Schieffelin and Company, McKesson and Robbins and the Willow Ware Company submitted bids. When the decision was made the Willow Ware Company received the contracts, as its bid was far below those submitted by the other firms. Schieffelin and Company protested, as their bid was lower than McKesson and Robbins, on the ground that the company were not druggists, and the hospital authorities rewarded the contract to Schieffelin & Company.

—Among those who have visited the trade during the last week were: Samuel Davis, druggist, Boonton, N. J.; L. J. Schlessinger, druggist, Yonkers, N. Y.; J. Voorhees, druggist, Whitehouse, N. J.; J. H. Allen, druggist, Millbrook, N. Y.; E. A. McFadden, druggist, Hackensack, N. J.; G. M. Carslake, druggist, Bordentown, N. J.; Dr. Carlos C. Spear, druggist at Somoto Nueva Segovia, Nicaragua; F. N. Hamlin, druggist, of Rome, N. Y.; J. S. Hoge, of the firm of Henry J. Lamar & Son, wholesale druggists, Mason, Ga., and Mr. Reed, buyer for the same firm; W. H. Stanford, of Newark, N. J.; A. J. Staudt, Philadelphia representative of Parke, Davis & Co.; H. Griffin, of the H. Griffin Drug Company, Peekskill, N. Y.; J. D. Blauvelt, Nyack, N. Y., and J. H. Rosell, Jr., druggist of Freehold, N. J.

—The employees of Hegeman & Co. held their first annual reception at Feltman's Pavilion, Coney Island, Wednesday evening, August 1, and it was a success. A large crowd was present, and the programme of twenty-eight dances was highly enjoyed. The officers of the organization are: Francis A. Murray, president; William S. Reardon, vice-president; Richard J. Thompson, second vice-president; Richard Green, treasurer; John D. Stem, financial secretary; John J. Delaney, Chairman Entertainment Committee.

—President Felix Hirsman, of the New York State Pharmaceutical Association, has named the following delegates to the National Wholesale Druggists' Association convention in Chicago, September 17: R. K. Smither, chairman, Buffalo; S. H. Carragan, New York; William J. Walker, Albany; Clay W. Holmes, Elmira, and George B. Hubbard, Syracuse.

—Mr. and Mrs. Pierre T. Trautman are rejoicing over the arrival of a baby daughter which occurred Sunday, July 29, at their home in Long Branch. Mr. Trautman is a druggist owning stores at Chelsea and Ocean Avenues, Long Branch, N. J., and Elton street and Atlantic avenue, Brooklyn.

—Druggist John J. Hauss and wife, of St. Mary's, Ohio, returned on the steamer Deutschland, Monday, from an extended foreign trip. They left this country last May and have since visited extensively in England, Switzerland and of course taking in the Paris Exposition.

—J. C. Gallagher, druggist of Grove and Seventh streets, Jersey City, is making a short stay at Atlantic City. One of his clerks, Mr. Blair, has just returned from a vacation in the mountains.

—Spangenberg & Boyd, druggists at Columbus avenue and Eighty-second street, have recently made an improvement in their store by the addition of tile flooring

and a handsome new show case. The floor space has also been enlarged.

—Leo Degenstein, who for seven years was with F. E. Roen & Co., druggists at 521 Sixth avenue, has resigned to accept a position as manager in the drug store of Louis Hilf, 750 Third avenue.

—Bruce C. Hallowell recently accepted a position as traveling salesman for Lehn & Fink in Virginia, Pennsylvania and the District of Columbia. He began his new duties August 1.

—Wm. Wels, druggist at Thirty-fourth street and Seventh avenue, has given his store a thorough renovation which adds much to its already engaging appearance.

—L. D. Orr, formerly with J. A. Carpenter at 123d street and Eighth avenue, this city, has accepted a position with E. A. Pickard, druggist of Roslyn, L. I.

—William Rowse, junior clerk for J. J. Redmond, druggist at 114th street and Fifth avenue, is recuperating his health at the Plaza Hotel, Asbury Park.

—J. Roemer, druggist of White Plains, has recently purchased the drug store of G. E. La Sage. Mr. Roemer now owns two stores in White Plains.

—Mrs. Catherine M. Barkman, of Binghamton, has secured an absolute divorce from her husband, Dr. M. Barkman, a druggist at that place.

—Mr. Mayer, of the class of 1900, of the Brooklyn College of Pharmacy, has accepted a position as pharmacist in Roosevelt Hospital, this city.

—Francis S. Warner, druggist at Thirty-seventh street and Seventh avenue, and his wife are summering at the Savoy Hotel, Atlantic City.

—Dr. Gilkey and wife, of Yucatan, Mexico, were the guests of Albert Turrell, of Parke, Davis & Co., at the Drug Club one day last week.

—William S. Mersereau, of Schieffelin & Company, returned last week after having spent the month of July in the Adirondack Mountains.

—H. S. Livingston, of the advertising department of Schieffelin & Co., has gone to a "quiet spot" in Sullivan County for two weeks.

—Edward Rave, formerly at Sands' drug store, corner avenue C and Tenth street, is now with Reeder Bros., at 400 Fourth avenue.

—Edward Hammond, apothecary at Bellevue Hospital, will leave Monday for a vacation of two weeks, which he will spend in Maine.

—Max Silver, assistant to Mr. Simon of the city department of McKesson & Robbins, is enjoying an outing at Tannersville, N. Y.

—M. Gluck will establish a new store at the corner of Marcy avenue and South First street, Brooklyn, some time next week.

—J. F. Farley, druggist, formerly at 119th street and Lexington avenue, will pass his vacation in the Catskill Mountains.

—J. H. Morey, druggist at 104th street and Boulevard, accompanied by his wife, is seeking rest in the White Mountains.

—Mr. Owens, with E. M. Mount, 200 Washington street, Jersey City, is enjoying an outing of two weeks at Granville, N. Y.

—William Schwallie, of the city department of McKesson & Robbins, is on a vacation in the Catskill Mountains.

—Mr. Butler, of Caswell, Massey & Co., 355-357 Columbus avenue, is on a two weeks' vacation in the Berkshire Hills.

—Herman Simon, of the city department of McKesson & Robbins, is spending his vacation at Bustleton, Pa.

—W. E. Potts has succeeded George C. Lautenschlager in the drug business at 226 Valley street, Dayton, O.

—R. R. Lampa, with Lehn & Fink, will spend his vacation this year with old friends in Massachusetts.

—The Wilson Drug Co., of Brooklyn, have opened a new store at Bushwick avenue and Furman street.

—O. P. Holm is arranging to install a new drug store at 256 Franklin street, Brooklyn, next week.

—Otto Boeddiker, druggist at Fifty-fourth street and Sixth avenue, is on his annual vacation.

—S. J. Betts, druggist at Bayonne, N. J., is numbered with the vacationists at Lake Hopatcong.

—Leon Schapira has recently opened a wholesale drug store at 533-535 Broadway, Williamsburg.

—For the week ending August 4, drugs to the amount of \$632,791 were brought into this port.

IN AND ABOUT BOSTON.

Drug Store Robberies.

Boston, August 4.—Three drug stores in Malden were visited by burglars, early on the morning of Sunday, July 29, resulting in their gaining an entrance at one place and being frightened away while attempting to gain admittance to the others. One place visited was W. L. McGarr's drug store on Highland avenue, near Pleasant street, where a window in the rear of the store was broken. Just as the burglar was climbing in, the night clerk of the store, who sleeps in the back room, was aroused, so the intruder jumped out and ran away. The clerk then went to the front door and saw two men running down Highland avenue toward the Edgeworth district. P. F. O'Hare's Pharmacy on Pleasant street, near the Medford line, also was entered, false keys being used. Cigars valued at \$40, besides \$20 in money, were taken. A window in the rear of the store was broken, and entrance first was tried there, but there were several cases of bottles piled up on the inside which blocked the way. James K. Keeney's Pharmacy, at the corner of Charles and West streets, Edgeworth district, was visited and a window in the rear of the store was forced open. However, a large bull dog on the inside frightened the burglars away. Near the broken window a jimmy and hatchet were found later by the police. The police of Malden have not succeeded in discovering the thieves.

NOTES.

—Clerks in D. R. Smith's drug store in the Globe Village District of Fall River recently enjoyed a joke on a young man who is a clerk in that neighborhood and who frequents this drug store for his cigars, sodas and other little purchases. The young man is noted for his personal appearance and as one of the best dressed men in the town. One day recently he purchased a handsome shirt which was to be worn at a gathering that evening and on his way home, late in the afternoon, he stopped at Smith's drug store and made a short call on the clerks employed in the store. The newly-purchased shirt, neatly done up, was laid upon a show case. As a car came along, which would carry the young man to his home, he seized the bundle and rushed for the car. On arriving at his home the bundle was laid carefully away until later, when he prepared to change his clothes to shine in society. When partly dressed, he opened the bundle with the intention of donning the new shirt, when, much to his consternation, the bundle supposed to contain the shirt was found to contain four pounds of steak! How the mix-up of shirt and steak came about is accountable, only from the fact that some other customer of the drug store must have gone supperless. The drug clerks when accused of playing a practical joke, easily proved an alibi, for how should they have had conveniently at hand four pounds of steak? It simply was a "miss-take" on the part of the young man in running off with the wrong package.

—A neat little card from Hasting's Pharmacy, at Warren has been issued, with the new fire alarm signals of that town printed thereon. Explicit directions are given as to how an alarm should be rung in, and also the different user to which the service will be put. The card has been in much demand from townspeople there.

—C. E. Brown, a Beverly druggist, and his family have returned from a pleasant trip to Kearsarge, N. H. While they were in the mountains Mr. Brown climbed Mount Kearsarge and met several Beverly friends who are camping on the rugged slopes.

—Among newly organized corporations is the Bristol County Drug Company of Taunton, of which T. F. Cavanaugh is president and W. C. Chamberlain treasurer. The capital is \$6,200.

—Charles A. Baker has taken a position as prescription clerk at Luscomb's Old Corner Pharmacy, Town House

Square, Salem. He formerly was a clerk at Moore's drug store in Beverly.

--The week's exports from the Port of Boston include, among other things, drugs and chemicals, \$7,483; India rubber manufactures, \$4,744; tobacco, \$1,077; spirits, \$40,171.

—John E. Garfield, who has the leading drug store in the Maplewood district of Malden, situated in Maplewood square, is enjoying a vacation and rest at Orr's Island, Me.

—Dr. G. W. Nutter, a Beverly pharmacist, has had put up a handsome druggist's sign in front of his store, on High street, in that city.

—Geo. H. Rolfe, manager of Lewis & Co.'s Adams Square Pharmacy, spent a few days down in Maine resting up.

—Frank Dane, a junior clerk at Miner's drug store, Summer street, Malden, is on a vacation at East Tilton, N. H.

—Arthur Gunthner, of Jamaica Plain, has been added to the clerical force of Moore's Pharmacy, in Danvers.

—Alpha B. Paige has been given a position as clerk at Stickney's pharmacy in Beverly.

—Miss Grace Porter, a clerk at Perkin's drug store at Wenham, is enjoying a vacation.

OTHER NEW ENGLAND NOTES.

MAINE.—With new fittings and furnishings the store formerly occupied by the Lisbon drug store at Lisbon has been opened by E. H. Gerrish, of Lewiston, with the firm name of the Gerrish Medicine Company.—Arthur Ham, son of J. G. Ham, a druggist at Livermore Falls, has enlisted on a naval cruiser. He will be gone for four years abroad, going around the world before returning.—A search recently was made by the liquor deputies of the new cigar and tobacco store, formerly the Beaver Drug Store, of Lewiston, but no intoxicating liquors were found.

NEW HAMPSHIRE.—A department for the sale of newspapers has been established at C. W. Howe's drug store at Rochester.—At the last quarterly meeting of the State Board of Pharmacy, at Concord, the following passed successfully the examinations and received certificates: Seniors, Charles H. Bacon, Fitchburg, Mass.; Charles C. Blonquest, Manchester; F. Elmer Eaton, Providence, R. I. Jun'ors, Carl M. Thompson, Walpole; Roy J. Boynton, Hillsboro Bridge; Adrian S. Cogan, Exeter.—Arthur H. Knowlton, the Pleasant street pharmacist at Concord, served during the month of June 4,380 ice cream soda orders.

VERMONT.—W. H. Moren, of East Fairfield, has bought the stock and furnishings of Lemer's & Company's drug store on the corner of Winooski avenue and Main street, at Burlington, which were sold by the referee in bankruptcy George W. Deberville. The price paid was \$1,000, and the goods will be removed to East Fairfield. The drug store has been closed for several months because of legal proceedings.—The drug store business of Arthur Smith, who has been for several years at East Hardwick, has been sold, and the place will be known as Carpenter's pharmacy after this.—Repairs and improvements have been made on the Marcotte drug store building, Main street, Winooski.—George C. Otis, of Sheldon's drug store, at Swanton, recently has become a registered pharmacist.

CONNECTICUT.—Williams' drug store at Thomaston recently was entered by a burglar, who was caught and proved to be a former Thomaston boy who has relatives living there now. The man was arrested in Southington for drunkenness, and on being searched goods were found on him which, on being examined by Mr. Williams, were identified as taken from his store.—A recent burglary in the North Side Pharmacy at Bristol is felt by the police to have been the work of boys.

—W. G. Wenck, of S. M. G. Wenck & Son, Northumberland, Pa., with his wife, Dr. Mary M. Wenck, has returned from a two weeks' vacation in Nova Scotia.

PHILADELPHIA.

DEATH COMES IN AWFUL FORM.

Philadelphia, August 4.—One of the very saddest in the long list of tragedies which have blackened the history of the Jersey coast summer resorts, occurred at Ocean City on the morning of July 31st. Professor Clement B. Lowe's two daughters, Miss Virginia M. Lowe, aged 24 years, and Miss Elsie M. Lowe, 27 years of age, were drowned, together with two other young women, also sisters, the Misses Lonsdale, of Germantown. The young ladies were spending their vacation at the cottage of Mrs. S. M. Meehan of Germantown. The cottage is just back from the beach, and it is the custom with cottagers at such watering places where there is a long stretch of sand, to bathe directly in front of their homes. The bathing party consisted of Mrs. Meehan, young Clement W. Lowe and the four girls who lost their lives. No one knows exactly how it happened. The young women were all floating, an accomplishment but recently learned, when one of those mysterious undertows or unlooked-for currents carried them far out beyond the line of breakers. Young Lowe was the first to notice the danger, but fortunately for him a favorable current carried him ashore, and he rushed for assistance. On account of the great stretch of beach at Ocean City, the bathing grounds are poorly patrolled. By the time the guards reached the spot, help was only available for Mrs. Meehan, who was got ashore with great difficulty. The Lonsdale girls were seen struggling—the Lowe girls had disappeared. With the greatest effort on the part of the guards, the Lonsdale girls were gotten to the beach, but they were dead, and all attempts to coax back the vanished spark of life failed utterly. It was sometime after, however, before the cruel ocean gave up the bodies of the unfortunate Lowe girls. They were taken ashore and placed tenderly beside the forms of their one-time comrades, and Prof. and Mrs. Lowe, who were in Philadelphia, at once notified of the awful calamity.

The Misses Lowe were well-known and greatly respected in social and church circles in Germantown, and the catastrophe has cast a gloom over the entire city. Many of the Philadelphia drug trade will remember Miss Elsie and Virginia Lowe, for they have often accompanied their father to association meetings. The bodies were brought from the shore on Wednesday morning. Prof. Clement B. Lowe of the Philadelphia College of Pharmacy, resides at Pelham, Germantown. His daughters were graduates of the Girls' High School and the Drexel Institute, and Miss Elsie further held the diploma of the Philadelphia School of Pedagogy. The funeral, which was strictly private, was held on Friday, at 2 P. M., at Prof. Lowe's home in Germantown. Prof. Lowe has been overwhelmed with telegrams and letters of sympathy from friends in all parts of the world.

P. A. R. D. Meeting.

Philadelphia, August 3.—The August meeting of the P. A. R. D. was called to order about 2:30 P. M. by First Vice-President Poley, in the absence of President McIntyre. A good attendance was noted. The minutes of the last meeting were read and adopted in full.

The recording secretary reported the receipt of a letter from Mrs. Pinchback (through W. W. Chalfant, Chairman of Memorial Committee), expressing her appreciation of the memorial sent her by the association on the death of her husband.

The financial secretary reported the receipt of \$80 dues from fifty-five members, and a balance in the treasury of \$728.48.

Executive Committee, J. C. Perry, Chairman, reported as follows: The question of contribution in the "Phenacetin Case" had been held over to await further information from Mr. Cliffe.

In the matter of the "Free Dispensary" evil, the committee suggested that the secretary ascertain from the secretary of the State Association the names and number of the committee appointed by that body at its last meeting to act in conjunction with the State Medical Association.

tion, that a committee be appointed by this association to act with the above, of a number equal to the State committee, and that necessary expenses be authorized, after consultation with the executive committee.

The renewal of the contract for advertising with the "Alumni Report" was recommended.

The N. A. R. D. assessment for 100 additional members being now due, the committee recommended that the treasurer be authorized to draw a check for \$50 in favor of the N. A. R. D., being the amount at 50 cents per member.

The resignation of Dr. Delker was recommended to be accepted.

Bills to the amount of \$33.10 were passed upon; these were read in full.

The applications of eleven new members were reported as passed upon favorably.

The Chairman reported unexpectedly favorable results from the paper sent out to the different wards asking for an expression of opinion on the scale of prices recommended by this association, and the purpose of the signer to maintain or oppose this scale. Twenty-five wards had reported up to date; in these, 319 druggists had signed favorably, 3 as opposed, 32 refused to sign, and 21 were absent at the time. From data at hand as to those not yet returned, the Chairman expressed his belief that the great majority of Philadelphia druggists would sign and support this effort to obtain better prices for proprietary articles. In the discussion that this brought out, the Chairman stated that this action was not final, and that every druggist would be notified before the final adoption of a scale to govern prices; also, while the original resolution had called for only three prices, the executive committee had deemed it advisable to cover as many prices as possible. Criticisms of the scale were desired, as it merely indicated the lines along which prices would be raised finally; no absolute price had been yet fixed, and when fixed, it would be governed entirely by the best interests of the druggists in all sections of the city. A full report on this matter was promised for the September meeting.

There were no other committee reports presented. President McIntyre arriving, assumed the chair.

A resolution of sympathy and condolence with Prof. C. B. Lowe in his recent bereavement was adopted and ordered forwarded by the recording secretary.

Mr. Mahlon Kratz wished to assist the executive committee in the work of getting the "price-scale" signed, and offered his services in this connection, which were accepted with a vote of thanks.

There being no further new business, the meeting resolved itself into an "Experience Meeting," in which the woes and joys of the "meek and humble apothecary" were discussed and talked over, about every member present participating.

What seemed to be in the minds of every one was the remarkably good feeling that was beginning to be felt among the druggists of this city for each other; while competitors for the dollars and good will of the dear public, pretty nearly everybody had come to the conclusion that it was not necessary to look upon the "other fellow" as a robber and an unhung scoundrel, for, after all, the "other fellow" was quite a decent chap when you got to knowing him, and he had his own troubles, too. As one member brought out, "if the P. A. R. D. had done nothing else, it had fulfilled its mission by the good it had done in bringing the druggists of the city together on a common ground and getting them acquainted with one another." That this was not an enthusiast's view was shown by the reports of those to whom the work of obtaining signatures to the "price-scale" had been assigned; every one of these reported that they had been received in a friendly and courteous spirit wherever they had gone, with very few exceptions. Even those who could not, for various reasons, sign the scale favorably, had met the P. A. R. D. representatives with a friendly feeling.

Had it not been for the feeling that it was almost time to go home to dinner, the meeting might have remained in session all night, so interested were the members in the "Experience Meeting." It was a commonly expressed sentiment that this was the most enjoyable meeting ever

held, and that it would be a capital idea to devote the closing hour of the monthly meetings to similar discussions and talks over the various questions that came up in the druggists' daily life. As it was, a motion to adjourn was made by a member who had to "catch a train," and was unally reluctantly adopted by the others, on a suggestion that the janitor was anxious to close up the hall for the night.

New members elected are: T. C. Coltman, Jenkintown, Pa.; Charles H. Riegel, Fifty-eighth and Vine streets; Edward A. Eyer, 3,626 Haverford avenue; Ralph L. Haus, Twelfth and Vine streets; George R. Lawson, 613 N. Fourth street; S. D. Crawford, Fifth and Fairmount avenues; John T. Shaw, 4,750 Frankford avenue; J. K. Hecker, 4,908 Lancaster avenue; George H. Rolland, Fifty-second and Westminster; Fred Rapp, 5200 Haverford avenue. R. M. Slick, Sixty-third street and Girard avenue. Frederick T. Gordon, Recording Secretary.

NOTES.

—That S. C. Henry, an enterprising West Philadelphia druggist, could sojourn at the seaside with his family seems to have been taken as evidence by a hard-working burglar that his till would prove a mine of wealth. Unfortunately for the burglar the clerk in charge had removed the cash when he closed the store and Mr. Henry's loss amounted to only a couple of dollars in pennies. It is understood that there will be a slight advance in the price of cholera mixture at this establishment until the deficit is made good.

—Miss Clara Sprissler, class of '96 P. C. P. is the capable manager of her brother's store at Ninth and South streets. Dr T. Sprissler is his name. The real estate agents in the neighborhood assert that Miss Sprissler is making a success of pharmacy. When there is any property for sale they generally take it to her first, and she is continually adding to her brick and mortar investments. Miss Sprissler can give the men points on how to run a store, and in addition, how to save their money.

—E. T. Sprnceer, Fifteenth and Arch streets, is not only an artist in dispensing and a Mahatma in the handling of wealthy Arch street, railroad and Quaker trade, but possesses a still surer touch in the management of leather ribbons—to use the amateur term. A bright bay, the slickest runabout, a firm hand, there is no more stylish get-up on the Schuylkill Speedway and the smoke is all behind it.

—A close observer of the habits of the retail druggist states that in spite of the many cheap and satisfactory cork-pressers, quite a number of Quaker City dispensers still persist in using their front teeth, when the cork is unwieldy, even in the presence of customers. The Civic Club, an association of æsthetic and Board of Health young women, propose inaugurating a campaign against this evil.

—Robert Cadmus, who for so many years kept shop in the snug pharmacy, S. W. corner of Twenty-first and Mount Vernon streets, having amassed sufficient of the wherewithal, is branching forth in a magnificent establishment at Twentieth and Spring Garden streets. Mr. Cadmus expects to hold all of his fastidiously exacting trade, and, by proper service, to add much to it.

—Young, of Seventeenth and Chestnut streets, manages to keep the public notified of the existence of his swell little pharmacy, in spite of the mass of scaffolding and steel framework piled in the air over his head. The apartment house when completed will be worthy of the store. In the meantime Young has big signs on all three sides of the coal breaker.

—Frederick T. Gordon, Hospital Steward at League Island Navy Yard, and Recording Secretary of the Philadelphia Association of Retail Druggists, is receiving congratulations from his friends upon his luck in having recently received appointment as Pharmacist in the navy, with the rank of warrant officer.

—T. D. MacPhee, of Ninth and Vine streets, has sailed for Paris and the patent Midway therein. He will be home in September with a gross of exposed films, a trunk full of phonographic records, prepared to prove by sight and sound the truth of his French assertions.

—Not content with adding M. D. to his name and prescription writing to his occupation, a Philadelphia pharmacist has just been admitted to the Philadelphia bar

and practices all three of his professions from the same office.

—M. N. Kline, of Smith, Kline & French Co., is spending a vacation of a couple of weeks in Maine, at Kennebunkport. J. C. Koller, of the above firm, is back again at the head of his department after an illness of a month.

—F. E. Jones, secretary of the J. Ellwood Lee Co., of Conshohocken, has just sailed for Europe with his wife. Mr. Jones expects to make an extended Continental trip, and of course to take in the Paris show.

—Charles H. Longmire has opened a new store at Haines street and York Road, Germantown. The fixtures, which are attracting a great deal of attention, were manufactured by Cameron Bros.

—Winner and Lum, of Sixth and Buttonwood streets, have recently made great improvements in their pharmacy and it is now one of the trade attractions of their neighborhood.

—George D. Feidt, 514 Arch street, left last week for a six week's trip to Paris and the Exposition, with probably a hasty loop to Oberammergau at the time of the Passion Play.

—Milton Grotz, former owner of the pharmacy at Franklin street and Susquehanna avenue, is again in the city clerking for C. L. Shoemaker, Twenty-ninth and Thompson streets.

—J. J. Keenan, who only graduated three years ago, has just purchased the store at Fifth and Mifflin streets, this making his third establishment.

—Newton Butz, of Eighth and Race streets, and for many years with H. A. Nolte, was married on the 25th to Miss Anna Collins, of this city.

—Charles Ouram, 668 North Fifteenth street, and Hospital Steward to the tony "First" is now in camp with his regiment at Mt. Gretna.

—Fred. Seitz, Twenty-second and Vine streets, has established his family at Atlantic City, to which he of course makes frequent trips.

—George D. Jones, of Fifth and Tasker streets, is now about again, having been laid up for a matter of six months with the rheumatism.

—Dr. T. Hargraves, pharmacist, of 2725 North Front street, has returned from a two week's trip through the beautiful Thousand Isles.

—J. J. McFadden, Twentieth and Dickinson streets, could not resist the temptation this summer to take another trip to Europe.

—Mr. Dale, manager for Dr. J. W. Harrigan, Thirty-fourth and Wharton streets, has just returned from a trip to Ireland.

—O. T. Lewis, the poet of the second year class of the P. C. P., is away on a three week's visit to his home in Kentucky.

—The mother and daughter of George E. Dahis, 4900 Woodland avenue, are abroad doing Paris and the Exposition.

—W. H. Ricker, of Nineteenth and Dickinson streets, is energetically at work refitting and beautifying his pharmacy.

—Mr. Fisher, formerly with J. W. Frey, contemplates opening a new store in the Northwestern part of the city.

—E. K. Zeigler has opened a store at 2024 N. Front street, which was previously occupied by Mr. Barwig.

—S. C. Henry, 508 S. Sixty-first street, has returned from a two weeks' vacation at Atlantic City.

—F. C. Davis, Sixteenth and Vine streets, has just been appointed a Sub-Postmaster.

DETROIT.

Dearth of Drug Clerks.

Detroit, August 4.—Never was Michigan so "shy" of drug clerks as at the present time. They are simply not procurable, for love or for money. Every day come telephone and telegraph messages to the wholesale houses here, asking for men. A. M. Edwards, Jr., secretary of the local drug clerks' association, is besieged with letters and messages of the same kind. Druggists throughout the State are willing to pay liberally for help, but they cannot procure it. Advertisements put in the daily papers bring but two or three replies—and those from no-account drug clerks who have answered every advertisement for

the last twenty years. All the batch of graduates of 1900 of the schools of pharmacy are busy.

One of the chiefs of departments of a wholesale house here had an experience the other day which convinced him that drug clerks are scarcer than hens' teeth. A message from Adrian said that one of the leading druggists there had been taken ill, and a clerk was wanted immediately. Extra large pay was guaranteed for four weeks, at least. Willing to do what he could, the gentleman called up every relief man in town. All were busy. Then he began to call the druggists to see if they could recommend some one. By actual count he called forty of them, without getting a gleam of hope. The thought occurred to him that maybe Windsor, across the river, could help him out. He began calling the Windsor druggists, but when he had called five of the principal ones and had learned that three of the five had been looking for relief clerks for two or three weeks for their own stores, he gave it up in despair, and does not know yet whether Adrian succeeded in getting some one.

One reason for the scarcity is the fact of so many resort towns in the State. These places, which barely support one drug store through the winter, blossom out in the summer with three or four, each one well supplied with clerks. Another reason is that many proprietors, who run their stores alone during most of the year, hire a clerk in the summer in order to give themselves a little rest and a chance to get off for a vacation. And above all, the ranks of the profession are not at any time crowded on account of the long hours and comparatively small pay. It is said that many graduates in pharmacy stop at the obtaining of their diplomas and go into some other profession or business. "The wise ones all get out," say some of the older clerks. "Men with families dependent upon them cannot work for drug clerks' wages, and all over the State drug stores are run by 'kids.'"

NOTES.

—John F. Smith, with Farrand, Williams & Clark, Detroit, is away on his annual vacation. Mr. Smith's trip this year includes the St. Lawrence, Lake Champlain and New York City.

—N. H. Jones is the new financial secretary of the Detroit Drug Clerks' Association, taking the office made vacant by the removal of W. F. E. White to New York.

—George Wayne, formerly clerk at Fettig's drug store, Detroit, has accepted a clerkship with Rothacher, Gratiot avenue.

—E. H. Nelson, of Nelson & Baker, Detroit, has purchased a new gasoline yacht, for use at his summer home, Snow Islands.

—James E. Davis, of the Michigan Drug Company, is spending a few weeks at Narragansett Pier.

—H. H. Johnson, of Grand Rapids, has taken a position with Hurd & Gray, Detroit.

CHICAGO.

PHARMACY BOARD CLOSES OPIUM JOINTS.

Chicago, August 3.—Opium smoking—denounced by the police as one of the most harmful vices in Chicago—is about to be stamped out, according to the guardians of the city's peace and morals. Working hand in hand, the State Board of Pharmacy and the local police have instituted a vigorous crusade. Hope is expressed that at last the use of the deadly drug may be confined to the Chinese and victims who have been addicted to the habit too long to be susceptible to reforming influences. Along this line policemen searched out suspected places throughout the south and west sides last night. Dozens of cellar dives, in many instances forming labyrinths of subterranean passages and chambers, were visited. Efforts were made to gather evidence, but while a "layout" was in evidence at almost every place and the close, stuffy atmosphere was heavy with the pungent smoke of burning "yen" little information was secured that could be used in court. At 277 West Randolph street two women and a man were taken into custody. Elsewhere terror had proved potent and no amount of money would pur-

chase the use of a "layout." This was inspired partly by the formal notice given by the police that all such places would be suppressed, and the action of the State Board of Pharmacy in bringing twelve celestials before Justices Quinn and Porter at Hyde Park yesterday, and causing them to be fined \$15 each. The great number of persons who have purchased opium outfits for themselves and are indulging in the habit in their own rooms, safe from police interference, has caused the pharmacy board to move against those who supply them with the drug. Justices Doyle and Eberhardt's courts held to-day the Caucasians and Chinamen arrested last night in opium resorts in Halsted, Randolph and Green streets. Justice Doyle fined the inmates the court costs and the keepers \$5 and costs each. There were fifteen inmates and six keepers.

NOTES.

—Seventy-five of the new penny-in-the-slot directories will be ready for distribution next week. Druggists will be supplied with thirty slugs per month to use as they may desire. They will receive five per cent. of the gross receipts, in return for which percentage they agree to supervise the counting of the pennies in their machines as often as collections are made.

—A new drug store was recently opened at the corner of Centre street and Milwaukee avenue, across the street from John R. Valteich's former location. Mr. Valteich has moved his store to Addison avenue and North Halsted street.

—L. L. Chaffee, an officer of the State Board of Pharmacy, recently procured warrants for the arrest of three Southside Chinamen. Yen Wo, Sing Lee and Gee Woo, for selling opium.

—Ground has been broken for the new building of Lord, Owen & Company, at 233-235 Randolph street. The structure will be of steel and terra cotta, eight stories high.

—Joseph G. Peters, vice-president of the Fuller and Fuller Company, has gone to Dennis, Mass. with his family for a month's vacation.

—George K. Baker, proprietor of the Ashland Block Pharmacy left to-day on a short vacation which will be spent at Atlantic City, N. J.

—V. H. Chantler, a well-known druggist of Chicago, who has been visiting the Paris Exposition for the past two months, has returned.

—H. G. Hartmann & Company have sold their drug store at 63d and South Halsted streets, to the Englewood Pharmacy Company.

—W. T. Mason, who owns a drug store at Diversey avenue and North Clark street, has gone to Canada to spend a summer's outing.

—Charles Hirsch and A. P. Freund, well known Chicago druggists, will spend a few days vacation this week at Paw-Paw Lake, Mich.

—O. F. Fuller, president of the Fuller and Fuller Company, has gone to New York to spend a few days.

—E. P. McClure has bought the store formerly owned by G. R. Bassett, at 1324 Ogden avenue.

—The Union Avenue Pharmacy, at 31st street and Union avenue, has changed hands.

THE NORTHWEST.

St. Paul, Minn., August 3.

—Successions: J. J. Freeman, Dickinson, N. D., by T. J. Greene; McMillan & Barnes, Genoa, Neb., by H. A. McMillan; W. D. Harlan & Co., Macedonia, Ia., by W. C. Miller & Co.; A. I. Bunn & Co., Macesville, Ia., by William F. Stauffer; Blair & Neffzer Bros., Terrill, Ia., by Gill & Brown; Milo Kutchens, Omro, Wis., by Miner Lord; Thomas Bros., Aurora, Ia., by Mackin Bros.; Blakeslee & Heinzman, Oskaloosa, Ia., by Blakeslee Bros.; Herman & Cowan, Conde, S. D., by J. D. Herman; Stedman & Sanger, Windom, Minn., by W. F. Sanger.

—Three years ago Welton McDonald, a druggist at Dickinson, N. D., left for the Klondike. Saturday he reached home. Mr. McDonald has a number of valuable claims, and during the three years he has been in Alaska has taken from them snug fortunes each year. He will prob-

ably remain in North Dakota until next spring, when he will return to look after his properties.

—J. A. Hummel, chemist for the Minnesota State Food and Dairy Commission, has resigned to take a position in the State College of Agriculture. He is succeeded in the food and dairy department by Prof. W. F. Kunze, superintendent of the Hastings, Minn., public schools.

—Among the country druggists visiting the wholesale houses this week were the following: Messrs. Stone, of Helena, Mont.; Jones, of Jones Bros., Watertown, S. D.; Irgens, of Valley City, N. D.; S. H. Brownlee, of Sandstone, Minn., and Shaffer, of Hartford, S. D.

—William Gauzewitz, of Owatonna, Minn., ex-president of the State Pharmaceutical Association, has been appointed one of the members at large of the Democratic State Central Committee.

—New: Lark & Fredericksen, De Smet, S. D.; Krause & Schulz, Hosmer, S. D.; the Davis Drug Co., Weiser, Idaho; C. G. Snyder, Chesaw, Wash.; T. A. Jensen & Co., Vienna, S. D.

—Dr. Scanlon, of Vienna, S. D., was in this city this week purchasing a drug stock for Vienna.

—J. W. Bowden is in New Prague to take the place of C. R. C. Johnson during a vacation.

—F. W. Force, Windom, Minn., and H. J. Narveson, Erskine, Minn., have sold.

—Dr. E. R. Holmes, physician and druggist of Island City, Ore., died this week.

—Albert Glotzbach was visiting in St. Paul the early part of the week.

—Ray Humston, Worthington, Minn., has sold his Ellsworth branch.

—O. M. Harris has sold his interest in Harris & Nichols, Riddles, Ore.

—Dr. L. Foley has been partially burned out at Lebanon, Ore.

—Hanson & Dock, Platte Centre, Neb., have dissolved.

—G. W. Skinner, Omaha, Neb., has given a bill of sale.

ST. LOUIS.

Apothecaries' Annual Meeting.

St. Louis, August 3.—The postponed annual meeting of the St. Louis Apothecaries' Association was held at the College of Pharmacy this afternoon. The officers for the ensuing year were elected and installed towards the close of the meeting. They are as follows: President, Henry Fischer; vice-president, Theodore F. Hagenow; secretary, Rudolph S. Vitt; treasurer, Dr. Otto F. Claus; executive committee, H. A. Kattelman, H. F. Hasselbrock, Paul M. Nake and John H. Allen.

The meeting was called to order by President John H. Allen. Secretary H. F. Hasselbrock read reports of previous meetings, which were duly approved. The officers then made their reports for the year. President Allen made a verbal report. He said that the active work of the association has fallen on the executive committee and the officers who have co-operated with them. They have met week after week with scarcely an absentee, and have besides done much extra work in calling on jobbers in pursuance of matters pertaining to the working out of the plans locally of the N. A. R. D. The National Association took up as their first duty that of regulating the sale of proprietary medicines, recognizing the fact that the demoralization of prices on such goods was the chief evil with which the trade is confronted. The N. A. R. D., the speaker said, will not consider any other proposition until this one is solved and the retail drug trade receives the proper compensation for handling these goods. He touched upon the absolute necessity of co-operation between the manufacturer, jobber and retailer, and said that the work done since last October has met with most flattering success. The N. A. R. D. has figured out the contract agency plan which is explained in detail in Bulletin No. 8, by which the prominent proprietors have entered into a contract with the jobbers appointing the latter as their agents, controlling the price to be obtained by the jobber from the retailer and the parties to whom the retailer shall sell. Mr. Allen spoke especially of the fine spirit shown by the

jobbers as a whole, stating that they have granted everything which the N. A. R. D. have asked. All the local jobbers have signed the agency contract mentioned. Here Mr. Allen read letters from Secretary Wooten and Chairman F. E. Holliday of the executive committee of the N. A. R. D., sympathizing with the druggists in their struggle and encouraging them on the ground of what had already been accomplished and on the latest expression of willingness on the part of the St. Louis jobbers in agreeing to the contract plan. Of particular interest to those present was the reading of the letter sent to the wholesale druggists by Chairman Faxon, of the proprietary committee of the N. W. D. A., under date of August 1, which is as follows:

NATIONAL WHOLESALE DRUGGISTS' ASSOCIATION.

Office of Committee on Proprietary Goods.
Kansas City, Aug. 1, 1900.

INAUGURATION OF NEW PLAN.

To Wholesale Druggists:

The new plan for the distribution of proprietary medicines, as explained by my circular letter of May 5, has been accepted by the wholesale drug trade of the country and is now in effect as far as the proprietors named within are concerned.

Most of these proprietors have issued new price lists and term sheets embracing the provisions of the plan. Others have as yet issued no new schedules, but will probably do so at an early date. At all events, every proprietor whose name appears on this list has stated definitely that he will confine his sales at best prices to a uniform list of jobbers whom he has selected to act as his distributing agents, and that he will not sell to aggressive cutters and brokers, or to jobbers who supply such parties, either directly or indirectly.

It is hoped and believed that other proprietors will later on adopt this plan. In the meantime, the chairman would recommend that its operation be extended to proprietary medicines generally by each jobber individually.

Of the wholesale druggists throughout the country, 88 per cent., numerically speaking, accepted the terms and conditions of this plan, and the 12 per cent. from whom no replies were received consist of small dealers representing not more than 1 per cent. of the total volume of distribution.

This plan has been urged upon proprietors for a number of years by both wholesalers and retailers and it is hoped that the results to all parties interested will be gratifying.

Yours very truly,

FRANK A. FAXON, Chairman.

The names of the proprietors heretofore referred to are as follows: The J. C. Ayer Co., Lowell, Mass.; C. I. Hood & Co., Lowell, Mass.; Lydia E. Pinkham Medicine Co., Lynn, Mass.; F. E. Greene, Boston, Mass.; World's Dispensary Medical Association, Buffalo, N. Y.; Dr. D. Jayne & Son, Philadelphia, Pa.; The Piso Company, Warren, Pa.; California Fig Syrup Company, San Francisco, Cal.; The Centaur Company, New York City, N. Y.; The Peruna Drug Manufacturing Co., Columbus, O.; Dr. Kilmer & Company, Binghamton, N. Y.; Dr. Miles Medical Company, Elkhart, Ind.; J. W. Campion & Co., Philadelphia, Pa.; Kickapoo Indian Medicine Co., New Haven, Conn.; J. M. Grosvenor & Co., Boston, Mass.; Sterling Remedy Co., Chicago and New York; Dr. Seth Arnold Medical Corporation, Woonsocket, R. I.; The Athlophoros Company, New Haven, Conn.; Battle & Company, St. Louis, Mo.; Brown Medicine Company, Erie, Pa.; N. K. Brown Medicine Co., Burlington, Vt.; Chamberlain Medicine Company, Des Moines, Ia.; Chattanooga Medicine Company, Chattanooga, Tenn.; Crab Orchard Water Company, Louisville, Ky.; E. C. DeWitt & Company, Chicago, Ill.; Ely Bros., New York City; M. M. Fenner, Fredonia, N. Y.; Seth W. Fowle & Son, Boston, Mass.; Garfield Tea Company, Brooklyn, N. Y.; Gilpin, Langdon & Co., Baltimore, Md.; Graefenberg Company, New York City, N. Y.; G. G. Green, Woodbury, N. J.; J. H. Guild, Rupert, Vt.; W. T. Hanson Company, Schenectady, N. Y.; Henry Johnson & Lord Company, Burlington, Vt.; Henry Pharmacal Company, Louisville, Ky.; W. H. Hill Company, Detroit, Mich.; Hiscox Chemical Works, Long Island City, N. Y.; T. H. Jackson & Co., Quincy, Ill.; Norman Lichty Manufacturing Co., Des Moines, Ia.; Lightning Medicine Co., Muscatine, Ia.; Eli Lilly & Co., Indianapolis, Ind.; Magee Emulsion Company, Troy, N. Y.; Meade & Baker Carbolic Mouth Wash Company, Richmond, Va.; Merchant's Gargling Oil Company, Lockport, N. Y.; J. S. Merrell Drug Company, St. Louis, Mo.; Wm. S. Merrell Chemical Company, Cincinnati, O.; Morgan Drug Company, Brooklyn, N. Y.; Omega Chemical Company, New York City; Pabst Brewing Company, Milwaukee, Wis.; Paris Medicine Company, St. Louis, Mo.; J. J. Pike & Co., Chelsea, Mass.; E. C. Powers, Boston, Mass.; Radway & Co., New York City; D. Ransom, Son & Co., Buffalo, N. Y.; S. T. W. Sanford & Sons, Long Island City, N. Y.; J. H. Schenck & Son, Philadelphia, Pa.; H. Schiffman, M. D., St. Paul, Minn.; J. Harrison Whitcomb Company, Baltimore, Md.; I. O. Woodruff & Co., New York City; Orator F. Woodward, Leroy, N. Y.; Woodward Chemical Company, Toronto, Canada, and Buffalo, N. Y.

Secretary H. F. Hasselbrock presented his annual report in substance as follows:

Since May 3, 1899, the Executive Committee has held

twenty-eight meetings, every member being present at each meeting, with a few exceptions through ill health or absence of one or the other from the city. The Executive Committee made itself felt from the very beginning, in fact did its work so well that the aggressive cutters got Attorney General Crow to bring suit against our association and named about seventy-five members, restraining the Executive Committee from doing other aggressive work. This was in May, 1899. Then we had to turn our attention to defending the members named in the suit, for which we employed able counsel. We sent out 1,286 letters asking for contributions to our defense fund, to every member of our association, to the St. Louis wholesalers and the leading proprietary medicine manufacturers of the United States. There were seventy retail dealers out of a membership of 255 in St. Louis who responded to the call, and contributed almost half of the defense fund. The remainder came from two St. Louis wholesalers, the Louisville Retail Druggists' Association contributed \$100 and twenty-one contributions were received from manufacturers. July 13, 1899, I received letters from the Pennsylvania Druggists' Association requesting the St. Louis Apothecaries' Association to discontinue selling Cuticura and Ripans tablets.

Treasurer Dr. Otto F. Claus presented his report dating from August 6th, 1898. The receipts to date are \$1,373.79. Disbursements to date \$1,234.01, leaving a balance on hand of \$139.78. The auditing committee has examined the books, accounts and vouchers on August 24, 1899, and again to-day before the meeting.

Thomas Layton, chairman of the executive committee, gave his report as follows:

Many weekly meetings have been held by your committee. A large majority of the Thursday afternoons have been devoted by them to the discussion of matters that pertain to the betterment of the trade conditions of the St. Louis pharmacists in particular.

While nothing of startling importance has developed, much I think has been done in a general way to encourage and assist the national movement to which we must all look for relief from the disastrous trade conditions into which our business has been thrown.

The quo warranto proceedings instituted by the State's Attorney General against the members of our association in the month of May, 1899, had the effect of stampeding some of our membership, but we have many who stood loyally by the association, placed in the hands of the committee the necessary funds for the defense of this famous and historic case brought by the State's Attorney General of this great Commonwealth in the interests of common humanity and intended to throttle mighty and gigantic trusts such as might be formed by the money-having and money-getting aristocrats of the retail drug trade. Oh, thou mighty Crow.

The treasurer has on his books the names of all who paid annual dues to the association for 1899. This list is much too short for pleasant perusal and we trust that for 1900 it may embrace the name of every pharmacist in the city.

The suit filed by the Attorney General necessitated the raising of money for defense and to this end your committee was compelled to devote much of its time, attention and best energies. Many voluntary contributions were made and many of our brethren in pharmacy came forward with subscriptions so cheerfully made and paid that it made the work of raising the fund of \$1,000 much lighter.

Many have promised to contribute to this defense fund who have not paid, but may yet send the sum promised to Dr. Claus, our treasurer.

For these voluntary contributions and very cheerful subscriptions your committee wish to express their gratitude and say the records of this association shall contain the names and amounts and will be preserved as a roll of honor.

In conclusion let me exhort you to be loyal to your association, at all times stand ready to assist the officers of your selection in carrying out the plans adopted by the National Association, and above all pay your annual dues with a spirit of cheerfulness.

If the efforts now being made are to be crowned with success it must come after much hard work and the expenditure of some money.

The old adage, "It is always darkest just before dawn," let us hope applies fully to our case, for it is not possible to grow darker than at present.

Allow me to repeat in conclusion, that your committee feel under great obligations to the various contributors to the fund before mentioned and trust that our acquaintance with Crow may end with the termination of his inglorious quo warranto proceedings against the druggists of St. Louis.

Attention was called to the provision of the new plan by which jobbers are to refrain from selling proprietary medicines to aggressive cutters or brokers or to those supplying them and defining an aggressive cutter as the dealer who is designated as such by not less than 75 per cent. of the local retail druggists. In response to a question Secretary Hasselbrock said that the membership at the last annual meeting was 255 out of about 350 druggists in the city. Various suggestions were made for securing new members and the collection of dues and the matter was left to the executive committee. A

vote of thanks was given the wholesale drug houses and their salesmen for the excellent work done by the latter in securing members and collecting dues last year.

Charles W. Hahn told of the work of the Missouri Mercantile Association which is working for the abolition of the department store evil and favored the Apothecaries Association becoming affiliated with it. This was referred to the executive committee, as was also the matter of sending delegates to the coming conventions of the N. A. R. D. and the N. W. D. A.

Theodore F. Meyer, of the Meyer Bros. Drug Company, who, with the other jobbers, had been invited to be present, was called upon and responded briefly. He said the whole matter was one of co-operation between the manufacturer, retailer and jobber. He believed that all three parties to the proposed plan were doing their utmost to make it a success, and he sincerely hoped that it would be.

The meeting was characterized by a spirit of the utmost harmony throughout, although discussion was free and participated in by many of those present.

The officers and executive committee men who have borne the brunt of the legal fight which terminated in Mr. Crow retiring from the field evidently for good, are not strongly represented in the new directory. Most of them were urged to again accept office but preferred to work in a less conspicuous way the coming year. Many of the obstacles which have heretofore confronted the Association have been swept away, and while the new ones will have no special sinecure, perhaps, they will be backed by the experience and active aid of their predecessors.

NOTES.

—George F. Becker, head clerk at the Locust and Seventh street store of Judge & Dolph, greatly surprised his friends in the store by quietly slipping off to Belleville this week and marrying Miss Helen Boeker, who was formerly employed in the store but was away on a two months' leave of absence.

—E. N. Block, who presides at the desk near the entrance to Meyer Bros. Drug Company, and is the visitors' general information bureau, so to speak, is off for the first vacation he has had in ten years. He will visit relatives in both Mississippi and Arkansas before he returns.

—Druggist F. E. Whitcomb, of Garrison and Washington avenues, came out with another advertisement for a drug clerk with a certificate and a mustache the other day. One of the dailies made two sticks of it, so it is to be presumed Mr. Whitcomb is satisfied for the nonce.

—Max Schneider, of Schneider & Grewe, is in Manitou Springs, Colo., seeking restoration to health. Mr. Schneider is very popular among the younger element of the drug trade and was the second president of the St. Louis Retail Drug Clerks' Society.

—Joseph Maserung, formerly instructor in pharmacy and materia medica at the St. Louis Medical College, has bought the drug store of C. J. Werner, at Washington avenue and Twenty-eighth street. He took possession this week.

—The Mayfield Medicine Manufacturing Company, of Kentucky, has filed certificate of incorporation in this State; capital stock, \$25,000, all of which is employed in Missouri with headquarters in St. Louis.

—H. S. Merrell, of the J. S. Merrell Drug Company, has returned from his Northern trip. E. W. Knott, of the city department, has hied himself away to Alexandria, Minn., for a brief respite.

—Dr. H. M. Whelpley has been elected to the chair of pharmacy and materia medica of the Medical Department of Washington University.

—Wm. Junghans, formerly clerk for Charles Herbert, has bought the drug store of J. H. J. Wagner, at Taylor and Garfield avenues.

—The Secretary of State has issued a certificate of incorporation to the Peck Drug Company, of Columbia; capital stock, \$3,000.

—E. A. Bern'us leaves on Monday night for a several weeks' outing in Canada.

AN OLD LANDMARK.
PECK BROS.' DRUG STORE, GRAND RAPIDS, MICH.

OBITUARY.

BARTH L. KISSELL, JR., a prominent young druggist of St. Louis, Mo., died July 31 at the Alexian Brothers Hospital in that city of appendicitis. He had been sick but a few days. An operation was performed, but the young man never rallied. Mr. Kissell, after clerking for some years opened the drug store at Nebraska and Eads avenues about a year ago, and ran it up to the time of his death.

ROBERT B. SMITH, a one-time distinguished citizen of Alton, Ill., died at Chicago July 28 of cancer. The body was buried in the Alton cemetery by Belvedere Commandery, Knights Templar. Mr. Smith was born in Alton sixty-two years ago. He was the oldest son of Hon. Robert Smith, Alton's only Congressman, and was in the retail and wholesale drug business twenty years prior to his removal to Chicago in 1880. He was a tenor singer of note, and counted as his chief musical triumph a time when he sang before Queen Victoria at her invitation. He was Eminent Commander of Belvedere Commandery of the Masons at Alton several years, and took the thirty-third degree in Scotland.

—The Minnesota Board of Pharmacy has been making it lively for violators of late. Since the middle of June twenty-two cases have been successfully prosecuted, and the offenders fined fifty dollars each. These cases were scattered all over the State, and were against proprietors of drug stores who were unregistered, and who had no registered pharmacist in charge of their stores, unregistered clerks, and general merchants who were selling drugs unlawfully; one registered pharmacist was fined \$10 for not having his certificate exposed in his place of business. The board has been somewhat annoyed by persons who held certificates, but who were not themselves actively engaged in business, permitting their certificates to be hung in stores of unregistered persons to deceive the public; several such stores were pulled, and it is the determination of the board to stop this practice. At the last (July) meeting of the board pharmacists' certificates were granted the following: Edward M. Bradseth, Gustave A. Dickman, Lawrence A. Harding, Claus A. Swanson, Anna M. Schmidt, St. Paul; Charles H. Orth, Edward D. Slingsby, Minneapolis; Barnabas W. Cole, Breckenridge; J. Elmer Davies, Mankato; Otto H. Graben, New Paynesville; Elwin B. Greaves, Glencoe; J. Frank Holden, Sauk Rapids; Arthur B. Hall, Rochester; Charles J. Hartmann, Hector; Allen R. McGuire, Annandale; Rheinhardt Schwartz, Henderson; George A. Tripp, Perley. The following were granted certificates as assistant pharmacists: Horace S. Conger, Eugene M. Chilson, Theodore F. Damashke, Chris Hopjorn, Anton Kucera, Alexander Persson, Guy C. Barnes, Ambrose E. Grout, George Heller, Emil C. Kiesling. The next meeting will be held in Minneapolis on the third Tuesday in October. H. G. Webster, Secretary.

PATENTS.

Trade-Marks, Designs, Etc.

PATENTS.

Issued July 31, 1900.

- 654,597.—Clyde M. Brady, Brunswick, Ga. Siphon.
 654,616.—Franz G. Kleinsteuber, Berlin, Germany. Dissolving resins.
 654,649.—Wilhelm Krauth, Griesheim, Germany. Making allo cltral.
 654,667.—John L. Novarine, New York, N. Y. Making borax.
 654,775.—Walter G. Wulchet, assignor to Pasteur-Chamberland Filter Company, Dayton, Ohio. Filter.
 654,804.—Gilbert Rigg, Swansea, England. Obtaining oxid and carbonate of zinc from materials containing zinc.
 654,879.—John Dincen, Chicago, Ill. Device for dispensing beverages.
 654,907.—Walter Middleditch, Detroit, Mich. Pill-making machine.
 654,908.—Walter Middleditch, Detroit, Mich. Machine for rolling pipes or strips of pill mass.
 654,946.—Vincenzo Cervello, Palermo, Italy. Apparatus for volatilizing disinfectants.
 654,959.—Louis Drevon, Pont-de-Beauvoisin, France. Bottle stopper for aerated beverages.
 654,988.—Leonhard Lederer, Sulzbach, Germany. Making acetyl cellulose.
 655,056.—Thomas J. Butler, Kearny, N. J. Bottle stopper.
 655,060.—Alexander Classen, Aix-la-Chapelle, Germany. Making non-coagulable albuminoids.
 655,070.—William H. Francis, Philadelphia, Pa. Disinfecting apparatus.
 655,117.—Fritz Raschig, Ludwigshafen, Germany. Separating meta and para cresol.

TRADE MARKS.

LABELS.

- 7,720.—Title: "Minnekahta Mineral Water." (For Bottled Mineral Water.) Hot Springs Bottling Works, Hot Springs, S. D. Application filed June 25, 1900.
 7,722.—Title: "Eureka Whooping Cough Remedy." (For Whooping Cough Remedy.) B. F. Spangler, York, Pa. Application filed March 31, 1900.
 7,723.—Title: "Savoy Hair Restorer." (For Hair Restorer.) Edward P. Smith, Trenton, N. J. Application filed July 9, 1900.

—During the month of July the following licences were granted by the Erie County, N. Y. Board of Pharmacy. Pharmacist licenses to Harry N. Duke, F. J. Tuthill, John Armour Franke, John Edward Klerze. The next meeting will be held the first Saturday in September. The Erie County Pharmaceutical Association will have a meeting on August 15th, at which officers will be elected for the ensuing year, and other very important matters will be considered. George Reimann, Secretary.

STATE OF TRADE.

More Activity in Prospects.

New York, August 6.—Notwithstanding the fact that the Summer vacation period is very much in evidence, there are indications that preparations for the coming autumn and winter season are already in progress, and dealers are looking forward to an early revival of more active conditions. There is an entire absence of discouraging features and there appears to be little doubt that expectations will be realized. The position of quinine is stronger under the influences heretofore noted. Domestic manufacturers have advanced their quotations 2 cents per oz., and it is believed their action will be followed shortly by manufacturers of leading foreign brands. Meanwhile the latter continue to book orders for both prompt and contract deliveries to meet legitimate requirements of their regular customers, but turn down all orders of a speculative character. The bark situation is perhaps the chief cause of the increasing strength of quinine. Shipments of this raw material from Java have continued to diminish, and offerings at the coming monthly auction sales will necessarily be small. It is also reported by cable that purchases of bark have been made privately and that the prices paid show an advance of 10 per cent. over the unit value at the July sale in London.

Opium has ruled quiet under the influence of corresponding conditions at primary sources of supply, and the tone of the market is slightly easier, but there is no material change in jobbing quotations. As intimated in this column last week, manufacturers of the various bismuth and iodine preparations have reconciled their differences and the market has a more settled appearance with all descriptions quoted at uniform prices. In the department of essential oils, bergamot has received the bulk of attention and quotations are decidedly higher both here and in primary markets. The spot stock in first hands is more closely concentrated and the outlook is considered favorable to further improvement, not only in bergamot, but other Messina essences. Oil male fern is firmer in price owing to scarcity and quotations for stock in first hands have been advanced about 10 per cent.

Thymol shows increased strength on account of reduced supplies and some holders have further advanced their quotations 25c. per pound. Santonin is firmer owing to scarcity of raw material, and both foreign and domestic manufacturers have advanced prices, the former taking the initiative. Cacao butter is decidedly stronger and the outlook is favorable to extreme prices. Spot stocks are light and the quantity to be offered at the August sales in London and Amsterdam is far below the average. Consequently dealers offer very cautiously for either spot or future delivery. Large flake manna is in very small supply and holders of the limited spot stock have advanced quotations fully 10 cents per pound. Tonka beans are attracting increased attention and values are higher for the Para and Surinam varieties, but Angostura are easier in view of fairly liberal stocks.

Arnica flowers are firmer in sympathy with foreign markets and values are $\frac{1}{2}$ ¢ to 1¢. per pound higher. Pulsatilla herb is easier on account of arrivals of new crop and quotations from first hands are 5c. per pound lower. Rhubarb continues to harden in price under the influence of the unsettled condition of affairs in the Orient. Among the seeds, coriander, celery and Russian hemp are all firmer, but the changes in quotations for round lots are only fractional and jobbing parcels are obtainable to a limited extent at old prices. Nutgalls continue to advance owing to higher primary markets.

Pretty Good in Boston.

Boston, August 4.—With almost perfect weather this week, business with the drug trade has been pretty good, and at some places quite brisk. There appears to be a continued demand for the hundred and one little things which the drug store is called upon to furnish people going far away from home on a vacation trip. The call for drugs and chemicals in the general market appears to be only seasonal, dealers buying simply what they actually need for present use. Quinine shows strength, as compared with recent conditions, while opium is quiet. Other than this there is nothing of importance to be said of drugs. Nitrate of soda alone shows life among chemicals. Gambier is more active and gaining in strength but no other feature is found among the dyestuffs and tanning materials. Waxes are dull, yet fairly firm. Alcohols and cologne spirits are without much life.

Not a Word of Complaint.

Philadelphia, August 4.—The apogee of the midsummer dullness has been reached, although one city salesman states that the July just closed was the best he ever had. The Philadelphia quinine manufacturers this morning issued circulars advancing the price of the article to 37 cents. There is yet no report of the foreign makers having done likewise, though the advice is momentarily expected. People are buying as they want and there is

100,000 PRESCRIPTIONS: NOT ONE MISTAKE.

E. J. HUELS, BROOKLYN, N. Y.

no excitement or speculative activity. Opium is very strong, but there is nothing doing in this market, and those posted are disinclined to believe in much further advance. There is not a word of complaint in any line. All merchants agree that the outlook ahead of this country is most encouraging. In all lines of export trade from the building of ships to the hustling of patent medicines and specialties in foreign parts, there is great activity in this port. The Delaware River shipyards have countless millions in contracts on hand, and manufacturers of all kinds of goods propose to fill some of these bottoms with their products. The dullness, therefore, is really confined to the local and retail trades.

Nothing to Complain Of.

Detroit, August 4.—On the whole there is nothing to complain of in the amount of business done here during the week. It is expected that July and August will be quiet months, and also that the first week of every month is apt to be a little better than the other weeks. All conditions have been fulfilled in the present case, and the element of surprise has not entered in.

Chicago Trade Quiet.

Chicago, August 4.—Nothing out of the ordinary has happened this week to disturb the even tenor of business, which has moved rather sluggishly. The mid-summer dullness is on, and what with the heat and the annual vacations of everyone who can get away to lake or wood or stream, there is little display of activity. Considering the season, trade, however, is fairly good. Staple goods sell in the normal amounts, the demand for sundries is fair and the fountain supplies are very active indeed. Manufacturers and jobbers anticipate no great activity until Fall.

General Conditions Good.

St. Paul and Minneapolis, Minn., August 4.—The general condition of the wholesale trade is good and collections better than expected. Still, there is a little falling off in the number of orders of late owing to harvest, etc. Jobbers anticipate good Fall trade. New stocks are being furnished and the demand for fancy goods and druggists' sundries, paints, oil and glass all indicate prosperous conditions in the country tributary to these cities. Retailers are mostly satisfied with the state of their trade, though a few complain of dullness. There is considerable sickness, with the usual increase of prescriptions. No price changes have occurred on Western products.

Quiet, But Normal, Business.

St. Louis, August 4.—Trade shows little change from last report. Quiet but still well up to a normal business for the season. Local retail trade has recovered almost entirely from the late strike and gradually receding boycott, but druggists generally report prescription trade light. The weather has been very hot this week and the soda fountain cash registers have prospered accordingly.

MARKET REPORT.

NEW YORK MARKET.

New York, August 7.—As usual at this period of the year, the wants of the consuming trade are light and the market remains seasonably quiet, but the tone continues steady with the outlook favorable to a good trade during the coming autumn and winter season.

OPIUM.—The demand has continued light and unimportant with the market rather tame, but jobbing quotations are maintained at the recent advance to \$3.55@3.75 for 9 per cent. and \$3.65@3.85 for 11 per cent., the outside figures for single pounds.

POWDERED OPIUM.—There are no further developments and consumers' requirements are being supplied at \$4.70@5 for 13 per cent. and \$5.20@5.50 for 16 per cent., according to size of order.

MORPHINE.—A steady movement into consuming channels is noted with quotations for jobbing quantities unchanged on the basis of \$2.05@2.15 in ounces and \$2.30@2.40 in eighths, according to brand.

QUININE.—As intimated in last week's report, the market is stronger and domestic manufacturers have advanced their prices 2c. per oz. Jobbers have marked up their quotations to 37@38c. in 100-oz. tins, 39@41c. in 5-oz. tins and 44@45c. in ounces. Pelletiers in ozs. has been advanced to 55@60c.

BISMUTH PREPARATIONS.—Manufacturers have reconciled their differences and the market has a more settled appearance with all makers quoting uniform prices. The revised jobbing quotations are on the basis of \$2.10@2.20 for subnitrate, \$2.30@2.40 for subcarbonate, \$2.20@2.35 for subgallate, and \$3.90@4.25 for subiodide. The latter in ounces is quoted 30@35c.

IODINE PREPARATIONS.—The influences affecting the bismuth preparations have caused a restoration of the former schedule, and jobbers are now quoting \$3.45@3.65 for resublimed, \$3.65@3.80 for iodoform, and \$2.45@2.60 for potash.

CACAO BUTTER.—Foreign markets are stronger and spot prices for jobbing parcels have been advanced to 48@50c. by the box and 53@55c. for less.

MANNA.—Large flake is scarce and higher, the revised range being 80@90c.

NUTGALLS.—Owing to higher primary markets and reduced spot stocks jobbers have advanced quotations to 34@38c. for whole, 36@40c. for ground and 38@42c. for powdered.

ARNICA FLOWERS.—Firm conditions abroad are reflected here and spot quotations for jobbing quantities have been advanced to 20@25c. for whole, 25@28c. for ground, 30@35c. for powdered.

HEMP SEED.—Russian is higher in producing markets and jobbers have advanced quotations to 34@35c. by the bag and 5@6c. for less.

CUTTLEFISH BONE.—Trieste is firmer and spot quotations have been marked up to 26@28c. by the case and 32@35c. for broken lots.

SANTONIN.—Manufacturers' quotations have been advanced and the revised jobbing range is \$4.35@4.50 per lb., 34@38c. per oz. and 10c. additional for powdered.

BLUE VITRIOL.—Values are slightly lower and jobbers are quoting 5½@6c. in barrels and 7@8c. for less.

MENTHOL.—The market is a shade easier and jobbers have reduced quotations to \$3@3.25 per lb. and 25@28c. per oz.

OIL ANISE.—Jobbers have advanced their quotations to \$1.80@1.85 by the can and \$2.15@2.25 for smaller parcels. Conditions abroad are favorable to holders.

OIL CASSIA.—Holders have modified their views somewhat and a revision of jobbing quotations shows a decline to \$1.10@1.20 by the can and \$1.35@1.50 for less.

CASSIA.—Quotations have been advanced by jobbers to 14@18c. in mats.

FLORAL WATERS.—Imported rose and orange flower have been reduced to \$1.50@1.75 for 1-gallon bottles in cistive.

COOPERS' GLUE.—Manufacturers' quotations have been reduced ¼c. per lb. on all numbers.

FAIRCHILD'S PEPSIN.—Both scale and powdered materially lower. The new quotations for scale are 30c. per oz., \$7.50 per lb., \$3.75 per ½ lb. and \$1.90 per ¼ lb. Powdered 45c. per oz. and \$7 per lb. in pounds, halves or quarters.

THE ERA COURSE IN PHARMACY.

The lectures will hereafter be issued in monthly installments, and the entire work of the Course can be completed within twelve months.

NEW CLASSES FORMED EACH MONTH.

The first installment of lectures will be issued in October, and the remainder at intervals of thirty days thereafter.

Recitations and examinations are conducted by correspondence directly with each regularly matriculated student.

Especially valuable as a preparation for examination by a board of pharmacy, to those who cannot attend a college of pharmacy, and to all desiring to review their former study of the subjects embraced in the curriculum.

TOTAL EXPENSES FOR FULL COURSE. \$10.00.

For fuller particulars see announcement facing third cover.

Write for new descriptive Prospectus, now ready.
Address, **THE PHARMACEUTICAL ERA.**

INDEX TO VOLUME XXIII.

All subscribers who wish the Index to Volume XXIII., from January to June, 1900, are requested to send us a postal card to that effect.

THE SUCCESS OF THE ERA COURSE.

The Era Course in Pharmacy has enabled hundreds of young men and women to obtain an education in pharmacy who otherwise would have been deprived of that privilege. There are growing up every year a very great number who have no hope, no prospect, of ever attending a college of pharmacy to receive systematic, thorough instruction, yet who will enter the practice of pharmacy by some means or other. It is infinitely better that they have as much pharmaceutical education as they can be prevailed upon to get, than that they should enter the calling with little or none. While the Era Course is not intended, and has never been regarded, as a substitute for the college course, it has unquestionably filled a field of usefulness in the direction just indicated. It has given these embryo pharmacists a good amount of sound information; especially a foundation upon which the superstructure of later education can be reared with profit, and which will stand them in good stead throughout their entire professional experience.

The Era Course has farther been of direct practical benefit to many students in the colleges, who have pursued the lectures of this course as an aid to their studies. It has assisted many physicians who wished to obtain a more complete knowledge of pharmacy to be of service to them in the writing of their prescriptions. Further than this, many graduates and practicing druggists have gladly availed themselves of the opportunity to review the general principles of pharmaceutical science and to post themselves upon the facts and laws which have become of pharmaceutical importance since the days of their apprenticeship. In all and each of these several directions the Era Course has accomplished and is accomplishing good work, and its prospects of good service in the future are even greater than in the past.

The Era Course has been completely remodeled and revised, and condensed into one year, thereby lessening the time and labor of students; but, be it remembered, without in any way detracting from its practical value.

As now arranged, the revised Era Course can be completed by a student of average intelligence and industry in ten months from the time of beginning. Students can enter the course at any time during the year, as new classes are started each month. The lectures have been very carefully prepared with a special view to the needs

of the class of students for whom they are designed. They represent the fruits of the experience of our best known educators, and the course as a whole is sound, thorough and practical. The lectures are issued in ten monthly parts, being sent to the students at thirty-day intervals, each part being accompanied by printed questions thereon, which the student is required to answer and submit his replies to the careful inspection and criticism of the quiz-masters and instructors. The lectures are supplemented by a large amount of practical work, requiring that students shall actually perform the experiments described, make the tests outlined, and report the results to the instructors. There are combined, therefore, in this course the advantages of both the didactic and manual methods of instruction. The recitation feature enables both the students and the director to estimate properly what progress is being made and benefits acquired.

The expense of the course is very small, being but very slightly above the cost of production. All interested in this method of home study of pharmacy are requested to write for the full explanatory Prospectus, which will be gladly supplied to all whose names are furnished.

FREE DISPENSARIES IN COLLEGES OF PHARMACY.

The Maryland College of Pharmacy, as related in this journal some time ago, announces the introduction of a plan for the establishment of a free dispensary in connection with that institution, whereby hospitals, etc., in that city can be supplied with properly compounded medicines, these being the work of the students. The Atlanta College of Pharmacy wishes it noted that it has had such a plan in operation for years, and that it has met with marked success. A regular drug store is conducted and hundreds of prescriptions for patients are compounded every day. The local College of Physicians and Surgeons has very large clinics, and its prescriptions are written by the leading physicians of the city. There is no charge, either for medical attendance, surgical operations or the medicines, which are furnished by the college of pharmacy.

It is not well to attempt a snap judgment on the merits or demerits of such a plan. It has some most decided advantages, provided all conditions are correct. We are thorough believers in charity, true charity, and if such a college dispensary can be run without abuse by the patients, and without direct injury to the followers of the professions of pharmacy and medicine, all well and good. It must be provided, however, that the compounded medicines sent out by such a free dispensary be of the proper quality and correct in all respects. There must be some supervising head who will be responsible for them. If prescriptions are received from the public institutions, and are given to a class of students for compounding, this class being composed of individuals of very widely varying degrees of intelligence, practical experience and facility, the re-

sults will be, it may be expected, of equally varying nature. It will not do to let a class of students practice in this sort of work, and send out medicines without having the proper kind of check upon them. We need not dwell, however, upon this possibility of danger, for it may safely be left to the colleges themselves to see that the free dispensary is conducted with all due regard to the welfare of all concerned therein. As stated above, the idea is a good one, properly carried out.

EPITOME OF THE NATIONAL FORMULARY.

Some weeks ago we announced that the American Pharmaceutical Association had prepared a most convenient pocket Epitome of the National Formulary, which could be purchased in quantity lots at a very a small price by druggists for distribution among their patronizing physicians. It is well to occasionally repeat this announcement, in order that druggists shall not be allowed to forget an opportunity presented them which embodies features of most direct financial and professional advantages to them.

This Epitome of the National Formulary gives in condensed and convenient form the medicinal properties, uses and adult doses of all preparations formulated in that book. It enables the physician to prescribe articles of known composition which every up-to-date druggist is expected to keep in stock, in this way greatly facilitating the work of the physician, and at the same time relieving the druggist from the necessity of carrying a large variety of makes of proprietary or semi-secret preparations. The better known the preparations of the National Formulary become to physicians, the more likely they are to be designated, and pharmacists everywhere must realize the great advantages that would accrue to them if this can be achieved. It is urged, therefore, that druggists shall supply their physicians with copies of this Epitome. It is in pocket size and costs but ten cents per copy when ordered in quantities of twenty-five to one hundred. For more than one hundred copies special discounts are allowed. The Secretary of the American Pharmaceutical Association will be glad to supply the work, and render all information necessary concerning it.

NOTICE TO STUDENTS OF THE ERA COURSE

Since the publication of our last announcement, the following Seniors have completed their recitations and examinations, and are entitled to diplomas:

John Weems Brewer,	Matriculation No. 98.
Elbert C. Howell,	" " 146.
Robert McFarlane,	" " 35.
William L. Warner,	" " 100.

The following students have also completed the work of the Junior Year:

John J. Dooley,	Matriculation No. 394.
Tony Neutzling,	" " 92.
Miguel A. Romero,	" " 23.
Joseph R. Shenneck,	" " 383.
George W. Simmons,	" " 440.
Henry Laurence Viereck,	" " 145.
Charles R. Whitmer,	" " 170.

Pharmaceutical Celebrities.

THOMAS STODDART.

A household word in Buffalo is Stoddart, for the name is as well known in Buffalo, and, indeed, throughout Western New York, as Tiffany is in New York or Wanamaker in Philadelphia.

Thomas Stoddart, the subject of this sketch, is the senior member of the firm of Stoddart Bros., who run the foremost drug store in Buffalo. They have achieved great popularity, have made a host of friends, and hold them. The firm of Stoddart Bros. was established about a quarter of a century ago, when the two brothers, Thomas and Charles, were very young men, and for many years they have been in the front rank of Buffalo's business men.

Thomas Stoddart couldn't stay at the rear. Level-headed, far-sighted, dignified, considerate of others, affable to all, those with whom he comes in contact quickly learn to respect his judgement and then to thoroughly like him. He is one of the most companionable of men, and he makes friends wherever he goes.

At present Mr. Stoddart is first vice-president of the New York State Pharmaceutical Association, and chairman of the legislative committee of the National Association of Retail Druggists. In the latter capacity last winter he headed a delegation of about one hundred druggists from all over the United States who appeared before the Ways and Means Committee of the House of Representatives and President McKinley, urging a reduction of the war tax on proprietary preparations. For several years he was chairman of the executive committee of the New York State Pharmaceutical Association, retiring from that position on January 1st of this year. He is now first vice-president of association, and in line for

elevation to the presidency at the Buffalo meeting next year.

A notable achievement, the formation and successful career of the Empire State Drug Company, is largely due to Mr. Stoddart's efforts. Several years ago at a meeting of the State Association, Mr. Stoddart suggested that the druggists of the state band themselves together as a joint stock association for the manufacture and sale to members of the organization (and to no other) of a large number of the standard preparations which a druggist must handle, elixirs, and the like, and thus establish a bulwark of protection against the onslaught of department stores. The suggestion was well received, was talked over at great length, officially endorsed by the association, and Mr. Stoddart was encouraged to go ahead and organize a company. He did so, and the Empire State Drug Company was the result. A laboratory was established, the best chemists obtainable were secured, and the company started in a comparatively small way. That was four years ago. To-day the company is doing business in greatly enlarged quarters, has a large number of employees, has added its own printing plant, and is doing a very extensive business. Its stockholders number nearly 1,200. At first the company confined its operations to New York State, but subsequently extended its scope, throwing open its advantages to druggists all over the country. No one except stockholders can buy its goods, and only bona fide druggists can become stockholders. The prices of its goods cannot be cut, and cannot in any way, except by retail purchase at regular prices, get into the hands of department store dealers. Mr. Stoddart has been president of the company since its inception, and devotes a great deal of time and attention to it, without compensation.

"This company," says Mr. Stoddart, "is bound to be one of the greatest factors in the United States in improving the condition of the retail druggist. It protects him at a point where he solely needs protection."

Mr. Stoddart is one of the incorporators of the Pan-American Exposition Company, which is now doing great work in preparing for the Pan-American Exposition in 1901, and he is a member of the entertainment committee.

Of Scottish birth and a true, sturdy Scot in all his ways, Mr. Stoddart is a leading member of St. Andrew's Scottish Society of Buffalo. He is now the president of the society, and has held that position about eight years in all, though not consecutively. This society is one of the most prominent organizations of the kind in Buffalo, and its annual banquets are attended by many of the foremost men of the city.

From the foregoing it can be seen that Mr. Stoddart is a very busy man, yet he finds time for many philanthropic enterprises. Time and again he has conducted public fairs or balls for charity, and has always made a remarkable success of them. It is not too much to say that he succeeds in whatever he undertakes.

OUR LETTER BOX.

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors.

Please be brief and always sign your name.

THE SUGGESTION APPROVED.

I have read your article in the Era of July 26th in regard to the printing of papers read at the State Pharmaceutical Association meetings in the pharmaceutical journals, and I wish to state that I fully agree with you upon this subject. I shall suggest to our committee on queries and papers that this plan be adopted by our association next year.

I mail you a copy of my paper on "How to Conduct the Prescription Counter" read at our last annual meeting, and if you wish to do so, and find it worthy of publication, you have my permission to publish it in your journal.

Lanesboro, Minn.

B. O. KYSETH,
Pres M. S. P. A.

(Specially Reported for the Era.)

The British Pharmaceutical Conference.

(Concluded from page 147, August 9.)

Most of the papers were followed by discussions, and this continued until 1 P. M., when luncheon was partaken of in the King's Hall of the Holborn Restaurant. The Conference re-assembled in the lecture room of the Pharmaceutical Society's House, when more papers were read and discussed, and at 4 P. M. the day's proceedings closed, and a

Garden Party

took place in the Garden of the Royal Botanic Society in Regent's Park. Later on several dinners were given in connection with the gathering. The president entertained a number of prominent visitors, and dinners were also given by Mr. Carteighe, Mr. Martindale and Mr. R. Bremridge, the secretary to the Pharmaceutical Society.

On Wednesday, July 25, the session was resumed and the papers proceeded with, luncheon taking place as on the previous day. At 4 P. M. a number of communications still remained, and these were taken as read and the concluding official business was entered on.

The Formulary Committee was elected as follows: A. C. Abraham, F. C. J. Bird, N. H. Martin (chairman), W. Martindale, F. Ransom, C. Symes, Harry Wilson, Harold Wilson, R. Wright and W. A. H. Naylor.

Future Meetings.

A cordial invitation on behalf of the pharmacists of Dublin and the South of Ireland to visit the Irish capital next year was tendered by G. D. Beggs, president of the Pharmaceutical Society of Ireland. This was supported by other Irish visitors and accepted with acclamation. W. Cummings, of Dundee, expressed the wish of the Dundee chemists that the Conference for 1962 should be held in that Scottish city, and although the invitation could not be definitely settled on at the meeting, there is no doubt that the Conference will accept the hearty welcome proffered when reintroduced next year.

Election of Officers.

The following officers were chosen: President, G. Claridge Druce, M. A.; vice-presidents, Peter Boa, G. T. W. Newsholme, G. D. Beggs and Professor C. R. C. Tichborne. Council, L. Atkinson, F. C. J. Bird, H. Collier, W. Warren, Professor H. G. Greenish, E. White, E. S. Peck, B. A., P. Kelly and E. H. Farr.

The New President.

George Claridge Druce, M. A., (Oxon) F. L. S., who succeeds Mr. Holmes as President of the Conference, is a retail pharmacist in Oxford, and an ex-examiner of the Pharmaceutical Society. He is, however, well known outside of pharmacy as a distinguished botanist. He is the author, among other works, of the Floras of Oxfordshire, Berkshire and Northamptonshire. Mr. Druce is Fielding Curator of Oxford University, and has also served the office of Sheriff of the city of Oxford.

Votes of Thanks.

Votes of thanks were passed to the president and officers, to the local committee and to the Pharmaceutical Society, for the use of their house for the meetings, and the meeting terminated.

A Concert, A Dance and a River Trip.

A ballad concert and dance were held in the Hotel Metropole on Wednesday evening, and Thursday was devoted to a river trip through about twenty-five miles of the most lovely reaches of the Thames. Henley, famed for its regatta, was left about twelve o'clock, nearly 400 being on board the pleasure boats. Medmenham, Marlow and Cliefden—the beautiful home of W. W. Astor, purchased from the Duke of Westminster, were passed in succession, and Maidenhead was reached about 7 P. M., when dinner was served at Skindle's Hotel.

The London meeting of the conference must be voted

a record one for attendance; this was to be expected, but there was a sad falling off in the attendance at the later Scientific Sessions. The almost tropical heat rendered members more inclined for pleasure than the discussion of pharmaceutical processes. The outings, however, were properly appreciated. During the sessions the ladies were taken to see some of the sights of London by a committee, at the head of which was Mrs. Martindale, so that they, as well as the Conference members, were fully occupied.

ADDITIONAL CONFERENCE PAPERS.

TURPENTINE OIL AND TEREHENE (C. T. Tyrer, F. I. C., and A. Wertheimer). This paper was a lengthy and exhaustive one, and one of the main points brought out was that American Oil of Turpentine, though dextro-rotatory, contains both laevo-rotatory and dextro-rotatory bodies. The fractionating of the oil was carried out very thoroughly by the authors.

LIQUID FERRI PERCHLOR (T. Tyrer, F. I. C., and A. Levy). On a manufacturing scale liquor ferri perchlor, answering both to the B. P. specific gravity and proportion of iron cannot be produced.

MELTING POINTS (T. Tyrer, F. I. C., and A. Levy). Authors have performed a large number of experiments, and find that many of the pure organic substances mentioned in the B. P. do not agree with the official melting points. No single method of determination is suitable for all substances.

SOLUBILITY OF PEPSIN IN ALCOHOL (F. C. J. Bird). Pepsin is not to be met with which is soluble in 100 parts of 90 per cent. alcohol.

PHARMACEUTICAL PLANTS OF JAMAICA (T. H. Wardleworth, F. L. S.) was an interesting and instructive paper on the drugs of Jamaica.

SANDAL WOOD OIL (E. J. Parry, B. Sc.). Santalol is a mixture of at least two bodies, according to Parry's researches.

WASTE MENTHOL (A. W. Gerrard, F. I. C.). Author shows that discoloured menthol can be purified economically by recrystallization from methylated ether.

(Special Correspondence.)

BRITISH PHARMACEUTICAL NOTES.

London, July 27, 1960.

The Companies' Bill.

The final stage of this bill, as far as pharmacists are concerned, was reached on July 24th. It will be remembered that the measure, in the main a financial one and intended to protect investors, contained two clauses of a totally different character. Clause 2 permitted companies to carry on business as pharmacists, and to use the titles of Pharmaceutical Chemist and Chemist and Druggist, provided qualified managers were employed. Clause 3 absolutely forbade companies to practise as physicians, surgeons, dentists or midwives. It will be noticed that veterinary surgeons were not mentioned in either clause. At present, owing to a decision in the House of Lords, companies are quite outside the Pharmacy Act, and can carry on a chemist's business and use his titles without let or hindrance. Most companies do employ qualified assistants, but this is not compulsory, and in the event of a breach of the Act by one of their assistants, only the assistant can be proceeded against, the company being quite safe from prosecution. Of course chemists would prefer to be included in the medical clause, but those who had comprehended the Free Trade tendency of modern British legislation could see that this was quite out of the question, and that the medical clause itself possessed practically no chance of becoming law, and they wisely urged that an attempt should be made, as it was impossible to prohibit com-

pany pharmacy, to amend clause 2 in such a manner as to prevent companies from using chemists' titles, and at the same time to make them as well as their assistants legally responsible for breaches of the section of the Pharmacy Act governing the sale of poisons. The Pharmaceutical Conference, however, declined to recognize that half a loaf is better than no bread, and after failing in their attempt to secure inclusion in Clause 3 have opposed Clause 2 in toto instead of endeavoring to amend it. Their contention has been that so long as company pharmacy is not specially recognized by Act of Parliament, there is a chance of securing its suppression. This, in view of the long period during which companies have carried on the business of chemists and druggists, and the large amount of public money invested in such companies, is absolutely impossible of attainment, and the only result of the Council's action has been the deletion of Clause 2 from the bill and the continuance of the present unsatisfactory state of affairs, which while subjecting the chemist to penalties for breaches of the Pharmacy Act allows the company in similar cases to go unscathed. This result was reached at a meeting of the House of Commons on July 24th, when the bill, as amended by the Standing Committee on Trade, came up for consideration. Colonel Welby moved the omission of Clause 2. After a brief discussion the President of the Board of Trade, Mr. Ritchie, who had charge of the bill, and who had previously expressed his opinion that clauses 2 and 3 were out of place in a financial measure such as this, assented, and both Clauses 2 and 3 were struck out. After the Conference reception on July 23d, Mr. Glyn-Jones and a number of others interested visited the House of Commons and consulted a number of members of Parliament on the subject of the bill, and their action had, no doubt, some bearing on the result reached on the following evening.

NOTES.

Valentine's Meat Juice.—Some months ago the Valentine Meat Juice Company, of Richmond, Va., sued the Valentine Extract Company (managing director C. R. Valentine) for infringing their trade mark by selling meat extract in capsules under the name of "Valentine" or "Valtine." The defence was that as Valentine was the manager's name, he had a right to use it in connection with the company's products. The Court of Queen's Bench decided in favor of this contention, but on July 23d the Court of Appeal reversed this decision and granted an injunction in favor of the American company.

The Pharmaceutical Society's Examination.—The London Examinations for July have just concluded; 14 candidates out of 32 passed the Major, conferring the title of pharmaceutical chemist; 130 out of 472 passed the Minor, conferring the title of chemist and druggist, while the only entrant for the Modified (designed for those who were assistants when the 1868 Pharmacy Act was passed) was successful.

The Proprietary Articles Trade Association.—This association in its annual report states that steady progress has been achieved particularly in connection with the Chemists' Defence Association. There is a small balance in hand, and the new council has been elected. The annual meeting is on July 31st.

The Prince of Wales a Surgeon.—In connection with the centenary celebrations of the Royal College of Surgeons, a number of honorary fellows were elected, including H. R. H. The Prince of Wales, the Marquis of Salisbury and Lord Rosebery.

DRUG STORE APPRENTICES.*

By LEO ELLIEL.

Quite recently one of the pharmaceutical journals (The Pharmaceutical Era) published a series of letters on the question of "College Graduation as a Prerequisite to Board examinations," and, as might well be expected, no two exactly agreed. Nor do I consider it of any vital importance if they do, so long as our schools of pharmacy do not require a standard for matriculation at least equal

to high school education. And can we blame them for accepting students lacking in this essential educational requirement so long as we are furnishing the material.

We are to-day moulding and preparing the material from which, in due process of time, the pharmacists who are to take up our burdens and duties will come. And upon them will devolve the duty of advancing and elevating the profession to that high plane we are striving for.

If we are to succeed in that elevation, we must change the methods now in vogue. What are we doing to-day? We need a boy to run errands, etc., and, of course, cannot pay very much for such services; we accept a likely boy, possibly 14 or 15 years of age; in a little while he is at the cigar or soda counter. He is quite handy and ambitious, learns about the sundries, and in the course of a few years aspires to work at the prescription desk. Then he prepares himself for the board examination by cramming in some school of pharmacy, manages to pass, and also passes the board examination. In a majority of these cases the certificates of graduation and board examination where the height of his ambition. He has gotten through; why should he waste any more of his time on study. And how long will it be before what little real knowledge he has absorbed will be evaporated? Can we expect or hope for any professional advancement from this class? If we wish to do our full duty to the public and to those who are to take our places, if we desire to do our share for future advancement and elevation of pharmacy, we must change our methods.

Up to 1862 or '63 there were few schools of pharmacy west of Philadelphia. It was the custom in many of the stores in the larger cities and towns to accept apprentices for a stated term, generally two years, the instruction given being considered as ample compensation for services rendered. The apprentice was taught to keep the shop neat and tidy, how to wait on customers, during the proper season was taken into the fields and forests, taught how and when to gather the various vegetable drugs indigenous to that section, their identification, etc. That was the way he got his botany. He was taught how to dry and otherwise care for the drugs he gathered, and he developed his muscles by grinding and powdering these and other drug substances. He had to study, and was expected to stand quiz examinations at regular intervals. He got his first lesson in chemistry by learning how to clean the various utensils, and as he progressed, was allowed to assist in the preparation of the various chemicals, pharmaceutical and other preparations in common use at that time. These operations were conducted under the supervision of the master or his assistant, and were accompanied by explanations giving chemical reactions, etc. Thus he was taught all of the things that it was necessary for him to know.

Of course the first condition of apprenticeship was a good school education, and rarely anyone under sixteen years of age. This system worked satisfactorily, and furnished competent drug clerks and druggists. I would urge the adoption of some such system again, wherever practicable, accepting only such persons as have the proper educational and other requirements, and who will agree that after having served a stated period of apprenticeship, they will enter some school of pharmacy and take its full course.

This would necessarily bar out some worthy young men, and might seem a hardship, but better a few should suffer than to continue the present lines. This step, if adopted, in connection with the higher educational requirements of our colleges and universities, would in a great measure remove all obstacles to the attainment of that higher plane of pharmacy we are striving for, and would also relieve us from that worst of evils, invoking the aid of legislation to protect us from our own thoughtless acts.

—The Rhode Island Board of Pharmacy, appointed for three years from July 1, 1900, met at Providence, July 13, and organized, electing Norman N. Mason president and Howard A. Pearce secretary and registrar. The board consists of Norman N. Mason, Providence; Albert B. Collins, Westerly; Wm. McCaw, Providence; Wm. R. Potter, Providence; Frank A. Jackson, Woonsocket; Howard A. Pearce, Providence; James T. Wright, Newport; all re-appointments.

*Read before the Indiana Pharmaceutical Association, meeting of 1900. (Nat. Drug.)

(Special Correspondence.)

INTERNATIONAL HOMEOPATHIC CONGRESS AT PARIS.

The International Homeopathic Congresses are held at regular intervals of five years, the last was at London in 1895. This being Exposition year the 1900 Congress naturally took place at Paris. The next meeting (in 1905) is to be held in the United States, probably at Philadelphia. America was well represented at this year's gathering, which commenced on Wednesday, July 18th, and terminated on Saturday 21. Drs. H. A. Harrison (of Cooperstown, N. Y.), Whitaker and Harold, (of Indiana), Malcolm Dills, (of Carlisle, Ky.), Straeder (of Oregon), Chas. A. Church, (Passaic, N. J.), Arnulphy and Titzell, (Chicago), McClellan and T. J. Grey, (of Minneapolis Homeopathic College) attended, as well as Dr. Fisher, (of Montreal, Canada) and one lady, Dr. Williams (of Salem, Mass.)

The pharmacists present were mostly Parisians, M. M. Ecalle, Penvrier Piotruszynski, Delpech, Kenick, Fouquier-Kirn and Veaux. There were half a dozen English doctors and a few Italians, Spanish, etc., etc., but the

of the present memorial. It consists of a bust with the inscription on

"HAHNEMANN

Founder of Homeopathy,

Born at Meissen, (Saxony) in 1755.

Died at Paris in 1843.

International Subscription."

His scientific work is briefly recorded on the two marble slabs which flank the pedestal.

The Banquet

was held at Ledoyen's well-known restaurant on the Champs Elysees, a fresh leafy spot in torrid July, and a refreshing shower came as a pleasant surprise while the speechmaking was going on. Several American delegates spoke, and Dr. Gonnard, (an eloquent French homeopath) had much that was complimentary to say about the Transatlantic visitors and their country, and made graceful allusions to the friendship of the two great Republics of the Old and New World, and to the recent inauguration of statues of Lafayette and Washington in Paris during the Fourth of July fetes which have been quite an event in the Parisian Exposition season of 1900.

NEW REMEDIES.

Kineurin.—Trade name for a glycerophosphate of quinine.

Petrolan.—Trade name of a new ointment base, a combination of mineral oils with soaps, etc.

Eubiol.—Trade name of a new dry hæmoglobin preparation. It is tasteless and odorless, and is soluble in cold water.

Basol.—Trade name of a new disinfectant. It contains 50 per cent. of kresol, and is intended as a succedaneum of lysol.

Lavoderma.—A new skin preparation to be used in the treatment of parasitic and mycotic diseases. The base is medicinal soap, which it contains to the extent of 50 per cent.

Hedonal.—Name given to a new hypnotic of the urethan group, chemically methyl-propyl-carbamic ether. It has been found valuable in cases of light insomnia provoked by neurasthenia or hysteria.

Sana.—Trade name of a substance brought forward as a succedaneum for cod-liver oil. It is said to have the taste of pure fresh butter, and to possess all the fat-producing qualities of the oil, with none of its defects.

Creosin.—A clear yellow fluid, of not unpleasant taste, soluble in all parts in water, and miscible with wine, soup, milk, etc. It is a compound of creosote, iodine, calcium hypophosphite and balsam-of-peru, recently brought into trade in Italy.

Eosol-Salts.—Name given to a class of preparations—combinations of medicaments with the salts of tri-sulpho-acetyl-creosote, as chininum eosolicum, argentum eosolicum, etc. They are used in the treatment of diseases of the glands generally.

Iodolene.—Trade name for a new iodine and albumen compound. Its base is Iodol. It appears in trade as a yellow granular powder, of somewhat large grains. It is dry, not balling together under pressure, and is entirely odorless and tasteless. The iodine content is put at 36 per cent. It is almost insoluble in all the usual solvents, dissolving but slowly in alkaline media.

Cruirine.—Trade name given by Edinger to a substance answering to the formula $(C_6H_5N.HSCN)_2 Bi(SCN)_3$, being a bismuth and chinolin sulphocyanide. It appears as a granular, orange red body, having a slightly piquant odor and but little taste. It is insoluble in water, alcohol and ether. Its action is said to be distinctly regenerative of the epidermis, and it has been found valuable in old, deep, sloughing ulcers, especially of the leg.

Fersan.—Trade name of a new iron and phosphorus compound, introduced in Austria. It is prepared from the red-blood corpuscles of beef, which, by a new process, are split up into two bodies, one of which (that used in Fersan) contains all the iron and phosphorus-containing albuminoids of the blood. It is soluble in water, does not coagulate on the application of heat, and passes through the stomach unaltered, being taken up in the intestines. Fersan is administered in milk, chocolate or water, and is said to be palatable and very nourishing. (Nat. Drug.).

HAHNEMANN MONUMENT.

predominance of the Anglo-Saxon element was striking. This is explained by the fact that homeopathy in France is rather on the wane than on the increase. America is its stronghold. Germany, the fatherland of Hahnemann, was represented by but two delegates.

In Spain, Barcelona, the most homeopathic town, about 10% of the doctors there are disciples of Hahnemann, and there are few homeopathic pharmacies. An interesting feature of the proceedings was the inauguration of

A Monument to Hahnemann

at Pere la Chaise, the great Parisian cemetery. The founder of homeopathy spent the last eight years of his life in Paris, his second wife being a young Frenchwoman. He was buried in the Montmartre cemetery, whence his remains were removed a couple of years ago to the site

THE QUESTION OF COLLEGE TRAINING.

By FREDERICK J. WULLING.

The growing interest in the subject of compulsory college training for pharmacists is voiced not only in private discussion, but in the number of articles that are written and in the discussions given the matter at State and other meetings.

In following the discussions and reading the articles, one observes how diverse are the ideas advanced. Many of them are born of mature thought and wisdom, but not a few are less happily based. There are undoubtedly many persons who are earnestly desirous of taking sides in this matter who are reading all that is written on the subject and otherwise informing themselves with a view toward arriving at an intelligent conclusion. It seems pertinent, therefore, to present some ideas and opinions on the matter that perhaps have not been urged before.

Before the advent of pharmacy there were preceptors and apprentices. The preceptor was the instructor, the apprentice the instructed. The preceptor is no more. By virtue of the demands of progress the college has replaced him, or at least should replace him. Apprentices after a time became homeless unless they went to college, and then they became students. Exit the apprentice. Those who did not go to college had to depend upon themselves for their training—had to be their own preceptors or instructors.

It is at this point that the pharmacists of to-day are making a serious mistake. They are handing their profession down to a posterity which they are crippling by not affording it the fullest means for development. A profession that should be powerful in its learning and wisdom cannot expect to be what it should, nor can it expect recognition as a learned profession when it is utterly indifferent as to the qualification of those into whose hands it places its own continuance. In every instance in which the preceptor was not replaced by the college the profession received a check in its development and dignity. Most of the self-taught pharmacists have not become eminently successful, so far as professional attainment is concerned, and those who have met with more than the average success must admit that they and therefore their profession would have been better off if they had had aid in the way of competent instruction. If the contention to which so many cling persistently, that not all pharmacists need college training, holds good, it would follow that none need such training. What would be the result? Only this, that the education of pharmacists would be in the hands of the least qualified; it would not even be in the hands of pharmacists. Think of it! Our pharmacists educated and trained by those who know nothing whatever about pharmacy! But strange as it may seem, this is the case to a great extent at the present time. It needs a prompt remedy.

Hundreds of young men entering the ranks of pharmacy, indeed the majority of those who apply to the boards for registration, are their own instructors. How unwise they are; how extravagant. That which more than any one thing is a determining factor in a person's life, the quality of his early training, is altogether overlooked by them and, stranger yet, by their employers as well. The employer as a rule is indifferent to whom he hands down his profession. An acquaintance of the writer's took into his store three years ago a boy of sixteen who had been in the district messenger service for four years. The boy not long ago obtained his assistant's certificate, although he cannot do common fractions well, nor write without gross grammatical errors. His work is done in a slovenly, careless way, and his habits are not good. Asked whether he did his duty in choosing such a successor, the employer replied: "He will do for the future pharmacy." The boy is bright, quick-witted, and learns easily. The pharmacist would have more nearly approached doing his duty if he had urged the boy to go to a night school for three or four years (the boy had to make his own living), and then

insisted on his going to a college of pharmacy of good standing. Then the young man would not have degraded his profession as he now does. There are many similar cases. Who is the delinquent, the employer or the young man? The employer again fails in his duty toward himself and his profession if he does not insist upon a college training for the young man who is in his employ with a view to becoming a pharmacist.

The argument that not all can afford to go to college, and that college training as a requirement for registration would work hardship in most cases, is irrational and ridiculous. Supposing a pharmacist were to hang a sign over his door reading thus: "Prescriptions dispensed by men who are not as competent as it would have been possible for them to become had they had the means to go to a college of pharmacy." Would he do the business that his neighbor does, of whom it is known that he and his employees had the means to obtain college training?

A young man intending to become a pharmacist cannot afford not to go to a college. However worthy a young man may be, his poverty will not appeal to those who need medicine. His remedy is in getting out of poverty, to do which there are many opportunities for those willing and capable of availing themselves of them.

The writer does not believe it will be long before the State will take the matter of compulsory college training for pharmacists into its hands if the pharmacists themselves do not soon take the initiative. The State provides education of an academic nature. Why does it do so? Not for charity, nor to benefit individuals. The underlying principle is preservation—the preservation of the State and the welfare of its citizens. There is no more potent factor in the preservation of the individual and of the State than education; it is the principal foundation stone of our institutions and of civilization itself. The question as to how far the State should educate is a much discussed one, but the majority of legislators and thinkers agree that it should not be beyond the point of necessity for preservation. But where is this point? It used to be placed in the vague region just beyond reading, writing and arithmetic. But it is there no longer, as witness the curricula of our grammar schools. State preservation requires a higher average of intelligence now than it ever did, and most countries have recognized this for some time, with the result that the average education and therefore intelligence is higher now than ever before. For the fullest development of individual and State this point of necessity is higher up than most men put it.

The importance of elementary education is recognized by all civilized countries in that it is made obligatory either directly, as in this country, or indirectly, as in many foreign States. Most countries include not only universal primary training, but a special training for all of its citizens practicing vocations, the practice of which, if the practitioner does not possess the fullest competency, may result in direct harm to the people or may interfere with the enjoyment of "life, liberty and the pursuit of happiness." Not all countries provide this special training, but they recognize its necessity by requiring it of those within their jurisdiction who desire to practice certain vocations. Nearly all the States of this country have laws prohibiting the practice of medicine, dentistry, pharmacy, law, etc., by all except those whom the State declares competent after a sufficient inquiry into their qualifications. Each State deems this necessary for the welfare of its citizens and for its own perpetuation, but many States, in fact most of them, deem it necessary, not only to examine as to competency, but to specify as to the nature of the training. So far as the practice of medicine is concerned, most States recognize the necessity of a special training by requiring of all applicants for registration evidence of at least three years' professional training at recognized colleges of medicine. Here the State does not furnish the training, but makes it obligatory. It is a wise policy on the part of the State thus to protect its citizens and at the same time insure its own preservation and advancement.

If all this is true and wise as to medicine, it surely cannot be less so with regard to pharmacy. A pharmacist is really a medical man—he is a medical specialist, or ought to be.—(Bulletin of Pharmacy.)

THE DIPLOMA PREREQUISITE ACTION OF THE NEW YORK STATE PHARMACEUTICAL ASSOCIATION.*

By E. H. BARTLEY, M. D.

The New York State Association, at its recent meeting in Newburg, showed that it is a progressive body by its unanimous resolution instructing its Legislative Committee to present next year for the consideration of the association an amendment to the pharmacy law embodying two ideas: First, that candidates for examination for license to practice pharmacy in this State must present a diploma from some reputable college or school of pharmacy, and, second, that the colleges of pharmacy in this State be placed under the control of the Regents of the University.

The first of these resolutions has been thoroughly discussed in the journals during the past year, and, as I believe the resolution expresses the consensus of opinion upon the subject, it needs no further discussion. It is enough to say that it was perhaps a wise provision to give four or five years' notice of the change, although I do not see the necessity for giving a longer time than it takes a young man to obtain his instruction in any college of pharmacy in the United States. Three years would seem to be the limit of time to be allowed as a notice to young men who intend to become pharmacists.

This article is written chiefly to call attention to the second resolution or proposition. I am not sure that the members who voted for this proposition really understood just what it means. I am sure that the proposition was not well considered, and reasonably sure that it was, at the present time, unwise. It was not generally known among the members present at that meeting that this means, under the present ordinances of the regents, a preliminary education of a four-year high school course or its full equivalent and a four years' course in a college of pharmacy, as a requisite for the degree of graduate in pharmacy. This law has been in existence since 1897. I believe it has not been repealed.

It must be admitted that the average student of pharmacy during the past ten years has not had a preliminary education equivalent to that furnished by the grammar schools of our cities. The preliminary training which would be required of students of pharmacy before beginning the course in a college of pharmacy, if this second proposition should become a law at the present time, would require five, and in many cases six, years more than the average student now gives to it. Add to this the two extra courses in the college, and it would mean for the average student seven years' more time than he now spends. The regents regard the grammar school training as representing eight years of study and the high school as four years, making twelve years of study to prepare the student for any of the technical or professional schools. The time required in the professional, technical, or academic colleges must be uniformly four years, and, according to their rules, no degree can be conferred for a less time. This places the young man who proposes to study pharmacy in the same position as the one who proposes to study medicine, law, mechanical, electrical or civil engineering, architecture or the liberal arts. He would have the disadvantage, however, that he would still be obliged to spend at least two years more in a store before he could apply for an examination for license to practice his profession. In other words, this would impose upon him a preparation of eighteen years, while all other professions require but sixteen. It may reasonably be claimed that during two of these years he would be self-sustaining while getting his store experience. It might be possible that the board of pharmacy would consent to allow the time spent in the college of pharmacy as the equivalent of store experience, but the student would then be obliged to work during all the vacations of his college course in order to get through in the same time as the other professional or technical students. It will be seen at a glance that no student would take such a course of preparation unless

the first proposition was in force to protect his diploma after he secured it. These considerations show why the present law has not been enforced. It is impracticable.

But there are other considerations. We have above shown that the proposed action of the association imposes upon the average student of pharmacy five years of study more than he now gives to his preparatory training, and two years more in the college. The average student is supposed to finish the grammar school at the age of fourteen, the high school at eighteen and the professional or technical school at twenty-two; and unless the pharmacy student be granted some concession for the time usually spent in getting his store experience, he would finish his education, under the regents' law of to-day, at the age of twenty-six, or possibly at twenty-four. Again, assuming that the average cost to the student of a year at school is \$350, which is a very economical estimate, and the lowest the writer ever succeeded in getting through with, the seven extra years would cost him about \$2,500, or the nine years of education, including the last year in the grammar school, would cost him \$3,250, and in most cases \$3,500. This investment he must calculate to pay the prevailing rate of interest upon, or about \$175 per year, or about \$3.33 per week.

Now, what about the return for this investment? The present wages paid to clerks is about \$18 per week, or about \$936 per year. How does this compare with the income of the physician, the lawyer, the engineer, the architect, or the dentist, who is required to spend the same or less time in getting his education? How do the social status, the confinement to business, the hours of labor, the profits, compare with those of the other professions? I will leave the answer to these questions to the members of the New York Pharmaceutical Association, and would suggest that they ask themselves whether the conditions under the present law of the regents would not be practically prohibitory of any reasonable young man studying pharmacy?

If such a condition were established and if students were to be found who would undergo the training, the proprietors must certainly pay the \$3.33 a week more than they now pay. More pertinent would be the query, where would the clerks come from? They would come from the other States and from abroad, attracted by increased wages. In the course of a few years, if the business of pharmacy would warrant the employment of higher-priced, better educated clerks, men of means would send their sons to the colleges of pharmacy. But this could only happen when pharmacy should have become a better paying business. Then stores would begin to increase in number in proportion with the population, as they did a few years ago, instead of decreasing, as they have been doing the past ten years. These matters are always regulated by the law of supply and demand, but, as we all know, this law operates rather slowly and many a man becomes bankrupt before the law comes to his rescue.

The above discussion is based upon the published ordinances of the Board of Regents of the University of the State of New York. (See Regents' Bulletin, No. 38, June, 1897.) So far as the writer is able to see, the conditions will be but slightly altered five years from now, except that perhaps other neighboring States may by that time have come up to the same high standard or requirement for a license to practice pharmacy, as the proposed plan of the New York Association contemplates. It is also thinkable, but highly improbable, that the condition of retail pharmacy in this State may be so improved that such wages may be paid as to induce young men to take the full professional training demanded by the University of the State. That pharmacy has not been, and is not now, in such condition that wages enough can be paid to induce young men to take such a course, all will admit. An attempt was made a few years ago at Cornell University to raise the standard of pharmaceutical education to a higher plane, but had to be abandoned for lack of students.

For these reasons and others I have stated above, this second proposition was not well considered, nor is it a wise proposition at the present time. The time may come when such action may be wise and necessary, but if done in 1905 it will work great injustice to the retail trade,

prospective students of pharmacy, the colleges of pharmacy and to the State by compelling students to go out of it for their education.

It is possible the regents of the university might be induced to repeal the existing ordinance so far as it affects colleges of pharmacy and lower the preliminary education to two years of high school training or its equivalent and three years in the college. This, however, they have expressed themselves as unwilling to do. They have, on the other hand (See Bulletin No. 38, p. 479), suggested that the colleges of pharmacy refrain from granting any degree at all for the usual two or three year course. It might be possible to have all this modified, but it would in the opinion of the writer be better to bring the schools up to this standard, provided the conditions of the business or profession for which the students are prepared will warrant it.

I would suggest that the association and its Legislative Committee consider well the interests of pharmacy before they commit themselves to this programme. Would it not be better to keep the control of this whole matter in the hands of those who know the needs of pharmacists and the possibilities of the business to support a higher education during the stages of development. Just as soon as the diploma of the colleges has a legal recognition and becomes a necessity, the colleges can be depended upon to increase their entrance requirements and curriculum as fast as circumstances will permit. Not only will this be done in the State of New York, but all over the country, by a concerted action brought about by the Association of Pharmaceutical Faculties, recently organized at Richmond. The colleges have had this matter under discussion for several years but have been held back by the feeling that the present state of the business of pharmacy would not support expensively-educated clerks. They have felt that the courses must soon be lengthened, but as long as the diploma has no commercial value, and as long as there is a much shorter and easier road to all the privileges of the educated pharmacist through board examinations, just so long must the colleges make their requirements comparatively easy. They felt that it was better to place a systematic education within the reach of as many as possible rather than make it so high as to drive all through the easier board examinations without any systematic school training. The moment a course in the college becomes a necessity, the colleges stand ready to meet it with increased requirements. The pharmacists are the best judges as to how high these requirements should be and how rapidly the existing conditions will warrant such increase.

That the course now very generally given in the colleges of pharmacy is ridiculously short is as well known and appreciated by the faculties of the colleges as by the would-be reformers. The only difference is that the faculties and trustees of the colleges are obliged to look at the matter from the standpoint of practicability and the necessities of the situation, while the writer of journal articles and the would-be reformer usually considers only the theoretical and the visionary sides of the subject. Their writings remind one of the "instructions in how to raise children," written by old maids. Pharmaceutical education in this State, since the failure of the Cornell University experiment, has been in the hands of the pharmacists themselves, and I know of none who have made any money out of it. In but one of the four schools has any one but the janitor or clerk even made his living out of his connection with the school. Even the fact that the colleges have not paid their faculties enough to live on, without the assistance of an outside business, has been the cause of very caustic criticisms from these impractical and visionary reformers. The pharmacists as a class have, I think, some appreciation of the unrequited labors of those who for a generation have put their hands in their pockets to maintain pharmaceutical education in this State. Not one of these schools has been self-sustaining, in spite of the charge that has been repeatedly made that they are private corporations organized for a selfish and money-making purpose. A higher standard of preliminary education is a necessity. A higher standard of professional training is desirable, but it must be a gradual and not a sudden change, such

as the action of the New York Association would precipitate.

For the lack of proper preliminary education the practical retail pharmacists have been responsible. They have admitted into their stores small boys and have kept them there when they ought to have been attending school and then have undertaken to make pharmacists of them. They have sent them to colleges to obtain a professional education. If the college refused to undertake this because of their lack of sufficient elementary education, they studied up for the board examination, passed after from one to six trials and were registered as pharmacists. Raising the entrance examination, under these circumstances, would simply have limited the number of would-be pharmacists who have received some systematic instruction. This will all be changed when all must have a prescribed course of training in a school of pharmacy. The entrance examination can then be raised and the length of the course increased. No legislation is necessary to accomplish this. It will be perfectly possible for the board of pharmacy to publish for the guidance of the colleges a minimum of preliminary education and of college training that it will regard as a proper course of study. Colleges who do not come up to this standard will have to suffer the penalty of having their graduates rejected. The standard would probably follow that established from time to time by the Association of Pharmaceutical College Faculties.

The regulation of pharmaceutical education, in short, would be regulated by pharmacists themselves, instead of by those who do not know the conditions to be met.

ORGANIZATION THE REMEDY.

Among the reports read at the eighteenth annual meeting of the Maryland Pharmaceutical Association were two of exceptional interest, one of them being the report of H. P. Hynson as delegate to the first annual convention of the National Association of Retail Druggists; the other his report as chairman of the Committee on Trade Interests. The first was, in part, as follows:

As your delegate to the meeting of the N. A. R. D. at Cincinnati, I have the honor to report my presence there during the entire convention. . . . I cannot refrain from calling your attention to a consideration of the advantages to be gained from such intercourse as this with your fellow pharmacists. It not only brings you into friendly touch, but it raises your estimate of them and their ability, since it enables you to know them better. It makes you think more of your profession, consequently increases your self respect. Indeed, the social and fraternal features of these conventions are, in my opinion, of greatest value and benefit to all who take part in them. . . . The convention of the N. A. R. D. was made up of strong, vigorous manhood. Evidently the delegates were representative in their respective sections, and, in nearly every instance, were earnest, active and enthusiastic. With the detailed report of this meeting and its transactions you are all more or less familiar. It is sufficient, I think, for me to give you some expression of my opinion of the National Association's purposes, form, policy and plans.

The purpose of the organization is patent and most commendable. It is to better the condition of the retail druggist in every possible way, by combining their influence and strength to effect that end. A representative national body is most desirable; indeed is absolutely necessary to secure proper recognition from Congress and from such branches of trade as are in any degree controlled by national association. Its form of organization is ideal, since it is a delegate body and enables communities or sets of men to secure representation at a minimum cost; in both time and money. Effective executive work is made possible because this is delegated to a small, yet sufficiently large body, under ordinary conditions, to make it also representative. Its policy "Justice to all," based upon a truth, a no less sublime foundation than the golden rule itself, is great and good enough to support the fairest structure our greatest ambition can desire. Since the purposes, form and policy are all we can desire and must be, in consequence, thoroughly acceptable, we must consider the plans whereby we are to realize the benefits.

At St. Louis, at the very beginning, co-operation was the keynote with which all efforts were to harmonize. Co-operation of the three more or less distinct branches of the drug trade: manufacturer, jobber and retailer. This seemed a particularly fair plan, since it was understood that all parties to the alliance were equally in need of the others' support to overcome trade abuses and injustices. To those who sincerely entered into the compact the plan contemplated the building of a triangular pyramidal fortress, one each of the three planes to be built evenly, by the three several branches of the trade, respectively; each one to be adjusted to the other two, and all to lean inwardly toward and upon each other.

While such a plan and such a device would obviously result in the best obtainable protection, if perfectly consummated, it would as surely lead to misfortune and confusion if defects or failure occurred in the work of any one of the contractors, no matter how well the others might build. Nor does it avail anything if one builder is helped in material and effort by the other, when the helper himself has failed to rear his own part of the triangular structure.

It is only fair to say that the retailer has always stood ready with ample material to deal evenly with his co-laborers, indeed has gone far above them, and while the jobber and manufacturer have been so long getting their materials together, our wall has stood without support. Our waiting support is already showing "fissures," as witnesseth New Jersey's action, and unless support from the other sides shall quickly come, we had better take down our dependent wall before it fall to ruin, and build for ourselves a stronger and more compact fortress, one all our own, one with even another wall, the strongest, which shall protect us against our worst enemies—our treacherous friends.

At Cincinnati much impatience was quickly evident, and the progress of the St. Louis plan was questioned, but this was satisfied by the request for more time. Its advocates claimed that yet a few more months were required to perfect it. This was granted them, and the executives who had it in charge were continued. It remains for our members to decide whether or not, after so many months, sufficient progress has been made to encourage the belief that good will finally come out of it. Whether or not it is possible to effect the desired result through such an alliance when we know that the manufacturers are absolutely without binding organization, and when the membership of the jobbers' association represents but a small percentage of the trade. In this State only 44 per cent, of those on the accepted list, as now published, are members of the N. W. D. A. These conditions exist with the others while they are yet demanding a 75 per cent, organization from us.

To summarize, national organization of retail druggists is imperative since the inter-commerce between the States is almost, if not quite, as large as is domestic traffic. The delegate form of organization is the only practicable one. It is also the sense, I am sure, of all of us that a policy of justice and equity should prevail. I therefore earnestly recommend to this association that it take active interest in the doings of the N. A. R. D. and make some special provision for even more effective affiliation with that body.

The report of the committee on trade interests contained these statements and suggestions, which commanded the closest attention:

Your committee appreciates the fact that the membership of this association includes representatives of the three branches of the drug trade, and that a report touching trade matters must include a consideration of the interests of the several divisions.

It would not be difficult to harmonize the varied interests were the lines more decidedly drawn, and each department restricted to operations legitimately within the province of each. This would be ideal, and is a condition for which we can devoutly hope; a condition that would make many of the trade annoyances from which we are now suffering absolutely impossible, and lead to a happy solution of many more.

There is much unrest in all these departments; this seems to be a transition period, and, without doubt, evolution is going on throughout the trade world. The optimist sees in the future the establishment of fewer but better retail stores; stores fully equipped and ably manned, where advanced pharmacy may be practiced in a manner consistent with the modern practice of medicine; he sees the establishment of laboratories in connection with such pharmacies, of sufficient ability and capacity to actually test the quality and adjust the strength of every article coming in and every product going out that can be subjected to modern methods of test and assay.

It may be said that this is not trade, that it is professional or scientific! Within itself it is scientific, but its application is indeed a trade matter; it is within trade's province to say how all this can be done with an increase of profit rather than a decrease. Indeed, this is the real trade problem that confronts legitimate or professional pharmacy to-day; when the higher and better practice of pharmacy becomes profitable then it will be adopted, and the cutting of prices on "patents" will no longer annoy us. If your committee has anything like a prophetic eye it can plainly see, not so far away—no further away than a ten years' journey, this now optimistic, but then necessary, higher practice. The way by which it will reach us is not quite clear, yet there are at most but two roads visible; one is by the rapid growth of a few of the larger stores, centrally or advantageously located, and the still further contraction or greater modification of the smaller store.

If this change in the retail department is inevitable, then certainly changes must occur in the other branches of the trade. Truly the processes of evolution are most mysterious; the jobber, as we know and as our fathers knew him, is not the same person, nor is he increasing, in a large and growing country like this. His clan is becoming smaller each year, and he is generally less robust or not so well fed; he, too, must change his feeding ground, and is gradually doing so. Either he steps guardedly into the pastures of the retailer or he is adapting himself to a special line upon which he better

thrives. It is very plain that he is, in fact, becoming a retailer or a dealer in special lines; he may be an importing sundryman, or, perchance, the collector and grinder of crude drugs. More often he poaches upon the manufacturer who, in turn, is quickly retaliating. At any rate, no matter where or who he may be, he will not hesitate to tell you that a strictly jobbing business is unprofitable.

The manufacturers, as a class, where are they? Is the manufacturer still content to deal with the jobber and not sell the retailer? By no means; many of them have already gone to the consumer; certainly none of them now regard the jobber as a necessity, nor even a convenience. Large and active competition has pushed him to his utmost and he, too, has gone as far as possible, and is fast becoming the final distributor of his wares—as he must. All these changes are very significant, and plainly point to a culmination which, at last, is most desirable, is for the best; therefore will surely come, as it has already occurred in other trades.

From the actual source of supply on through all its travellings and changes the drug will make its way to the consumer under one head; under one great management, whether we will or not.

Organization, even now, will do much toward bringing about these results, and your committee urges upon this association and its members the necessity for advanced organization, and to this end it offers an amendment to the by-laws whereby this association will foster and control an adjunct body whose business shall be to influence the proper regulations of the plan.

THE LINNEAN SOCIETY.

One of the oldest British scientific societies is the Linnean, which was founded in 1788. The circumstances which led to the inauguration no doubt centre round the acquisition in 1784 by Dr. John Smith of the priceless collection of the great Swedish botanist Linnæus. The price he paid the widow of Linnæus was only £1,000, but she was glad to dispose of it for even that sum, because she was in fear that she might be compelled by the Swedish Government to part with it to the University of Upsala for considerably less. Dr. Smith was only twenty-five years of age at the time of the purchase which led to this unique collection being brought to England. (A few years before the Linnean Society came into existence a Natural History Society was founded in London in 1782, and the actual ivory hammer at present used by the president of the Linnean Society was originally the property of this body.)

It was on the 26th of February, 1788, that the meeting out of which the Linnean Society grew was held in Dr. Smith's house and at his instigation, only seven gentlemen being present, although the first list of members contains twenty names. Dr. Smith was elected president and Mr. T. Marsham, secretary. The income for the first year was only £65. The first meetings were held in a coffee house, and, like the Chemical Society, the Linnean occupied several homes until it was finally housed in 1873 in New Burlington House. The charter was granted in 1802, and in 1829 the Linnean collection was acquired by the society. The society possesses a fine library, and in addition to the Linnean collection there is also the Smith herbarium, a fine Indian herbarium, a collection of British crustaceans, a very extensive collection of fruits and the Salmon collection of birds' eggs. The income of the society is now about £3,000 a year, and its journal contains some of the most valuable botanical communications in the world. The present president is Albert C. L. G. Günther, M. D., F. R. S., and the secretaries, B. Daydon Jackson and Prof. G. B. Howes, LL. D., F. R. S. At the time of the last annual meeting there were 752 fellows, 50 foreign members, including the best known of foreign botanists, among them Dr. William G. Farlow of Harvard University, and Dr. C. Otis Whitman, of Chicago. There are also twenty-five associates. The register of fellows contains a fair number of pharmacists, although the proportion is not nearly so high as in the case of the Chemical Society.

EDWARD ECK, a young Baltimore druggist, died on the afternoon of July 30 at the residence of his parents, 15 North Frederick street, aged 34 years. He had suffered for some time past with consumption and his death was not unexpected. He was a native of Baltimore, had studied medicine and had graduated from the Maryland College of Pharmacy. He was unmarried.

(Written for the Era.)

WINTERGREEN BITTERS.

By THERSITES MENDAX.

In the days of my boyhood there was a popular superstition that there were three methods of making a fortune with comparatively little labor; the first and easiest one was to take out a license in pharmacy; the second and more laborious one was to set up in business as an undertaker, and the last and most difficult was to become a plumber. I adopted the first method, and ever since I started in business on my own account I have regretted (from a financial standpoint) that I did not take the second or third road to riches.

While I am fond of my profession and do not grudge the four years' apprenticeship it took me before I could go up for examination, and the trouble and expense of preparing myself before I could face the board of examiners, it seems at the present day that the druggist is in many cases like Issacher: "A strong ass, crouching between two burdens," and curiously enough both burdens are more or less self-imposed.

Two very important items in the load we are obliged to carry are non-paying patent medicines and dispensing doctors. The first item we assumed before the department stores cut our profits down to nothing (or a minus quantity). The second evil we are not wholly responsible for, but it has undoubtedly been augmented by counter-prescribing, unlimited refilling of prescriptions, substitution and the assiduous pushing of secret nostrums which make extravagant claims as to their therapeutic efficacy.

The result of this unfortunate state of things has been the evolution of the doctor-druggist. Both these individuals are a nuisance to the professions they have usurped. The former, who uses his pharmaceutical diploma to cloak the illegal and unqualified practice of medicine is only one shade better than the druggist saloon keeper. His conduct widens the breach which already exists between physician and apothecary, and causes the many who conform to the law to suffer for the few who make a practice of violating it. Of the injustice to the public I will say nothing. A man who of his own free will puts himself under unequalled treatment deserves to suffer. No matter whether he is "treated" by a druggist, a Christian Scientist, a self-qualified "cancer doctor," or any of the other innumerable pseudo-medical parasites who infest society. I do not wish to criticise the medical profession in this paper; they have their own troubles, and plenty of them. The doctor of the present day has to contend not only with the patent medicine mania, the prescribing druggist, and the "consultation by mail" specialist (?), but he has to keep an eye on his "true friends" who flood his mail box with circulars extolling the virtues of their numerous proprietary medicines which are just at present advertised in the medical press only, but which in the course of a few years will undoubtedly pass into the department stores for general and indiscriminate sale to the public at large.

While the druggist who pushes a patent medicine is very apt to "catch it in the neck" from the physician, the physician is frequently doing the same thing himself only in a different way. He does not take space in the daily papers and advertise himself to the public as using Quackenbush's tablets; such a course of proceeding would be unprofessional and unwise from a monetary point of view. He, however, dispenses them himself, and very probably gives the concern which manufactures them a testimonial which finds its way into print if the professional status of the doctor is at all above the ordinary run.

Now I consider that a doctor who sanctions a secret remedy, of whose composition he is utterly ignorant, is hardly in a position to throw stones at the druggist who pushes a patent. Every doctor has a perfect right to know what he is giving his patients, and if he believes that A's fluid extract of ergot is better than B's by all means let him use his discretion and give what he thinks best. In the same way, if a druggist considers that C manufactures a better line of pharmaceuticals than D he is surely justified in acting accordingly. If they choose to champion their respective favorites there is no need to publish the

fact in the newspapers. I often think of a little advertising scheme which brought me in a good deal of business in a most unexpected way.

About a year ago I received a visit from a gentleman who was representing a well-known patent medicine. The preparation is a fairly good one of its kind. It is well advertised, and the firm do not make a specialty of filling up the dry goods and grocery stores with it, in my locality at any rate. It costs about \$100 a gross, and the department stores sell it for seventy-five cents a bottle. The traveler asked me how much of it I handled in a year; how I found it selling at present? And on receiving my answers to his various questions he made me the following liberal offer: If I would take one gross at once, either on four months' time or subject to the usual cash discount, the firm would "advertise me" free of all expense in the two local papers I preferred for three, or in one paper for six, months. They would themselves look after the advertisements, change them every month if required, and ship the goods through any jobber I chose to name.

The sample ads. were well written, the contract was all right, and the financial standing of the firm above reproach. The agent told me that he intended to make the same offer to every druggist in town, and I asked him to call again before he left the place. I ascertained that I had two dozen or so of the preparation in stock—I will call it "Wintergreen Bitters"—and when my friend next appeared I requested him to ship me a quarter gross through the jobber I usually buy from. The agent was not prepared for this; he told me he had sold every one of the drug stores except myself and a concern which was on the verge of liquidation. We would be the only two concerns in the place who did not participate in the free advertising, and as three fifths of the space was at our absolute disposal and only two fifths reserved for the "Wintergreen Bitters" I was missing an offer that was well worth having. I however told the agent that I had definitely decided not to accept his firm's proposal, and that when I sold out my stock I could replenish in twenty-four hours or less.

About a week afterwards the advertisements appeared, some in one paper, some in another, all of them containing the statement that the advertiser personally recommended and endorsed "Wintergreen Bitters." The proprietors of the medicine inserted ads. on their own account with testimonials and portraits of sufferers who had experienced marvelous cures by the use of from one to a dozen bottles of bitters. The public read these advertisements, and in a few days the run on the medicine commenced. My sales increased perceptibly and some of my regular customers asked me why I did not advertise "Wintergreen Bitters" myself. My reply was that they were in stock in the store, and that as everyone else advertised them and I kept them, I could sell my share without a special advertisement. To those who asked me if I endorsed the claims made by the proprietors, I replied that I never gave an unqualified recommendation to any patent medicine, and in one or two cases where people were under regular treatment, I brought all my influence to bear to induce them to continue it and leave "Wintergreen Bitters" alone.

Now about that time our family doctor went away for a month, leaving his practice in charge of an elderly gentleman who combined a rough, blunt manner with a very considerable degree of medical skill. I knew very little of Doctor Ross, as I will call him. Most of his dispensing he did himself, and what he didn't do he sent to other places than mine. My wife's cousin was staying with us, and her health being by no means good we decided to call Doctor Ross in. That morning Ross happened to be in the office hunting up a prescription which had been filled some time ago. I asked him to call at my house and see the young lady, and when he snapped out the reply that I had better send her up a bottle of "Wintergreen Bitters" I was not at all surprised. I replied that I would certainly send the bitters if he prescribed them, but that I thought they would hardly cure a case of acute tonsillitis, nor did I consider that they were indicated in a case of amenorrhoea. The old gentleman shut up the prescription file with a bang. "I have no patience with you fellows," he said. "You expect prescription work from us, and yet you endorse every

patent medicine that comes along. Then when any of your own people are ill you send for us, instead of curing them with the latest patent panacea which you are begging the public to buy from you." The "Weekly Mercury" lay open on the desk beside him, and his eyes fell on one of the "Wintergreen Bitters" ads. After enumerating the different toilet articles he had in stock the advertiser went on: "I have just received a gross of 'Wintergreen Bitters.' I use the Bitters in my own house and recommend them to the public as the greatest economizers of doctor's bills that I ever handled. They are unrivalled as a cure for anemia, impure blood, scrofula or King's evil, St. Vitus' dance, and all diseases which arise from physical or nervous debility. M. Burette, Ph. G., Chemist and Druggist, Main Street."

"Well, doctor," I replied, "I'm not answerable for Burette's advertisements. If he likes to use 'Wintergreen Bitters' and advise others to do so, I can't prevent him. I happen to be advertising syringes, hot water bottles and rubber goods just now, and I put in a few lines about fluid extracts and a new extract machine I have just bought. Here is my ad., and here is the machine if you care to see it." Ross went up to my house, saw the young lady and gave me a couple of prescriptions for her. I think he must have told one or two of his medical brethren about the affair, for that evening a young fellow who had opened a practice in the outskirts of the town dropped into my office and referred to the "Wintergreen Bitters" advertisement again. "I see you are not advertising it yourself," he said, "but you druggists are hard people to deal with. I have sent about a hundred prescriptions to Pine's pharmacy this month, and here he is 'selling it with a positive guarantee that it will alleviate and ultimately cure the worst cases of chronic dyspepsia, rheumatism and neuralgia.' I am pretty hard up and I want every dollar I can scrape up for new books and a decent set of instruments, but if this sort of thing goes on I shall certainly put in a stock of tablets and do my own dispensing when I can. We can't expect you to turn these patent medicines down altogether, but you might at least refrain from giving your personal endorsement to them, especially when you know perfectly well that they are making impossible claims."

"I am just writing up my next week's ad.," I replied; "I advertised rubber goods last week; I am now advertising an emulsion I make myself; here is the copy of the advertisement: 'If your doctor orders any particular kind of emulsion, get that kind and no other. He knows why he does it and he expects you to abide by his directions. My own emulsion contains fifty per cent. of the best Norwegian cod liver oil procurable, with hypophosphites of lime and soda. It costs thirty per cent. less than a proprietary brand and your doctor can see the formula at any time.' " There was a note about a line of herbs I had just unpacked, and that was all.

The doctor picked up a sixteen-ounce bottle of the emulsion which was standing on the desk, smelt and tasted it, asked for the formula and made a note of it. "I shall send you down an order for a bottle of that stuff to-morrow," he remarked. "A patient of mine is using it and she is dreadfully hard up. I'm getting nothing for my services, so to speak, and she will be glad to save thirty or forty cents. I may work some off for you before long; the formula is a good one and I like the way it is put up."

"Now look here, doctor," I said; "the 'Wintergreen Bitter' people are making a set on all the drug stores around here. Their man called in here twice the other day and I refused to let him advertise me. I keep the stuff like I keep ha'r restoratives and cheap household syringes. Not because I can recommend them or because I want to sell them, but because they are advertised and the public insist on having them. If I don't sell them, the next man will. But when it comes to saying that I use them or advise their use, it is a different matter. I have always made it a rule to be perfectly non-committal in such matters, or if I incline any way it is rather against than for these remedies. In the first place I have very little faith in them, and in the second place I have to pay from eight to ten dollars a dozen for them and sell them for from seventy-five to ninety cents each. 'Wintergreen Bitters' sells at ninety cents just

now; a gross costs off and on one hundred dollars delivered here and gives me a profit of thirty dollars. Against that I should certainly have to offset the loss of some prescription work, and I don't have to work up a hundred dollars worth of drugs to make thirty dollars profit on that.

"My prescription file shows an increase of two hundred dollars a month over what it was three years ago when I bought this business and this increase alone is equivalent in profits to the sale of two gross of any dollar patent on the market. I keep a small stock of standard patents, a smaller one of new 'discoveries,' a line of non-secrets, such as the emulsion you have just tasted, which the proprietary medicine people are facetiously pleased to call substitutes, and a good line of drugs, chemicals and the newer remedies. There are two doctors in town there is no doing anything with. They are hard up and have very little to do. They never write a prescription if they have the wherewith in their offices to fill the patient's bottle, and as a natural result, while I don't run them down to the public, I never send them a patient I can work in to one of the men who are willing to live and let live. Now Burette has been in this business before. He bought half a gross of Dongola Digested Food and he's got a lot of it yet. He could sell a good many dozen Alaska Rheumatism Cure, and I think his stock of Pawnee Indian Remedies holds out pretty well. I have a few bottles of each of these remedies, say an average of a third dozen of each, and that is quite enough dead stock to carry. When one of these companies asks me to buy and promises to create the demand afterwards, I always tell them to go ahead and make the demand, and I will see about buying when their goods are selling. I fully realize that the profit on a prescription is usually larger than on a nominal dollar's worth of patent medicine. I have lost some money by sending people where they get both advice and medicine, but I find in the long run that it pays me. Out of the dozen doctors in this place, four or five are friends of mine, several are neither friends nor enemies, and the other three or four I either don't know or don't wish to know."

For three or four weeks the sale of "Wintergreen Bitters" boomed. The doctors growled about it, but the advertising sold it in spite of their maledictions. Then the attention of Messrs. Tag & Remnant, dealers in dry goods, fancy goods and groceries, was attracted by the phenomenal run the preparation was enjoying. One fine morning an advertisement in every paper they took space in announced that they had just bought a jobber's stock of "Wintergreen Bitters" at sheriff's sale, and that they would offer it to the public at seventy-five cents a bottle. Our town is not a very large one and none of the druggists are very well off. Some of them had as high as three gross of "Wintergreen Bitters" in stock, and their feelings when the advertisement appeared and cut their profits down to zero can be imagined.

I had less than three dozen on hand, so it didn't concern me particularly, as I knew Messrs. Tag & Remnant would not keep the thing up forever. I sold the stuff for seventy-five cents when I could not help myself, but I found out the advantage of not having committed myself to pushing it; and that in more ways than one.

In the first place—it may seem incredible—the doctors in general remembered the stand I had taken in the matter, and my prescription file showed a gratifying increase. In the second place the public, when they found by experience that "Wintergreen Bitters" were not exactly the elixir of life they were represented to be, felt inclined to vent their resentment on the parties who had allowed themselves to be advertised as giving the medicine their personal endorsement.

I had a visit from the representative of the "Chinese Kidney Cure Company" a day or two ago. They put up a mixture which cures diabetes, Bright's disease (acute or chronic), lumbago, urinary calculi, and all diseases of the kidneys and bladder. I told him the story of "Wintergreen Bitters" (in a modified form), and while I wish no evil to my professional brethren, it would be greatly to my advantage if he could place say twenty gross of it in this town and advertise his customers. If he or any other concern "advertise" me I shall certainly sue them for damages unless they previously get my consent in writing. Timeo Danaos et Dona Ferrentes!

SODA WATER SYRUPS AND THEIR SERVING.*

By JOHN K. WILLIAMS.

The secret of the druggist holding his soda water trade must lie in the superior quality of his goods as compared with the confectioner and dry goods man. With his intimate knowledge of the requirements of this branch of his business he ought to be in a large measure the manufacturer of the flavors that he serves, not alone because he can make them better, but because he should have, and certainly to-day needs, the additional profit accruing therefrom.

This branch of my business commands my personal attention as much and more than some others, and my constant aim is to learn how I can improve the quality of my products. I confine my attentions, however, to what may more properly be called the legitimate serving of soda water as such as against the serving of soda water that has to be drank with a spoon; for I contend that the introduction of any foreign substance into a glass of sparkling soda destroys its quality just as the pouring from one tumbler to another, to make up for unskilled drawing, reduces the sparkle and life, making it akin to hydrant water.

Preparation of Fruit Syrups.

My method with all fruit syrups is the cold process entirely, relying solely on the preservative power of sugar and a small quantity of C. P. acetic acid. I never use the least heat, for the instant this is done, whether in vacuo or not, the natural delicate flavor disappears and you have that of crooked preserves.

I have no use for the soft, cheap, stale berries of the market, but get them right from the vines, mash them, hulls and all, and throw the pulp on a coarse linen strainer stretched over a half barrel (saw a rock candy syrup barrel in two and you have good tubs for this use), and with a wood paddle work the juice through until the pulp is fairly dry. Then pour over 40 quarts of berries 3 or 4 quarts of water over the pulp to wash it out, transfer the pulp in small portions to a small wood cider press and express the remaining juice. To each gallon of this add 1 ounce of concentrated C. P. acetic acid and 13 pounds of granulated sugar, stir frequently, cover up and set away over night. In the morning skim off the greater part of the pulp that has risen to the top and when the sugar is all taken up, strain again and put away in 3 or 4-gallon jugs in a cool cellar.

Reduce the concentrated syrup about one-half with the rock candy syrup when put into the fountain, adding also one-half pint of water to each quart of the combined syrups to reduce it to the right density. Also add to each gallon of all fruit syrups when put into the fountain $\frac{1}{4}$ to $\frac{1}{2}$ ounce of the following "acid solution," which is required to develop their flavor: Tartaric acid, citric acid, each 4 ounces; boiling water, 8 ounces; filter.

Pineapple, Orange and Lemon Syrups.

In making pineapple syrup I remove the outer coat, cut them in slices, which I then run through an Enterprise horizontal press, thereafter proceeding as with berries. For orange I prefer the Jamaica variety, which come in barrels, each wrapped in a coarse brown paper, for they give me a superior and more lasting flavor than other growths. The oranges and lemons are cut in halves and the juice expressed with a "King" lemon squeezer, and the pulp on the strainer washed with about a gallon of water to a barrel (about 550 of oranges or a box of lemons). Then add the acetic acid and sugar the same as for the berries. The lemon syrup, when put into the fountain, requires a much greater reduction with rock candy syrup on account of the varying tartness of the fruit, according to the season. To each gallon of the orange and lemon when put into the fountain I add 2 ounces of "extract of the fresh peel." You will observe that these syrups are cloudy and contain more or less of pectinous matter, for I do not use heat to clarify them, nor do I wish to, and thus remove their attractiveness to the palate, for they are practically a natural fruitade.

No complaints of these or requests for the clear, handsome fruit juices at my counter have been made.

For a reducing syrup, and for making vanilla especially, I use only rock candy syrup, no matter what it costs, for it pays in the superior flavor and sweetness it possesses over a granulated sugar syrup.

Vanillin Syrup.

My vanilla contains in each gallon 2 ounces of a high-grade old true vanilla (not an atom of tonka) and a pint of rich Vermont maple syrup.

For foam in any syrup requiring it I use only the whites of eggs.

Coffee Syrup.

My coffee is made by hot percolation, 16 ounces of coffee to the gallon of finished syrup, and the blend of coffee that I prefer is 2 parts of Java, 1 part of Mocha, 1 part of Maracaibo, and all a light roast, for most coffee sold is ruined by over-roasting so as to give it a dark, supposedly strong infusion. The coffee must be ground as fine as spice, and only ground at the instant of making, and it must be made fresh every day, otherwise it resembles warmed-over restaurant goods.

Chocolate Syrup.

My chocolate is made from Baker's solid confectioners' chocolate (10 cent cake), not cocoa, but what is known commercially as "liqueur" chocolate, containing all the oil, etc. It is nonsense, as nearly all published directions direct, to "carefully shave the chocolate, etc." I throw it into a "struck up" tin dish in $\frac{1}{2}$ pound lumps, keeping the paddle working when boiling the first time. Here is my formula: Four ounces each "Carracas" and "Eagle" brands chocolate, 1 ounce corn starch, 8 ounces cold water. Stir and add 24 ounces boiling water, set over a strong, direct fire and boil hard for three minutes, whipping and stirring constantly to avoid burning and to make it smooth. Then add 3 ounces sugar and 24 ounces boiling water and boil hard again. Then again add 3 ounces sugar and 24 ounces boiling water and bring the whole to a hard boil. Remove from the fire and strain through a wire colander and when cold add 1 ounce extract vanilla. There is no special trouble about cleansing the glasses after serving this. If this is put into the fountain, which is best on account of keeping it cold, then it should be drawn off and turned back once or twice a day, for being in the nature of an emulsion it is necessary to keep it evenly mixed.

How to Serve Soda Water.

Now a word about serving. Add the cream syrup to every fruit syrup unless forbidden, except lemon, and to vanilla, chocolate and coffee, whether called for or not. Don't think that you have saved just so much by not doing so, because your customer failed to specify cream, for it is your real interest to give the patron the best and richest-flavored glass of soda possible and not to strive to "skin" it. Draw your soda rapidly, not necessarily all foam either, unless you are thoughtless; and when there are two or more of a party get out all the flavors into the tumblers before commencing to draw the carbonated water, so that all can drink together. Always pass the glass into the holder before the customer with the left hand, because then the hand does not come in contact with the part of the tumbler that touches the lips of the drinker. If lime juice and lemon is called for, don't follow the order, but give the party what he wants, not what he called for, viz., lime juice sweetened, for adding lemon only intensifies the acidity. This rule applies to "acid phosphate and lemon" as well. Therefore, have a faucet convenient in which to keep the rock candy syrup for that purpose. Avoid also serving vichy and lime juice or vichy and phosphate, for if your vichy is what it should be (alkaline) it would be neutralized by the acid and rendered flat and injure your reputation, besides being a waste for you; rather serve plain soda with these and you serve your customers best. But you need not impart all this to them. Don't, don't stir your phosphates with a spoon; the phosphates should be drawn "solid," of course. Reduce your acid phosphates two-thirds and turn in from a glass-stoppered bottle a teaspoonful of this into the small thin tumbler first, then the syrup flavor, then from another tumbler pour in at the side, holding it above a little, when it will mix without

*Read before the Connecticut Pharmaceutical Association. (W. Drug.)

foam and yet be bright and sparkling, but do it rapidly; don't go to sleep over it. Throw into the ash barrel the pepper-sauce - bar-room - barber-shop - shampoo - squirter bottles and keep the acid and lime juice in and turn out from a glass-stoppered bottle.

Value of a Refrigerator.

I have a refrigerator that stands close to my fountain, the top on a level with the marble slab or counter with the front half of the top so balanced with weight as to open with a touch and disclose all of my tumblers surrounded with ice and cold air and away from the heat and dust of the store, thus enabling me to draw a cleaner and colder glass of soda than where they are out on the counter. This refrigerator is of great value for storage of other perishables, since the lower portion is available for that purpose.

How to Clean Tumblers.

I have found that the easiest, quickest and cheapest way to clean the tumblers, and all glass containers as well, when they get a dull stain upon them (as they will in a few days' frequent use) is to put an ounce of sulphuric acid into one and with a bit of cloth and stick wipe the sides and bottom, then transfer to the next and so proceed with them all, then rinse with clear water and your glasses are bright as new.

Fine Sarsaparilla Syrup.

I cannot close this paper without urging you to abandon the makeshifts for that old sarsaparilla syrup. It is my favorite and I make it up in barrel lots to last a year or more, for it improves vastly with age. I use all the roots and barks—sarsaparilla, sassafras, sweet fern, prince's pine, checkerberry, licorice, senna, rose leaves, cassia, anise, fennel, etc.—in liberal quantities and steep them in a succession of boiling waters. I then make that decoction up into syrup, which has a "body" that the makeshifts do not possess. When cold I strengthen that up with oils of wintergreen and sassafras emulsified with gum acacia. Then, when brought to the fountain, I add from one to two pints of maple syrup to each gallon.

EXAMINATION QUESTIONS

NEBRASKA BOARD OF PHARMACY.

PRACTICAL PHARMACY.

- 1.—What are the preparations known as waters? Name four methods of making the official waters and give one official of each method and how prepared.
- 2.—Name five methods of making syrups. Also give one official syrup of each method and how prepared.
- 3.—What are liniments? How prepared? How many official?
- 4.—Name five animal products, from what obtained and how prepared.
- 5.—What are Protein Compounds, and what are their constituents?
- 6.—What is meant by incompatibility? Define chemical and pharmaceutical incompatibility.
- 7.—Give official name and ingredients of the following: Aromatic Powder, Compound Chalk Powder, Compound Effervescent Powder, Compound Powder of Jalap.
- 8.—What are suppositories? Give formula for suppository glycerin.
- 9.—What is a prescription? Write a complete prescription in metric for a tonic.
- 10.—How would you compound the following prescription:

R Hydrargyrum	60
Acidum Nitricum	60
Acidum Sulphuricum	60
Cantharis	16
Antimonium Nigrum	16
Mix. Sig. Apply as directed.	

THEORETICAL PHARMACY.

- 1.—Give the rule for converting Centigrade degrees into those of Fahrenheit; and vice versa, those of F. into C.
- What is the highest temperature to which water can be heated?
- 2.—Define Carbonization; Incineration; Sublimation.
- 3.—What are volatile oils? Are they lighter or heavier than water.
- What are fixed oils? Are they lighter or heavier than water?
- 4.—Having 100 gm. of powdered opium of 18 per cent. morphine strength which I desire to reduce to 13 per cent., how much diluent powder shall I use?
- 5.—Having a 4-ounce solution containing 4 grs. of morphine, what quantity of morphine would be contained in (a) one teaspoonful; (b) one dessertspoonful; (c) one tablespoonful?

6.—Give the weight in gms. of (a) 10 Cc. of distilled water; (b) 500 Cc. of glycerine (Sp. Gr. 1.25); (c) 1,000 Cc. of alcohol (Sp. Gr. .820).

7.—What is a Tincture; a Fluid Extract? Give the U. S. P. general formula for an Infusion.

8.—What are (a) Cerates; (b) Ointments; (c) Plasters? What is an important point of difference between them?

9.—Following is the formula for Compound Pills of Rhubarb:

Rhubarb	13 gm.
Purified Aloes	10 gm.
Myrrh	6 gm.
Oil of Peppermint	.5 Cc.
Water a sufficient quantity to make 100 pills.	

Write the formula for 40 pills.

10.—Define Specific Gravity. Give the rule for determining Sp. Gr.

CHEMISTRY.

- 1.—Define matter. In how many states does matter exist? Define weight.
- 2.—Give definition of crystallized substance. State the difference between Amorphous, Polymorphous and Isomorphous substances.
- 3.—What are salts and how are they formed? Define neutral, acid and double salts.
- 4.—Mention 10 elements and give symbol and atomic weight of each.
- 5.—State composition, mode of manufacture and properties of Hydrogen Dioxide. Chemically what is Glycogene?
- 6.—Complete the following equations and give name of each acid formed:

$$\begin{aligned} \text{P}_2\text{O}_5 + \text{H}_2\text{O} &= \\ \text{P}_2\text{O}_5 + 2\text{H}_2\text{O} &= \\ \text{P}_2\text{O}_5 + 3\text{H}_2\text{O} &= \end{aligned}$$
- 7.—Show by equations how the following may be prepared: Hydrochloric Acid, Potassium Chlorate, Ammonium Bromide.
- 8.—What generally causes the yellow color of commercial Hydrochloric Acid? When Sulphuric Acid becomes dark colored, to what is this state due.
- 9.—Define Analytical Chemistry. Distinguish between qualitative and quantitative analysis. What are Reagents? Give a test for acids, for alkalies. What is the Reagent used to precipitate the metals of Group I in qualitative analysis; mention those metals precipitated by it.
- 10.—Give a short sketch of how you would make an analysis of urine, giving tests for sugar and albumen.

MATERIA MEDICA.

- 1.—Describe Leaves, Seeds, Fruit, Herbs, Flowers.
- 2.—Arnica. Give origin, parts used and official preparations.
- 3.—Santonica. Galla. Catechu. Lycopodium. Lappa. Give habitat, part used and medical properties.
- 4.—Give official description of Acetanilid. Colocynth. Aloes.
- 5.—How many species of Cinchona Bark are there? How many Alkaloids of Cinchona have been discovered? Name the four most important.
- 6.—Give botanical name and synonym of Boneset. Ladies Slipper. Stramonium. Buckthorn. Cascara.
- 7.—Give botanical name and synonym of Bloodroot. American Poplar. Calamus. Couch Grass. Celery.
- 8.—Opium. Give official description; official preparations and their doses.
- 9.—Give origin, habitat, medical properties and parts used: Wormwood. Kino. Elecampane. Red Saunders. Pareira Brava.
- 10.—Identify drugs marked I to 10.

TOXICOLOGY.

- 1.—Name all the official preparations of opium, powdered opium and extract of opium, and give the maximum safe dose of each if used internally.
- 2.—(a) What do you understand by the terms: Toxicology; (b) Poison; (c) Antidote; (d) Emetic; (e) Corrosive.
- 3.—(a) Describe completely the treatment and antidote for poisoning by Strychnina; (b) Acidum arsenosum.
- 4.—Give the maximum safe dose for an adult of each of the following:
 - (a) Tinctura belladonnae foliorum; (b) Tinctura gelsemii; (c) Tinctura cannabis indicæ; (d) Tinctura digitalis; (e) Tinctura veratri viridis.
- 5.—Give Young's rule for doses for children; (b) Suppose the dose for an adult to be 60 grains, what would be the dose for a child 1, 2, 3, 4, 7, and 14 years old?
- 6.—(a) Give the treatment for poisoning by Oxalic Acid and its soluble salts; (b) Lead and its salts.
- 7.—Describe the toxic effects of each of the following: (a) Alcohol; (b) Coca; (c) Ergota; (d) Hyoscyamus; (e) Lobelia.
- 8.—(a) Name five emetics in order of importance; (b) Give the law regulating the sale of poisons.
- 9.—Give the medicinal action and physiological antidote of three drugs whose doses are one grain or less.
- 10.—(a) Give complete treatment and antidote for poisoning by Nux Vomica; (b) Carbolic Acid.

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Peanut Butter.—(F. P. G.) See this journal, June 15, 1899, page 807, and May 3, 1900, page 474.

Solution Peptonates of Iron and Manganese.—(C. A. H.) See this journal, October 12, last year, page 498.

Solution Peptonates of Iron and Manganese.—(C. —(W. M. L. W.) See this journal April 5, 1900, page 370.

Tasteless Castor Oil.—(H. and G.) See this journal, May 24, 1900, page 557. Some other formulas are given in the Era Formulary, page 269. (Formulas Nos. 3175-3177).

Lotion to Apply to the Face After Shaving.—(M. W. P.) Try the following: Tragacanth, 6 parts; warm water, 576 parts; witch hazel extract, 50 parts; alcohol, 24 parts; menthol, 1 part. Dissolve the tragacanth in the warm water and allow to stand until cold; then add the menthol dissolved in the alcohol and the extract of witch hazel. More of the extract of witch hazel may be added if desired. Other formulas may be found in previous volumes of the Era. Consult the indexes.

Munyon's Inhaler.—(L. M. M.) We do not know the formulas for the preparation of the acid solution and tablets used with "Munyon's Inhaler." In the apparatus known as the chloride of ammonium inhaler vapor of sal ammoniac or ammonium chloride is produced by the union of hydrochloric acid and ammonia at the moment they are withdrawn from the respective parts of the inhaler which contain them. Sometimes the nascent ammonium chloride is medicated by passing it through creosote water, bitter almond water or an oleo-balsamic mixture.

No Law Against It.—(B. E. M.) asks if there is any law to prevent one from putting up compound cathartic pills and selling them as "Smith's Liver Pills?"

No, there is no law which will prevent you from putting up any preparation to sell as a proprietary specialty. You can give your preparation or article any name you choose so long as the name chosen does not infringe upon that selected by another and the name thus chosen becomes your individual property. Many of the much advertised specialties on the market are said to be manufactured from well known formulas.

Handkerchief Extracts.—(M. W. P.) There are formulas and formulas for handkerchief extracts and you will find no single odor which will please everyone alike. However, we give some formulas, one of which may prove satisfactory.

Extract of Millefeurs.—Coumarin, 10 grains; oil of cinnamon, 2 drops; oil of rose, 3 drops; oil of neroli, 5 drops; oil of lemon, 15 drops; tincture of musk, 15 drops; tincture of benzoin, 20 drops; cologne spirit, 2 ounces.

New Mown Hay.—Extract of tonquin bean, 32 ounces; extract of geranium, 16 ounces; extract of orange flowers, 16 ounces; extract of rose, triple, 16 ounces; extract of jasmine, 16 ounces. Mix and filter.

White Heliotrope.—Coumarin, 16 grains; vanilla, 16 grains; heliotropin, 16 grains; essence of rose, from pomade, 1 ounce; essence of rose, triple, 1 ounce; oil of bitter almond, 6 drops; deodorized alcohol, 6 ounces.

Cologne.—Oil of lavender, $\frac{1}{2}$ ounce; oil of rosemary, $\frac{1}{2}$ ounce; oil of bergamot, 1 ounce; oil of lemon, 2 ounces; oil of cloves, $\frac{1}{2}$ dram; deodorized alcohol, 1 gallon.

Remedy for Warts.—(W. W. P.) (1) A writer in *Bull. de Thérap.* recommends an application consisting of corrosive sublimate, 1 part; and collodion, 30 parts. This remedy is stated to be more effective and convenient than any other heretofore used. The collodion is carefully applied to the warts once daily. (2) Chrysarobin, 40 grains; collodion, 3 drams. Mix and apply with a camel's hair pencil every day or two. (3) Powder for the Removal of Warts.—Salicylic acid, 5 parts; boracic acid, 15 parts; calomel, 30 parts. Mix and rub a small portion on the warts three times daily.

Dandruff Cure.—(D. L. A.) We cannot give the formula for the proprietary preparation, but we append several additional formulas which are typical of their class: (1) Chloral hydrate, 60 grains; tincture of cantharides, 1 fl. dram; pilocarpine muriate, 4 grains; bay rum, enough to make 16 fl. ounces. (2) Resorcin, 60 grains; glycerin, 60 minims; alcohol, 3 fl. ounces; bay rum, 3 fl. ounces. (3) Coumarin, 1 grain; essence of musk, 10 minims; benzoic acid, 10 grains; oilbanum, 10 grains; oil of lavender, 30 minims; jamrline pomade, 2 drams; rectified spirit, 10 ounces. Mix all together, shake well two or three times a day, and in four days filter.

Copaiba and Cubeb Paste.—(K. P. S., Jr.) Here are several formulas taken from our files: (1) Powdered cubeb, 3 ounces; copaiba, $1\frac{1}{2}$ ounces; alum, 2 drams; sugar, 1 ounce; magnesia, $1\frac{1}{2}$ drams; oil of wintergreen, 1 dram. Mix the copaiba with the magnesia as in the preparation of copaiba mass, then add the other ingredients. (2) Oil of sandalwood, 80 minims; oil of cubeb, 20 minims; balsam of copaiba, 1 dram; magnesia, $\frac{1}{2}$ dram; powdered buchu, 240 grains; powdered extract of licorice, 240 grains; glycerin, q. s. to make a paste. Dose, one to two teaspoonfuls. (3) Oil of sandalwood, 1 dram; oil of copaiba, 3 drams; white turpentine, 4 drams; sugar, 1 ounce; gum arabic, 1 ounce. Mix thoroughly.

Sticky Fly Paper.—(B. E. M.) The successful manufacture of sticky fly paper is as much due to practical experience as it is to the formulas employed. We give some of the latter which have been published, but the details of manufacture must be worked out by experiment. (1) Resin, 9 parts; rape seed oil, 4 parts. Melt the resin, add the rape seed oil and apply to one side of the paper, previously cut to the desired size. (2) Resin, 8 parts; turpentine, 4 parts; rape seed oil, 4 parts; honey, $\frac{1}{2}$ part. (3) Resin, 1 pound; molasses, $3\frac{1}{2}$ ounces; linseed oil, $3\frac{1}{2}$ ounces. Boil until thick enough. (4) Another mixture which is spread warm upon unsized paper is castor oil, 8 ounces; resin, 24 ounces; sugar, 4 ounces.

VALUATION OF INSECT POWDER.—F. Dietze makes a comparison of the several methods of valuation of insect powder, the most plausible of which are based on the amount, appearance and odor of the extract afforded by percolation with ether, chloroform or petroleum spirit, boiling under 35°C. The percolate from pure insect powder, when such menstruum is employed, is bright yellow, and possesses the odor peculiar to the genuine powder. The author urges that, in addition, physiological tests should be tried on the insects themselves. (*Pharm. Zeit., Amer. Jour. Pharm.*).

THE LEADING MARKET FOR WAX in the future will probably be Hamburg, judging by the continual development in the business at that port. A further increase of 10 per cent. is reported to have taken place last year in the importations of beeswax, which reached a total of 1,376,000 kilos, as against 1,262,300 kilos in 1898, the chief sources of supply being the West Indies, South America, Morocco and Madagascar. There was a considerable rise in the prices of Garamouba wax, in consequence of the limited supplies, the quantity arriving at Hamburg last year only amounting to 305,000 kilos, about half the amount of the 1898 import. Transactions in Japan wax are said to have been limited, the trade becoming depressed on account of the unsatisfactory quality of the article. (*Pharm. Jour.*).

THE PEPPERMINT INDUSTRY.*

By LEO ELIEL.

The drainage of the Kankakee swamps opened a large area for cultivation. Its rich soil, fertilized by the deposits of decaying vegetation of many centuries, promises to become in the near future the most productive district in the state. Among the industries introduced in this section, that of raising peppermint and the distillation of its oil interests us more directly. In this country there are said to be nearly 700 acres under cultivation for this purpose.

The cultivation of peppermint dates back to about 1750, at Mitcham, in England, but the total area under cultivation when at its best was only about 500 acres. American competition, however, as well as improved methods in the manner of distillation, have reduced this area to about 200 acres in 1898.

According to A. M. Todd, (Proceedings A. Ph. A., 1886), the first oil of peppermint distilled in the United States was by a Mr. Burnet in 1816 in the County of Wayne, New York, who collected enough wild plants to produce 40 ounces. Some 20 years later cultivation of the plant was begun in St. Joseph County, Michigan, a distillery being established two miles north of White Pigeon. This was a very crude affair, and consisted of a copper kettle, in which the plants were immersed under water, direct heat being applied by a furnace and an ordinary condensing worm connected from the top of the kettle. Some ten years later a more improved system of distillation was adopted, which, with some further changes for rapidly discharging the receiving vats, is now in general use.

This change was the large wooden vats to which live steam is conveyed by a pipe entering at the bottom, the kettle which had served as a still now being displaced by a boiler to generate the steam. Distillation is more perfect, scorching is avoided, and, in consequence, no empyreumatic products are formed. It also distills with greater rapidity and economy. The vats, as a rule, have a capacity of from 700 to 1,000 ounces, and will deliver from 75 to 100 ounces of oil during the day's run. Some of the more modern stills are constructed with double vats, distilling from one, while the other is being either charged or discharged. The boiler also runs a pump, the water being carried up and allowed to trickle over the condensing pipes. The distillate is carried into a receiving vessel so constructed that the oil can be skimmed off while the water discharges through the water pipe.

Cultivation.—In early spring the ground is plowed and furrows marked out two or three feet apart, in which the plants and runners, which have multiplied from the setting of the previous year, are placed, one acre furnishing sufficient to plant 10 acres of ground. The roots are from one-eighth to one-quarter of an inch in diameter and one to three feet in length, when in good condition. The workmen, in planting, carry the roots in bags over their shoulders and place them in rows, so there are one or two roots at every point of the row. While planting the roots with their hands, they cover them at the same time with their feet, and the queer motion of the workmen is an interesting sight. An experienced workman will plant an acre a day if the ground is in good conditions. Plants will appear above ground about 15 days after setting. They are cultivated until July, when, if the season has been fair, the plants have thrown out enough runners to make further cultivation difficult and unnecessary. The time for distillation is when the plant is in full bloom. This is during the latter part of August or early in September. The second and third years' growth matures earlier. Some seasons a second crop is obtained.

The plants are cut and allowed to wilt and partially dry before being drawn to the still. The average yield from green plants is stated to be four-tenths of 1 per cent, of oil. The yield of oil varies very much from the same field, and seems to depend on atmospheric conditions, as

mint cut after a warm and humid night will yield a much greater percentage than if cut after a cool and dry night. The author displayed varieties of mint grown in this vicinity, and was followed by Philip Holler, one of the principal mint cultivators of the country, who gave a short and interesting practical talk on the subject.

SASSY BARK AS AN ORDEAL POISON.*

By DR. LASNET.

Among the tribes that employ the bark of *Erythrophloeum guineense* in trials by ordeal are the Balantes, who inhabit the West Coast of Africa. In preparing the poison the Balantes finely powder the bark, add to it powdered glass and the dried powdered viscera of the victims of the preceding trial. It is formed into a paste with water when required for use, the dose being two spoonfuls. Formerly, the Diola tribe made a specialty of the manufacture, but since the French authorities at Casamansa have forbidden trial by ordeal the Balantes have been obliged to make the poison themselves. The ordeal is presided over by the chief of another tribe, a Mandingoe, Diola or Mandiogo, whose duty it is to see that it is properly carried out, to prevent fraud, and to receive from each person undergoing the ordeal a fee of one or two francs, payable in cash or in kind—e. g., in rice, chickens or goats; he also remunerates the preparer of the poison and the persons who assist in carrying out the details of the ceremony.

When one of the Balantes is accused of crime, say, of witchcraft, he must individually undergo the trial; once suspected he is protected no longer by the ties of blood or friendship; nobody hesitates to accuse him, since even the father denounces the son and the husband the wife. The chiefs and the fetich make the decision, and no one can go back on the judgment of the ordeal. After troubled years of war, epidemics and famine, when sorcerers are supposed to have increased in numbers, it is usual for the Balantes to collectively take the ordeal, enduring it for days or even weeks. This is done with a view of destroying any sorcerers from among them, so that the whole nation may be purified. The chiefs meet by moonlight in a forest and choose a clearing near a stream. A day is devoted to the ceremony, and the neighboring villages, being warned, take the poison in turn, which is arranged by lot, according to the length of the pieces of wood that are drawn for.

Those who have taken the poison are stripped of their clothes by their parents and friends, who conduct them to the spring and make them drink quantities of water, the lookers-on seeing that no fraud is practised, nor antidote administered. The innocent are judged to be those who vomit freely and recover; these are led home amid loud shouts of rejoicing and singing. The others who do not vomit die in from one to four hours from heart failure. They are considered to have been condemned, their corpses are thrown into the woods and left to the wild beasts and birds of prey, and their property is confiscated and divided among the great men of the tribe.

No one can avoid the ordeal; women, old men, sucklings, all must take the poison; those who refused would be delivered up by their relatives and probably burnt alive. Indeed, the fanaticism of these negroes is such that they court the ordeal and quarrel among themselves for the first dose. The Balantes take the poison often, five six times or more; as a rule they miss no opportunity, and make several days' journey out of their way in order to submit to the ordeal, being held in greater esteem in proportion to the number of times they have undergone it.

Were it not for the high birth rate in the tribe the Balantes would long ago have been exterminated by this practice, since at each ordeal hundreds of corpses are thrown into the woods.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of
Era Readers.

FOREIGN.

China.

An edict emanating from Peking, and authorizing Li Hung Chang to negotiate with the Powers for peace, has, it is reported from Shanghai, been received there.

The correspondents at Yokohama again send the statement that a Russo-Japanese force is moving on Peking from the North. The movements and number of this force are, it is further asserted, kept secret in order to prevent accurate intelligence from reaching Peking. The French Consul at Shanghai says that three thousand Annamite troops will arrive there this week for the protection of the French settlement.

The Chinese merchants of Shanghai have petitioned the foreign consuls there to prevent the landing of troops, declaring that it will create a painful panic among the Chinese.

Field Marshall von Waldersee, of the German army, has been chosen to command the allied forces in China. He is now in Germany and will not reach China for several weeks.

The ministers in Peking sent out messages to their Governments last week, saying that the Chinese were still attacking the legations with rifle fire, and that the Chinese Government had offered to escort them safely to Tien-Tsin. The ministers have refused this offer and say that if they accepted it they would certainly be killed.

The allied forces, 16,000 strong, captured Pei-Tsang and Yan-Tsun last week. They intend to use the latter place as a base for an advance of 30,000 men this week.

The Russian troops are getting the upper hand of the Chinese in Manchuria and along the Amur river. The Russians have taken the strong and important towns of New-Chwang and Kharbin. A force of Cossacks which was sent by the Russians to clear the Chinese from the right bank of the Aigun, captured a Chinese general, five officers and fifty-eight soldiers.

It is believed in Berlin that Germany will send another expedition, bringing the total German contingent up to 30,000 by the middle of October.

Expressions of opinions by high officials make it clear that the United States, England, Japan and Germany are all opposed to any partitioning of China.

Battery O, with its seven-inch siege guns, the largest in the army, and 175 men started from Fort Riley, Kansas, for San Francisco last week on hurry orders to proceed to China.

South Africa.

Lord Roberts telegraphs that after ten days resistance, the British garrison on the Elands river has evidently been captured.

General Macdonald has captured Harrismith.

It is rumored at Lorenzo Marquez that President Steyn has committed suicide.

A plot in Pretoria to kill the principal British officers in the city and capture Lord Roberts was discovered last week, and the principal conspirators were arrested.

Lord Methuen has intercepted Gen. DeWet, and a battle or a surrender is expected.

Other Foreign News.

Baron Russell, of Killowen, Lord Chief Justice of England, died on Friday of last week. He was the first Catholic to hold that office.

The treaty between the Republics of Santo Domingo and Hayti having expired, Hayti now requires all Dominican products to pay on importation the duty imposed on articles from other countries.

Troops and Kurds under Ali Pacha massacred two hundred Armenians in the District of Sassun last week.

Conditions in the famine provinces of India have improved in the last few days, more rain falling and sowing being carried on.

Wilhelm Liebknecht, the famous Socialist speaker and writer, died in Berlin last week.

DOMESTIC.

Politics.

Mr. Bryan, in his speech at Indianapolis last week, accepting the Presidential nomination, said that, if elected, he would at once convene a special session of Congress and ask it to pass a resolution declaring it the intention of the United States to recognize the independence of the Philippines as soon as a stable

government was established, and to extend the Monroe doctrine to protect the young nation from foreign interference.

As a result of the election in Alabama last week, William J. Samford (Democrat) was chosen Governor, and an almost unanimously Democratic legislature was elected. One of the first acts of the new legislature will be the calling of a constitutional convention to provide for limiting the suffrage, as is done in other southern states, barring the negroes from the polls.

Returns from the primary elections throughout Pennsylvania show that the power of M. S. Quay, the Republican "boss," is broken, and that the next Legislature will be hostile to him. He will undoubtedly fail to be re-elected to the Senate.

Ex-Congressman Charles A. Towne has declined the nomination for Vice-President made by the Populist National Convention at Sioux Falls.

Other Domestic News.

W. B. Brooks was sentenced to the penitentiary for life in Texas last week for taking a principal part in a lynching in 1898.

Representatives of the United States Bureau of Immigration are in Montreal to confer with the various railroads for the purpose of having immigrants inspected in future in accordance with the United States law. The railroads maintain that the Canadian system is much stricter than that in the United States.

The Wisconsin Republicans have nominated ex-congressman Robert M. La Follette for Governor.

The India Famine Relief Fund, contributed to by persons all over the country, passed the \$200,000 mark last week.

Half of the British war loan of \$50,000,000 was subscribed by American capitalists. This will replenish the gold in the Bank of England, which is at the lowest point in years.

Fifty cases of yellow fever are now under treatment in Havana, and the disease is on the increase in Pinar del Rio.

Representatives of the various textile workers' unions, including the loom fixers, spinners and carders, met in Boston last week and took preliminary steps for the organization of the American Federation of Textile Operatives.

The count of the population of Buffalo, just completed at the census office, is 352,219. The population in 1890 was 255,664. The increase in ten years is 37.77 per cent. The population of Providence, Rhode Island, according to the recent census, is 175,597. In 1890 the population was 132,146. The increase in ten years is 32.88 per cent.

The Japanese Foreign Office announces that the Government of Japan has prohibited all emigration of Japanese laborers to the United States and Canada.

DETERMINATION OF FUSEL OIL.—A new method described for the determination of fusel oil in distilled spirits, is given by E. Beckmann and H. Brüggemann. (Phar. Cent., Ph. Jr.) Calcium chloride (fused, 30 Gm. is mixed with 50 C.c. of the spirit; methyl and ethyl alcohol combine with the calcium chloride, and the amyl alcohol is salted out. The mixture is then shaken out with carbon tetrachloride to remove the amyl alcohol, washed once with water and the CCl_4 extract dried with sodium sulphate (dried). A current of nitrous acid obtained from sodium nitrate is then passed through the CCl_4 solution and any excess of this gas removed by a current of carbonic acid gas. The amount of amyl nitrite thus obtained is then determined by the amount of nitric oxide liberated in a Schulze-Tiemann apparatus, by the action of a solution of ferrous chloride in hydrochloric acid. The equivalent of amyl alcohol is obtained by multiplying the number of cubic centimetres of nitric oxide gas obtained by 0.06294. Another method described by F. Adam, is based on the conversion of the alcohol into its acetic ester by the action of acetyl chloride in chloroform solution. Ten to 25 c.c. of a 5 to 10 per cent. solution of acetyl chloride is added to the spirit to be tested, allowed to stand for two hours, and the hydrochloric acid set free titrated with normal alkali. Meanwhile about 100 C.c. water is shaken with the same volume of acetyl chloride solution and the hydrochloric and acetic acids liberated are titrated. The number of C.c. of alkali required for aqueous solution, minus number of C.c. required by the alcohol solution $\times 0.988$ = weight of amyl alcohol present in the spirit.

The following equations represent the reactions on which this method is based.

THE DRUG NEWS.

New York and Vicinity.

DOWN BY THE WAVE SWEEP SHORE

Unlike the ordinary vacationist, the "medicine men" of New York have a unique as well as pleasurable way of spending their annual outings, which are invariably to the sea shores of placid New Jersey. One who enjoys the surf not only poetically but physically, reports his observations of what some of them are doing this season as follows:

Brent Good.—Watching the chips come in; Brent never tires of the surf.

Chas. R. Fletcher.—Watching the clams bake at Pleasure Bay. Charley is never so happy as when entertaining his friends.

E. G. Wells.—Watching his wife drive a spanking pair of bays; Ed. could not not enjoy life more than when behind high steppers.

H. B. Harding.—Watching his daughter on her saddle-horse, Olivett. H. B. is always in his glory when he plunges into the surf after a hot day in the city, and he's a regular duck in the brine.

Harry Good.—Watching the horse-show; Harry is awfully elated over the success of his horses in the ring.

Eben Jayne.—Watching his flowers grow. Mr. Jayne fairly dotes on horticulture, and his delight is protecting his choice plants from stormy blasts.

S. Britton.—Watching the foaming billows and wondering when the whole world will effervesce.

The missing this year are dear old Dr. Humphreys, now of precious memory and Frank Richardson and his partner, Doc. Whitecomb, who are doing the Paris Exposition.

EARLY CLOSING MOVEMENT AGITATED AGAIN.

There is more work to be done by the committee on early closing composed of C. O. Bigelow, Charles A. Osmun and M. F. Bender, whose efforts in the district from Bleeker to Fourteenth streets and from Broadway to the North River, were published in these columns several weeks ago. It is said that another united effort on the part of the committee will be needed to get the druggists together in the agreement once more, as a number have fallen by the wayside and fractured their pledge. When the petitioners worked in the district before, they secured the consent of all the druggists but two or three. One of the men who said he would close has a store on Sixth avenue. As soon as the agreement became operative, June 1, a sign appeared in his window announcing that his store would be open from seven o'clock in the morning until midnight. As this was contrary to the agreement, the committee waited on the druggist and he was informed of his pledge. He agreed to consider the matter and a few days later sent word to the committee that he would not stand by his agreement, but would keep open as announced by the sign in the window. A number of others have also broken the agreement and will be visited again by the committee.

CONCERN OVER TELEPHONE QUESTION.

Much anxiety exists among the druggists who have been laboring to secure relief from the alleged abuse heaped on them by the New York Telephone Company over the story which appeared in the daily papers last week to the effect that the New York Company had increased its capital and the appearance of the name of T. T. Eckert, the head of the Knickerbocker Telephone Company in the list of the Board of Directors. It is hinted that the Bell Company and the Knickerbocker Company have combined, and if this be so there is small chance of the druggist getting any better than the present telephone service and surely no increase in the

percentage allowed. It is possible the matter will be investigated at an early date.

DRUGGIST NEGLECTS TO DECLARE GOODS.

Hugo Rosenthal, druggist of 101 Second avenue, returned recently from Europe on the Deutschland, and he brought with him, among other things, four trunks, in which were contained twenty pounds of phenacetine, two pounds of sulphonal and two pounds of trional, also prohibited rubber goods. When the trunks arrived on the dock, Special Employee W. H. Theobald, of the Collector's office, seized them. Rosenthal was arrested, taken before U. S. Commissioner Russ, Hoboken, and placed under \$3,000 bail. His examination was set down for August 21st at two o'clock. Mr. Rosenthal said he had no intention of smuggling the goods into the country, but had failed to declare them simply because he was ignorant of the law. He said the goods were all for his own use.

MORE ABOUT PHENACETINE.

No less an authority than Col. Dudley F. Phelps, chief of the law division of the Custom House, makes the statement that he has absolute proof that Henry Bogart, who is said to have been associated with Alfred R. Goslin, in importing phenacetine to this country, is the prime mover in the numerous deals. Bogart, according to Col. Phelps, probably knew he was being watched for when the goods were being taken from Goslin's West End Avenue House, he used the elevated road and a Hansom Cab as means of transportation to elude any detectives who might have been watching.

Will Not Accept Being Divorced.

Mrs. Lizzie Dubbs, wife of Howard Dubbs, a druggist at Atlantic City, N. J., created a scene in the Chancery Court in Trenton, N. J. last week, when she was informed a divorce had been granted against her to her husband on the grounds of desertion. Mrs. Dubbs was wild with excitement and could hardly be quieted. She said she would endeavor to have the decree set aside. The couple were married in Atlantic City, N. J. in 1894, after a ten days courtship.

Thieves Secure Big Haul of Opium.

About 1,100 pounds of a special high test opium, consigned to the firm of Dodge and Olcott, and lying in one of the bonded warehouses of Lawrence Son and Gerrish, was stolen by thieves during Friday morning, August 12. The value of the drug duty paid would amount to nearly \$4,000. The police are working on the case, but the robbers were so clever in covering up their tracks that as yet no positive clue to their identity has been revealed.

Comptroller Holds up Chemist's Bill.

Comptroller Coler has refused to audit the bill of Prof. R. A. Witthaus, the analytical chemist engaged in the Molinex case, on the grounds that it is exorbitant. The bill was for \$18,500 and included a charge of \$500 for "Analysis of a bottle of bromo-seltzer for comparison" and the same amount for a similar analysis of a Kutnow's powder, and \$150 a day for attendance as expert witness.

Wasn't a Druggist After All.

According to the daily papers last week William Lee, a city marshal, of 906 Second avenue assaulted Rudolph Goldstein to whose drug store at 1562 First avenue he had gone to levy on goods. As far as the druggist part of it goes the item was wrong. At the address given there is a dry goods store and the assault was made on its proprietor, Rudolph Goldsand.

NOTES.

—The Manhattan Pharmaceutical Association meets Monday evening, August 20, when some interesting matters will be presented for discussion. The committee on grievances, the telephone committee and others have reports to make, while there will be several applications for membership. The society is growing rapidly and this is attributed to the resolution adopted some time ago that each member constitute himself a committee of one on membership.

—G. R. Baker, one of the foremost druggists of Chicago and who owns three stores there, was in the city last week. Mr. Baker has recently fitted out one of his stores with what is said to be the most beautiful soda fountain in Chicago. He is a member of the Druggists' Bowling Team of Chicago. He is now in Atlantic City, where he will remain for a week.

—Doctor George C. Dickman, one of the members of the faculty of the New York College of Pharmacy, a member of the Manhattan Pharmaceutical Society and German Apothecaries Society, and popular with the trade, was married to Miss Emma Lillian Cheney, daughter of Mr. and Mrs. Ralph Scott Cheney, August 8. The ceremony took place in this city.

—Mr. Sara, junior member of the firm of the V. da Jose Sara e Filho, of Havana, Cuba, was in the city last week. Mr. Sara, with Mrs. Sara, was on his vacation, which is to be spent at the watering places along the Atlantic Coast. The Sara firm is the largest drug house of Spanish-American make-up in the world.

—Among the visitors to the trade last week were: Albert J. Lydehn, druggist, Moline, Ill.; Mr. Guernsey, of Neal & Guernsey, Southington, Conn.; T. E. Peck, manufacturing chemist, Bridgeport, Conn.; George F. Brown, druggist, Rahway, N. J. Mr. Brown left for St. Johns on his vacation.

—During the current month George E. Schweinfurth had a "house cleaning" in his large store. Everything in the place has been overhauled and a great many improvements made. New marble flooring has been placed and the interior of the store touched up with white and gold.

—The Sunflower Remedy Company has been chartered under the laws of New York State to do a patent medicine business in this city. The capital stock is \$25,000 and the directors are Henry H. Sherin and William H. Baker, of White Plains, N. Y., and Clarence E. Sherin, of this city.

—Members of the Alumni Association of the Brooklyn College of Pharmacy are working earnestly toward an outing which they have decided they will hold at Woodlawn Park, corner of 22d avenue and 45th street, South Brooklyn, September 13th.

—Many improvements are being made to the Rieger Pharmacy, Ira Allman, proprietor, corner 155th street and Amsterdam avenue. The changes include metal ceiling, tile flooring, new soda fixtures and an all-round cleaning and "fixing up."

—Mrs. Rosie Levy, proprietor of the F. E. Roen and Company drug store, at 521 Sixth avenue, and her daughter have arrived home after a pleasant European trip of several weeks.

—The exports of drugs, chemicals, etc. from this port for the week ending August 7, amounted to \$92,078 which is about fifty per cent. above what they have been for the last few weeks.

—William M. Zempliner has recently opened a store at 12d street and Hamilton Place. He was formerly clerk in the store of B. Metz, at Eighth avenue and Forty-second street.

—Fidel Guillemerty, the leading druggist of Porto Rico, who has a large store at San Juan, was in the city last week. He left early this week for a visit to the Paris Exposition.

—C. O. Bigelow has been having a good time this year. After spending a vacation at Naragansett Pier, he went on another outing in Jersey and has but recently returned.

—Daniel Merritt, druggist at Fishkill, with his wife called on friends in the city last week. They were on their way to Maine for several weeks rest.

—President Reuben R. Smith of the Manhattan Phar-

EMPIRE STATE DRUG CO. DISPLAY.

H. B. SMITH, BROOKLYN, N. Y.

macetual Association is numbered with the "tired New Yorkers and others" at Elmhurst, N. J.

—George Wiley Holmes, proprietor of the Colonial Pharmacy at 65th streets and Columbus avenue, spent his vacation this year at Atlantic City.

—Eugene Robidaux has resigned his position with Dr. A. M. Heron at Hotel Columbia Pharmacy, Belmar, N. J. and will go on the stage this fall.

—Emil Levi, New York representative of C. F. Boehringer & Soehne, is away on his vacation, which will be spent in the Adirondacks this year.

—Fred Budelman, bookkeeper in the local branch of Parke, Davis & Co., is receiving congratulations over the arrival of a boy in his household.

—Dudley T. Larimore, manager of Haas' Pharmacy, 39th street and Fifth avenue, is back after three weeks vacation in the Catskills.

—John C. Denner, at 160th street and Columbus avenue, recently returned from Belmar, N. J., and is now at Hempstead, L. I.

—C. L. Nason, druggist at Twenty-ninth street and Lexington avenue, with his wife, is enjoying a few weeks' at Newport.

—Col. J. W. George, with Schieffelin & Co., returned last Thursday from a two weeks' vacation at Block Island.

—Oscar M. Reid, of McKesson & Robbins credit department, is spending his vacation at Ulsterville, Ulster Co., N. Y.

—R. J. Reid, treasurer of Reid, Yeomans and Cubit, 140 Nassau street, has gone to Canada to spend his vacation.

—M. F. Bender, druggist at Fourteenth street and Ninth avenue, is taking several "days off" at Syracuse.

—The members of the Apothecaries Bicycle Club enjoyed a run last Thursday to Grant City, Staten Island.

—John W. Ferrier, of the Longacre Pharmacy, has recently returned from the Navesink Highlands, N. J.

—G. N. Lyons, druggist on Eighth avenue, accompanied by his family is spending his vacation at Cairo, N. Y.

—Wm. H. Ebbitt, city salesman for Schieffelin & Co., is searching for rest in the quiet of the Adirondacks.

—T. S. Armstrong, druggist at Plainfield, N. J., and family are at Patchogue, L. I., for a few weeks.

—James Reid has recently accepted a position with J. F. Comerford, Columbus avenue and 105th street.

—Mr. Passmore, manager of Olliffe's Pharmacy on the Bowery, is in the Catskills with his family.

—Charles H. Chumot, Twenty-third street and Eighth avenue with his wife, is at Nyack, N. Y.

—Albert Addett, of Plummer's Pharmacy, 405 Fifth avenue, is resting at Asbury Park.

—T. J. Galligan, with F. J. O'Rourke, druggist at Waite stone, L. I., has resigned.

—Druggist H. A. Cassebeer and family, of First avenue, are traveling in Europe.

—L. F. Roediger, druggist at 63 Division street is in the Adirondack mountains.

IN AND ABOUT BOSTON.

Boston Druggists Suffer from a Small Flood.

Boston, August 11.—Owing to the breaking of a thirty-eight inch water main on Tremont street about midnight on August 8, the whole district soon was flooded. The break was opposite Paul Klein's pharmacy in the Hotel Pelham, across from the Touraine and his cellars were just enough removed, luckily, to escape the flood. The drug store of W. B. Hunt & Co., as far away as Washington and Eliot streets, and this is quite a distance—suffered, for the water poured into the cellar of that place as it also did into that of Parker's drug store at the corner of Tremont and Eliot streets. It is feared that the losses, which now are being estimated, will prove to be considerable all around.

NOTES.

—On Saturday afternoons during the summer time, just as in the winter months, the well-known and getting-to-be-famous "Hammer Club" meets regularly for dinner, served quite informally, and the members, connected with leading drug houses or allied trades, have a pleasant sort of reunion and gossip over trade, business matters, the condition, outlook and like matters. The attendance varies from as low as ten up to twenty-five or more. Charles Williams, who travels for the Los Angeles Wine Company, makes an excellent presiding officer, while Charles H. Perry, of the Eastern Drug Company forces, is vice-president and Thomas F. Mullen, who is popularly known as a salesman for Carter, Carter, & Meigs, serves in the capacity of secretary. Milton Murray, of the Murray Company, is the treasurer. Their rendezvous for dining is the Crawford House.

—Charles Thompson, a leading salesman for Carter, Carter & Meigs, this city, has been enjoying his annual vacation "Way Down East." Thomas F. Mullen, spends the middle two weeks of August at Bar Harbor, his wife accompanying him. It is pleasantly said of "Tom" that few of his customers can resist the "genial smile" of his, when he is offering them goods. George E. Berry, of the laboratory department at Carter's is taking a day or two now and then during the warm weather, going at such times as he can best get away, and in that way he is bit by bit getting his vacation.

—Winslow Macmillan, of Macmillan Bros., druggists at East Gloucester, recently had made to order, carrying out special designs, a fine bicycle. This he left temporarily in front of his drug store and a customer rushed in and said a man had stolen the wheel, riding off on it. Realizing that he had gone in the direction of Rockport, the police were notified and an officer put on the chase. Just as an officer reached the top of an intervening hill he met the thief panting up from the opposite side and arrested him red-handed.

—C. Edward Fransworth, of Lynn, is president and William S. Farrington of the same city treasurer, of the Columbia Remedy and Chemical Company, just organized at Portland, Me., for the purpose of making and marketing a medicinal compound to be known as "Geremene." The capital stock is to be \$500,000 of which \$30 has been paid in.

—Samuel T. Jeffers, Jr., the Roslindale pharmacist, is having a month's vacation and entire change of scene at his summer home, Lamaine Beach, Me. E. T. C. Eddy, for several years with the Theo. Metcalf Company on Tremont street, is doing the honors in the prescription department at Mr. Jeffers's store, during the owner's absence.

—F. E. Bickford, whose pharmacy at Lynn is at the corner of Exchange and Union streets, has gone off to Maine to enjoy a much-needed rest. Meanwhile, J. H. Hart, who formerly conducted his own drug store in Lynn, is taking Mr. Bickford's place in the management of his store.

—Albert W. May, who formerly was a clerk at Emerson's pharmacy, in North Andover, is now engaged in a similar capacity at a drug store in Roxbury. He lately has visited his former employer and friends in North Lawrence.

—C. I. Hood, of Lowell, is again at the Oceanside Hotel at beautiful Magnolia, the "Newport of Massachusetts,"

where he spent some time last summer. With him are Mrs. Hood and Miss Wilder and H. H. Wilder.

—L. K. Harrington has been given a position at Green's new drug store at Springfield and already has begun his duties at that place. He formerly was employed in a Worcester pharmacy.

—This week's exports from the Port of Boston include among other things, drugs and chemicals, \$12,193; hops, \$712; india rubber manufacturers, \$178; tobacco, \$1,820; spirits, \$10,668.

—E. O. Goldthwait, another Lynn druggist, is having a change of scene and relief from work temporarily. He is enjoying the beauty of the Thousand Islands region.

—On the charge of illegal liquor selling, H. G. Ellis, a clerk at Fugere & Co.'s drug store at Spencer, has been fined \$50 in the court in that town.

—Roland Bosson, one of the clerks at F. E. Berry's pharmacy at Beverly, is now having his annual vacation, with his family at Chebacco Lake.

PHILADELPHIA.

Philadelphia, August 11, 1900.

—There is a beautiful little pharmacy in the south west corner of the first floor or ticket office of Broad Street Station. It opens on Market street, and, scarcely more than an entry, runs about fifty feet into the ticket office. There is a big "L" shaped highly decorated soda fountain in an angle of the inside end of the store. These days the whole station is fragrant with the odors of mint and lemon. In a straight line, the soda counter would probably measure about thirty feet. It is impossible to count the number of immaculate, lined-coated soda sizzlers at work, so impenetrable is the swarm of fair "main line" and other equally fair commuters awaiting the cooling beverage. The glum New York division ticket agent, looks in jealousy at J. M. Stoevers' cashier as she rakes in the checks. It reminds him of the days when he used scoop the coin from the 7 A. M. one dollar excursions to Atlantic City when he held the office at the ferry-slip. Mr. Stoevers enjoys the advantage of an exceptional location for a soda bar, but he leaves no stone unturned to keep his flavors up to swellest standard, to serve it by professionals, and to surround himself with the most artistic appointments. —In the vain search for news this week, your correspondent stumbled across a city drug salesman, who propounded a question which some of the white-ribbon brothers of trade may be able to answer. It is this—"Why is there such a noticeable increase of drunkenness among the clerking force in the city pharmacies, many of the young men taking to jamaica ginger and other triple X compounds in their desire for unconsciousness?"

—H. Kindig, of Pfroom and Kindig streets, has evolved a satisfactory way of keeping up his end in this summer's plethora of fish-stories. His catch of course is all contracted for by the wholesalers of Dock street market. Mr. Kindig however, merely takes with him to the sea a roll of special size tracing paper and makes an outline copy of anything abnormal, for exhibition to his friends.

—R. Calhoun, Forty-sixth street and Lancaster avenue, had a costly experience with a vindictive female last week. He very properly refused to sell the lady a certain drug prohibited by the State law. The revengeful individual squared herself with Mr. Calhoun by smashing one of his handsome French-plate store mirrors.

—Dan Harris, Fortieth street and Girard avenue, the able chairman of the entertainment committee of the Philadelphia Association of Retail Druggists, has his family at Cape May for the summer. Mr. Harris manages to spend a few days each week with them.

—C. Willis, who makes no claim to being a patented food infant, but who manages to keep in the best of health attending to the druggists wants which are supplied by Messrs. J. M. Maris & Co., has relinquished work for a two week's fishing outing.

—Nelson Fry, Nineteenth and Arch streets, has rented R. C. Cadmus's just vacated store at Twentieth and Mt. Vernon streets, and will therein open a branch. Mr. Cadmus, as mentioned recently, is opening at Twentieth and Spring Garden Streets.

—Frank Morse, formerly of Eleventh and South streets, is out on a still hunt for a good location and established

business, intending to enter the lists again and to add leaves to his already large and unwieldy roll.

—Robert Doake, of many stores and much real estate, is negotiating for the sale of a farm in New Jersey and intends to invest the proceeds in another pharmacy. This will make the third.

—F. W. E. Stedem, Broad street and Fairmount avenue, has established his family in cottage life at Wild Wood, N. J., and spends considerable of his time at that popular resort.

—J. Frank Kilgus, of the drug department, and Geo. B. Miller, of the sundry department of the Smith, Kline & French Co., are putting in their vakes at Atlantic City.

—John J. Parker, East Norris and McAnolis streets, left August 2 for a two weeks vacation at Hotel Stratford, Ocean city, N. J., in company with his wife and son.

—Jesse W. Pechlin, of Thirteenth street and Columbia avenue, is away on a trip to the Great Lakes, the Yellowstone and all the other big wonders of the far West.

—Lawson Crothers, of Twentieth street and Fairmount avenue, and party of friends have left town for a few days fish at Mr. Crothers' homestead, Cecil Point, Md.

—William L. Dorsey, one of P. D. & Co.'s hard-workers in Philadelphia, is booked for a pleasure voyage through the heart of Maryland.

—E. Bender, manager of the surgical department of L. C. Funk's Lancaster avenue pharmacy, is sojourning at Atlantic City.

—J. R. Elfreth, of Twelfth street and Columbia avenue, has installed his family in a cottage at Atlantic City for the summer.

—C. Winfred Dare, of C. F. Dare and Sons, Bridgeton, N. J., has just returned from a trip through the New England states.

—John Maier, 2631 Kensington avenue, has decided to forsake trade for a while, and to enjoy a well-earned vacation.

—John B. Scheuhing, of Sixth and McKean streets has opened a new store at Twenty-ninth and Huntingdon.

—Mr. Bowman, head clerk for L. R. Hoeffcker, writes that he is having a great time at Ocean City, N. J.

—Mr. and Mrs. Charles Leedom, 1403 Filbert street, are spending the summer at Brown's Mills, N. J.

BALTIMORE.

The New A. Ph. A. Section.

Baltimore, August 11.—A deep and growing interest is being manifested in the new section on practical pharmacy and dispensing created by the American Pharmaceutical Association. Expressions of opinion setting forth the utility of the section are numerous and the scope of the work to be undertaken by the division are being freely discussed. Those who have given the matter much thought and close study incline to the view that an increase in the membership of the A. Ph. A. by accessions from the ranks of the retail druggists is one of the most desirable ends to be attained, and they maintain that the energies of the organization should be asserted in two or three directions—by developing the new section on practical pharmacy and dispensing, by giving more time to the consideration of commercial problems and by looking after pharmacy legislation. In order that the druggists throughout the country may secure such practical benefits as to render the advantages and the effectiveness of the A. Ph. A. plainly apparent. The purposes of the N. A. R. D., it is felt, are rather temporary than permanent. With the attainment of regulations governing the sale of patent and proprietary medicines, and the elimination of price cutting the chief objects of the association would be accomplished. The belief prevails among prominent members of the A. Ph. A. that if this body will recognize the retailer and the questions that appeal particularly to him, to a larger extent than has hitherto been the case, a conspicuous and enduring element of strength will be added to the A. Ph. A., and it will be made a more potent factor among the forces for promoting the prosperity and raising the standards of the drug trade. A striking proof of the interest manifested in the matter is contained in the offer of Dr.

Enno Sander, a former president of the A. Ph. A., to donate the sum of \$50 as an annual prize for stimulating work in the new section. He makes the tender in a letter to H. P. Hynson, chairman of the section, and takes occasion to express the warmest approval of the section and its programme. The other members of the committee are F. W. E. Stedem, Philadelphia, secretary, and C. Lewis Diehl, Louisville, associate.

A Dye Works Destroyed by Fire.

Baltimore, August 11.—The seawall factory of the Baltimore Chrome Works, near Fairfield, Anne Arundel County, just outside the city, was burned to the ground on the night of August 1, the blaze entailing a loss estimated at \$70,000 to \$100,000. The fire was discovered on the roof of the factory, a frame structure, about 6.20 o'clock in the evening, and is supposed to have originated from sparks carried out of the stack. About 125 barrels of prussiate of potash and some books were saved by the night shift of employees, everything else being destroyed. The main building of the factory was about 275 by 300 feet in dimensions. A number of frame sheds were annexed to the principal structure. These buildings, with their machinery, were valued at \$20,000 to \$25,000. The factory was used for the production of prussiate of potash. It has been in operation about fifteen years and has never suffered damage from a similar cause. The president of the works, Jesse Tyson, is in Europe, and in his absence no definite statement as to the intentions of the company can be made, but it is believed that the burned establishment will be rebuilt. No part of the product turned out by the plant is exported, all being used by domestic consumers.

An Opium Seizure.

Baltimore, August 10.—Calvin Gorman, of the Special Agent's office of the United States Government, spent several days at Staunton Va., recently and while there seized a box of opium which had been forwarded to that place after having been smuggled into the U. S. over the Canadian boundary. The drug contained in the box was valued at \$3,200, the package having been shipped through the medium of the United States Express Company, and consigned to R. T. Lamar, Staunton, Va. It was forwarded from Detroit, Mich., by the Adams Express Company. Information about the smuggling of a large lot of opium had been received at the Treasury Department some time before and officials had been instructed to keep a strict lookout. Not long afterward the proper authorities got a hint about a mysterious package having been consigned to "Mr. Lamar," and Mr. Gorman's trip to Staunton was the result. The box is now at the Baltimore Custom House, and its contents will be sold at the next public auction of seized and unclaimed goods. The duty on opium is \$6 per pound. "Lamar" has not been located, having doubtless obtained warning that revenue officials were on his track.

Captain Emerson Returns.

Baltimore, August 7.—Capt. Isaac E. Emerson, president of the Emerson Drug Company, of this city, has returned from a six weeks' trip to Europe, in the course of which he paid several visits to the Paris Exposition and saw other interesting sights. He said the exposition is not nearly so well attended as was the great Chicago Fair, and he also regards it as inferior from a spectacular point of view. Captain Emerson talked about a number of other things, but none of them particularly interesting to druggists. He is enjoying excellent health and has gone off on another trip North.

VOTES.

—George D. Eader, until recently a clerk in the pharmacy of Thomas & Thompson, Light and Baltimore streets, has gone to Texas to take charge of the manufacturing department of a drug house there. His place at Thomas & Thompson's has been taken by Mr. Bacon, formerly with W. M. Fouch, Charles street and North avenue.

—Henry C. Croft, of Croft & Conlyn, Park avenue and Madison street, has returned from a tour of several months through Europe. He visited a number of coun-

tries, seeing a little of Germany, France, Switzerland, England and Italy, taking in the Paris Exposition and viewing other interesting sights. He was much benefited by the trip.

—Druggists August Schrader, O. G. Schumann, of Caroline street and Ashland avenues, and John A. Wager, of Highlandtown, near Baltimore, are among those summering at Ocean City, Md., and the colony will soon be increased by Wm. Owings, of Hynson, Westcott & Co., Charles and Franklin streets.

—H. A. Brown Dunning, with Hynson, Westcott & Co., Charles and Franklin streets, and a member of the Board of Examiners at the Maryland College of Pharmacy, is spending his vacation at Saranac Lake, N. Y. It is hinted that the place has other than natural attractions for him.

—The retail drug store of the late Joseph Denton, which has been conducted since his death several years ago, by his widow, has passed by purchase into the possession of W. L. Campbell. Mr. Campbell formerly owned a pharmacy at the corner of Charles and Read streets.

—The Planters' Chemical Company has been incorporated at Richmond, Va., to manufacture chemicals, &c. The incorporators are: R. Gilham, D. G. Whitehead, T. H. Brown and others. The capital stock is \$400,000.

—H. L. Eichelberger, of York, Pa., a member of this year's class of the Maryland College of Pharmacy and a prize man, has accepted a position with Frank Baker & Son, Winchester, Va.

—Among the out-of-town visitors here recently were Frank Brockman, of York, Pa.; Dr. J. N. Simonson, of Crisfield, Md., and Edward Jenkins, of Dawson & Jenkins, Easton, Md.

—The Hinton (W. Va.) Drug Company has been incorporated by O. O. Cooper, George S. Sussenbury, J. G. Healy and others, with a capital stock of \$50,000.

—Mr. Boussett, with E. O. Streett, Charles and Mount Royal avenue, is spending a brief vacation at Ocean City, Md.

CINCINNATI.

August 11, 1900.

—R. D. Wells, 4th street and Central avenue, treasurer of the local drug association, speaking of the N. A. R. D. movement, said: "We are doing nicely, but it is the hardest thing to get a unanimous action, and we have yet quite a number to get. The trouble with many is that they sign the agreement against cutting, and as soon as they get to their stores that is their first object, to place a cutter's sign on their window and undersell all of their competitors."

—Several druggists have been arrested recently for selling cocaine. The claim is made that they failed to register each sale, and that the traffic has reached such proportions that many shops are "pullin' through" and laying some money aside. The police complain that many crimes among the "dusky" and unfortunate element are directly due to the use of "coke." It is chiefly placed in the beer they drink.

—All of the local pharmacists and clerks are giving all the aid possible to the movement seeking the advancement of the pharmacist in the navy, army and marine hospital service.

—The condition of the drug business in this city is not at all pleasing. This month especially it is very dull, and there is comparatively no buying done by the local dealers.

—Wm. Lakamp, of 7th and Linn streets, is having his store remodeled and painted. It will be as handsome as any store in the West End when completed.

—Herman Serodino, of 5th and Walnut streets, is sojourning among the mountains for about two weeks. Wm. Schneider is relieving him.

—Samuel Harris, Ph. B., will open a store in Dayton, Ky. in a few days. The many college "boys" wish him success.

—George Kylins, the druggist on Walnut Hills, has placed about 100 new electric incandescents in his store.

CIGAR CASE DISPLAY.
WEST'S DRUG STORE, DECATUR, ILL.

CHICAGO.

Drug Store Burglar Captured.

Chicago, August 11.—John White, night clerk in M. W. Rankin's drug store at Thirty-sixth and State streets, worsted a burglar who forced an entrance into the store at an early hour yesterday morning. White was roused out of a sound sleep by a crashing noise, and, getting up, found himself face to face with an unknown man, who was approaching the prescription case from the direction of the door. White had taken the precaution to snatch his revolver from a shelf and at once called upon the unbidden visitor to halt, at the same time firing a shot from the gun. The man immediately was cowed, and though the bullet did not hit him, willingly surrendered himself. White ordered the man to hold up his hands, and, awaking his brother, Barrington White, who also sleeps in the store, the two stood guard over their prisoner until the police of the Stanton avenue station arrived in response to their summons. On investigation it was found that the man had entered the store by means of the transom. At the station he gave the name of Harry Young.

NOTES.

—The fourth annual picnic of the Chicago Wholesale Drug Buyers was held on Saturday, August 4th, at Nehers' Grove, Lyons, Ill. Despite the hot weather a large crowd was in attendance and the occasion was thoroughly enjoyed. In the afternoon a baseball game between teams representing Robert Stevenson & Company, and Morrison, Rummer & Company was played. The superior playing of R. S. & Co.'s representatives won the game for them by a score of 13 to 8. M. P. & Co.'s team was somewhat crestfallen over its defeat, but promise to do better in a match game which was immediately arranged to take place Saturday, August 19th, at Lincoln Park. The picnic brought together many of the men from the different drug houses, and all enjoyed themselves thoroughly, some not getting home until nearly midnight.

—The Thiel Detective Agency has sent out a notice to the effect that James Camp, a gold leaf swindler, is wanted by the police of Cincinnati and St. Louis. Camp is described as a man about fifty-two years of age, five feet five inches in height and weighing about 150 pounds. He has blue eyes, gray hair and gray moustache, complexion medium. He is well built. He forged orders for gold leaf from \$35 to \$85 worth on paint and drug houses, the orders purporting to come from other houses in the same cities. These orders he sent by messenger, whom he intercepted returning with the gold leaf. Camp's residence was in Philadelphia as late as July, 1900. Houses in Cincinnati and St. Louis have been victimized by this swindle.

—Druggists in Chicago who own soda fountains, have reaped a harvest this week selling soft drinks. Eight days when the temperature has averaged 93.75° have vastly promoted thirst. The record for a long spell of hot

weather has been broken and the general health of Chicago has suffered. The soda water dispensaries have therefore been in great demand. Business begins with the opening of the store in the morning and lasts until its close at night.

—Lizzie Trusty, a nineteen year old colored girl, living at 2800 La Salle street, attempted suicide by drinking laudanum in a drug store at Twenty-ninth street and Wentworth avenue. She was despondent because she could not decide between two lovers. She will recover. Lizzie chose the wrong kind of a place in which to imbibe her laudanum. The next time, perhaps she will go where the emetic and the poison antidote is not.

—It is reported that Charles B. Thomas has transferred his drug store to the firm of Thomas & Johnson. Your correspondent has been unable to locate this store, as the only Charles B. Thomas in the city directory is a clock repairer, living at 7933 Parnell avenue.

—H. G. Hartman & Company have sold their drug store at 6300 South Halsted street to Reese & Garen.

—Herman Diehl has succeeded H. Giddings in the drug business at 1235 West Lake street.

THE NORTHWEST.

His Stuffed Birds Gone.

St. Paul, Minn., August 10.—Mr. Fleming, of Fleming & Dewaux, druggists of Grafton, N. D., has a mania for trophies of the taxidermist's art. He indulged it fully and therefore when his store was burned out on the 6th inst, he sustained a loss that cannot be gauged by dollars and cents. The loss of the firm was about \$8,000, on which there was \$5,000 insurance. Mr. Fleming had one of the finest collections of mounted elk, moose and deer heads and stuffed birds in North Dakota. His taxidermist work cost him over \$1,000, and all the specimens on the walls outside of the glass cases were ruined. He carried \$500 insurance on his collection. The cause of the fire was an unexplained explosion.

NOTES.

—C. M. Wilcox, of Marshall, Wis., has sold his drug stock to W. C. Haney and will now reap reward for his efforts as a political hustler. Mr. Wilcox will move to Washington in a few weeks to take a position in the congressional library. He has been chairman of the republican county central committee for a number of years and also a delegate to the national republican league last year and is now a member of the executive committee of the national republican league.

—Successions: Blair & Neffzgar, Terrill, Ia., by Gill & Brown; T. B. Eslick, Des Moines, Ia., by Andrew Bros.; S. A. Jones, Atlantic, Ia., by J. B. Jones; John Schonborn, Helena, Mont., by The Schonborn Drug Co., which has incorporated with \$7,500 capital; Crocker & Hawley, Fairbault, Minn., by Mrs. C. M. Crocker; Cuffe & Goff, Olga, N. D., by R. E. Cuffe.

—The great and continued heat has probably kept most of the country druggists away from the city this week. At any rate but few have visited the wholesale houses, almost the only one being Mr. Holverson, of Baumbach & Holverson, of Alexandria, who braved the torrid zone and presumably secured advantages to compensate him therefore.

—New: J. M. Tyrell, Portal, N. D.; T. A. Jensen, Vienna, S. D.; R. L. Wood, De Smet, S. D.; H. W. Barrett, Brown's Valley, Minn.; Dr. S. J. Froshang, Twin Valley, Minn.

—G. B. Nichols has left Maiden Rock, where for some time past (and until it was sold) he conducted Stevenson's drug store.

—Edwin Greaves, of Glencoe, has gone to Franklin to take care of the store of Mr. Kirwin, during his vacation.

—The Junior member of Watson & Gregory, Spokane, Wash., has sold half of his interest to W. H. Murgittroyd.

—The Merritt-Graham Drug Co. has incorporated at Omaha, Neb. Capital, \$10,000.

—C. A. Shumway, Aberdeen, S. D., and C. F. Little, Lehlston, Mont., have sold.

—W. L. Benner, Waukesha, Wis., has filed a voluntary petition in bankruptcy.

—Heussy & Fliz, Seattle, Wash., have sold their Pike street store to T. Olsen.

—The New Economical Drug Co., Omaha, Neb., has given a bill of sale.

—O. O. Wold is at North Branch working for Lindmark's Pharmacy.

—Count B. Walsh, Redfield, Ia., has removed to Reasnor.

—B. H. Farnish, Malad, Idaho, is negotiating to sell.

ST. LOUIS.

St. Louis, August 11, 1900.

—The Alumni Association of the St. Louis College of Pharmacy, held a meeting at the College Tuesday night, at which arrangements were put under way for the celebration of the silver anniversary of the College this fall. The auspicious event will occur on Tuesday evening, September 11, and will consist of a banquet and reception for members only, the ladies being excluded this trip, simply in order that there may be a more free mingling of the members. A special committee, appointed to have charge of the arrangements, consists of Charles A. Lips, chairman, Theo. F. Hagenow, Oscar F. Bausch, L. A. Seitz and Wm. C. Bolm. H. O. Hegel the chairman of the publication committee was instructed to get out a report of the Alumni Association for the past year. This is the first report the association has published for several years past.

—Adolph M. Finke, the well-known pharmacist and traveling man has bought the interest of Prof. Francis Hemm, in the Hemm-Hoeffken Laboratory and the business will be conducted in the future under the name of the Hoeffken-Finke Laboratory. Consideration for his health prompted Prof. Hemm to take this step. The experience of a five months trial convinced him that the business was too arduous for him and more than his health and strength would stand. Dr. Hoeffken states that the capital of the house will be increased and the business will be considerably extended.

—Attorney General Crow will find that he has made a very serious mistake in trying to make out that the hard working pharmacists of St. Louis constituted a trust, if the plans of some of the prominent members of the St. Louis Apothecaries Association are carried out. They declare that there will be an organized movement among the druggists of the city and state to oppose his re-election to office if he does not speedily declare his intention of dropping the matter altogether and promise not to renew his "information" against the St. Louis druggists.

—The Executive Committee of the St. Louis Apothecaries Association are seriously considering the matter of holding meetings of the association more frequently in the future than in the past. The by-laws call for quarterly meetings, but only one meeting a year has been held since the reorganization, year before last.

—A new drug store will be opened at 4332 Easton avenue about September 1, under the name of the Ozark Pharmacy by Duby & Strabach. Mr. Strabach was formerly with the Newstead avenue pharmacy.

—Charles Thurston Whittier, a local chemist, was married on Monday, July 16, to Mrs. H. C. Waterman, and cards have just been received by their friends here announcing the happy event.

—B. E. Stehle, formerly in the drug business at Steele City, Mo., and more recently at Frankfort, Ind., is looking for a location to start a drug store somewhere in Southwest Missouri.

—L. A. Seitz, Dr. O. C. Claus, Dr. H. M. Whelpley and H. F. Hassebrook, all with their respective wives left last night for Kings' Lake for a three days camp-out and fish.

—The St. Louis Drug Clerks' Society gave one of their enjoyable river excursions on the steamer City of Providence, Thursday evening.

—H. F. Weible, formerly clerk for Dr. Froelingsdorf of South Broadway, has opened a new drug store at New Athens, Ill.

—Eugene Gissy, clerk for Theo. F. Hagenow, is spending his vacation at his former home in Illinois.

—E. A. Medlar, Twentieth and Ferry streets, will leave in a few days for a Northern vacation trip.

TWENTY-SIXTH ANNUAL MEETING OF THE N. W. D. A. AND THE P. A. OF A. AT CHICAGO, SEPTEMBER 17-22.

The meeting of the National Wholesale Druggists Association in Chicago, September 17 to 22 next, with headquarters at the Auditorium Hotel, will probably prove the most important and eventful in the association's history. This is doubtless equally true of the semi-annual meeting, on the same days and at the same time, of the Proprietary Association of America. The National Association of Retail Druggists timed the date of its meeting at Detroit one week earlier so that in effect an adjournment might be taken to Chicago to aid in the satisfactory solution of questions involving not only the future of the tripartite anti-cut-rate agreement, but possibly also the life of the rebate plan itself.

These and other questions of vital interest should prompt the presence in Chicago of one or more representatives of every wholesale drug house and every proprietor in the country.

The Entertainment Programme.

The programme has been arranged in a manner befitting the metropolitan importance of Chicago.

Provisions for the comfort and pleasure of the visiting members and their ladies have had the earnest attention of the committee on arrangements and entertainment.

Monday evening, September 17, will occur a General Informal Reception to the visiting guests, closing with an entertainment by accomplished artists. Tuesday evening is reserved for the usual President's Reception, which promises to be an especially brilliant affair, the beautiful and spacious parlors of the Auditorium affording exceptional advantages for the event. Wednesday evening will be given over to an opera party at the Studebaker Theatre adjoining the Auditorium. Thursday evening a musicale will be given to the ladies at the Auditorium, followed by luncheon, after which they will join the gentlemen in the grand banquet hall, where, the menu part of the gentlemen's banquet having ended, the "feast of reason" will begin with such men as Senator John M. Thurston, Rev. Frank T. Crane and other equally gifted orators to dispense the evening's eloquence.

Excursion to Milwaukee.

Friday, at 10 A. M., the magnificent steamer "Manitou" will await the party for a trip over the blue waters of Lake Michigan to Milwaukee, where due provision will have been made for the reception and entertainment of the visitors. The return trip at night amid the luxurious cabin and stateroom appointments of the "Manitou" will give opportunity for refreshing rest preparatory to the respective homeward journeys of the visitors.

It will be noticed that especial provision has been made for the pleasure of the visiting ladies, who will be given every attention by the Ladies' Reception Committee, and for whom, aside from all other features of the entertainment, badges of pure gold will be provided. A drive through one of the great park systems by carriage or automobile has been arranged for Tuesday or Wednesday afternoon.

The usual rate of one and one-third fare for the round trip has been granted by the railway lines, concerning which specific information has been furnished by the Committee on Rates and Routes.

Order of Sessions of the N. W. D. A. and Entertainments.

The sessions will convene in one of the spacious parlors of the Auditorium Hotel, the Association Headquarters.

Monday, September 17.

Evening.—General Informal Reception; Musicales and Readings.

Tuesday, September 18.

10.30 A. M. First Regular Session. 2.30 P. M. Second Session.

Afternoon.—Carriage drive through the Parks and to other places of interest.

Evening.—President's Reception.

Wednesday, September 19.

10.00 A. M. Third Session. 2.30 P. M. Fourth Session.

Evening.—Opera Party.

Thursday, September 20.

10.00 A. M. Fifth Session.

Evening.—Gentlemen's Banquet, with Distinguished Speakers.

Luncheon for Ladies, with Entertainment Program including their Presence at the Banquet Speeches.

Friday, September 21.

10.00 A. M. Excursion to Milwaukee by the magnificent steamer "Manitou," specially chartered for the occasion. The comfort and enjoyment of guests en route and in Milwaukee will have the earnest care of a special committee.

NORTH DAKOTA PHARMACISTS.

The fifth annual meeting of the North Dakota Pharmaceutical Association was held at Fargo, August 7-8. There was a large attendance. The first day was devoted to routine business and the following officers were elected: President, J. M. S. Wilser, Fargo; first vice-president, A. C. Grant, St. Thomas; second vice-president, Walter Master, Willow City; secretary and treasurer, W. S. Parker, Lisbon; executive committee, P. C. Remington, Bismarck; C. R. Meredith, Cassleton; D. F. Siegfried, Sanborn. Grand Forks was chosen as the place for the next annual meeting, to be held the first of August. A drive over the city was one of the forms of entertainment for the visitors Tuesday evening. The routine work of convention was completed Wednesday, and the meeting was ended Thursday with a big picnic at Detroit Lake, Minn., for which a special train was provided. The association took unusual action in one respect. It adopted resolutions protesting against the position it was placed in by the present prohibitory law of the state. Under the measure the members are made blind piggers, and odium is reflected on the ancient and honorable profession of pharmacy. The members ask for a repeal of the law, and the adoption of a measure preventing their handling intoxicants. Here is the full text of the resolutions:

Whereas, the present prohibition law in the State of North Dakota, in its relations with the reputable druggists of the state, has proved itself a detriment to their business and has cast a stigma upon the profession of pharmacy. And

Whereas, no matter how careful or painstaking the druggist holding a permit may be in his endeavor to comply with the requirements of the present law, he can be and is subjected to undue public criticism, annoyance and persecution in the discharge of his duty as a dispenser of intoxicating liquors, which duty was forced upon the druggists by this law. And

Whereas, owing to the construction of the law a moral responsibility rests upon the druggists in the dispensing of liquors as to who or who is not a proper person to sell to, in many instances causing unpleasantness and differences of opinion between the public or the authorities and the holder of the permit, although he has made every honest endeavor to comply with the law. Therefore, be it

Resolved, That the North Dakota Pharmaceutical Association, now in session at Fargo, hereby reiterates its instructions to the North Dakota Board of Pharmacy to see that the pharmacy law is strictly complied with, and particularly sections which brings the pharmacy law and the prohibition law in close relation. And, be it further

Resolved, That our legislative committee be instructed to use all honorable means to have the prohibition law changed or annulled or have the sale of intoxicating liquors placed in other hands than in those of the druggists, who have not now or never did have any desire to have this task and entire responsibility thrown on their shoulders.

—The following were the successful candidates at the examination by the New Jersey Board of Pharmacy, held July 19 and 20. Registered Pharmacists: William H. Blauvelt, Newark; Charles George Breuninger, Newark; Ernest Fullerton Cook, Asbury Park; Nicholas V. Cadmus, Bayonne; Henry Lyle Casperson, Camden; Charles Dominguez Garben, Perth Amboy; William A. Hoburg, Jr., West End; Harry Wilber Hughes, Millville; Harrie H. Lane, Montclair; Frederick A. Schraedley, Rutherford, Pa.; Oscar R. B. Scholz, Montclair; Erwin Sedlmayr, Hoboken; Frederick Vanton, Middleton; Carl A. Von Gohren, Newark. Registered Assistants: Frank Fisher Moore, Camden; Kurt Reiter, Newark. The next meeting of the board will be held at Trenton, October 18 and 19. Applications must be on file ten days in advance. Henry A. Jorden, secretary, Bridgeton, N. J.

Business Record.

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS DIRECTORY can correct their copies from the record, and the term "D. D. List," used here, refers to this directory.

We exercise due care to insure the authenticity of items here recorded, but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, THE PHARMACEUTICAL ERA,
New York.

ALABAMA.—Port Deposit.—T. M. McPherson, deceased.
ARKANSAS.—Imboden.—Imboden Drug Co., sold to E. W. Hogan.
GEORGIA.—Savannah.—M. H. Levi, sold to Ocean Drug Company.
ILLINOIS.—Danville.—H. A. Hall, succeeded by John M. Nungesser.
INDIANA.—Newport.—Jas. T. Sample, sold to F. D. Collett.
IOWA.—Earlville.—S. H. Holcomb & Co., sold to C. A. Kendall & Co.
Eldora.—Tobin & Co. sold to Steeley Bros.
Janesville.—A. J. Burr & Co. sold to Wm. F. Stauffer.
Macedonia.—W. D. Harlan & Co. sold to W. C. Miller & Co.
Oskaloosa.—Blakeslee & Heinzman succeeded by J. H. & W. Blakeslee.
South English.—Reinert Bros. sold to Euler & Co.
MAINE.—Ellsworth.—S. D. Wiggin succeeded by Wiggin & Moore.
MASSACHUSETTS.—Lowell.—F. H. Martin & Co. sold to A. W. Dows & Co.
Springfield.—Wm. P. Draper sold to Henry L. Green.
Woburn.—Kelly & Callahan succeeded by Callahan & Co.
MICHIGAN.—Detroit.—F. W. Mayer sold to W. H. McAllister.
MISSOURI.—Oran.—Hale & Richmond succeeded by J. L. Hale.
Parnell.—D. W. Humphrey sold to C. P. Anderson.
St. Louis.—Joseph Weiner sold to Joseph Maserang.
NEBRASKA.—Craig.—J. H. Christensen sold to Clark Drug Co.
Genoa.—McMillan & Barnes succeeded by H. A. McMillan.
Humboldt.—Neill's Pharmacy sold to B. F. Herring.
Platte Centre.—Hansen & Dack succeeded by C. H. Dack.
NORTH CAROLINA.—Franklinton.—H. S. Furman succeeded by H. S. Furman & Co.
OHIO.—Dayton.—Geo. C. Lautenschlager, 226 Valley street, succeeded by W. E. Potts.
SOUTH CAROLINA.—Pendleton.—Evans & Day succeeded by E. G. Evans & Co.
TEXAS.—Comanche.—James W. Holland sold to M. W. Carroll.
WASHINGTON.—Pomeroy.—G. B. Kuykendall, damaged by fire; partly insured.
Pomeroy.—Stephens Bros., damaged by fire; partly insured.
Waterville.—Chas. Hobson, assigned.
WEST VIRGINIA.—Harrisville.—J. W. McKeever & Co. sold to J. C. Simmons.
WISCONSIN.—Ripon.—J. E. Brayton & Co. sold to T. S. Chittenden & Co.

Dr. J. F. KINCHELOE, a prominent druggist and physician of Tonway, Ark., died August 6th, at the age of sixty-five years. His son, J. A. Kincheloe, is a traveler for a medicine company of St. Louis.

DR. CURTIN M. G. ENGLAR, proprietor of the Englar Company drug store, Eutaw Place and McMechen street, Baltimore, Md., died last month. He was only 27 years old.

The Wisconsin Board of Pharmacy is actively engaged in prosecuting violators of the pharmacy law in that state. Recently Dr. J. F. Lohrs, of Highland, Iowa County, was fined \$50 and costs for carrying on a drug store and selling drugs and medicines with no registered pharmacist. This case is of interest, as it is the same one which has been in the courts against C. H. Shield, of Highland, who showed a bill of sale of the store to Dr. Lord. The case was tried at Dodgeville, the county seat of Iowa County.

METAL POLISHES, PASTES, LIQUIDS, POWDERS, SOAPS, ETC.

At one time we had to get along with only a few makes of metal pastes; these were nearly always red in color, the exceptions being black, says Oils, Colours and Drysalteries. (W. Dr.) But things have now altered. During the past few years more than a score of new brands have appeared, and considering the liberal house-to-house sampling of the rival makes that goes on, it is a wonder that housekeepers require to buy any at all. In one neighborhood we remember four sampling teams going around in one week. However, the paste was not wasted, but put to other useful purposes. It made a good boot dubbin; someone found it a fair cycle chain lubricant, another genius used it as a substitute for grease paint in private theatricals; while, perhaps the best thing of all was its employment as a window glass cleaner and polisher.

The manufacturer should take note of this little hint, as it answers well for the purpose, giving a mirror-like appearance and effectually prevents steaming. The tins should in future bear a few words in relation to this. It is not so dirty as when using water, the paste being simply rubbed on with one rag and polished with a clean one, with the application of plenty of elbow grease to remove smears. If a family now use one tin a week, using it for windows would increase this to at least two tins, and is tantamount to making two blades of grass grow where one did previously. This presents an opportunity to double even the existing large output without much trouble. Some of the best makes of metal polishes answer well for giving a keen edge to razors, a small quantity being applied to a leather strop. This is especially so when using a paste containing oxalic acid, as this has much affinity for steel, thereby producing the keen edge.

Once we used to wonder how it was that the ordinary German red putzpomade that floods the market came to have so many "sole agents," and yet always bore the same trade mark on the tins. Our curiosity was at last set at rest by learning that this kind of paste may be had in barrels from the works, which entitles the buyer to use the mark. The tins also of German origin, are supplied with blanks for the insertion for the "sole agent's name." All there was to do, then, was to run down the paste and fill the tins. This is generally done by filling a kettle-like pot with paste and melting over a moderate fire. While this is going on the girl is busily engaged at the bench in laying out and removing lids from, say, a gross of tins. By now the contents of the kettle are liquefied, and the tins are filled; while cooling, the kettle is refilled and replaced on the fire. Then the girl quickly fixes on the lids and lays out another lot of tins, another girl packing the full tins in the wood or cardboard boxes. So the process goes on.

Red Polishing Paste (Without Acid.)

A. C. Peroxid (sesquioxid of iron).....	40	lbs.
Venetian Red (dry).....	36	lbs.
Palm Oil	20	lbs.
Petroleum Jelly	20	lbs.
Mineral lubricating oil.....	1 1/2	gal.
Mirbane oil	4	ounces.

Melt the palm oil, mineral oil and jelly; stir in the peroxid and red, add scent, then grind. Some pastes are not ground, but simply mixed together, causing them to sweat when tinned; moreover they do not look so well as those put through the mill.

The next mixture contains acid and makes a German style of paste. The color is red or chocolate:

Red Polishing Paste (Acid.)

Rotten stone	30	lbs.
Bathbrick powder	28	lbs.
Red ochre	26	lbs.
Emery flour	14	lbs.
Crocus martis	14	lbs.
Oxalic acid	10 1/2	lbs.
Petroleum jelly	50	lbs.
Mineral oil	1 1/4	gals.
Citronella oil	6	ounces.

Wound the oxalic acid and mix with the earthy matters by running through sieves, then grind up with the

greases. Some bases absorb more oil than others, and if the paste is rather stiff add more oil or jelly. The correct consistence for metal paste should be that of butter in winter. If softer, it will ooze out during the hot weather, but will not become so soft as butter does, as the earthy matters keep in the grease to a large extent.

Another paste is one of a

Buff Color.

Petroleum jelly	42 lbs.
Refined paraffin wax.....	14 lbs.
Powdered bath brick.....	14 lbs.
Powdered pipeclay	14 lbs.
Powdered pumice	2 lbs.
Yellow ochre	2 lbs.
Oleic acid	1 lb.
Oil cassia	3 ounces.

Melt the wax and jelly, stir in the others and grind as before.

Another polisher is known as

Jeweler's Polishing Bar.

Refined town tallow.....	80 lbs.
Sesquioxido iron	16 lbs.
Oxalic acid	1 lb.

Powder the acid, mix with sesquioxido and mold with the tallow into bars like soap. The sesquioxido must be quite free from grit, or it may scratch valuable work. It may be prepared by calcining equal amounts of oxalic acid and iron sulfate in a crucible for about fifteen minutes with a good draught. The next is a

White Polishing Paste.

1.—White petroleum jelly	90 lbs.
Kieselguhr	30 lbs.
Refined paraffin wax.....	10 lbs.
Refined chalk or whiting.....	10 lbs.
Soda hyposulfite	8 lbs.

Melt wax and jelly, stir in others and grind.

2.—Town tallow	36 lbs.
White mineral jelly.....	20 lbs.
Non-gritty chalk	30 lbs.
Levigated flint	4 lbs.
Powdered pumice	3 lbs.
Oxalic acid	2½ lbs.

Melt the tallow and jelly, powder the acid, mix well with the pumice, flint and chalk, mix all and grind.

It is an undecided point as to whether a scented paste is better than one without perfume. The latter is added merely to hide the nasty smell of some of the greases used, and it is not very nice to have spoons, etc., smelling, even tasting, of mirbane, so perhaps citronelle is best for this purpose. It is likely to be more pure. The dose of scent is usually at the rate of four ounces to the hundred weight.

A new form of polisher is put up in cylindrical card board "push-up" cases, like cosmetique. These tubes are quite inexpensive, and they would only have to be filled with the following composition and labeled, when they would be ready for sale.

Tube Polish.

Town tallow	10 lbs.
Lard	10 lbs.
Japan wax	10 lbs.
Iron oxid	8 lbs.
Soda hyposulfite	1 lb.

Melt the first three, and stir in the other two, mixed together beforehand. This is of a red color.

Polishing Powder.

1.—Kieselguhr	42 lbs.
Putty powder	14 lbs.
Pipeclay	14 lbs.
Tartaric acid	1½ lbs.

Powder the acid, mix well with the others. This is styled "free from mercury, poisonous mineral acids, alkalies or grit." It may be tinted with twelve ounces of oxid of iron if desired.

2.—Kieselguhr	28 lbs.
Powdered pipeclay	10½ lbs.
Flake white	7 lbs.
Soda hyposulfite	3 lbs.
Iron oxid	2 lbs.

Finely powder and mix well.

Liquid Polish.

1.—Malt vinegar	4 gals.
Lemon juice	1 gal.
Paraffin oil	1 gal.
Kieselguhr	7 lbs.
Powdered bath brick.....	3 lbs.
Oil lemon	2 ounces.

Well mix.

2.—Kieselguhr	56 lbs.
Paraffin oil	3 gals.
Methylated spirit	1½ gal.
Camphorated spirit	1½ gal.
Turpentine oil	1½ gal.
Liquid ammonia fort.....	3 pints.

Pour the ammonia into the oil, methylated spirits and turpentine, add the camphorated spirit and mix with the kieselguhr. To prevent settling keep well agitated during filling. The color may be turned red by using a little sesquioxido of iron and less kieselguhr. Apply with a cloth, and when dry use another clean cloth or a brush.

Polishing Soaps.

1.—Powdered pipeclay	112 lbs.
Tallow soap	16 lbs.
Tartaric acid	1½ lbs.

Grind until pasty, afterwards press into blocks by the machine.

2.—Levigated flint	60 lbs.
Whiting	52 lbs.
Tallow	20 lbs.
Caustic soda	5 lbs.
Water	2 gals.

Dissolve the soda in water, and add to the tallow, when saponified stir in the others, pressing as before.

3.—Saponified cocoanut oil.....	56 lbs.
Kieselguhr	12 lbs.
Alum	5½ lbs.
Flake white	5½ lbs.
Tartaric acid	1¾ lbs.

Make as before.

4.—Tallow soap	98 lbs.
Liquid glycerin soap	14 lbs.
Whiting	18 lbs.
Levigated flint	14 lbs.
Powdered pipeclay	14 lbs.

The following compound should be made into tablets instead of the usual bars:

Pink Tablets.

XX Pale soap	112 lbs.
Powdered pipeclay	40 lbs.
Soda hyposulfite	6 lbs.
Rose pink	4 lbs.

Grind and press as before. Another way of coloring is to add a little peroxid of iron, or make a solution of anilin in water. The rose pink should be pure wood color; if the color has been given to it by anilines, these may fade or change.

Polishing Cloths.

We will complete this article with a word upon polishing cloths, which are undyed velveteen in the stage of manufacture known as "dressed-off." They may be improved by soaking in a solution of ammonia, or a saturated solution of hyposulfite of soda, then dried. Polishing tissue was thin paper saturated with ammonia solution and dried; it is now obsolete.

BUFFALO COLLEGE OF PHARMACY.

Several changes in the instructing force are noted in the new announcement.

Dr. Edward J. Kiepe, Instructor in Materia Medica, has been elected Professor of that branch.

Albert P. Sy. M. S. is the new Instructor in Chemistry. Willett H. Mosher, Ph. M. returns as Instructor in Pharmacal Assaying.

The plan of instruction for both the Junior and Senior years, is separately arranged so intending students can readily find full information for each year's course. The announcement will be sent to applicants by the Secretary, Dr. John R. Gray, 246 Seventh street.

Dr. Gray is preparing a full index card record of each student who has ever attended the college, with all particulars of standing in every examination, degrees obtained, etc.

Matriculates for the next session have been coming in for several weeks. A number seeking employment during their college course have already made their appearance, the Buffalo stores employ quite a number of students who are given college privileges at the same time.

A new fifty horse power gas engine has lately been installed in the University building, and the number of electric lights in use largely increased.

New supplies and apparatus are being added for all the laboratories in preparation for the coming session.

OBITUARY.

DONALD LOCHIEL CAMERON, senior member of the firm of Cameron & McGee, well known pharmacists of Rutherford, N. J., died suddenly Saturday morning, August 11th. On the afternoon of the previous day he went to New York, returning to Rutherford in the evening. The day was intensely hot, and he suffered greatly with the heat. About nine o'clock in the evening he complained of feeling very ill, and a physician was sent for. He continued to grow worse, however, and died at three o'clock, the following morning. Mr. Cameron was of Scottish birth, his father being a Highlander, and an army officer. At an early age Donald came to this country, and entered the drug business with J. N. Hegeman, who then conducted the well known retail pharmacy on Broadway below Fulton street. Some ten years later he went into business for himself, and for many years conducted a retail pharmacy in Brooklyn. During his residence in that city he became an active member of the Kings County Pharmaceutical Society, and a member of the Kings County Board of Pharmacy, later being elected president of the latter organization, a position he resigned in 1896. About two years and a half ago he became identified with the firm of Cameron & McGee, in Rutherford. Mr. Cameron was a member of the American Pharmaceutical Association, and also of the New Jersey Pharmaceutical Association, having been elected vice-president of the latter at its recent meeting held in Asbury Park. He was fifty-two years of age. A widow survives him. The funeral services were held Monday afternoon at his late residence in Rutherford, and his remains were buried in Fairmount Cemetery, Newark.

Transmission of Infection by Flies.

The Medical Age of June 10, 1900, says: "An interesting experiment illustrative of the possibility of transmission of infection through the agency of flies is communicated by Dr. P. Smith, of Sierra Leone (Public Health, December, 1899). Four Petri dishes were prepared, three with sterile, coagulated serum, and one with a culture of diphtheria on serum. A common housefly was made to walk first over a sterile dish (No. 1), then over the one on which was the growth of diphtheria (No. 2), and next over the other two sterile ones (Nos. 3 and 4). Numbers 1, 3 and 4 were then placed in an incubator. On the following day No. 1 showed only a few cocci, but Nos. 3 and 4 showed colonies of diphtheria bacilli in the tracks of the fly." In other words:

1st. Four dishes of gelatinous food were so prepared that they were sterile and contained no living thing; not even the smallest germ of any kind.

2d. Some diphtheria germs were planted in dish No. 2.

3d. A fly was made to walk over the gelatinous surface of dish No. 1, so that its feet were perfectly cleaned and everything adhering to them was picked off by the gelatinous surface and remained upon the same.

4th. After the feet were perfectly cleaned by dish No. 1, the fly was made to walk over dish No. 2 containing the diphtheria germs.

5th. To learn if any diphtheria germs had fastened themselves to the fly's feet it was made to walk over the pure sterilized dishes Nos. 3 and 4.

6th. Dishes 3 and 4 were placed in an incubator to develop any germs which might have been deposited upon them by the fly's feet.

7th. On the following day colonies of bacilli had developed in the tracks of the fly, thus proving conclusively that flies carry contagion.

After these discoveries, it can no longer be disputed that Tanglefoot Sealed Sticky Fly Paper is the only thing to prevent flies from carrying infection.

Tanglefoot catches the germ as well as the fly.

STATE OF TRADE.

A Good Outlook.

New York, August 14.—Perhaps the exceedingly warm weather of last week was responsible for the condition of the market; certainly it was not conducive to activity, but withal the market was far from being stagnant. The general undertone is steady and although little attention has been given to round lots, dealers have kept up their interest and the movement of jobbing quantities was fully up to expectations. There is nothing on the horizon to mar the outlook for the dawn of the autumn and winter trade and indications point encouragingly toward a good trade. The position of quinine has been stationary during the week, but extremely sensitive, as was evidenced when a rumor gained circulation during the week that it had advanced and holders scurried to the point of information to find that it was morphine instead. It is probable that a much higher figure will be reached following the Amsterdam bark sale.

There is little to note of opium, the conditions being much the same as last week. The tone of the market is slightly easier owing to corresponding conditions at the sources of supply and there is no material difference in jobbers figures although quotations for powdered show a slight decline. Quotations on morphine were shifted by some manufacturers to an increase of 10 cents an ounce, but the movement did not become general as some are yet willing to receive orders at the old prices.

Owing to a lightness of spot stocks the position of cacao butter has become much stronger and the general prediction is that extreme prices will be reached. While the advance in quotations has been but 2 cents it has increased caution on the part of dealers who are now slow to offer for either spot or future delivery. A slightly easier tone has been struck in oil anise which has caused it to be shaded under last week's figures and though conditions are favorable to holders its position is changed. Oil bergamot has received its share of attention, with the result that higher prices are asked. Oil of cloves have worked into the advance field, prices coming up somewhat and a firmer feeling appearing in sympathy with the spice. Oil of lemongrass also showed the upward spirit and quotations changed materially.

Small flake manna has come in for a new pricing consideration as it moved to a slight advance and the new range places it on a better footing. Serpentina root has become firmer, securing an advanced price from a jobbing movement. Kava kava and lady slipper root are both dull, with quotations lower.

There was a report current during the week that chloral hydrate would probably be changed in price owing to a decision of the United States Circuit Court classifying it as a medicinal preparation under Paragraph 68 of the Dingley tariff law, thus making it dutiable at 25 per cent. ad valorem. Such a decision was made by the court and affirmed by the Board of Appraisers but does not take effect until the time in which the Collector of the Port may file an appeal expires, and as it is understood he intends such an action it is possible that duty will be exacted at 55 cents a pound for some time to come.

Intense Heat Stimulates Soda Water Business.

Boston, August 11.—Business has been pretty good with many retailers in this city this week, although the intense heat made it hard to do work. It has stimulated trade in some lines, and has of course brought many shakels to the soda fountain at each drug store. Ask any druggist in the summer time how trade is, and in Boston, at least, he will tell you it is good, or fair, or rushing, according to his fountain receipts, for this seems to be his thermometer of trade conditions during the heated term.

In the general market things are about at low tide as regards volume of business, which is of the hand-to-mouth kind, customers buying at this time only just what they need to care for immediate orders. Trade is just what it is expected to be at this season, with no approach even to activity. This is so right through the list of drugs and chemicals, dyestuffs and tanning materials and other things. Alcohols and spirits, waxes, hops, all show no special feature of note. One leading dealer, when asked about his trade, said that if they could only keep cool and comfortable just now they would not find any fault if they had no business at all.

Business Normal and up to the Mark for This Time of the Year.

Philadelphia, August 11.—Business in the Quaker City this week has been strictly confined to the filling of orders which have been coming to hand in satisfactory quantity. On account of the heat there is no attention paid to future supply, or the possibilities, if there are any, of the speculative market. Hence while business is normal and up to the mark for this time of the year, there is no desire in existence beyond the wish for a speedy coming of fall. On all hands prophets predict an immense fall trade, both from domestic and foreign consumers, and the continued steadiness of the stock market proves that the country is not in the least agitated over the results of the election, but that prosperity is assured

under any regime. Manufacturers of almost all lines, including chemicals and pharmaceuticals, are busy and laying plans for comprehensive fall campaigns. The retailer is satisfied, for the trade he lacks at the prescription counter is being made up at the soda counter.

No Pronounced Change in Business.

Baltimore, August 13.—The drug trade conditions of this section have undergone no pronounced change during the past few weeks. Retailers complain that their prescription trade is rather quiet, but the deficiency in this department is being largely, if not wholly, made up by an extraordinary demand for soda water and other summer drinks. Cholera morbus mixtures are also in strong request, the intensely hot weather tempting many people into gastronomic indiscretions. A fair amount of business is being done by the wholesalers, while the manufacturers of pharmaceuticals, though not overtaxed, have enough orders on hand to keep the laboratories occupied. The market for botanicals, especially those of indigenous growth, is quite active, and prices are generally on the rise. Herb gathering is a rather less profitable occupation than many other pursuits, and the opportunities for getting something else to do are at present so favorable that the volume of botanicals brought into the market is limited, which accounts in part for the rising prices, although allowance must also be made for the upward trend of values generally. The manufacture and distribution of heavy chemicals is in the main satisfactory.

Big Business in Soda Water Supplies.

Detroit, August 11.—With the thermometer hovering near the century mark for a week, it is not surprising that Detroit wholesalers have done a big business in soda water supplies. And retailers report that the bottom fell out of every department except the soda fountain when the hot wave came. It is too hot to think of anything in the drug store except the soft drinks. When the wave passes the druggist will still be "in it," fixing up those of suffering humanity who drank too many of the appetizing concoctions.

Moderate Trade in Chicago.

Chicago, August 11.—Manufacturers report a quiet trade during the months of July and August. The vacation season, coupled with the harvests, has caused the lull, which is, perhaps, even less than usual at this season. Jobbers are doing fairly well for midsummer, and are not complaining. Some houses report themselves quite busy. Fountain supplies have been in enormous demand this week, owing to the long spell of extremely hot and humid weather, which has more or less affected the health and spirits of the entire community. The infant mortality has been very great. Sundries are reported to be in good demand.

Collections Are Fair; Prescriptions Less Brisk.

St. Paul and Minneapolis, Minn., Aug. 10. The human frame is in the cheerful "biz" Of rivaling the soda faucet's fizz; But, luckily, this perspiration-spouting Performed by those too poor to take an outing, By the fount's sizzling thrown into the shade is; While this is cool, that is as hot as hades! Of course, this practical, sedate trade column Should not include a word that isn't solemn; But let the rule be waived once, for the reason That this is what is called "the silly season." And there are times that one must have a laugh Or give his measure for an epitaph!

The extreme heat of the past two weeks is having a bad effect upon the drug business as well as every other branch of trade. Nobody does much that he "doesn't have to." Fortunately, the druggists are suffering no more in pocket than other business men, and they are philosophically keeping their mind's eye on the time—not far hence, it is believed—that the temperature, and with it trade, will resume its normal status. Collections are tolerably fair and the prescription work is less brisk than a week ago. The jobbers are keeping up pretty much the same old jog, serene in the knowledge that they are still ahead of last year.

Wholesalers Report Good Business; Retail Trade Normal.

St. Louis, Aug. 11.—Wholesalers report that business has been exceptionally good for this time of year since August 1. Local retail trade seems to be again moving along in a very normal, healthy way and the continued hot weather makes the soda water business thrive.

—The date of the annual meeting of the Vermont Pharmaceutical Association has been changed from September 26 and 27 to September 19 and 20.

MARKET REPORT.

NEW YORK MARKET.

New York, August 14.—The warm weather of last week had its effect on the market, but though conditions were not favorable to activity the general state of affairs was far from being stagnant.

OPIUM.—Dealers reported rather a better demand for the consuming trade and a fair business was noted. Quotations for jobbing quantities are \$3.55@3.75 for 9 per cent. and \$3.65@3.85 for 11 per cent., the latter figure for single pounds.

POWDERED OPIUM.—A quiet condition prevailed and the demands of the consumer are supplied at \$4.70@5 for 13 per cent. and \$5.20@5.50 for 16 per cent., according to size of order.

MORPHINE.—Prices were advanced 10c. during the week and the basis established is \$2.15@2.25 in ounces.

QUININE.—The market remained quiet but very firm. There is a general feeling that the price will be advanced following the Amsterdam bark sale; 42@45c. is asked in ounces.

CACAO BUTTER.—Continued activity in the foreign markets prevails and prices advanced over last week's figures 2c. Jobbers now ask 49@52c. by the box and 54@57c. for less.

MAXNA.—Small flake has been advanced 2c., the new range being 47@52c.

THYMOL.—Owing to scarcity dealers have changed their quotations to a much higher figure and will not sell under \$4.25@4.50; 35@40c. is asked for ounces.

OIL ANISE.—A reaction has taken place and though conditions are still favorable to holders a decline of 5c. has been noted. The new prices are now \$2.10@2.20.

OIL OF CLOVES.—There was an upward movement noted, the price changed to make a difference of 2c. and 75@85c. is now asked.

OIL OF LEMONGRASS.—Favorable conditions to holders are shown in an advancing market. New quotations at 15c. higher are now made, the price being \$1.45@1.70.

OIL OF BERGAMOT.—A strong market and a good consuming demand has caused jobbers to quote higher figures and the new quotations are: No. 1, \$2.50@2.65; ordinary, \$2.40@2.50.

KAVA KAVA.—Trade is dull and the prices have fallen 5c., making present range 25@30c.

SERPENTARIA ROOT.—The market is steady and especially firm; a jobbing movement caused a slight advance. The new prices are: Whole, 47@52c.; ground, 49@54c., and powdered, 52@57c.

LADY SLIPPER ROOT.—Continued dullness prevails, with prices a shade lower. The whole may be had for 30@40c. and the powdered 35@45c.

—The Ohio Board of Pharmacy will hold a meeting for the examination of applicants for registration at Columbus, October 9 and 10. All applications must be in the office of the secretary, W. R. Ogier, Columbus, not later than Thursday preceding the dates of the examination, otherwise they will not be accepted. Persons who take a second examination must file applications in a similar way.

The way perfumes are made is a subject that should interest every druggist who sells them, and therefore our readers will probably find it well worth their while to write and ask F. Stearns & Co. of Detroit, for a copy of the handsome souvenir book they advertise in another column.

THE ERA COURSE IN PHARMACY.

The lectures will hereafter be issued in monthly instalments, and the entire work of the Course can be completed within twelve months.

NEW CLASSES FORMED EACH MONTH.

The first instalment of lectures will be issued in October, and the remainder at intervals of thirty days thereafter.

Recitations and examinations are conducted by correspondence directly with each regularly matriculated student.

Especially valuable as a preparation for examination by a board of pharmacy, to those who cannot attend a college of pharmacy, and to all desiring to review their former study of the subjects embraced in the curriculum.

TOTAL EXPENSES FOR FULL COURSE, \$10.00.

For fuller particulars see announcement facing third cover.

Write for new descriptive Prospectus, now ready.
Address, THE PHARMACEUTICAL ERA.

THE DRUGGIST'S ADVERTISING.

It would seem almost impossible to say anything new on this subject, but, be that as it may, it is desirable to frequently repeat good things which have been said. The success of advertising depends very largely upon repetition, reiteration, hammering it into the reader till he "senses it." Of late years the retail druggist has been a greater and better advertiser than ever before in the history of his calling. He's had to be, or starve to death. He has been a student of the subject, and the measure of his success has been in exact proportion to the kind and quantity of attention thus applied. Time was (and still is with some) when a standing card in the local weekly, reading "John Smith, Druggist. Prescriptions carefully compounded," was the extent of drug store advertising. But that sort of thing does not suffice now. The public demand more, in both general and special information, and the druggist who best gauges the demand or who can create such demand, is he who gets the trade and garners the coin.

But the drug business is radically different from most businesses and its advertising must be similarly different. Concerning the druggist, the people want to know what are his capabilities professionally: they will purchase plows or sugar or dress goods from any sort of salesman, but they must have confidence in the integrity, knowledge and carefulness of the man who dispenses medicines, into whose keeping are placed the welfare and life of themselves and theirs.

It is not unethical, therefore, but rather strictly ethical and imperatively demanded of the druggist that he advertise, tell who and what he is, and convince the people that he is one to be depended upon. In no other calling does there exist so natural and strong a demand for advertising.

And one especially good feature of the drug business is that it is so easy to advertise. There is not an article in the store concerning which cannot be said something of interest and profit to the general reader. The people thirst for information of the very kind the druggist is well qualified to supply, and that sort of advertising pays in every sense of the word.

And so, while the druggist should adopt the customary methods for general advertising, he may with profit go farther—specialize. He should advertise the professional side of his business: just how will depend largely upon the character of his environment and circumstances, but advertise he should and do it well, too. Time and thought devoted to the study of advertising will bring quick returns.

A few druggists in a section of St. Louis are

working the "combination advertisement" plan, and the returns are reported satisfactory. The method is not a new one, but it is good. The excuse for specifically mentioning it here is that we may quote a line from the advertisement which may be considered either the text or the moral to the foregoing remarks. That line reads: "It is safer to employ a physician of known ability and reputation, even if he is at a distance, than to risk life and health in the hands of inexperience. It is just as important to have an able druggist. The ablest physicians, without pure drugs and skilfully compounded medicines, cannot help you. Our experience and facilities insure the most efficient service." Rather wordy, but the sentiment is right. This is the kind of talk to give the people, and prove that it is right.

THE BRITISH PHARMACOPOEIA.

There has been some quite severe criticism of the recently (1898) issued British Pharmacopoeia, and upon good grounds. All may be summed up in the statement that the work is not up to date, the descriptions and tests are frequently faulty, and as a whole the book is a disappointment. Of course American pharmacists have been comparing it, much to its disadvantage, with the U. S. P., but the surprising thing is that the English pharmacists and their pharmaceutical journals are doing the same thing. They frankly admit that the U. S. P. is in all respects a superior production, and when the Englishman admits that anything, especially from Yankeeedom, is better than his own the case is serious.

The fact is the B. P. is practically a one-man production, and the one man did not make proper preparations for his job. Technical literature, especially in chemistry and pharmacy, for the past ten or a dozen years was but lightly skimmed, if considered at all. Pharmacopoeias cannot be made in that way. The plan followed in the United States is the best, and the U. S. P. is therefore logically and naturally the best.

The B. P. came in for a lot of discussion and attack at the recent meeting of the British Pharmaceutical Conference. One paper (by an American, too) went for it fore and aft, and found so much to criticise that it was almost as voluminous as the text of the B. P. itself. It is no special discredit of the compiler of the work that it is found so sadly lacking, the task is beyond the power of one man to perform acceptably. The case simply goes to show that our British cousins must catch up and keep up with the procession. If the B. P. is to be what it should be it must be prepared by modern methods.

ROYALTIES ON BICYCLE RACKS.

The business men, especially druggists, of New York and Massachusetts, who have had the T-shaped bicycle racks in front of their stores have been visited during the past few weeks by an agent of one E. S. Calkins with the request that each merchant pay \$5 royalty for the rack. This agent says that the Calkins patent has been

infringed and threatens immediate suit if payment is not made. A representative of a law firm of Syracuse that has charge of the case is said to have collected over \$13,000 throughout the country on royalties.

We have tried to get at something tangible relative to the merits of this case, but without success. We can find no record of any patent granted to Calkins, and the lawyers named as his attorneys pay no attention to letters requesting information. Several druggists, also, who have complained to us wholly ignore letters sent to them asking for particulars. If druggists want us to help them in this matter they must give us what information they possess. The whole thing may be a big game of bluff, or it may be straight. We would like to know, but do not seem to be able to get to the bottom of it.

MATRICULATE NOW.

All who intend to enter the first class in the Era Course in Pharmacy (which commences in October) are urged to send in their matriculation orders at once. It is very important that we know in advance how many to provide for, that all things may be in readiness to begin the work promptly without hitch or delay of any sort. Those who do not matriculate thus in advance must wait till the following month's (November) or some subsequent class is organized. The course extends over full ten months, the first class graduating next September, and to delay at the beginning means delay at the conclusion.

This notice is a direct appeal to each intending student to matriculate NOW.

DIPLOMAS FOR ERA STUDENTS.

The work of engrossing the diplomas for the graduates from the Era Course in Pharmacy has now been completed. The task has required considerable time, but all the diplomas have now been mailed, and all students whose names have been published here as being successful in the final examination should have received the coveted parchment by the time these lines are read. If any, however, fail to receive them, please drop a line to us and the matter will be promptly set straight.

HANDLING OILED SILK.—A. B. Burrow recommends (Merck's Market Report) that on receiving a roll of oiled silk it be removed from the original package and attached to a Hartshorn shade roller—preferably one provided with the patent clamp, which obviates the necessity for the use of tacks. The protecting strip of paper which accompanies the silk should also be affixed to the roller. The roller can then be attached to the lower side of a conveniently located shelf and the silk cut off as required with the greatest ease and dispatch. Five yards of silk may be accommodated on one roller.

REMEDY FOR THE CARPET BEETLE.—A suburban entomologist has discovered that formaldehyde is a sure destroyer of the carpet beetle, known as the Buffalo bug. This insect is, in this locality, rapidly giving the moth points in destructiveness. It eats any textile fabric, silk, linen or wool, and has defied all known methods of annihilation. Method: Close your apartment or closet, and generate your gas from either methyl alcohol or solution of formaldehyde.—(Popular Science.)

OUR LETTER BOX.

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors.

Please be brief and always sign your name.

MORE PRIZE WINNERS.

It affords me much pleasure to inform you that yesterday I received "Coblentz' Handbook of Pharmacy" awarded to me as a prize. Please accept my sincere thanks. I highly appreciate the book, and hope to derive much knowledge from it. I sent an acknowledgment to the publisher. I again thank you for your kindness and courtesy.

Dallas, Texas.

SISTER JULIANA.

Permit me to express my appreciation and thank you for the fine gold medal which I received as the first general prize in the Junior Class of the Era Course in Pharmacy. The medal is a very beautiful one and well worth the effort it took to secure it. While I admire and take pride in my emblem, I value more highly the benefits I have derived from the course of lectures. I do not hesitate to recommend the course to any one wishing to pursue the study of pharmacy. I wish to thank most cordially the director and the management of the Era for the courteous manner in which they have answered all questions. Wishing the Era Course the best success, I am

MRS. MARGARET H. DICKERMAN, (Mat. 146.)
Nevada City, California.

I beg to thank you for the copy of Prof. Scoville's book, "The Art of Compounding," awarded to me as the special first prize in botany. I am sure I shall prize the gift very highly, both for its own self and the manner in which it was given. The Era Course is certainly excellent for persons who cannot go to a school of pharmacy, and I expect to go on with it again next year. Thanking you for the Era Course, the prize and all the course has done for me, I am

Lexington, Neb.

JESSIE L. RIDGWAY.

THE ERA COURSE HELPED HIM.

My diploma arrived to-day. Please accept my sincere thanks for the same. I can speak only in the highest terms of the Era Course in Pharmacy, and everything in connection with it. The lectures are certainly of a high standard of excellence and cover in a condensed manner the subjects considered very thoroughly indeed. I am certain that my connection with the Course for the past two years has been of very great benefit to me, not only in the way of knowledge acquired, but that by its direction and influence I have been enabled to study systematically and intelligently.

Newaygo, Mich.

JAMES H. BRACE,
Matriculate No. 1.

PHARMACEUTICAL CELEBRITY TAKES AN EXCEPTION.

Editor Pharmaceutical Era:—I desire to correct a mis-statement made by some good friend concerning myself in your issue of August 9th, viz. that to me is due the credit of the plan for dividing the work of the American Pharmaceutical Association into sections. That plan was presented by a committee of which Prof. Remington was chairman. I was a member of that committee and can say from personal knowledge that to Prof. Remington largely belongs the honor of that good work. Of course I did my share as a member of the committee, but it was from the working of the molecules of the grey matter in the brain of our able chairman that the plan was finally evolved. Yours very truly,

Boston, Mass.

S. A. D. SHEPPARD.

A KANSAS DRUGGIST ON ILLEGAL SALES OF COCAINE.

Editor Pharmaceutical Era:—In reading the article in your issue of August 9, page 149, regarding the illegal sale of cocaine in Cincinnati, I was very favorably impressed with your very just criticism and can only say I wish the law could be evolved in this State to the end of weeding out some hundreds of druggists who are in business solely to cater to the vices of their patrons. The writer is acquainted with an old druggist in Kansas City who openly stated that his sales of cocaine, morphine and whiskey were fully 90 per cent. of his business. I also have in mind several others who openly violate every moral law for the sake of the profit on such dangerous articles. If the journals would all take the high ground the Era has done, this class of druggists would speedily be brought into such disrepute they would seek other fields. Let there be a moral awakening along the line.

Clifton, Kan.

WINFIELD S. SAND.

THE SUPPLY OF GUTTA PERCHA.—According to a work on the subject just published in Germany, so writes Consul Hughes of Coburg (Consular Report), the supply of gutta percha is almost exhausted, owing to the reckless and primitive way in which the trees were treated in Sumatra and Borneo, whence the principal output has come. As these trees will flourish only in very few places, the question has become serious. The book adds that the Philippines is the proper place to grow gutta percha cheaply and profitably.

OXYGEN AND GERMINATION.—M. P. Mazé has studied the part that oxygen plays in the germination of seeds immersed in water. This was done by placing them in sterilized water and adding varying quantities of oxygen gas. He concludes that seeds submerged in a liquid do not germinate for lack of aëration; further, when placed under water, though life appears to remain in a latent condition, the seeds are the seat of various diastatic changes. The hydrolyzing enzymes in particular, and zymase, preserve their activity as in the case of seeds germinating under normal conditions. On the other hand, the oxidizing enzymes cannot produce in the body of a liquid the oxidizing processes that the elaboration of reserve food material requires; for this reason the embryos of the young seedlings remain inert. Small seeds, e. g., those of the cruciferae are able to develop slowly by reason of an atmosphere within their coats, providing oxygen necessary for respiration. Starchy seeds rapidly lose the power of germinating when under water; oily seeds are more resistant, though there is no proof that any kind of seed can for long resist this treatment. The weakening of the vitality of the embryos in submerged seeds is due to the accumulation of toxic products, aldehyde in particular, in the liquid. All the facts observed show that the development of the plant seems to be the result of a certain series of diastatic reactions at the expense of the reserves of food materials stored in the seed, and that the equilibrium of these reactions once disturbed, the death of the plant sooner or later ensues. Temperature is an important factor; at a very low temperature the disengagement of gases might cease without being destroyed, since gaseous exchange is only an expression of diastatic decomposition.—(Ann. de l'Inst. Pasteur; Sci. Am. Sup.)

Graphite Paste Stove Polish.

Ceresin	120 grams.
Japanese vegetable wax.....	100 grams.
Oil of turpentine.....	1,000 grams.
Fine lampblack	120 grams.
Graphite	100 grams.

Unite ceresin and wax by melting, add to the half cooled liquid mass the lampblack and graphite ground in the oil of turpentine, and stir until completely cool.—(Farben Zeitung.)

(Special Correspondence).

THE FOURTH INTERNATIONAL CONGRESS OF APPLIED CHEMISTRY.

(Concluded from page 151, August 9.)

An account of the opening of this very important and successful gathering has already been given in the Era. Though the proceedings are far too long to be reported in detail, a few items of special interest may be noted.

The American Delegates.

were well to the fore as usual, though naturally far less numerous than the Germans, Austrians and other Europeans, who formed the bulk of the Congress.

Of Dr. Clarke's active participation in the work of the Analytical Section we have already spoken. M. Mathews read a report on the Carbide of Calcium Industry in the United States, in the Electro Chemistry Section. M. Moissan, who presided, made some observations as to the question of priority of invention, Mr. Wilson's patent having been alluded to by Mr. Mathews in his paper. Dr. H. W. Wiley of the Washington Agricultural Department, is a well known face at Parisian chemical gatherings. Besides his remarks on the utility of maize stems (with molasses) as cattle food, he contributed a paper in the Sugar Industry Section, on the Correction of Polarimetric Readings according to temperature, and laid down a general rule on this point, founded on his own experiments. Dr. Wiley, by the way, represents the United States in the International Committee on Forage and Manure Analyses, nominated at Vienna, in 1898, which is still drafting a report on this subject. Dr. Doremus, the active chairman of the United States Committee of Organization of the 1900 Congress, was unfortunately absent, but the transatlantic visitors included Prof. Morley, of Cleveland; Prof. Schweinitz, of Washington; Prof. Chandler, of Columbia College; Prof. Rising, of California; Mr. K. E. Nelson, of Chicago, and Mr. Welt, of New York, besides two Canadians, Messrs. Choquette and Fillion, of Quebec. The usual

Visit to the Exposition.

took place on Tuesday, July 24th. It was preceded by a lunch at the Lyonnais Restaurant (in the exhibition grounds), where M. Moissan made a capital little speech on the good and evil deeds of chemistry, and Herr Setlik, of Prague; Herr Bernstein, of Baden, and M. Christomanos, of Athens, spoke for the foreign delegates. On Wednesday the Pasteur Institute and its new laboratories and hospital were visited, after which a number of the Congressists were received at the Hotel de Ville. For Thursday a charming excursion was organized to Chantilly, the princely estate bequeathed by the late Duc D'Aumale, to the Institute of France. The whole of the mansion and grounds were thrown open, and a lunch and refreshments provided for the visitors. A group of foreign chemists stayed in Paris and made a pilgrimage to Pasteur's tomb, where they laid a wreath in the name of the Congress. On Friday morning

The Statue of Lavoisier

was inaugurated. The monument has already been described in the Era, and our space will not permit us to reproduce M. Berthelot's remarkable review of Lavoisier's life-work. This discourse was read by M. Darboux, as ill health prevents M. Berthelot from being present at this or any other function of the Congress. M. Moissan made a brief, well-turned speech; cordially thanking all—Americans, Austrians, Belgians, Danes, Englishmen, Germans, Greeks, Italians, Mexicans, Norwegians, Russians, Swedes and Spaniards as well as Frenchmen, who had subscribed. M. Leygues, the eloquent Minister of Public Instruction, dwelt on Lavoisier's character as a philosopher and benefactor of humanity. Altogether the oratory was good and the function interesting; a handsome stand, draped in crimson and gold, had been specially provided for the Congressists, and all went off without a hitch.

On Saturday between 200 and 300 Congressists sat down to

The Final Banquet.

at the Hotel Continental. Most of the American delegates were present. A few ladies were noticeable among the guests, one or two of whom were, we understand, chemical graduates of a Swiss university. M. Leygues was again brilliant in his oratory, and M. Moissan's "Fairy Tale" was as amusing and neat a little speech on chemistry as it has been our fortune to hear. He told us how "Once upon a time" a lovely fairy (Chemistry) stood by the cradle of an infant (mankind) and prophesied to him his future. The "Fairy's" closing words deserve to be quoted—"During a century thou shalt painstakingly make soda from sea salt, but later on thou shalt find a simpler process. Thou shalt extract sugar from the beet root and found the Association of Chemists. And finally thou shalt reunite the chemists of the world every two years in an International Congress." (Cheers and laughter). The good fairy concluded by recommending the god-child to look after railway and customs tariff, water supply, &c., &c.; and added "Go, my son, all nature belongs to thee, for thou art a Chemist!"

The Work of the Various Sections

was epitomized by M. Dubont in the report he read at the closing meeting. The Analytical Chemistry Section had carried out their important programme of studying the possible international uniformity of methods of analysis in various branches.

International Analysis.

They had passed resolutions, (1) recommending oxygen—16 as the base of atomic weight; (2) asking the French Government to follow the example of other states and regulate the use of sulphurous acid in wine; and had nominated three committees. The first (of which Dr. Clarke is a member) is to study the best methods of Commercial Analysis for international adoption; the second to establish a table of Chemical and Physical Constants (for the use of chemists in all countries when called in as experts in law cases) with a view to its official and international adoption; a third to study and unify the best means of Volumetric Analyses. The committee on Forage and Manure Analysis was renewed, and strengthened by six members; and a committee was asked for to study the dosage of potash in saltpans, with a view of arriving at a uniform and universal method. We need not review the other sections, except the one devoted to "Hygiene, Medical and Pharmaceutical Chemistry and Adulterations," which may be termed

The Pharmacists' Section.

Here Prof. Riche, of the Paris School of Pharmacy, presided, and M. M. Patein, Denigès, Grimbert, Marty, Portes, Barillé, Sangle-Ferrière, Meillère and many faces well known to Parisian pharmacists might be recognized. Among the foreign visitors were Signor Piutti, of Naples; Prof. Ludwig, of Vienna; M. Christomanos, of Athens; Signor VillaVecchia, of Rome; M. Butureanu, of Jassy (Roumania); M. Wauters, of Brussels, &c., &c., &c. The principal questions discussed were urine analysis, the adulteration of wine, brandy, oil, etc. Mr. Patein's propositions regarding the analysis of urine were adopted, also M. Henocque's resolutions concerning the unification of the representation of the spectrum. An International Committee was named to study the question of brandy analysis, and on the motion of M. Sonnié-Moret, it was voted that it was most desirable that at these International Congresses, all papers read should be printed beforehand, and distributed to members a few days in advance. The lack of this simple precaution—now always adopted at Pharmaceutical Congresses—was the

IV CONGRÈS INTERNATIONAL DE CHIMIE APPLIQUÉE - PARIS 1900

one defect of this otherwise well organized gathering. A useful practice, worth noting, was the distribution of a little Guide to Paris to each member with a special plan on which the positions of all buildings visited by the Congress were plainly marked and numbered; the adoption of a Congress buttonhole badge, may also be noted.

Berlin in 1902

Is the site and date of the next International Congress of Applied Chemistry.

THE BEST MEANS OF ADVERTISING A
RETAIL CITY DRUG BUSINESS.*

By G. E. GIBBARD.

The power of printer's ink is recognized and admitted by every observant person to-day. Under the magic of its touch old things have passed away and a new epoch in the commercial life of the world has been marked. Successes have been achieved and fortunes have been accumulated in such a short space of time that one is almost ready to believe that the ancient myth of the "golden touch" is a living reality of to-day, possessed by some of those we are pleased to call the successful ones. So potent a factor has it been in almost every successful business career that we are about prepared to state as a fact that without it success is impossible.

Every age and epoch in the world's history has possessed its distinctive characteristic by which and through which it stands out in marked contrast with the preceding or succeeding periods and were I asked to place the ear-mark on our own age, I should unhesitatingly name it the "advertising age." This characteristic is by no means confined to the men who are engaged in handling the world's commodities. The professional man has not escaped the contagion, neither has the cleric or the warrior.

*A paper read before the Drug Section of the Retail Merchants' Association of Canada, and reprinted from the Canadian Pharmaceutical Journal.

The successful physician or surgeon, while perhaps a stickler for the letter of the law of professional etiquette, is not averse to a record of his achievements appearing in the daily press, nor will he protest too vigorously against the scare headlines which announce it. The reports of results in the legal arena never omit to mention that the gladiators, Messrs. Catchim, Doim and Bleedim, appeared for the plaintiff or defendant, as the case may be, and thus the lawyer and the doctor get their advertisement. The Church is not free from the infection; the modest one-inch space in the Saturday evening paper, taken for the purpose of giving location and the hours of service, by way of filling space merely, intimates that the Rev. Septimus Lovelock will preach from the text or on the subject of—well, the preacher advertises, the politician advertises, the statesman advertises, the warrior advertises (all except our Bobs), and the State itself advertises, as is seen by the hundreds of men employed and the thousands of dollars spent yearly to place before the intended immigrants the advantages and attractions to be secured and enjoyed in the "freest country under the sun."

A practice so universal in this utilitarian age must possess merit based on sound economic principles.

Perhaps the question might be pertinent just here—well, what is advertising, anyway? A direct question, admitting of a simple answer. Advertising is letting the people know that you have such articles, commodities or service as they require, and that you are anxious to deal with them in exchange for such articles, commodities or services.

No scheme or kind of advertising permits of universal application. In deciding as to the best means, location, class of business, volume of trade possible, and characteristics of constituents must all be considered, as they all will be potent factors in our success or failure. There is, however, one essential which must enter into one and all advertising schemes. I refer to printer's ink. This is the key to the arch, the corner stone of your structure, the main mast upon which hang your spars and sails, and to which all other devices are mere adjuncts. How best to employ this object in achieving the

object in view is the problem presented to the druggist for solution.

In my way of thinking, it does not require any long-drawn-out argument to demonstrate that the daily press is excluded from consideration from the first. The price of space in a live daily is simply prohibitive to a retail druggist, and were it otherwise, to my mind, money so spent is a doubtful investment. A daily paper is issued for a constituency extending over at least a province and containing thousands within its limits, the rate of charges is based on this circulation and these thousands you cannot hope to secure as customers to a retail drug store. An issue of say 500 would in all probability cover the limit of an average drug store clientele; it is folly, then, to pay for an advertisement to be read by say 25,000 people, from whom no possible benefit can be derived.

In cities the press is represented by other publications, mostly weeklies, given away, with a circulation confined to definite localities; the columns of these are still of doubtful value as advertising mediums; they are only recognized as advertising ventures and the little reading matter contained is of the most inane kind, not even interesting enough to induce one to pick it off the floor.

This, then, narrows us down to the use of printer's ink in pamphlet form, and, in my estimation, the only form by which it can be used to advantage in advertising the average city drug store. Here again, as in all things pertaining to advertising, sound judgment must direct.

A good pamphlet requires thought and care in its preparation. A number of essentials enter into its construction, some of which are: Neatness in appearance, good letter-press work, definiteness in announcement, proper construction, and last, but not least, good paper. Style, shape and size must receive attention. These are general outlines to be filled in in detail according to the artistic skill and literary ability of the author.

In preparing your subject matter, make up your mind what you are going to say to your prospective customers and then say it.

Be moderately concise and use the best English possible.

Except an incidental reference, confine yourself to one topic in each pamphlet.

In giving your copy to the printer be careful to outline the style of pamphlet you require; printers are proverbially stupid and if left to themselves will surely blunder.

Select a certain color in paper and adhere to it tenaciously; this will soon become distinctively yours, and the color alone will then advertise you.

Don't allow scare headlines or display type in a pamphlet.

Black faced type one size larger than the body is permissible for heads and divisions.

Illustrations should be used sparingly and care should be exercised to see that they balance.

Borders and ornaments are not necessary.

In all statements adhere to the truth; "honesty is the best policy" applies as forcibly in advertising as in any undertaking of life.

The druggist more than any other business man requires the confidence of his patrons and truthfulness begets and retains such confidence more effectually than well rounded periods or bombastic statements which lack the basic principle of truth.

In a scheme of pamphlet advertising, system should prevail; they should be issued not less frequently than monthly, while advantage should be taken of special seasons or importations of stock or of any and all occasions as will suggest themselves to a live business man. Don't be afraid to tell the people that you have what they require and that you are anxious to serve them.

With average ability, some little experience, and following a few simple rules, you can prepare a pamphlet which will be read by a majority of the people to whose attention it is brought.

A word as to distribution. I need hardly remark this is as important a matter as the preparation of your pamphlet. It is scarcely within the "eternal fitness of things" to spend time and money on a creditable pro-

duction and then have it meet the fate which befalls the majority of such stuff. "Any old thing" is good enough to find a resting place beneath sidewalks or in the angles of fences surrounding vacant lots. There are various means of distributing literature of this nature in the city and like all things human they are divisible into two classes, the good and the bad; to the latter class belongs most of the means now supplied. Use can be made of the city distributing agencies at so much per thousand and no questions answered.

Boys can be hired and the work done under your own supervision.

A pamphlet can be enclosed with every parcel or letter which is sent or taken out of your shop.

The mail can be used for the purpose.

The last is the only means which can have my recommendation, being the only one with a guarantee of certain delivery.

I will only take time to mention one objection each to the former three plans. In the first two antagonism is liable to be aroused where a favorable reception is absolutely necessary to secure best results. The housewife or door maid is apt to entertain anything but a friendly feeling toward the cause of a profitless trip to the front door, especially when called from a hot kitchen or an attic room by a jangling ring at the bell which would do discredit to an ordinary fire alarm, and by way of getting even they are liable to consign your pamphlet to the stove or dust bin. The objection to the last of the three is that your pamphlet falls into the hands of old customers when new ones are required.

With the mail it is different, the postman's visits are always welcome and his offerings are received gladly. Your modest little message, mayhap, accompanies a missive which brings warmth to the heart and the glow of pleasure to the cheek, it receives kind treatment because of the company in which it is found. Its chances will be improved should it go as a two cent message rather than a one; a sealed envelope bearing a two cent stamp is generally considered to contain something worth reading and it usually gets attention from the receiver.

Printer's ink, no matter in what form used, is only one essential in any scheme of advertising. There are other necessary adjuncts and the failure to supply these will materially affect the results experienced. I might mention a few of these.

First, location. No amount of advertising can draw trade to an unfavorable location.

Second, a well-selected and a well-kept stock in a bright, clean store. Order and cleanliness are heaven's laws, and there should be this much of heaven in even a drug store. System in stock keeping expedites work and pleases the customers.

Third, readiness to oblige on the part of courteous clerks. I know a young man in the city who has built up and holds a profitable trade, his pleasing manner and readiness to oblige being his sole qualification.

The "business ability" and "order" compartments of his "think tank" are vacuums. I would rather have the courteous pleasing clerk in my employ than the fellow who took all the gold medals for dispensing and pharmacy if he lacked these characteristics.

Promptness is an element which should not be overlooked. Customers are flattered by the notion that their patronage is appreciated, if their orders are filled with promptness and despatch. A prominent physician in a recent conversation with me made the remark that Mr. K. was considerable of a crank, but, do you know, I almost have to deal with him, his service is so good and orders are filled so promptly that there is a pleasure in it, notwithstanding his gruffness. Of course I should like to give my influence to Mr. H., we were boys together and came from the same town, but he is so slow that he is always getting me in trouble with "patients."

Be prompt.

Then always preserve the most friendly relations with the physician; he can and will be your best friend if treated properly. I will not elaborate on this subject, which is a large one and would afford a text for a paper dealing with it alone.

Study window dressing effects; a well dressed window is a "silent salesman" whose name does not appear on

the Saturday night paysheet. Don't neglect it nevertheless. No line of action can be laid down for operations in this particular subject, which will admit of universal application. In it must each be a law unto himself as circumstances direct—only this—give attention to it and you will be repaid for time and thought expended.

A pretty complete line of meritorious preparations put up by yourself in an attractive manner and kept constantly before your customers will do much to popularize your store.

Now this paper is long enough and I have not mentioned "Pure Drugs," "Accuracy in Dispensing," "No Substitution." These are old saws worked threadbare, and it should be taken for granted are applicable to every reputable pharmacist. I make no pretence that the subject is exhausted, it not being my intention to present a treatise on the art of advertising, but only to drop a few hints which perhaps might be beneficial to some members of the craft. I will wind up with a few "don'ts."

Don't give commissions to medical men for prescriptions steered your way. It is degrading in its influence and ten to one will make a liar of you; besides no permanent success was ever achieved by it.

Don't use a "dodger;" it is an unpardonable offence against good taste, savoring of the country fair fakir.

Don't spend money advertising other men's products. They are deriving the benefits.

Don't allow your name to be attached to a patent nostrum advertisement in a daily paper; you are giving a certificate of merit to an article which may possess none, besides you are being made a cat's paw to gather other men's chestnuts.

Don't give trading stamps, they injure you and benefit only the promoters who are men too lazy to work and, vampire-like, draw the blood for their sustenance from healthy bodies, which eventually they destroy.

Don't change clerks frequently if possible to avoid it. Drug store patrons like to see familiar faces, and changing clerks means slaving yourself.

Observe your own mind in the matters of slot telephone, the sale of postage stamps and supplying a city directory, only get a proper proportion of the proceeds.

BRITISH PHARMACEUTICAL AFFAIRS.

London, August 3, 1900.

The Proprietary Articles Trade Association.

The P. A. T. A., the association which has done so much in England to prevent undue cutting in proprietaries, held its fourth annual meeting on July 31st. The retiring president, Mr. T. Tebbutt, presided and introduced Mr. A. Cooper, the new president. The vice-presidents for the ensuing year are Chas. Sanger (representing the manufacturing section), A. Tebbutt (the wholesale) and C. J. Bunker (the retail). Mr. P. F. Rowse in moving the adoption of the report said that the P. A. T. A. had saved the retailers \$150,000 a year. The report was adopted. In answer to questions the secretary (W. S. Glyn-Jones) explained that it was urged on the manufacturers of a proprietary medicine joining the association to protect the face value of his preparation wherever possible, but that it was not always practicable to do this. A resolution in favor of the advertised price or face value being maintained was adopted as an expression of opinion, but it was admitted that it would be impossible to enforce this in every case. The meeting adjourned after the usual votes of thanks.

The Sale of Carbolic Acid.

In the London Gazette of July 31st, the decision of the Privy Council with regard to the sale of carbolic acid was announced. The Pharmacy Act gives the Pharmaceutical Society power to add substances to the poison schedule which contains those articles which have to be labelled poison and which can only be sold retail by registered chemists. The Privy Council have, however, the power of veto. The Pharmaceutical Council has several times in the past ten years recommended the addition of carbolic acid to the schedule, but each time the Privy Council has refused its sanction. Last month, however, the Privy Council intimated that they would sanction the scheduling of the acid with certain exemp-

tions. The Pharmaceutical Council immediately passed a resolution in accord with the Privy Council's views and now the Privy Council have signified their sanction. Henceforth the sale of all liquid preparations containing 3 per cent. or over of carbolic acid or its homologues will be restricted to chemists, save and except sheep dips and preparations for horticultural and agricultural purposes, which will be allowed to be sold by ordinary traders in original packages if labelled with the word poison and the name and address of the seller.

Pharmacy Legislation.

At its meeting on August 1st, the Council of the Pharmaceutical Society in view of the defect of the pharmacy clause of the companies bill, determined to draft a pharmacy bill of its own and a committee consisting of the president, vice-president, treasurer and Messrs. Carteligne, Glyn-Jones, Hills, Martindale and Wootton was appointed to draw up a draft bill and present it to the next meeting of the council in October. It is to be hoped that the result of their deliberations will not only be a measure of advantage to chemists, but one which Parliament is likely to accept.

The British Medical Association.

The British Medical Association, the medical analogue of the B. P. C., held its sixty-eighth annual meeting in Ipswich, from July 31st to August 4th. The president is Dr. W. A. Elliston, and the work is done in sections. In the section of Pharmacology, Dr. H. A. D. Jowett, of the Wellcome Research Laboratories—a prominent young pharmacist—contributed two papers on Jaborandi. The exhibition or museum as the association prefers to call it, in connection with the meeting again contained the exhibits of a number of the leading drug, surgical instruments and other firms, who appeal for support to medical men.

NOTES.

Wm. John Smith, of Liverpool, has been re-elected president of the Federation of Pharmaceutical Associations.

The capital of Spratt's Patent (American) Limited, has been reduced from \$500,000 to \$300,000. The company has never been in a position to pay a dividend.

The Pharmacy Act for the Isle of Man, the provisions of which were given in the Era some months ago has received the Royal Assent, so that no part of the British Isles is now without a statute governing the practice of pharmacy.

Surgeon Lieut-Colonel Warden died on July 18th, in London. He was a corresponding member of the Pharmaceutical Society and joint author with Dr. Dymock and Mr. David Hooper, of the Pharmacographia Indica.

CONSTITUTIONALITY OF PURE FOOD LAWS.—The Supreme Court of Ohio holds, in *State vs. Capital City Dairy Company* (Jour. Am. Med. Ass'n), that it is within the scope of the police power of the State to regulate the manufacture and sale of articles of food, even though the right to manufacture and sell such articles is a natural right guaranteed by the Constitution. Especially does it here hold that the police power of the State is properly exercised in the prevention of deception in the sale of dairy products, holding valid a number of Ohio statutes passed for that purpose, and to preserve the public health, as it is stated. And, in this connection, it particularly affirms that where the article sought to be regulated may easily be manufactured so as to be harmful, and thus result in fraud upon and injury to the public, the police power is properly exercised in the regulation of the manufacture and sale of such article by such requirements as will tend to insure the public against fraud and injury. Nor does it consider that there is any question whatever in regard to the power of the State to compel a sample for analysis of any article of food. Besides all of which, it is of practical interest, in this day of corporations, to note that it is here further held that the mere fact that the criminal laws of the State provide for the punishment, by fine, of those who offend against these pure-food laws is not a bar to a proceeding to oust a corporation engaged in violating them from the exercise of its right to be a corporation.

(Written for the Era.)

THE SALE OF SEASONING AND FLAVORING AGENTS.

BY JOSEPH F. HOSTELLEY.

Instead of entering popular periodicals, bric-a-brac or hardware as a side line, the druggist could invest his time and money in a lucrative way more befitting his profession. For instance, he could interest the public in spices, flavoring extracts and seasoning herbs. They are always timely, constantly used, and, if properly handled, profitable. We do not mean that you should merely keep stocked with these culinary aids and say nothing simply selling them when called for, or possibly make occasional mention of them. You should give impetus to them by regular advertising, by window exhibits, and by sending specimens to the householders of your vicinity. No hap-hazard, hit-or-miss methods will do to popularize them or any other item of your stock. Here is something from which to realize fair gains and an agent for keeping your thoughts from unprofessional tactics. Let us consider some of the advantages.

The pharmacist who has a call for spices or condiments only once in a great while knows he realizes a fair percentage from their sale; the one who sells them six days out of seven is pretty sure to figure his profits in rounder numbers. The latter can not only buy larger from first hands, but making of spicery a particular object of attention, his eyes and ears are always open for opportunities to purchase when and where prices are at ebb; he studies the market moods and the manoeuvres of merchants who make spices a specialty, much to his advantage. Then, too, advertising them well—continually pressing them to the fore, convincing the gentle folk and the gastronomers of the community that for savoring sauces, flavoring fruits, and aromatizing dishes dear to the epicurean palate, his spices are peerless—leading the laity to look upon these credentials to cookery as handled by himself to be of the best, he can give a trifle lighter weight for the same money the silent druggist charges for his, and the groceryman for his. This also increases the margin a mite. Flavoring extracts and seasoning herbs are closely allied to spices, and in creating a demand for one you oftentimes sell the other. If you press your own fruit juices in the summer for soda fountain use, it would be a simple matter to prepare a few dozen bottles of fruit flavoring extracts. Some varieties could be advantageously prepared most any time. Herbs employed as seasoning for food being obtainable pressed into pocket packages, are no labor to look after and handle. We would suggest that spices be made introductory of the other two kitchen helps.

There are profits in actuating a demand for such a type of drug, store stock, ulterior to an immediate monetary one, not to be despised. Paramount among these is the feature that the pharmacist is keeping within the province of professional pharmacy. He is keeping his hands from less legitimate lines, and not tainting the exclusive, ethical air of his store with merchandise unbecoming the abode of pharmacy or the regard of a pharmacist. He is not increasing the sale of anything that will conflict with the practice of physicians. The advertising emanating from his store relative to the subject discussed is far more befitting his vocation than the prevalent announcements abetting the sale of sundries and patent medicines at cut prices; it is intimated of education and ethics, and physicians and public will distinguish the difference betwixt it and the more common carriers of contemporaries. Within the minds of those who use his spices, his flavoring extracts and seasoning herbs, and find them just as he describes, is established the coveted conviction that he is a man mindful of the public welfare, careful and conscientious, a druggist deserving a tribute of trade.

Referring to advertising these inevitables of the cuisine, which is the first essential to their meeting with popular favor or support—we would say something relative to what others have done, and done well, and also something of what we stamp as original, with due respect to the wisdom in the saw that speaks of there

being nothing new under the heavens. We urge these suggestions and ideas as being utilitarian.

Some time back a Philadelphia druggist of the legitimate school, appreciating the benefits that might accrue from spice selling in earnest style, hired a man to distribute specimens of fine spices to dwellers in the immediate territory circumjacent to his store. Attention was solicited to one variety, then another. A well-worded circular accompanied the neatly planned packages. One that was handed to whoever responded to the usual visitor's summons (they were not to be left before the unopened door nor cast into the vestibule), and which enveloped a packet of black pepper, read in part as follows: "The enclosed sample of pure Black Pepper is handed you with the earnest request that you examine and test it carefully. This distribution will be followed by others of pure spices, the intention being to educate the people to demand that purity in condiments which they have a right to expect in all things. We have in stock a complete assortment of pure spices, both ground and whole, the quality of which is guaranteed. You save money and get good results." Then followed an apt word pertinent to prescriptions.

The next spice to be put to the fore by this pharmacist was Saigon cinnamon. That portion of the attending circular which spoke of spices was worded so: "Extraordinary results have attended our efforts at awakening the people to the fact that they can obtain absolutely pure spices of us. This followed closely after the recent free distribution of black pepper. To still further impress our neighbors with the importance of the subject, we to-day hand you this specimen of Saigon cinnamon. Please examine it carefully and you will readily observe the advantages offered by the use of spices of such quality. We are likewise encouraged to feel that our patrons regard our efforts in the broader sense that was really contemplated in the undertaking, an earnest of the purity of all our wares, drugs, products or medicines." The latter paragraphs of the circular told of prescription expertness and the prices of certain few popular articles.

Another druggist issues a circular upon spices through which he tells just how to prepare several dishes, spice flavored: Bordeaux sauce, pig's feet, tripe and spiced fruits, for example. This is a capital idea, and expanding upon we will say more presently.

We here describe a method of pushing spices that has met favor with one wide-awake pharmacist, and maybe others: Situated in a district of homes, faces and names became quite familiar to him. That they might become more so he used plenty of printers ink to tell of the stock he carried—spices often crowning the list. Those who bought the latter were given small tin boxes with tight fitting lids in which to keep them. A box went with each variety of spice, and the recipient was regaled with an account of the advantages of thus protecting these aromatic flavoring agents, and the superiority of this type of storage over the paper parcel so prevalent. "You can bring the box with you when allspice is wanted," the pharmacist would say; and while some would not remember to heed this advice, many would offer the box to be refilled with some spice, just as they would a bottle for tincture of arnica or camphor. We say "refilled," but think that word calls for explanation: The box at the outset was not always full, owing to its holding more than was often requested, but when it was returned it was frequently with a word of approval. "You may fill it, I guess," was a token of approbation that often greeted his ears and gladdened his heart.

Vanilla extract has been made in drug store windows with unvarying success, the operation selling both it and the "beans" like those from which it was extracted.

Before inaugurating a spice and condiment campaign the pharmacist should see that his stock of these appetite sharpeners is complete. He will want to have on his shelves cloves, powdered and stick cinnamon, allspice, long and white pepper, powdered black and cayenne pepper, whole black pepper, nutmegs, mace, vanilla "beans," caraway, coriander, cummin, fennel, and anise "seeds," bay leaves, curry powder, turmeric, celery seed, mustard, brown and yellow, whole white mustard. If you try to create a demand for flavoring extracts, let your supply

of these cover all the better known flavors and a few choice combinations of your own.

Do not be deterred from beginning at once to advertise spices because of it being the time of year when fruit and vegetables are being taken from the "can" rather than being put into it. Spices are used to some extent all the year around. Then, too, it is the early bird that leaves nothing for his tardy mate. Begin soon, in no desultory fashion, to let the public know that you are intent upon selling them spices now, and when they need them even more the people will know whither to wend their steps in quest of means to flavor their preserves. And it is not illogical to presume that they will favor you rather than one who but begins to speak of spices when there is a pressing demand for them. In their minds your name has been linked with spices for some months because of reading your circulars, your store wall, window, and pavement signs, and through admiring your tasteful window trims, and the knowledge of spices you evidenced when they have purchased small quantities.

Employ all manner of novel means to advertise and sell your flavoring agents, methods brother pharmacists less astute dream not of, and beside which the groceryman cannot hold a candle. Focus the attention of spice consumers in every legitimate way conceivable. Place an epigrammatic sign upon the pavement before the store summoning notice to the spice feature of your pharmacy. Change the wording of it at frequent intervals, and always invite comparison between your spices and those of others. Offer to further this end by presenting once to each patron samples sufficient for a comparative test.

Devote a show case to the exhibition of spices. Better to have them conspicuously before the eye, even confined in cans (glass bottles with ground glass stoppers are the best containers, of course), than hidden from view, as is often the case, on a back shelf or behind the door of a closet out of sight. Then customers can always see that you are ready to serve them with this type of stock. They will not always have to ask if you keep them, nor will they forget that you might be so supplied, and go to the corner grocer. If some or all of the spices be in glass receptacles, so much greater the incentive to buy; people usually like to see what they are buying. That would be a weighty argument for you to advance in support of your spices and condiments—it would recall to the mind of the listener the fact that they once got some spurious spices in silver-paper-ready-made packages.

When exhibiting spices, flavoring extracts or seasoning herbs, endeavor to instill into the bystander even a greater interest than would be awakened by the power of the display—by affixing to the window pane or to something affording a suitable support, explicit recipes for the concoction of savory, palate-tempting dishes in which one or all of the three named flavoring agents are indispensable requisites: caraway cookies, pepper cakes or some sweet bread, spiced; soups, rice pudding and apple sauce. Often requests will be made by some thrifty housewife for the possession of one of these formulas or a copy of same. And obtaining it she will feel an indebtedness to be expunged only by the purchase of the aromatic ingredients. The show case or near-by closet, the repository of spices, should have many of these suggestions arranged in a way that all may read them through the highly polished glass. Give prominence to a number of the recipes recommended by connoisseurs in the culinary art, such as Marion Harland and Mrs. S. T. Horer; and let people know whose suggestions they may be. The query, "What's in a name?" will, in this connection, prove there is much—influence at least. The number of people who will read these prescriptions displayed will be governed by your own skill and tact in placing them and in designing the exhibits of the spices themselves.

There seems to be no more fitting place to convey a gentle suggestion that you are selling spices than at the soda counter. By aid of tube sample jars this can be done to the queen's taste. Globe, Columbia, Egyptian or Tablet jars might be used. Most any large, pretty, wide mouthed bottle with a ground glass stopper, or even one that fits snugly, would answer. Polish several of these

receptacles inside and out, and put into them selected pieces of cinnamon, choice vanilla beans, cloves, nutmegs etc.; label correctly and carefully, and stand the jars on or about the fountain. A cluster of these spice vessels, some level with the counter or fountain top, others elevated slightly that their contents may be the better seen, all intertwined with artificial smilax vine, would beautify the fountain surroundings and cleverly call comment upon your spices. Several of these jars amongst some potted ferns or palms would look inviting atop the fountain.

It is well to fill small paper-board boxes with specimens of spices and hand them to well known people when they have prescriptions filled. A sample of, say, cinnamon, will be proffered to patrons, a few appropriate words spoken, and their names entered in a note book, put aside for the purpose, opposite which will appear the title of the particular spice they have been given to test. This journal will be frequently consulted, and those who receive samples will be questioned after an interval for their opinion of the spice. The date of delivery is also to be entered that the record may be more complete and fruitful of more accurate results. Then the pharmacist can not only keep tab upon his sampling, but he can judge better just when to either expect some returns therefrom or to become inquisitive.

Lubricate your carpentering abilities and lend prominence to your stock of spices by shaping a shallow box, long and slender, from smooth boards. Let its dimensions be such as to accommodate itself to a space before the counter or in close proximity thereto. Divide its interior into several compartments, and make for it a hinged glass lid. Stain it to harmonize with store furniture. Into the little boxes you have formed put various spices properly labeled. The major portion of your customers step before the scales to make known their wants and remain standing at this point while they await service, often searching with the eye everything on the counter before them, and rarely missing the most marked objects. So that in such an invention you would have a very good spice reminder. After a fortnight's advertising of spices, let seasoning herbs take their places, then, perhaps, such remedial agents as headache powders, toothache cure and corn cure. Then return to the original article, to be superseded by the others in turn. This change of subject keeps the novelty from wearing off, and gives people something to satisfy an attribute that calls for diversification. Rightly managed this contrivance will prove a boon to more than spices.

Here is a scheme to intensify interest in spices that would be particularly apropos in some of the smaller towns: Present some of your feminine patrons with specimens of spices and ask them to permit you to put upon exhibition a small glass jar of whatever they may preserve during canning season, and in which they use the sample spices. Few will be the number that will demur, the majority will, doubtless, be only too willing to acquiesce, and some fine examples of cookery and "cannery" will be at your disposal. Most housewives like to vie with their neighbors in such duties and rejoice in the friendly rivalry. When an assortment of these preserves has been collected, display them temptingly in the window along with bottles filled with spices. Upon each contribution place a card announcing by whom contributed (first asking permission of the loaner, of course), and that the spices from your store were used to assist in the favorable and flattering results. You will find that such an exhibit will arrest the attention and arouse the admiration of people hitherto considered particularly phlegmatic toward window displays. Women will "stop, look and listen," and listening they seem to hear an echo which says: "Buy some spices from this druggist and try your hand at it yourself. Get them here, mind you! It was from this store the ones were got that were used in making these very fine preserves." And in that echo you will discover a dainty and diligent advertisement well worth its cost. Those to whom you have given spices and whose handicraft you display, will naturally want to invest in some more to use, and the pedestrians who contribute at first only their attention will, many of them, some time give more substantially toward the success of your spice venture.

To add interest to a spice exhibit, cause the oils de-

rived from the various ones to be properly placed amongst them. Let the spices be in salt-mouth bottles that they may be plain to the eye, the oils in appropriate vials, plainly introduced by clean, unmarred labels. At another time display with the spices some of the galenic preparations aromatized and bettered in taste by these same spices. By means of placards tell the public the reason these products occupy the window space. Make them cognizant of the pharmaceutical uses of spices and gain prestige for them. The people will think much more of them if they know they are employed in what must cure them when they are ill. And how many there are who either do not know this, or, if they do, never give it a thought when patronizing the grocer for these aids to domestic economy! Actually, many persons there are who do not know that druggists sell spices to the public at all! The proprietor of the smallest grocery store on the side street says something to some one, at one time or another, about the spices he can furnish. Maybe it is when cucumbers or fruit are being bought, or just at a time when the drift of the conversation tends that way. Certain it is he says enough to soundly link spices with a grocery store. The druggist, on the other hand, says little—very little emphatically. The man of groceries constantly caters to the spice consumption. And he will continue to do this very thing until the pharmacist claims what legitimately is his even now.

When you are sending spice advertising to the laity, let not your medical friends be ignored. Direct to them any circular or folder gotten up on these products; hand the same to them in person when they happen in the store. Thus you evince progressiveness and let them see what you are leading the laity to buy—that you are not endeavoring to encroach upon their professional domain. A very comprehensive and potent fact to make evident.

We here offer some pithy sentences that might act as wording for window, wall, or counter signs when advertising spices and seasoning herbs:

"Selected spices to savor soups and sauces, flavor fruits, and give relish to a repast."

"Surpassing spices from tropical climes."

"Pure pressed herbs for seasoning soups and flavoring the dressing of fowl."

"Our full-strength spices suggest so many dainty dishes, they are a cook book in themselves."

"Spices that have never been mixed with foreign matter to increase their bulk and cheat the cook."

"We study to secure spices that are the best, not the most bulky."

"Spices and seasoning herbs for flavoring soups, meats, curries and feathered creatures."

"Our seasoning herbs give just the proper savor to soups, meats and dressings."

Become somewhat versed on the subject of spices. Learn the names and particular uses of all that are used by the various nationalities with which you come in direct contact. Be able to converse upon them intelligently and to interest your listeners with not too intricate explanations. To your more intelligent patrons you can occasionally speak a technical term, framed with explanatory words, which you make seem to your customers an evidence of your thoroughness. That you may talk intelligently upon spices and their employment, it would be well to look over, not alone your text books, but a cook guide, and commit to memory the formulæ of several spice esculents; certainly the titles of some should be familiar.

Be able to answer possible queries of patrons relative to spices. Should you be asked why the majority of nutmegs are covered with a coating of white, you will reply this is a covering of lime intended to protect the kernel from the ravages of insects, particularly a destructive beetle, the lime destroying the vitality of the germ. Immersion in lime water is the usual method of coating, carbonate of lime forming upon them after a few moments exposure to the air. You might opportunely mention the fact that the United States is conceded to consume more vanilla pods than any other country, and that the bulk of the "bean" consumption is supplied by home-grown products; Mexico furnishing an abundance of fine flavored vanilla.

Tersely tell your patrons interested in spices about

some of the many ways dishonest merchants adulterate the spices they forward to the public; how grocers have seldom the knowledge or the inclination to discover and discard such impositions when they negotiate for these seasoning agents; and how cautious you are yourself, as a trained pharmacist, to bring all your well-learned data upon the subject into action when dealing in them. Tell them how workmen sweep the dust from the floors of warehouses in which pepper berries are stored and use the same to increase the bulk of the black pepper that subsequently becomes what is known to the trade as P. D. pepper, selling at a very low figure. This "pepper-dust," which is gathered from the floors, contains sand, clay, and other foreign matter, all manifestly unfit for food. Do not fail to remember and remark that other methods of adulterating black pepper are common, such as wilfully adding ground corn, crackers, beans, flaxseed, mustard husks, rice, capsicum, etc. Exhaustive examination of samples of what was foisted upon the public as pepper has shown the latter to be nothing more or less than gypsum, mustard husks and a little cereal starch; other sophisticated samples yielding a little of what it was all supposed to be. If one of your customers chances to call for a condiment like mustard, dwell upon the unrelated matter often introduced into the same by unscrupulous traders, to augment their profits, and how by the aid of the trained senses of sight and taste and the microscope, you can easily become aware of the presence of such impurities and buy from a trustworthy market. You can expediently use your knowledge of the foreign matter used to increase the weight of mustard, not forgetting that capsicum, ginger, charlock, the wild mustard weed of the fields, flour, and other farinaceous matter are employed. Treatment with iodine solution will detect the presence of starch, which genuine mustard does not contain.

While many of the grosser impurities can be detected in spices by the naked eye, and a hand magnifying glass is a great aid in their discovery, the microscope is an invaluable assistance. It would be well for the pharmacist to acquaint his patrons with the fact that he is thus scientifically equipped, by exhibiting the device. It could hold a position of honor in a window display, in a case or on the counter, an attending placard pointing the significance of its presence among spices. Should it stand alone and unlabeled, under a glass globe, on a table or the common counter, many deep thinkers would ask its relation to pharmacy, and others less literate, but agreeably "nosey," would ask: "What's this for," which would handsomely pave the way for a nice little discourse descriptive of your efforts to dispense genuine and surpassing spices.

During the few minutes necessary for the weighing and wrapping of requested spices, take occasion to communicate some interesting bit of intelligence anent the subject of spice culture or ancient legends pertaining thereto; old time uses scripture teaches of etc. For instance, when some one is buying bay leaves for flavoring uses, speak of them being once put to the decking of homes at Yule-tide, being employed at weddings, and worn by simple folk as a talisman against thunder; and how when bay trees withered evil omens were averted.

When advertising spices, as other things, don't do something really clever or noteworthy and then fall into a restful state of laurel bearing; keep up the evidence of enthusiasm that it may prove contagious. If you are noisy in the advertising world for a short time, and then quiescent for a considerable period, people will begin to think you are not really certain that you have something praiseworthy, but are merely trying to convince the people, and incidentally yourself, that such is indeed so. And you will begin to about half believe it yourself, some day, after having been silent a great while. To realize success in commercial ventures there is nothing to stand shoulder to shoulder with continuity of effort. When you begin to rightly sell spices, to give impetus to them verbally and typographically, do not feel abashed or disgruntled if the public seems at first a little unconscious of your efforts to enter a new-old field. Rome was not set upon her seven hills in one circuit of the sun. It took you yourself some little while to make the people of your vicinage seem aware of your presence in their

midst, it is pretty safe to say, and a drug store is much more self-evident than something in the way of stock therein, even a stock of the most aromatic spices to a frequent customer. So, when you commence to move forward in this regard, take no retrograde steps; do not even falter in your purpose, keeping right at it; it will not take so very long to reap the first grain of success, then things will look brighter and advertising efforts will be stimulated. Let the public know you are selling spices, and then keep them reminded of this feature of your store. You might better say something about spices than to talk of the weather or the play. You may thus benefit yourself financially and your patrons intellectually.

Never let pass ungrasped an opportunity to impress upon the public the fact that you keep spices in airtight containers, thus preserving them well and retaining all the natural aromatic odor and delicate taste. That yours are not proportioned into many packages like the grocer handles, parcels whose age is uncertain, and whose contents, through inadequate protection, do not always approach the standard you are zealous to maintain. Divulge your methods of caring for spices.

Inaugurate a spirited spice campaign with judicious "thunder," thought and thoroughness. Sedulously labor to triumph over the dispensers of sophisticated goods they stamp as pure. Lay claim to what is yours by right of profession and of precedence. Solicit earnestly and in the proper way the custom your forefathers of pharmacy held in the hollow of their hands. Ask yourself why the grocer should be the possessor of trade that should be yours irrespective of every most forceful argument he can advance in contradiction. Quiz yourself as to why he should command patronage that robs you of the profits from the sale of spices, flavoring extracts, bicarbonate of soda, borax, cream tartar, and a harrowing procession of other legitimate tenants of the shelves of a pharmacy. While these profits are not great, you know they would be welcome. Be a little more aggressive than the grocer; advertise.

THE DETECTION OF FORMALDEHYDE IN MILK.*

Several Simple but Efficacious Tests for Determining the Presence of this Much-used Preservative.

By HERMAN HARMS, Ph. G.

Milk preservatives have long been used, and as the years rolled by new compounds were devised, each claiming advantages and improvements over its predecessors. All these contained in some form boric acid, salicylic acid, or the carbonates of sodium. Of late, however, these antiseptics have been superseded by a new rival, the well known formaldehyde. The absolute ease with which formaldehyde can be mixed with milk, and its powerful preserving action, effecting thus a great saving of ice, have led to its almost universal adoption as the milk preservative of the present day, and naturally its use leads to the query: "Is formaldehyde harmful or not?"

At present this question is being generally agitated, and eminent scientists have put forth strong arguments, some very favorable, and others severely condemning the use of formaldehyde as a preserving agent of food. I do not intend to enter this controversy, but, in short, to set forth the ways in which formaldehyde may be detected in milk and cream. Large quantities of this chemical are annually consumed, it being furnished usually in liquid state; sometimes, however, it is used in powder form, sold as pure formaldehyde, but more generally as a compound at a higher price, under some fanciful name, such as freezaline, preservaline, callerine, liquid sweet, etc. In each case, however, the manufacturer guarantees the absolute harmlessness and non-poisonous nature of his compound, and the majority add the claim that it is impossible to detect the presence of the above compounds by chemical means, in the milk or cream to which it has been added. This was true when

formaldehyde was first introduced, but during the past few years a number of tests have been found, and the most important of these are:

1. The Rimini Test.

A. Phenyl-hydrazine muriate, .5 gramme; distilled water, 100 Cc. Dissolve.

B. Sodium nitroprusside, .5 gramme; distilled water 30 Cc. Dissolve.

C. Soda, U. S. P., 15 grammes; distilled water, 60 Cc. Dissolve.

To 15 Cc. of the suspected milk in a test-tube add 10 drops of A, mix, and add 3 drops of B, mix and let 5 drops of C run in slowly on the side of the test-tube. In the presence of formaldehyde, a blue color is instantly produced, changing, on standing, to red. On adding to the mixture of milk and solution A 2 drops of ferric chloride solution, and then about 2 Cc. of concentrated hydrochloric acid, a red color is produced, which later changes to orange-yellow.

In sour milk, the above mentioned blue is supplanted by green.

The Rimini test is easily applied, and readily detects formaldehyde when present to the extent even of one part in 25,000 or 30,000.

2. Hehner's Test.

To 15 Cc. of concentrated sulphuric acid in a test-tube add 1 or 2 drops of ferric chloride test solution, U. S. P., and mix. Then pour upon this, in such manner as not to mix the layers, the suspected milk. A violet color indicates the presence of formaldehyde. In the case of cream, dilute the cream with an equal volume of water, and then apply the test as above described. The violet color is sometimes produced at once, but oftener not for five or ten minutes, and sometimes not for an hour or so, depending upon the amount of formaldehyde present. By this test one part in 10,000 or 15,000 is readily detected.

3. The Phloroglucin Test.

Dissolve one gramme of phloroglucin in 100 Cc. of distilled water. Put 10 Cc. of the suspected milk in a test-tube and add 5 Cc. of the phloroglucin solution, shake and add 1 Cc. of solution of potassa, U. S. P. If formaldehyde is present a red color is developed at once, fading, usually, within five or ten minutes; hence the color must be observed at once. One part in 20,000 gives a decided reaction.

4. The Liebermann Phenol Test.

In the presence of small traces of formaldehyde, distil off from the milk a few cubic centimeters and add to this one drop of very dilute aqueous phenol solution. Then pour this mixture slowly upon concentrated sulphuric acid in a test-tube solution so as to form a layer. A bright crimson color appears at the zone of contact. This is easily seen in as little as one part in 200,000, and in greater proportion in one to 100,000. There is a milky zone above the red color, and, if more concentrated, there will be a whitish or pinkish precipitate. Sometimes the zone will appear in about one hour, one-tenth of an inch below the line of contact.

5. Hydrochloric Acid Test.

Fifteen or 20 Cc. of suspected milk, together with 2 or 3 Cc. of strong hydrochloric acid, are boiled for a few minutes in a test-tube. A red coloration indicates formaldehyde.

Other tests are known, but they are more complicated and require apparatus or reagents not kept by the average pharmacist. The above tests are all simple in their application and afford a ready means of detecting formaldehyde in milk and cream.

Remarks on the Foregoing Tests.

The Rimini test is highly recommendable. The reaction in sweet milk appears rapidly and with certainty. Hehner's test, as well as the phloroglucin and phenol tests, are very reliable and are all extremely sensitive. The hydrochloric acid test is very simple but is not to be depended upon. It may show formaldehyde in most instances; however, cases have come under my observation when it has utterly failed to show the reaction, probably because of the milk having undergone some unknown changes. The Liebermann test is simple, delicate, and shows formaldehyde very readily.

*Bulletin of Pharmacy.

As corroborative evidence, it is well, after the tests are finished, to let the suspected milk or cream stand in a warm place for twenty-four hours. A pure sample will invariably turn sour and separate. A sample which has been "doctored" with formaldehyde, however, will show, at the end of twenty-four hours, but a very slight separation, if indeed any at all; and will have but a slight odor.

A Word of Caution.

It is desirable that all test solutions be freshly prepared, especially the nitroprusside of soda solution in the Rimini test; and that the suspected sample be as fresh as possible. Sour samples are difficult to test, and may yield variable results, because in these formaldehyde has been oxidized, and is no longer present as formaldehyde.

In carrying out the tests for formaldehyde, it is advisable to work side by side the suspected sample and the one known to be pure. Finally do not expose your tests or have your milk placed where a bottle of formaldehyde is being opened, for the vapor is very penetrating, and you may thus be easily led to misleading results. When formaldehyde has been found to be present by at least three of the aforementioned tests, it may be considered that conclusive evidence of its presence has been shown.

SOME PHARMACEUTICAL AND ECONOMIC PLANTS OF JAMAICA.*

By THEO. H. WARDLEWORTH.

Within the narrow limits of a paper such as the present it is impossible to deal with all the plants grown in Jamaica which might be called "pharmaceutical." The writer simply intends to briefly summarize and comment upon some of the leading pharmaceutical and economic products of Jamaica which have recently come under his notice. He has to thank the Director of Public Gardens and Plantations in Jamaica (Hon. William Fawcett, B. Sc., F. L. S.) for the specimens and photographs shown, and for his kindness during the writer's recent visit to the Island of Springs.

ANNATTO (*Bixa Orellana*).—This plant grows freely in different parts of the island, and were it not for the introduction of aniline dyes would provide a contribution to the revenue of Jamaica. At present little or no system seems to be adopted in its cultivation and collection by the peasant.

KOLA (*Sterculia Acuminata*).—This grows freely, and the product is of first-class quality, but it does not seem to compete successfully with the African variety, probably on account of the greater cost of production.

COCA (*Erythroxylon Coca*).—This can be grown in the island successfully, but apparently has not reached the commercial stage so far.

ORANGES (*Citrus Aurantium*, *Citrus Vulgaris*, etc.).—The climate of Jamaica is admirably suited for the growth of all descriptions of oranges, and were it not for the present regulation of the B. P. enforcing the making of tincture from fresh peel, it might be possible for Jamaica to produce an unlimited supply of orange peel of excellent quality. It is to be feared that the present prices obtainable for good peel would hardly call much attention to this article as a product worthy of cultivation.

ESSENTIAL OIL OF LIMES.—This is produced freely in different parts of the island, chiefly during the process of concentrating lime juice for citric acid manufacture.

JAMAICA DOGWOOD (*Piscidia Erythrina*).—Some years ago the writer's attention was called to a parcel of dogwood bark, said to be from the root of the *Piscidia Erythrina*. It contained a large amount of chlorophyll, and was evidently bark taken from the ascending axis of the tree. He endeavoured to find out whether it was really taken from roots which might have been partly exposed to the air and light, but, in this he was not successful. During his recent visit, he found, as the result of inquiries, that a very large quantity of bark from trunks of the trees had been shipped, as the collectors were not aware at the time that the root bark was required, and this probably explains the presence

of chlorophyll in the parcel in question. He found that the proportion of root bark exposed by the *Piscidia Erythrina* was very small indeed, and would only allow of a very small percentage in any parcel of the root bark.

COWHAGE (*Mucuna Pruriens*).—This grows freely all over the island and can be produced in quantity, but the natives seem to possess an unusual dread of this drug. The peasant when asked to clear a piece of bush in which cowhage may be growing is willing to do so if allowed to burn the bush, but not otherwise.

BALSAMS OF PERU AND TOLU.—These trees grow freely in the island, but apparently the balsams are not produced commercially.

PIMENTO (*Pimenta Officinalis*).—This is peculiarly a Jamaican tree. Efforts have been made to grow it in other islands in the West Indies, but without success. A grove of pimento trees is an interesting sight to the novice. The bark peels off every year in thin quills leaving the fresh bark of light cinnamon color, giving the impression that the tree has been freshly peeled. The gathering of the berries is commenced as soon as the first berry in the bunch has ripened, and a peculiar feature of the collection is that each bunch has to be broken off, and not cut. If the branch be cut with a knife it will die down for some considerable distance after the operation; if broken by the hand the wound heals with little or no loss, and the tree bears well again the following year. The berries are carried to a barbecue, and there allowed to ripen and dry in the sun. The odour round a pimento planter's house during the "season" is almost overpowering.

PAPAW (*Carica Papaya*).—This grows well in all parts of the island, and papain could be made in almost any quantity should sufficient demand arise.

COLOCYNTH.—Efforts are being made to grow this, as the plant flourishes well, but the natives so far lack the necessary skill in preparing it for the market. The Director-General is still devoting attention to the matter, and it is possible that before long Jamaica colocynth may be an article of commerce.

IPECACUANHA (*Cephaelis Ipecacuanha*).—An effort is now being made at the Castleton Gardens and at the Hope Gardens, in Jamaica, to grow the Brazilian variety of *Ipecacuanha* from seed imported from Brazil, and this is an experiment which will be watched with considerable interest by pharmacists.

CINCHONA.—Has been cultivated in Jamaica for some years past, on the slopes of the Blue Mountains, on the ridges rising from 3,000 to 6,000 feet. While the cinchona plantations have accomplished the aim of their founder, Sir J. P. Grant, like many other things, they have fallen upon evil times, and in 1887 ceased to be a commercial asset, as the fall in the value of quinine reduced their profits to such an extent that they did not pay to work. The recent rise in the price of the alkaloids has drawn fresh attention to this effort of the Jamaicans, and during the past year the Director of the Public Gardens has tried to attract the attention of quinine makers to the resources of the island in this respect, but the difficulty and expense of establishing a quinine factory on the spot after the model of the Java factory are not warranted by the quantity of cinchona available. There are only a little over 22,000 trees, and the yield of bark per annum is about 120,000 lbs., which is only about one-thousandth part of the world's consumption. It is, therefore, to be feared that unless the bark can be profitably stripped, dried, and exported, that this feature will have to remain idle for many years.

OLIVES (*Lea Europæa*).—It has been found impossible to grow the olive tree successfully in Jamaica. The tree itself flourishes well, but bears no fruit. This is apparently due to the lack of rest which the tree finds in Jamaica, and which is given to it in the more temperate climate of Europe.

LEMON GRASS OIL AND GINGER GRASS OIL.—These are being experimentally grown in the Hope Gardens, and seem to be flourishing well in their new surroundings.

CAMPHOR (*Cinnamomum Camphora*).—An effort is being made to introduce the cultivation of the camphor tree, and this is an experiment which will be watched with interest.

*Read before the British Pharmaceutical Conference, London, July 1900, and reprinted from the Pharm. Jour.

CASTOR OIL PLANT (*Ricinus Communis*).—Flourishes with little or no attention, and is to be found growing wild in many parts of the island. The oil could no doubt be produced commercially if sufficient inducement were offered.

CARDAMOMS (*Elettaria Cardamomum*).—These are being grown, but not systematically. They evidently would do well in many parts of the island.

GINGER (*Zingiber Officinale*).—The Jamaica ginger is of admittedly superior quality, and a great deal of attention is now being paid to its cultivation, chiefly by small colonies of Germans who are introducing improved methods in its growth and preparation. It used to be said by the planters and natives that it was a very exhausting crop, and could not be grown repeatedly on the same soil. This led to its being grown on virgin soil as far as possible, and when the plantation had been exhausted fresh ground was broken up, and the old fields were entirely neglected. To such an extent has this system been adopted that in a large number of instances the fields were at a great distance from the dwellings attached to the primary plantation. The German method of cultivation is "intense," and, by the adoption of a suitable fertilizer, very satisfactory results are obtained from the same fields year after year.

VANILLA (*Var.*).—Considerable attention has been devoted to the cultivation of the vanilla orchid in Jamaica by Mr. Fawcett, and the writer was privileged to see some exceptionally fine pods which had been grown and cured in the Hope Botanical Gardens. The director of plantations is distributing a large number of vanilla plants among suitable locations in the island, and in the course of a few years Jamaican vanilla may become an important factor in the vanilla yield of the world.

ARECA CATECHU (*Areca Catechu*).—This grows freely in suitable parts of the islands, and in connection with this palm the writer was able to set another question at rest. Some years ago a parcel of "split" areca nuts was offered on the London market. The quality was very unsatisfactory and yielded a very poor powder. Upon examination the writer was satisfied that they had been allowed to lie upon the ground until they had germinated and commenced to grow, but this could only be a theory. While in the Castleton Gardens he was fortunate enough to find a large number of the areca nuts at the base of one of the palms. They had sprouted, and the young palms had grown to the height of several inches. They were taken up and examined carefully, and the seedlings exhibited all the characteristics of the so-called split arecas which had been offered on the London market.

COCONUT BUTTER (*Cocos Nucifera*).—A German showed the writer some specimens of a remarkably fine butter which he had manufactured from the oil of the coco-nut tree. It was said to be very easily digested by persons of weak digestive powers, and was an excellent substitute for lard in the making of ointments. It kept well and did not readily go rancid. The maker was exceedingly anxious to bring it under the notice of pharmacists and others to whom it might be useful.

SARSAPARILLA (*Smilax Officinalis*).—Naturally claims special attention, but upon this point very little can be said, as the plant did not come specially under the writer's notice. To throw some light upon this point, a short excursion was made into the bush in order to find, if possible, some native sarsaparilla, but the search was not successful. One small plant was found, but it was not in flower. The roots seem to be gathered by the negroes in small parcels, and sold to the merchants from time to time, but no special effort seems to be made for its cultivation.

CONCLUSION.—The impression produced upon the writer by his visit to Jamaica was that in view of the present struggling condition of our West Indian colonies it was desirable that the attention of pharmacists should be drawn to our own colonies as a source from which to draw their supplies of drugs more freely than is at present the case. With some slight measure of encouragement it would be possible to draw supplies of many drugs which at present come from other parts of the world in which the mother country has little or no interest,

and it is to be hoped that in the course of a few years the wise and energetic efforts of the directors of the various botanical stations may be crowned with abundant success. Of course climate has a remarkable influence in modifying the therapeutic value of many drugs, but experience would very soon show if the elements of the various drugs were unduly altered by their cultivation in Jamaica and the other West Indian islands. The authorities and the colonists are exceedingly anxious to do all they can to extend the cultivation of the plants mentioned, and any others for which there may be a demand; and the writer's hope is that the present brief note may lead to draw more pronounced attention to the capabilities of our West Indian possessions in providing pharmacists with what they require.

PREPARATION AND PROPERTIES OF THE SO-CALLED "NITROGEN IODIDE.—The most convenient method of preparing nitrogen iodide, $N_2H_4I_2$ (Am. Chem. Jour.) is by bringing together ammonia solution and a cold solution of iodine monochloride, made by treating iodine with a mixture of hydrochloric and nitric acids to which ice has been added. The black precipitate of nitrogen iodide which at once separates may be filtered off with safety, and washed with dilute ammonia. The salt in crystalline form may be obtained by adding 15 cc. tenth-normal iodine mono-chloride to 100 cc. half-normal potassium hydroxide, and then adding, as rapidly as possible, 100 cc. of ammonia of sp. gr. 0.88. Glittering copper-colored crystals separate after a few moments; they are small, flattened, orthorhombic needles, dichroic, and have a specific gravity of 3.5. Pure nitrogen iodide is without action on litmus, does not leave the reaction of iodine with chloroform; but in contact with water it is slowly decomposed. It may be dried in an atmosphere of ammonia over time without decomposition, if light, to which it is extremely sensitive, be excluded. Nitrogen is slowly given off in diffused light from the compound suspended in water; in direct sunlight effervescence takes place. The partially decomposed substance is more explosive than the pure salt.

JAPANESE WEIGHTS.—A new standard of weight has been introduced in Japan (Ch. and Dr.). Prior to January 1 of this year a Japanese kin or catty was in practice taken to be equivalent to $1\frac{1}{2}$ English pounds (avoirdupois), though in reality, according to the metric system, it equals 1.32273 English pound. Under Japanese law only scales and weights inspected and approved by the Government can be used for weighing objects, with the standard weight of kin (catty), and it was notified that persons who should continue to use the English pound for that purpose would be prosecuted. As a result, all foreign firms are compelled to have scales complying with the Japanese regulations. But, according to A. H. Lay, assistant in her majesty's Consular Service in Japan, in actual business calculations in many cases are still based upon the old system, use of the new scales not being resorted to. Imports, it is stated, are frequently weighed on foreign scales, the method of weighing being apparently immaterial when it is determined by mutual consent. Exports, however, are weighed in Japanese scales, and before long it is expected that the use of the new scales will become universal.

A BUREAU OF CHEMISTRY.—The Council of the American Chemical Society has passed resolutions favoring the creation of a Bureau of Chemistry. The laws of the various states controlling food adulteration are largely ineffective, because of the interference of interstate commerce laws, and can be made effective only through national legislation. Bills are now pending which propose to establish in the United States Department of Agriculture, a Bureau of Chemistry, the director of which shall, under the direction of the Secretary of Agriculture, be charged with the chemical investigation of the foods produced and consumed throughout the country. The American Chemical Society desire to urge the enactment of the bill into a law. (Sci. Am.)

Pharmaceutical Celebrities.

HENRY CANNING.

Henry Canning is one of the best-known men, not only among the druggists of New England, but also of the United States. He has received from his fellows about all the honors in their power to bestow. He was on the board of government of the Massachusetts College of Pharmacy for many years, and was its president during the years most vital to the interests of the college, the years when the college building was being arranged for, built and occupied. Those were years when the ability of the executive officer of the institution was tried to the limit and never found wanting. Mr. Canning's record there was simply brilliant.

He has also been president of the State Pharmaceutical Association and the Boston Druggists Association, as well as having occupied many other positions of great responsibility in these and similar organizations. When, in 1883, the retail druggists of the country first came together as a commercial national body, the N. R. D. A. (National Retail Druggists Association), they turned their attention eastwards, and Mr. Canning was called to be the first president of the organization. He was also president of another national body—the Interstate Retail Druggists League—and in still another national body, the American Pharmaceutical Association, his work was so valuable that in the year 1887 he was complimented by a special vote of the association making him a life member.

Always and everywhere has Mr. Canning been recognized as a leader of ability and integrity, but while he has been for many years a "Pharmaceutical Celebrity", it is as a musician that Mr. Canning really enjoys life and is perhaps appreciated the most. He is a singer of far more than the ordinary merit, a veteran basso of local note. For thirty-nine years continually has he been a public singer; twenty-six years in one choir and thirteen years in another, and still his voice to-day is clear and resonant and a pleasure to those who hear it.

For forty-three years he has been behind the druggist's counter; yet he does not seem old, for his heart is young, and though we must now count him among the veterans, all his many friends unite in saying,—"long may Henry live and prosper, for he is a jolly good fellow."

MANAGEMENT OF THE HAIR DURING AND AFTER FEVERS.—Jackson (New York Medical Journal;) gives the following directions in regard to the care of the hair after fevers: Once or twice a week a little pomade containing a dram of precipitated sulphur to the ounce of a good cold cream, should be well worked into the scalp, or a three per cent. lotion of resorcin in oil and alcohol may be used daily. Many prefer a liquid preparation. Once in two or three weeks the hair and scalp are to be washed. For the shampoo, any good soap may be used, though the most convenient kind is a liquid one, such as the tincture of green soap. If the latter is used, the patient should be directed to invert the bottle on a piece of flannel, dip the flannel in warm water, and use just as little soap as will make a good lather. So used, the soap will not convert the hair into a mass of strings. If too much soap is used, it will be difficult to wash it out. After washing, the hair is to be carefully dried, and a little of the pomade rubbed into the scalp to take the place of the natural oil removed in the washing.

DIFFUSION OF GOLD IN LEAD.—In a recent lecture before the British Royal Society, Sir W. Roberts-Anstey, referred to a statement made by him some four years ago, namely, that if gold be placed underneath a column of lead, and the two metals be kept hot, though at a temperature well below that at which the lead melts, the gold will diffuse itself in the lead, so that even in twenty-four hours an appreciable quantity of the gold can be detected in the lower portion of the lead. At that time he had put aside similar cylinders of the two metals, keeping them at a temperature of about 65° F. The gold was now found to have made its way into the lead; the quantity, as might be expected, diminishing with the distance from the precious metal. Apparently the gold practically evaporates when brought into contact with solid lead, passing into the latter metal as steam might pass into wood. The action, of course, is slow, but it is sure, metal mixing with metal without melting; without any notable elevation of temperature.

CITROPHEN, discovered by Dr. J. Roos (L'Union Pharm.), is mono-phenetidin-citrate. It is a white powder having an agreeable acidulous taste, soluble in 250 parts of cold and 5 parts of boiling water. On cooling a hot saturated, aqueous solution to 170° C., the liquid retains it in the proportion of 1 in 40. In carbonated water citrophen is very soluble, but alcohol takes up only minute quantities. It melts at 186° C. Dr. Benario has shown it to be absolutely harmless by experiments on mice and rabbits. Its physiological action places it among the antipyretics and antineuralgics, and it may advantageously replace antipyrin, migranin, phenacetine, and salicylates. In doses of 0.5 gramme (8 grains), three times daily, it is analgesic and soporific. Its faint, agreeable acidity makes it desirable in children's practice. Twenty minutes after ingestion parphenetidin may be detected in the urine by ferric chloride, which produces at first a dark yellow color, gradually becoming dark red, varying in intensity with the quantity of the excreted parphenetidin.

PARAFFINED WATERPROOF CLOTH.—Cathorie announces that all fabrics and garments can be rendered absolutely waterproof by being dipped in a mixture of two parts paraffine—melting at 52° C.—and one part vaselin dissolved in kerosene—25 gm. to the liter. The expense is about a franc for an entire uniform. He mentions in his communication to the Revue d'Hygiene, 1900, p. 296, that one of the most important advantages is the absence of the extra weight of wet garments. The mixture does not interfere with the evaporation from the skin, as the garments thus impregnated showed no traces of moisture on the side toward the body. Pieces of paraffined cloth were sterilized in the oven without injury.—(Jour. Am. Med. Ass'n.)

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Solution Peptonates of Iron and Manganese.—(G. Z.) See this journal October 12, last year, page 498.

Cns-to-rine.—(H. & G.) We cannot give the formula for this proprietary preparation. Some formulas for a tasteless castor oil are given in the May 24, 1900, issue of this journal, page 557. Some other formulas may be found in the Era Formulary, page 269.

Saccharated Pancreatin (E. B. J.) We know of no specific formula for "saccharated pancreatin," although a preparation on the type of the saccharated pepsin of the Pharmacopœia may be made by triturating a suitable quantity of pancreatin with sugar of milk. Pancreatin is frequently prescribed in powdered form in combination with sodium bicarbonate. See the National Formulary, page 123.

Powdered Floor Wax.—(M. W. P.) The following formulas have been recommended: Spermaceti, 4 ounces; paraffin wax, 4 ounces; powdered talcum, 8 ounces. Shave the spermaceti and paraffin quite fine. Mix with the powdered talcum and pass through a No. 10 sieve. (2) Powdered stearin, 20 ounces; powdered yellow wax, 5 ounces; powdered soap, 2 ounces.

To Make Cider Vinegar Sour (W. B.) asks what can be put into cider vinegar to make it sour?

The addition of acetic acid will make cider vinegar more sour, but such addition is questionable. Cider vinegar contains normally from 3¼ to 6 per cent. of acetic acid, and a sample found to contain any quantity above the latter amount would probably be branded as sophisticated.

Pharmaceutical Requirements and Secretaries of Boards of Pharmacy.—(F. G. P.) We cannot spare the space to print in full the requirements for registration in pharmacy under the laws of Mississippi, Tennessee, Georgia and Florida. We suggest you write to the secretaries of the boards of these States for this information. Their names and addresses are: S. L. Craine, Columbus, Miss.; R. L. Eves, Nashville, Tenn.; George F. Payne, Atlanta, Ga.; T. Clarke, Jacksonville, Fla.

Tincture of Inula (Elecampane).—(I. K.) There is no official formula for tincture of elecampane. According to Hager, a tincture may be made by digesting in 5 parts of dilute alcohol, 1 part of finely comminuted elecampane root. The Pharmacopœia of the American Institute of Homeopathy prepares a tincture from 250 drams of the fresh root, macerating in 874 c. c. strong alcohol, percolating and adding through the percolator sufficient alcohol to make the whole measure 1,000 c. c.

Book of English and Mexican Drug Names.—(A. H.) The only book we can name which contains a list of English and Mexican drug synonyms, is the Mexican Pharmacopœia, the third edition of which was published in 1896 under the title "Nueva Farmacopea Mexicana de la Sociedad Farmacéutica de Mexico." In this work the Spanish or Mexican name of the drug is in all cases given as the common title, and this is followed by the various synonyms in native Mexican, French, English and Latin. For a reference book this work will probably answer your purpose better than any other. The various American Dispensatories may also be consulted.

Liquid Picro.—(K. and B.) We presume by this name is meant the tincture of "hiera picro" or powdered aloes and canella. The National Formulary gives a formula for the powder from which a tincture may be readily made with alcohol by percolation or maceration in the usual manner. About 2 ounces of the powder to the pint of finished tincture should be employed.

A so-called tincture of hiera picro employed forty or fifty years ago as a popular remedy in the treatment of amenorrhœa was made by macerating 1½ ounces of powdered aloes and canella in a pint of brandy.

Aromatic Elixir of Cullisya.—(E. N. B. & Co.) The formulas contained in the National Formulary for this preparation are the best we know of. In these preparations the aromatic elixir used for flavoring is that made after the formula of the Pharmacopœia. Here are two other formulas which have been recommended as suitable for use at the soda water counter: (1) Tincture of cinchona compound, 4 fluid ounces; tincture of cardamom compound, 6 fluid ounces; tincture of gentian compound, 2 fluid ounces; syrup, 16 fluid ounces; alcohol, 16 fluid ounces; water, 20 fluid ounces. (2) Sulphate of quinine, 20 grains; rose water, 48 fluid ounces; alcohol, 12 fluid ounces; syrup, 16 fluid ounces; water, 20 fluid ounces. Cochineal tincture to color.

Saddle Galls.—(C. B. G.) See this journal April 26, 1900, page 449. Here are some other formulas:

Blisters or galls are brought about by badly fitting harness or saddles, which produce local sores very difficult to cure. The sores should be washed two or three times a day with water; the ointment should then be applied two or three times daily on clean soft cloths.

- | | |
|---------------------------------|----------------|
| (1) Zinc oxide | 1 ounce. |
| Water | 1 ounce. |
| Salicylic acid | ¼ ounce. |
| Mutton tallow | 2½ ounces. |
| Lard | 5 ounces. |
| (2) Tannin | 1 ounce. |
| Camphor, powder | 1 ounce. |
| Golden seal, powder | ¼ ounce. |
| Compound tincture of benzoin .. | 6 fl. ounces. |
| Glycerin | 10 fl. ounces. |
| (3) Sulphuric acid | 1 dram. |
| Alum, dried | 2 drams. |
| Water, enough to make | 8 ounces. |
- Use as a lotion.

Paste Glove Cleaner.—(H. D. S.) Try one of the following: (1) Curd soap, 1 ounce; water, 4 ounces; oil of lemon, ¼ dram; French chalk, sufficient. Shred the soap and dissolve in the water by heat. Add the oil of lemon and make into a soft paste with the French chalk. The oil of lemon and chalk may be omitted and replaced by finely powdered orris root. (2) Castile soap shavings, 12 av. ounces; water, hot, 8 fluid ounces; solution of chlorinated soda, 8 fluid ounces; water of ammonia, 4 fluid drams. Dissolve the soap in the water, allow to cool and incorporate with the solution and ammonia so as to form a smooth paste. In using, rub a small portion over the glove by means of a piece of flannel, always rubbing in one direction until clean. (3) Take fine curd soap, 1 pound, scrape it into a fine powder, put into a jar and pour upon it from time to time sufficient strong alcohol to make it into a thick jelly; add one teaspoonful of ether or one half teaspoonful liquor potassa, mix and put into bottles well corked. To use, put the gloves on the hand, rub on the preparation with a piece of flannel, when the dirt will disappear.

Flour Paste.—(F. E. E.) The following formulas are said to be good ones:

- | | |
|-----------------------|----------------|
| (1) Wheat flour | 4 ounces. |
| Water | 16 ounces. |
| Carbolic acid | 10 minims. |
| Oil of cloves | 10 minims. |
| Glycerin | 1 ounce. |
| (2) Wheat flour | 4 ounces. |
| Nitric acid | 1 fl. dram. |
| Oil of cloves | 5 drops. |
| Boric acid | 10 grains. |
| Water | 16 fl. ounces. |

Mix the flour thoroughly with the boric acid and water, and strain through a sieve to avoid lumps; add the nitric acid and heat, with constant stirring, until the mixture has thickened. When nearly cold, add the oil of cloves and stir.

To Flour, starch, or other farinaceous substance 84 parts, pulverized caustic soda (or potash) 8 parts, ammonium sulphate 8 parts. The action of the alkali on the flour when mixed with water bursts the starch cells and deposits or swells it, increasing its bulk and reducing it to a paste which may be thinned by the addition of water or thickened by the addition of more of the alkali and flour. To apply the paste add to it a little water, experimenting until the right proportions have been ascertained.

Removal of Hair from the Face. (T. C. Y.) All depilatories or preparations for the removal of hair from the face are more or less injurious to the skin, and the most efficient preparation of this sort is, the more likely it is to prove injurious. No depilatory removes the hair permanently, and all such preparations afford merely temporary relief from superfluous hair. The only method of permanent removal is through the destruction of the hair bulb by means of the electrical needle, an operation which should be attempted only by a dermatologist or physician skilled in the process. We present the following formulas from the Era Formulary:

(1) Powdered quicklime, 10 grams; sulphide of barium, 10 grams; starch, 10 grams. The powder is first moistened with little water and then applied. It acts in a few minutes. (2) Quicklime, 16 ounces, pearlash, 2 ounces, liver of sulphur, 2 ounces. Powder very finely and keep in a stoppered bottle. Directions—When required for use mix a small quantity with water to form a soft paste, apply to the spot and in three minutes remove with a paper knife. If the skin smart much apply a little cold cream. (3) Sodium sulphide, 6 drams, powdered lime, 3 ounces, starch, 2 ounces, powdered orris, 1 ounce. Mix. The sulphide of barium should be fresh. It can be prepared by making barium sulphate and its own weight of charcoal into a paste with linseed oil, rolling the paste into the shape of a sausage and placing it on a bright fire to incinerate. When it has ceased to burn and is a white-hot mass, remove from the fire, cool and powder. Any of the foregoing may be made into pastes with soft soap or glycerin. Another way is to take fresh-burned quicklime, 30 parts, shake with about 15 parts of water and, when cool, sift. Place the powder in a wide-mouthed bottle and add water to make a paste. Pass sulphurated hydrogen through a tube to the bottom of the paste for an hour or two, then add glucose, 70 parts, and oil of lemon, 3 parts. This paste does not keep well.

Ownership and Giving Copies of Prescriptions.—(Clarkson.) The subject of the ownership of the prescription is one which has been discussed in the pharmaceutical journals for years, and if you will take your file of The Pharmaceutical Era you will find articles upon it. Regarding giving copies of the prescription we do not think any druggist unless forbidden to do so by the prescriber, would refuse to give a customer a copy of a prescription he has had filled. We cannot tell whether the courts, if appealed to, would uphold the druggist in refusing to give a copy, or compel him to do so. Were some one able to tell us to whom the original prescription belonged, for physician, pharmacist and patient have each claimed it, we might answer your question. Decisions have been rendered in favor of each of these individuals. If the prescription belongs to the patient and the druggist retains it, he simply does so through the courtesy of the patient, and the druggist would certainly feel under obligation to give a copy when asked to do so. We have always naturally believed that a druggist should retain the prescription, for it is a written order for him to supply certain drugs, and if he allows it to go out of his hands he has nothing to show that he was directed to supply certain drugs of a certain specified quality. In support of this belief a few of the States have statutory laws directing the druggist to keep on file for a specified time all of the prescriptions filled by him. Where the law does not allow the druggist to retain the original prescription, to give or not to give a copy, is but little figured. If the patient wants the prescription he can have the original. At all events the average druggist, unless forbidden by the prescriber, would gladly give a copy of any prescription if he can get

a chance to dispense it. It is business policy for him to do so. He cannot afford to run the risk of losing one customer of any kind of importance, especially when the favor requested is so modest and unimportant. If you have a customer who wants a copy of a prescription for him filled by you and the prescriber does not object, give it to him.

Flavoring Extract of Vanilla.—(T. H.)—The only way you can make a cheap flavoring extract of vanilla is to reduce the strength of a strong preparation, employ inferior material, or strengthen a weak extract with tonka, or use a solution of vanillin. We give you several formulas, but we do not believe in preparations which are to be sold for something other than they are to be labeled.

Vanilla Tonka Extract.

Vanilla	1 ounce.
Tonka	2 ounces.
Alcohol deodorized	32 fl. ounces.
Syrup	8 fl. ounces.

Cut and bruise the vanilla, afterward adding and bruising the tonka, macerate for fourteen days in 16 fl. ounces of the alcohol, with occasional agitation; pour off the clear liquid and set aside, pour the remaining alcohol on the magma, and heat by means of a water bath to about 77° C. in a closely covered vessel. Keep it at that temperature for two or three hours, then strain through flannel with slight pressure, mix the two portions of liquid and filter through felt. Lastly add the syrup. To render this tincture perfectly clear it may be treated with pulverized magnesium carbonate, using from $\frac{1}{2}$ to 1 dram to each pint.

Artificial Vanilla Extract.

Vanillin	3 drams.
Coumarin	1 dram.
Water—enough to make	2 gallons.
Glycerin	4 fl. ounces.
Alcohol	32 fl. ounces.
Caramel—about	2 drams.

Manufacturing Vanilla Extract.

(R. B. H.) writes: "We put $\frac{1}{2}$ pound best vanilla beans in 1 gallon of cologne spirits, and have macerated the mixture for eighteen months, but it does not seem to be right. What should we do to make a first class extract of vanilla? Should the preparation be flavored with tonka bean?" We think the difficulty in this case is partly due to faulty preparation, supposing, of course, that the vanilla employed was of the finest quality. In the first place, we have no information that the vanilla was reduced to a fine powder. Nor do we know that it was properly percolated. We do not approve of flavoring vanilla extract with tonka bean, although many customers prefer an extract so flavored to that possessing the genuine vanilla odor. We suggest the following manipulation: Reduce 8 ounces best Mexican vanilla bean to a fine powder by pounding it in a mortar with sand or powdered glass, and add to the powder contained in a suitable container, tightly corked, 2 pints deodorized alcohol (cologne spirits), and allow to macerate with frequent agitation during sixty days. After maceration has completed decant as much of the liquid as possible, and pack the moistened mass in a percolator and percolate with the decanted liquid. Continue percolation with dilute alcohol until 8 pints of the fluid are obtained. To give the extract "body" some sugar may be added. The value of glycerine, advised by some, for different purposes, is doubtful. A formula for a preparation containing both vanilla and tonka is given above.

ATRABILIN is a deep yellow, opalescent, fluid extract of the supra-renal capsules. It has a meat extract-like odor, and on standing throws down a flocculent precipitate. According to Wolfberg (Pharm. Zeit.), it produces, with the exception of mydriasis and anaesthesia, all the effects of cocaine but is much more powerful. For functional hyperaemia and other affections of the eye it is prescribed as follows: Atrabilin, 2, boric acid, 0.5; distilled water, 10. For eye drops.

News and Trade Department.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of
Era Readers.

FOREIGN.

China.

The relief of the legations was officially announced, the relief column entering Peking after a stubborn resistance; it is reported that the Empress Dowager and Prince Tuan fled from Peking to Si-ngan-Fu.

The Japanese have occupied Tung-chow, ten miles from Peking, while the Russians have repulsed 2,000 Chinese at New Chwang.

Opposition to the landing of British troops at Shanghai is reported to be sustained by the French and Russian Consuls, and Vice-Admiral Seymour has cabled to Lord Salisbury for instructions.

All women and children have been officially notified to leave Port Arthur.

The political activity of Great Britain in the Yang-tse Valley is being campaigned against by the St. Petersburg papers.

Great Britain, the United States, Japan and France have approved the appointment of Field Marshal Count von Waldersee, the United States and Japan unreservedly and Great Britain on condition that the other Powers agree.

It is reported that Count von Waldersee will go on a special mission to come before sailing to China.

Secret inquiries at Canton show that all the forts have been newly armed with disappearing guns, the garrisons numbering 18,000 men thoroughly armed.

The Ninth (colored) cavalry sailed last week from San Francisco for Taku by way of Nagasaki.

It is said that the railroad between Tien-Tsin and Peking has been restored, while the Russians are repairing the line in the direction of Peking.

A dispatch from Taku, China, received in Rome, announced that fighting continued in the streets of Peking after the allies entered the city, the allies bombarding the points resisting.

South Africa.

Lord Roberts reports the continuance of the pursuit of the Boer General De Wet by Generals Kitchener and Methuen.

It is said that ex-President Steyn, of the Orange Free State, died last week from a wound received while attempting to reach President Kruger.

General Kitchener relieved Colonel Hoare and the British garrison at Eland's River, Western Transvaal, after a forced march.

General De Wet, so it is rumored, has succeeded in joining hands with Commandant Delarey.

The conspirators who plotted to capture Lord Roberts are being tried at Pretoria.

General De Wet reached a position in the Western Transvaal occupied by General Baden-Powell, whom he summoned to surrender.

Other Foreign News.

The lists of awards at the Paris Exposition have been made public, showing that the American exhibitors have taken 1,981 awards.

Ex-Premier Crispien makes a plea for a larger Italian navy, saying that Italy must seek new channels in the Orient.

King Victor Emmanuel III., of Italy, took the oath of office last week in the presence of the Senate and the Chamber of Deputies at Rome.

It is said that the tribes of the Touat Oasis of North Africa have submitted to French authority, and that General Serviere has occupied Abrar, the chief city of that region.

Fifteen Italian detectives, it is believed, have sailed for America to trace the movements of Anarchists in the United States.

Permission has been given to the United States by the Japanese Government to establish a hospital on Japanese territory.

DOMESTIC.

Politics.

The Texas Democrats at Waco have nominated a State ticket, headed by J. D. Sayers for Governor.

The "National Party" Convention met in Indianapolis, and with a few dissenting votes, took formal action to support Bryan so as to defeat McKinley.

The Washington Republicans have nominated J. M. Frink for Governor.

Philippines.

General MacArthur reports to the War Department concerning the troops and their health. There are 5,129 sick soldiers, or 8.47 per cent.

Other Domestic News.

William Steinitz died in New York. He was the famous chess player, and held the world's championship for many years.

Collis P. Huntington, the railway magnate, died suddenly in the Adirondacks.

A severe race riot occurred in New York City during the past week, in which several whites and blacks were severely injured.

Ex-Senator John J. Ingalls, of Kansas, died at Las Vegas, New Mexico.

A political riot at Mayaguez, in Porto Rico, results in several deaths.

The Governor of Georgia has ordered militia out to quell an uprising of negroes in Liberty county, where the blacks outnumber the whites three to one.

Caleb Powers, ex-Secretary of State in Kentucky, has been found guilty of complicity in the murder of William Goebel, and is sentenced to life imprisonment.

The population of Greater New York, according to the final report is 3,437,202 distributed by boroughs as follows: Manhattan, 1,850,093; Brooklyn, 1,166,582; Bronx, 209,507; Queens, 152,999, and Richmond, 67,021.

FREDERICK STEARNS & CO.'S REPRESENTATIVE IN SIAM.

Frederick Stearns & Co., manufacturing pharmacists of Detroit, Mich., have recently had made an elegant silver perfume case which contains a most elaborate set of toilet perfumes manufactured by them for presentation to the favorite queen of King Khoulalongkorn of Siam. The gift is sent as a token of thanks for past favors from the royal house to R. R. Martin, the firm's eastern agent, and incidentally in the hope of working up a little extra trade in American perfumes among other ladies who inhabit the harem. As the number of the king's secondary wives is 400 odd, perfume is no inconsiderable item in Khoulalongkorn's household expenses and the job of supplying it will be worth the seeking. In fact, 1,500 dozen bottles of one brand of perfume from France was the record last year.

The case is described as a small leather box containing another box of solid silver set with delicate enamel and lined with red cloth. On the cover of this inner box is enameled the flag of Siam with the sacred elephant in white backed by a red field.

Of his visit to Bangkok, the capital of Siam, Mr. Martin writes:

"The one drawback to this place is the coming and going; thirty miles up a mosquito laden river, a bar outside, where you lay to be eaten up for one and a half days, is no catch. Yet when one braves it he finds a city with electric lights, tram ways, and dispensaries equal to any, and a population of over 1,000,000. In Bangkok every commodity is dear but human life—that is cheapest of all—cholera is the scourge. Almost daily two to four Europeans pass in. The dead are buried in a few hours on account of the great heat. The grave is full of water, and the body is thrown splash into this pool. This happens so frequently now that the question at the clubs is 'when and who the next?' and then somebody orders a 'stinger,' as they call a half whiskey and soda.

"The Ticaul, used in currency here, is about one shilling and two pence, but the hotels, carriages, etc., all charge by the dollar (Mexican), which is worth about two shillings—the hotel say \$10 a day, Mexican, not Ticauls. Carriages are 10 Ticauls a day, and this town is ten miles long. The distances are as bad as in London. Soda water is brought up from Singapore, the water here being too bad to make it. A factory is being started now, however, and Singapore water, which is brought up in barrels, will be used. The natives wash in the river here and pollute it generally, and drink of the same water.

THE DRUG NEWS.

New York and Vicinity.

A FRAUDULENT CONCERN.

For the second time within five years the postal authorities at Washington have been called upon to investigate the methods of the Egyptian Drug Company, now at 112 West Thirty-second street, this city. The last time was only a few days ago and a fraud order has been issued against the company, and its mail has been withheld on the ground that it was obtaining money under false pretenses.

The firm advertised to give valuable presents to persons who would distribute samples, etc.. Judging from the mail received a large number of persons throughout the country have responded to the advertisement, requesting samples. The company answered these letters by informing the writers that they must send thirty cents for a sample of "Egyptian Tea," and they would then receive the present. After the thirty cents had been sent the company would again write stating that the margin of profit was so small that it could not afford to give away the present. In some instances a miniature set of furniture was sent.

An Era reporter called at the offices of the company, on the eighth floor, at the number given, and was received by a woman whose knowledge of the firm and its methods of doing business was very defective. She knew nothing of the fraud order, and averred that business was continuing the same as usual. A man seated at a desk in a side room volunteered the information that a member of the firm had gone down town "to fix matters with the post office authorities." This man refused to give his name, but he said he was not G. H. Wiggins, treasurer of the company, or J. A. Lawrence, manager of the concern. He wished nothing published about the fraud order, and seemed not to know how it became public, although he admitted it was issued about ten days ago. He displayed one of the company's advertisements, which was worded to deceive the casual reader, and offered this as evidence of the honesty of the concern. The advertisement stated that a miniature set of furniture would be given to people for distributing samples of Egyptian tea. The man explained that the word "miniature" had been inserted in the advertisement at the instance of the government some time ago. He declared it was a shame that the post office authorities should hold up his mail, as there were many persons all over the country who were agents of the company who wished to send in money to buy more goods. He declared that the Egyptian Drug Company was only a branch of the Hart Drug Company, which is located in the same offices. A large amount of mail has been held up by the post office authorities, and will be sent back to the writers.

Four years ago, in December, 1896, the post office authorities investigated the Egyptian Drug Company, which promised a \$75 Elmore bicycle free to anyone who would act as agent for the medicine and comply with their conditions. One of the conditions was the sending of \$1.12 to pay for a sample of Egyptian tea. The other conditions were not revealed until this money had been sent. The bicycle would not be delivered to any agent until he had sold \$144 worth of medicine. Many persons did not want an Elmore bicycle under those conditions and wrote for the return of their money, but the company would not refund it. It is not known how the investigation resulted, but the manager showed a reporter from this paper a letter from a correspondent acknowledging the receipt of a bicycle after selling \$144 worth of medicine. It was admitted that the writer was the only one who had earned a bicycle in this way, but it was stated that a thousand men and women were working for them on the same plan. (The bicycle supplied was only a watch charm, it may be explained.)

Lecture at the Drug Club.

On Thursday last, August 16, the members of the Drug Club and their friends were favored with an interesting address upon the manufacture of carbonic acid from the atmosphere. Henry Burden McDowell, a well-known chemical engineer, kindly consented to deliver this lecture at the request of Thos. P. Cook, who is always on the alert for what is new and progressive in chemical manufacture. The lecture was intensely interesting, opening as it did a discussion on the possibilities of synthetic chemistry as applied to cyanide of potassium, nitric and sulphuric acids, ammonia, etc. The lecturer emphasized the belief that we are on the verge of a complete revolution in ways and means for producing upon a large scale many of the more important chemicals for use in the arts and medicine.

A Handsome Drug Store.

A practically new pharmacy that is attracting the attention of the drug trade of the West Side is the "Palisade Pharmacy" at Forty-second street and Tenth avenue, in the new modern flats being completed by D. O. Mills. The store is not only handsome in appearance, but it is also conveniently located and is well equipped with everything in a pharmaceutical line. The prescription counter is fitted with the latest improvements and is so arranged that everything required for the work is in reaching distance. The proprietors of the place are Charles A. Wittmack and Charles Friedgen.

Business Good in the West.

N. J. Bentley, member of the firm of the Green & Bentley Drug Co., of Oskaloosa, Iowa, was in the city last week buying holiday goods. Mr. Bentley said business was excellent in the West and far above what it was last year. Iowa was experiencing the most prosperous times for twenty years past. People had money. Mr. Bentley remarked that he was spending more money for holiday goods this year than in some time, but he stated that trade warranted it even though it was a presidential year.

NOTES.

—Among those who visited the city last week were: Dr. T. C. Wood, druggist, Haverstraw, N. Y.; N. J. Bentley, of Green & Bentley Drug Co., Oskaloosa, Iowa; Thaddeus Benjamin, druggist, Riverhead, L. I.; J. A. Goodale, druggist, Dover, N. J.; Edward V. Zoeller, president North Carolina Board of Pharmacy and druggist at Tarboro, N. C.; A. T. G. Hodnett, druggist, York, Pa.; William Du Clos, druggist, Columbus, O.; Mrs. L. Mosher, druggist, Columbus, O.; B. M. Patterson, druggist, Detroit, Mich.; George Leggett, of Leggett & Peddle, druggists, Glen Falls, N. Y.; H. C. Sanderson, Scranton, Pa., who went to Asbury Park for a vacation; J. F. Finneran and C. R. Pollard, who own the Beacon Pharmacy, at Boston; C. E. Helfer, druggist, Akron, O., who returned from Arverne, L. I., where he had been on his vacation; Matthew Collins, of the Rhode Island Drug Co., Providence, R. I.; J. H. A. Temm and W. D. Temm, of the firm of H. H. Temm & Son, of St. Louis, Mo.; J. L. Wikle, druggist, of Anniston, Ala.; Mrs. W. H. Nixon, New Lexington, Ohio; G. L. Hechler, Columbus, Ohio; F. H. Slater, Mattewan, N. J.; Dr. J. F. Gilder, formerly of Robertson & Gilder, Newbury, S. C.; H. Allen, president of the L. Rockfeller Co., Englewood, N. J.; T. P. Taylor, of T. P. Taylor & Co., Louisville, Ky.; Dr. Gross, secretary of the Fort Wayne Drug Company, Fort Wayne, Ind.; Joseph B. Ogden, manager for W. G. Miller, druggist at Blairsville, Pa.; Leon Pimstein, with J. J. Schott, druggist, Galveston.

Tex., and D. Willey Baker, druggist, Trenton, N. J.; L. J. Schlesinger, Yonkers; J. T. Douglass, Bennettsville, S. C.; W. I. Lowe, Short Hills, N. J., and W. H. Hull, New Haven, Conn.

—F. C. Kinsman, manager for the New York branch of Henry Thayer & Co., returned from a pleasant vacation at Boston. During his absence Mr. Kinsman spent some time in the laboratory of Thayer & Co., at Cambridgeport, Mass., and in inspecting the firm's plant. The Thayer firm is now represented by F. H. Finch, in New Jersey and F. G. Williams has been added to the local staff of salesman.

—Justice Lambert, sitting in the Supreme Court, in Brooklyn, last week annulled the marriage of Gertrude J. Van Deinsen, daughter of J. J. Van Deinsen, a druggist at 663 Vanderbilt avenue. The young woman, who is sixteen years of age, had married John J. McNamara, aged twenty-three, without her parents' consent.

—Arthur B. Liebstaedter, of the class of '99, New York College of Pharmacy, has just returned from a pleasant visit of three months in Europe. During his absence Mr. Liebstaedter traveled through Germany, Switzerland and France. He is now spending three weeks with his parents at Monticello, N. Y.

—Edward V. Zoeller, President of the North Carolina Board of Pharmacy, and proprietor of a drug store at Tarboro, N. C., was in the city last week. President Zoeller had just returned from a European trip where he visited Berlin, Switzerland, Paris and London.

—Prof. Joseph P. Remington, dean of the Philadelphia College of Pharmacy, paid a visit to the Drug Club last week. He was accompanied by his son William, and together they left for Longport, N. J., where Prof. Remington's family are spending the summer.

—Articles of incorporation have been issued in this State to the Cole Medicine Company, which proposes to engage in the drug business, with a capital of \$500. The directors are Marlus Turck and J. L. South, of Brooklyn, and L. Hornbeck, New York.

—H. G. Shaw is absent from his desk at McKesson & Robbins, and is spending the time at Narragansett Bay. Mr. Shaw expects to do some fishing before returning and as this is his favorite sport his friends are anxiously waiting his arrival.

—Fire visited the drug stores of J. Kreier, 578 Clinton street, Brooklyn, and Samuel Clevin, 298 Pleasant avenue, this city, during last week. In the former place \$100 damage was done, while in the latter store the loss was slight.

—W. A. Kellogg, of Kellogg & Company, returned last week from a vacation of two months, and his partner George H. Hitchcock, left for a similar period in the Catskills.

—For the week ending August 14th, \$66,298 worth of drugs, chemicals, etc., was exported from this port. This is a falling off of about 1-3 on the week previous.

—Miss Clara F. Ehlen, of this year's class at the New York College of Pharmacy, has accepted a position with the Nutrico Infant Food Company.

—J. A. Sachs, who owns a pharmacy at Broome and Ridge streets, has recently opened a new store at Bathgate avenue and 190th street, Bronx.

—E. W. Ault has recently opened a drug store, at 1238 Second avenue, corner Sixty-fifth street, which he has named the Rhinelander Pharmacy.

—Joseph J. Vetter, proprietor of Dahlbender's pharmacy, Court street, Brooklyn, is enjoying his vacation at his home in Ohio.

—William L. De Zeller, city salesman for Seabury & Johnson, left last Saturday for a two weeks stay in North Canton, Ct.

—By the sinking of a barge in the Passaic River at Newark recently, \$16,000 worth of prepared licorice was destroyed.

—John Rooney, senior clerk at J. J. Redmond's Pharmacy, 114th street and Fifth avenue, is on his annual vacation.

—T. W. Edwards, buyer for Schieffelin & Co., left last Friday for Block Island, where he will remain for two weeks.

—F. W. Fletcher has resigned his clerkship in the store of W. S. Campbell, Manhattan avenue, Brooklyn.

—Among the vacationists in Delaware County is E. B. Rickey with H. J. Reel, 214 Monroe street, this city.

—A. P. Kerley, druggist at Seventieth street and Broadway, is at Red Hook, N. Y. with his family.

—P. J. Schaaf, of 3409 Third avenue, has returned from a ten days vacation in Ulster County.

—J. H. Morey, druggist at 104th street and Boulevard, is summering in the White Mountains.

—John Shiel has resigned his position with Mrs. Mayha, at 247 East Twenty-first street.

—Fred. Knauf has accepted a position with A. L. Goldwater, at 2761 Third avenue.

—Otto N. Frankfurter has recently resigned his position with Elmer & Amend.

—W. C. Jewett will represent Hance Brothers & White, in Brooklyn.

IN AND ABOUT BOSTON.

Courtesy of the J. C. Ayer Company to the Cuban Teachers.

Boston, August 18.—Few people, perhaps, have more genuine friends among the drug trade and elsewhere than the J. C. Ayer Company at Lowell. They are always undertaking some unusual plan on a large scale which, while it gives pleasure to others, likewise emphasizes well the fact that the Ayer people are about as alive as any house on earth, and the Ayer projects are always matters of general public interest. This has been exemplified this week in the excursion from Boston to Lowell of a large party, numbering more than one hundred and fifty, of Cuban teachers, who have been studying this summer at Harvard College and who have now left Boston for New York, Philadelphia and Washington before returning to their native country.

The Ayer Company invited them to visit its laboratories and provided a special train from Boston to Lowell and return. Representatives of the firm met them in Lowell, where the public cheered them. They were conducted to the "House of Ayer" on Middle street and welcomed to Lowell, through the interpreters, by Mayor Jeremiah Crowley and Superintendent of Schools Whitcomb who made brief speeches. Mr. Rose also welcomed them in a cordial, hearty speech and an orchestra played delightfully while the teachers were led into a large room in the building, where banquet tables were spread and the large party sat down to lunch. An elaborate menu was provided and was well served. Before they left the table the teachers each received a souvenir printed in Spanish containing a brief description of the Ayer plant. The Cubans applauded "Yankee Doodle" and "The Star Spangled Banner," played by the orchestra, and stood up when the Cuban National air was played. Then they left the tables, wrote their names in the visitors' book and were escorted through the various departments of the plant. The Ayer people, while assuming all expenses of this excursion, arranged also for the teachers to visit many other points of interest, notably the big print works in Lowell.

Former Drug Clerk Turns Burglar.

Boston, August 18.—At Lynn, this week, a policeman caught "red-handed" a burglar who was robbing the drug store of James E. Small in that city. As the officer passed the store he saw the man in the rear, tampering with the safe. He watched the unsuccessful labors for some time and then saw him go to the cash drawer and take something from it. As the burglar started to leave the store the policeman placed him under arrest. At the police station he gave the name of Ward, but later it was found to be H. W. Saville. Up to about a week before the burglary he was employed as a clerk by Mr. Small during six weeks and had a key to the store and also probably learned the combination of the safe. Mr. Small discharged the clerk about a week ago, but forgot to ask him for the key to the store. When searched at the police station a small amount of money and several

stamps were found in Saville's pockets. He no doubt planned to make a hasty escape, for outside the store stood a horse and carriage ready for use. That very day, after depositing a large sum of money in the safe, Mr. Small changed the combination, thinking that something might happen. Notwithstanding the conditions of the case, in the police court, on the charge of breaking and entering and larceny, the prisoner pleaded "not guilty" and claimed he tried to get into the safe for the purpose of getting some cocaine. He was held in \$500 for the grand jury. Saville has been employed in drug stores in Lynn several years. His home is in Lawrence.

NOTES.

—C. J. Countie, who has a drug store in this city, at Charles and Chestnut streets, has opened a new retail pharmacy at Nahant, the very exclusive summer resort so beloved by old Boston families. The store is in a new, fine block situated on Nahant Road, the main village thoroughfare, and directly in the heart of many summer residences there. The store is under the charge of Joseph Stanton, and he is assisted by L. E. Welch, as chief clerk, and others. It is intended to remain open only throughout the summer season. For several past seasons there was at Nahant a branch of Wheeler's Massachusetts Avenue pharmacy, this city, but this season the branch has not been opened.

—Druggist Green, of Springfield, is making radical changes in the drug store he recently bought of W. P. Draper, and expects in a few weeks to have one of the most elaborately fitted stores in New England. He expects a new soda fountain, which will be in place in about two weeks. It will be an elaborate affair, extending back twenty-eight feet from the front, and built entirely of marble. There will also be a marble dispensing counter. Mr. Green plans to run a strictly union store. The boycott that hung over the store for some time was formally removed by the central labor union last Sunday, and all the clerks employed in the store are members of the local drug clerks' union.

—The police from the Mount Pleasant station at Roxbury one morning this week arrested John F. O'Connell, twenty years old, of 14 Langdon street, who is charged with breaking into the drug store of Alfred A. Burnham, at 459 Dudley street, and the larceny of stamps and a small amount of money. A citizen happened to be passing the store at a very early hour, before the place usually opens for business, and saw a man moving stealthily about in the store, as if he had no right there. The citizen notified the police station and policemen were sent to arrest the man.

—In the United States Circuit Court, this week, Judge Colt issued an order restraining Leo Bow, the manager of the headhouse and the Park Café at the Marine Park in South Boston, from selling "Non-Tox," or any other similar beverage as, and for, "Moxie." The counsel for the Moxie Nerve Food Company of New England, who made the application, stated to the court that Bow had been selling "Non-Tox" to his customers whenever they called for "Moxie."

—Two Boston young men, H. Callehe and James Hanlon, have been charged with flim-flamming a drug clerk in Saco, Me. Recorder Emery held the prisoners in \$100 each for their appearance before the Grand Jury at the September term of the Supreme Court. The prisoners were unable to secure bail and were taken to the county jail to await trial or the arrival of friends from Boston.

—George F. Black, of Watertown, and J. A. S. Woodrow, Roxbury, are back from Nova Scotia, where they spent their vacations. H. D. Smith, of Roxbury, and Frank Davidson, clerk of John Neil's drug store, Union street, are away on their vacations.

—Edward H. Blair, who has been with the Apothecaries' Hall Company, at Waterbury, Conn., has given up his connections there to accept a position with a large drug house at Holyoke.

—Roland Bisson, a clerk at F. E. Berry's drug store on Rantoul street, in Beverly, has returned from a vacation which he spent at Yarmouth, N. S.

—Edward Hines, one of the clerks at M. F. Flynn's drug store at Haverhill, is spending a fortnight's vacation at Old Orchard Beach, Me.

—Included in this week's exports from the port of Boston are drugs and chemicals, \$11,777; india rubber manufactures, \$2,750; wax, \$213.

—Alexander Patoel, a Marlboro druggist formerly of Holyoke, has been visiting Worcester relatives and friends lately.

—A part of Morgan's drug store in the Forest Hills district of this city has been leased to William H. Dolan, a jeweller.

—A. C. Genthner has joined the forces as a new clerk in Moore's pharmacy at Danvers.

Other New England Items.

—Differences between William B. Packard, shipping clerk for Blanding & Blanding, wholesale druggists of Providence, R. I., and Edgar Brown, another resident of that city, culminated a few days ago in a shooting affray in which the former was shot and probably fatally injured. Both men lived in the same tenement, despite their differences, and the quarrel which led to the shooting was brought about by Packard accusing Brown of assaulting his 16-year-old son. Brown was arrested, and at the police station he protested that he committed the deed in self-defense.

—One of the boldest robberies committed in Portland, Me., for a long time was that a few nights ago in which Frank McKeown's drug store was the place visited. Notwithstanding the fact that Mr. McKeown and his family reside over the store, the marauders secured entrance, pried open the cash register, broke open a desk and gum machine, and then escaped without having disturbed the slumbers of the sleeping family upstairs.

—At Robinson's drug store at Gardiner, Me., James R. Jackson is acting as clerk during the absence of Edward Emery, who is enjoying his vacation at Pleasant Pond. Joseph Woodward, another clerk, also is spending his vacation at the pond. He has resigned his position in order to enter the Massachusetts College of Pharmacy at Boston, in the fall, and his place has been filled by Earl Wakefield.

—Charles La Bonte, a clerk at Nutter's drug store in Somersworth, N. H., is just recovering from a severe burn he received by putting his left hand into a kettle of boiling water, the cover of which was open. In quickly withdrawing his hand, he upset the kettle and the water burned his wrist.

—The J. D. Tyler drug store at Windsor Locks, Conn., has been sold to G. M. Allen & Co., of Hartford. Mr. Tyler has had a most successful business for many years. He will now retire from business life and rest. The new owners also conduct a store in Parkville.

—Archibald Caldwell, a clerk at Holland's pharmacy at Manchester, N. H., has returned from his vacation and will work until the fall, when he will enter the Massachusetts College of Pharmacy at Boston.

—The F. R. Durgin drug store property at Brattleboro, Vt., has been bought by C. F. Thomas, of Rutland, formerly the junior partner of the firm of Miner & Thomas, druggists at Rutland.

—A. E. Belisle, well known as among the younger pharmacists of Concord, N. H., has accepted a position as clerk at C. H. Martin & Co.'s drug store in that city.

—Having bought a large drug business in Burlington, Vt., W. H. Morey, of St. Albans, is now putting in a fine assortment of drugs and toilet gods.

—Arthur S. Clark, the head clerk for the Apothecaries' Hall Company at Waterbury, Conn., will spend his vacation in Denver, Col.

—John C. Reagan has purchased from his brother, C. W. Reagan, the Lake street drug store at St. Albans, Vt.

—The Michigan Pharmaceutical Association held its annual meeting at Grand Rapids August 14 and 15. Detroit was chosen as the place for the next meeting, and the following officers were elected: President, Charles F. Mann, of Detroit; Vice-Presidents, W. D. Church, Grand Rapids; N. D. Morris, Sault Ste. Marie, and R. T. Bower, Petoskey; Secretary, J. W. Seeley, Detroit; treasurer, Walter K. Schmidt, Grand Rapids; Executive Committee, E. E. Calkins, Ann Arbor; W. H. Burke, Detroit; C. B. Schuman, Manistee; J. S. Bennett, Lansing, and D. A. Hagans, Monroe.

STEPHENSON CHEMICAL CO., GREENSBURG, PA.

PHILADELPHIA.

Druggist Wilkinson of Dover Wanted.

Philadelphia, August 20.—Howard M. Wilkinson, druggist of Dover, Delaware, is badly wanted in his home city and constables armed with warrants are in search of him. His present address is unknown, but it is presumed that he is somewhere in the south. Wilkinson married about two years ago a Miss Packard, daughter of one of Dover's most influential citizens, but about six months ago he became enamored with his wife's sister Josephine, an infatuation which culminated last Saturday in the elopement of the young people for parts unknown. All Dover is in a ferment over the unfortunate affair. Wilkinson, it appears, had carefully planned the adventure for, on the 8th inst., he shipped thirty-five boxes of drugs to Charlotte, N. C., to "The Eagle Drug Co.," it being evidently his intention, when the storm had blown over to establish himself again in business in that city. These goods however were seized August 18th, on claims amounting to \$500, preferred by cash creditors residing in Dover. This case is booked for a hearing on September 14th, when Wilkinson may appear and state his position. There are all sorts of ugly rumors afloat in regard to Wilkinson. His store in Dover was one of the most complete and up-to-date pharmacies in the state, and on the 14th it was attached for claims it is alleged of upwards of \$8,000. Wilkinson was well known in Philadelphia, and was graduated at the Philadelphia College of Pharmacy.

NOTES.

—Prof. Frank N. Moerk, of the Philadelphia College of Pharmacy, left August 20th, for an extended trip by rail and water to Detroit, Michigan. While in Detroit he will be the guest of his class-mate and late fellow professor, Frank G. Ryan. Prof. Moerk will return via Niagara Falls, thence to Albany from where he will take the Hudson River boat to New York. He expects to be absent about three weeks. His wife and son will accompany him.

—Many municipal "your honors," celebrated local politicians and adept pill-rollers, all fast friends and famous fishermen, have this year dredged the Beach Haven waters. In the dispatches from that resort it is not stated whether Henry L. Stiles is an aspirant for political fame or not, but his friends are assured from the

glut in the fish market, that there will be an abundant supply during the coming winter of the Stiles' brand fish story.

Dr. R. Kindig, of Framford Road and Girard avenue, accompanied by his wife, is making an extended trip abroad. When last heard from he was in Florence, Italy, on his way to Rome to see the Pope. The travelers had visited the Paris Fair, Lucerne, Milan, Genoa and Pisa. From Rome they go to Venice, Oberammergau, Vienna, Dresden, Leipsic, Berlin, Hanover, Amsterdam, Hague, Rotterdam, thence home.

—Since the notice in a recent issue of the Era that Clayton F. Shoemaker, of Shoemaker & Busch, had rented a farm in New Jersey for the summer, Mr. Shoemaker has been deluged with inquiries and offers of blooded stock of all kinds and breeds from Jersey short-horns, to Holstein bulls, razor-backs, Burlington county mulley cows, etc.

—The committee appointed by the president of the Pennsylvania State Pharmaceutical Association to confer with the State Medical Association in relation to the Free Dispensary evil, consists of Prof. J. P. Remington, chairman, J. C. Perry, of Philadelphia and Charles L. Hay, of Du Bois, Pa.

—Dr. Harry Stoeber, one of the members of the firm of the Broad Street Station Pharmacy, rejoices in the advent of a little daughter. To escape the congratulations of his numerous friends he has hied himself to Atlantic City.

—E. Bender, Lawson C. Funk's right bower, is cruising the Barnegat deep seas. As Mr. Bender owns a controlling interest in a cold-storage plant, possibly there will be plenty of fish in the market next week.

—D. E. Bransome, of Johnson & Johnson, contemplates a raid on the scaly denizens of the dreamy Susquehanna—somewhere between Columbia and Havre de Grace.

—C. B. McLaughlin, of Camden, has returned from a successful day's fishing trip and characteristically reports a catch of forty-six fish and a lame back.

—Clarence Campbell, of the firm of Campbell & Brother, Eighteenth and Market streets, has returned to his post of duty after a three week's country recreation.

—L. A. Stedem, Eleventh and Master streets, has his family comfortably located at Wildwood, he dividing his time between the seashore and Philadelphia.

—Charles A. Eckels, Thirteenth and Market streets, is enjoying the delights of summer cottage life on the County Line, near Overbrook.

—J. W. England, editor of the "Alumni Report" is enjoying the Atlantic breezes at Ocean Grove. Mr. England's family is with him.

—J. C. Whiteley, head clerk for J. C. Perry, West Philadelphia, leaves for Baltimore, Old Orchard and Boston on a two week's vake.

—S. H. Binton & Co., have opened a store at 600 South Fifty-second street. They were formerly at Sixteenth and McKean streets.

—J. M. Raker, of Kensington avenue, is behind the counter again after a very pleasant vacation of three weeks.

—Howard Newlin, of George B. Evan's 1105, returns from his two week's Beach Haven trip brown and healthy.

—Mr. Beaver, head clerk with Allen J. Frankeberger, 2304 North Thirteenth street, is away on his vake.

—Ed. Wall, of V. H. Smith & Co., has been spending his vake at Cape May with his family.

—Mr. Blenn succeeds Mr. Vichy at Carpenter street and Germantown avenue.

—M. N. Kline is again at the wheel after a fortnight spent in Maine.

BALTIMORE.

Long Hours for Pharmacists.

Baltimore, August 18.—This is the way a prominent South Baltimore druggist delivered himself several days ago of a lament concerning the hardships, the drawbacks and the annoyances of his profession: "Foremost among the druggist's accomplishments is that he shall at all times act as human guidepost for the immediate neighborhood and for strangers. He is a bureau of information, a city directory and a pharmaceutical automaton rolled into one. Then he acts as clerk of the scales for everyone who may command his services, and is also a post office annex for Uncle Sam. In late years he has been compelled to increase his stock by the addition of tobacco, stationery and bottled beer. His store, too, is used as a telephone exchange. In former times the dispenser of court plasters and pills was not so closely confined to his place of business, and the night bell occupied a less conspicuous niche in his chamber of horrors. Now he may expect to be called up at any hour of the night, and all persons who happen to be injured in the street are carried into his store, regardless of the extent of the injury and the damage they are likely to cause to the fixings. The druggist puts in longer hours than persons engaged in almost any other occupation. He is poorly organized and such a thing as co-operation for the purpose of securing the amelioration of his condition is wellnigh unheard of. With a good strong confederation, the life of a pharmacist could be made worth living."

Fried Eggs on the Pavement.

Baltimore, August 17.—Those who know something about Washington are also willing to accord the national capital the distinction of being the hottest place outside of Death Valley in summer. The smooth asphalt pavements absorb the heat like a sponge, and the pedestrian walking over them feels as if he were treading on pancakes. Week before last, as is generally conceded, was perhaps, the hottest ever experienced by those whom stern duty compelled to remain either in Baltimore or Washington, and the unusual torridity was responsible for some remarkable processes of cerebration. One of the most unique is said to have had its origin in the fertile brain of Druggist A. J. Schaffirt, whose pharmacy is located at North Capitol and H streets. Noticing that his thermometer registered 120 degrees, Dr. Schaffirt is said to have conceived the idea of frying eggs on the pavement. According to report he broke an egg and deposited the contents of the shell on the asphalt. Neither yolk nor white ran more than they would in the ordinary course of frying where a pan is used. In seven minutes by the clock one side was cooked, and in another ten minutes the other side had been done to an appetizing brown. When information about the success of the experiment got about a general dispensing with frying pans and fires is said to have followed, and there is alleged to be a movement on foot among all the "Adam and Eve" and hash house proprietors

to utilize solar heat permanently and exclusively for cooking purposes.

NOTES.

—Among the out-of-town druggists in Baltimore last week were M. L. Byers, Hagerstown, Md.; George L. Meyers, of Dallastown, Pa., and F. S. Williams, of F. S. Williams & Son, Washington, D. C.

—Frank Lippold, a druggist at Cumberland, Md., has been arrested for selling soda water on Sunday. He asked for a jury trial and was released on bail.

—H. P. Hynson, the Baltimore druggist went to Atlantic City last Saturday, to stay over Sunday and find out what the wild waves are saying.

LOUISVILLE, KY.

Louisville Druggists Will Return to Old Scale of Prices.

Louisville, August 16.—Druggists in this city are determined to do away with the obnoxious cut-rate drug stores and return to the old scale of prices. A meeting was held by them Tuesday night and the large attendance indicates that they are ready for the change. Oscar Dilly was elected chairman of the meeting and when he sounded the gavel more than seventy-five druggists were present. The meeting was harmonious although there was great diversity of opinion. There were many present who were opposed to a return to the old scale, preferring to compromise upon a slight increase. The majority, however, were in favor of it. The committee was instructed to visit every druggist in the city and secure a direct opinion, and also to visit the aggressive cut-rate stores and convince their proprietors of the error in blocking the road to higher prices. The members of the committee will do their utmost to bring these proprietors back into the fold, and it is not unlikely that the druggists of Louisville will present a solid front to the public in their demand for the old rates. One of the most peculiar features of the contemplated increase is the lack of objection on the part of the public. There is nothing to indicate that they are displeased.

—The crusade against the sale of cocaine is being vigorously pushed and the next Legislature will be petitioned to pass a law forbidding its sale. The drug has caused much crime and suffering in Louisville and the majority of the druggists are opposed to its sale. It is said that the bill will be well supported and that there is little doubt as to the outcome. The druggists are already taking active steps to secure its passage. The proposed bill will prohibit the sale of the drug except where it is prescribed by a physician. The State Board of Pharmacy is also endeavoring to introduce another much needed reform. Inspectors are being sent all over the State to examine the drug stores. One of the inspectors visited Lexington last week and found the conditions there in most lamentable state. The proprietors of saloons and grocery stores were vending proprietary medicines with the freedom of a century ago. The Inspector agreed not to prosecute the offenders if they would promise to dispose of the stock which they carried and the differences were amicably settled.

—The Alumni Association of the Chicago College of Pharmacy, the School of Pharmacy of the University of Illinois, has arranged for a series of special lectures upon business subjects connected with pharmacy, to be given at the college during the coming session. These lectures will be free to students and alumni and will embrace: Business forms, including lectures on laws of business, kinds and purposes of money, individual bank accounts, etc.; window displays, including designs for exhibition purposes; electro-medical apparatus and instruments, static machines, batteries and X-ray apparatus; photographic apparatus, cameras and supplies; furniture and fixtures, display cases, counters and soda water apparatus. These lectures will be delivered by experts in the various lines, and while intended chiefly for the students, are expected to prove both interesting and instructive to graduates as well. It is planned to have these lectures during the evening.

MCBRIDE'S PARLOR DRUG STORE,
YOUNGSTOWN, OHIO.

CINCINNATI.

Cincinnati Druggists Will Discuss N. A. R. D.

Cincinnati, August 18.—Notice of an important meeting of the Hamilton County Druggists' Association will be sent to all members in a few days. The meeting will be held in the Odd Fellows Temple, Friday P. M., August 31. Only druggists having cards will be admitted to the hall as the meeting is to be secret one. From a reliable source the information is obtained that the result of this meeting will determine whether the retailers in Cincinnati shall purchase their supplies from those houses who have not affiliated with the principles of the N. A. R. D., or transfer their patronage elsewhere. Only one of the local wholesale drug firms has openly espoused the cause of the N. A. R. D., and refuses to sell to cut rate stores. Many prominent druggists have already transferred their business to this house, and the outcome of this meeting will without doubt influence the decisions and actions of many others.

NOTES.

—A. E. Diebold, who sold his drug store on Walnut Hills and went to Washington, D. C., with the intention of locating there, is back again. Andy says he has traveled all through the East, but finds that there is no place like Cincinnati. It is likely he will again start in business here.

—The will of the late George Eger leaves his entire estate amounting to \$25,000 to his wife during her lifetime. After her death it is to be divided equally among his four children. George, Eger, Jr. will still continue in charge of the drug store at Mohawk and Central avenues.

—The druggists recently arrested for selling cocaine and morphine without a prescription from the consumer were dismissed in the Police Court. Had they been convicted many other druggists would have been arrested on a similar charge.

—Samuel Harris, a well known young clerk of this city is opening a new store in Dayton, Ky. The location is a prominent one and it is predicted that it will prove a paying venture for Mr. Harris.

—E. W. Gray is at Atlantic City with his wife. During his absence, Peter Herman is in charge of the store at Fifth and Main streets.

—Albert Nelson will resign his position with E. W. Gray, to accept one with N. E. Smith, in Avondale.

—Fred. Schelbenzuber, a former druggist of Dayton, Ohio, is clerking for John Ruppert, on Price Hill.

—Henry Duestberg, clerk for Emil Zorn, is enjoying his vacation at Fort Wayne, Indiana.

DETROIT.

Drug Clerks Draft a Bill to Regulate Working Hours.

Detroit, August 18.—The Detroit branch of the Michigan Retail Drug Clerks' Association has drawn up a bill which it will present to the State Legislature at its next session, the coming winter. A copy of it was prepared and sent to the recent meeting of the State Pharmaceutical Association at Grand Rapids. Its principal features are: That the working hours of drug clerks shall be limited to ten hours per day, in periods of five hours each; that ten hours overtime one week shall be allowed on the next week's time, i. e., the work for any two consecutive weeks shall not exceed 140 hours; that a violation of this shall be considered a misdemeanor, punishable by a fine (minimum \$10, maximum \$100), or imprisonment (minimum 10 days, maximum 90 days), or both, at the discretion of the court; and that this shall be operative in cities of 5,000 or more, and shall take effect immediately. The boys are determined to push the matter and anticipate success.

Swindler Works the Michigan Drug Company.

Detroit, August 18.—The Michigan Drug Co. has been "worked" very successfully of late by a swindler who is not yet located by the police. It was done this way: Orders with the firm's name, address and so on at the head, and signed "The Michigan Drug Co., per A. W. Brooks" at the bottom, were presented to various firms about the city, and were honored without question. It is supposed the name "A. W. Brooks" was used in place of that of A. S. Brooks, of the firm, to avoid a charge of forgery. The fraud was discovered by A. S. Brooks during the present week, and so far it is known that about \$200 worth of goods have been obtained by the unknown in the last two months. It is suspected that the mischief began even before that time. Cigars, playing cards and revolver cartridges are among the goods obtained. The scheme is not particularly hard to operate, especially at the first of the month, as books are not made up till many days have passed. A practice which helps make it easy, is that of giving the bill of goods with the goods themselves, instead of mailing it direct to the purchasing firm.

NOTES.

—A. M. Edwards, Jr., is the new president of the Detroit branch of the Michigan Drug Clerks' Association, vice Grant Stevens, who has become a proprietor. As Mr. Edwards was formerly secretary of the association, and can not fill two offices, it will be necessary to elect a new secretary at the next meeting.

—The opticians in convention in Detroit August 14-17 spent a very enjoyable afternoon at Parke, Davis & Co's. After a tour of the plant lunch was served on the lawn and an exhibition fire drill given. Several hundred were in attendance, many ladies being among them.

—The thirteenth game played by the Michigan Drug Co. last Saturday, was lost to the Byram & Co. (brass foundry) team; score 9 to 5. It was the second game lost by the druggists this year.

—Oscar E. Franke, of Farrand, Williams & Clark's, Detroit, is touring the lakes. Mr. Franke will have another vacation in the fall, when he will go to the Paris Exposition.

—Harry Skillman, advertising manager for Parke, Davis & Co., has been spending a two weeks' vacation with his family at Mackinaw.

—Druggist A. L. Walker, of Detroit, has just returned from Lyons, N. Y., where he rusticated for about ten days.

—Druggist Wm. A. Hall, of Detroit, will take his vacation on the lakes. His family will accompany him.

—Druggist C. F. Mann, of Detroit, is enjoying a few days' fishing at Whitehall, Mich.

CHICAGO.

Represented Himself to be an Officer of the Board of Pharmacy.

Chicago, August 18.—William Schmidt, of Nashville, Ill., has gotten into trouble. He represented to merchants that he was an officer of the Board of Pharmacy and held up those who had no permit to sell patent medicines for \$10 each, threatening to arrest and prosecute them unless they paid. He practiced only on general merchants in towns where there are no drug stores and medicines are sold by permit of the board. The young man is now being sought by an officer with a warrant for his arrest.

NOTES.

—The drug store at Sixty-third and Halsted streets, sold a week or so ago by H. G. Hartman to the Englewood Pharmacy Company, has been completely overhauled and remodeled, a balcony has been put in and a larger stock has been taken in. The store is under the management of William Schlitzer.

—Wilhelm Bodemann writes thus concerning his new directory: "Have my slot directory. First lady who dropped in penny was indignant. 'Why, don't I ouy all my stamps here? and you mean to charge for the directory!' Yes, my dear, that slot is just for that class of benevolent patrons. Like the G. O. P. platform, I 'po'int with pride.'"

—The wife of Robert S. Murray, a druggist at Sixty-third street and Ashland avenue, will leave soon for Berlin, Germany, where she will take a three years' course in vocal music. Mrs. Murray is an unusually fine vocalist.

—E. A. Bertram has opened a new drug store at Milwaukee and California avenues in a new building just completed on the northwest corner. He has fixed up the store artistically and has a fine Twentieth Century fountain.

—A new sub-station of the Chicago post office was opened last week in the drug store of Edward G. Binz at Sixty-ninth street and Normal avenue. The office was established upon the petition of 300 residents of the district.

—F. S. Catlin, formerly of Gowrie, Ia., will soon open at Mason City, Ia., a new drug store, the stock for which he has just purchased from Morrisson, Plummer & Company.

—A. Timberlake, secretary of the Indiana Pharmaceutical Association and a member of the Executive Committee of the N. A. R. D., was in Chicago this week.

—Five boys robbed the drug store of J. F. Carnegie at Michigan avenue and Sixteenth street last week. All they took was ice cream, cigars and candy.

—A. I. Movitt, of 352 West Fourteenth street, will open a new drug store on September 15 at West Taylor street and Ashland avenue.

—Druggist G. L. Kidder, of Fifty-seventh and State streets, has gone to Michigan to spend a week or two amid rustic scenes.

THE NORTHWEST.

St. Paul, Minn., August 17, 1900.

—Successions: Cowles & Lines, Brown's Valley, Minn., by G. S. Lines; E. J. Brown, Wheaton, Minn., by Brown & Stewart; Mrs. Louise Johnson, Jasper, Minn., by Mrs. J. H. Borg; E. E. Draper & Co., Runnells, Ia., by Draper & Switzer; R. W. Ady & Co., Osage, Ia., by N. P. Kaul; A. W. Jameson, Jasper, Minn., by Jameson & Davis; Hankinson & Co., Hankinson, N. D., by N. Schultheis; C. Thittle, Lewiston, Mont., by D. E. Hemphill.

—Henry Prestholt has left Lindmark's drug store, at North Branch, and is succeeded by O. O. Wold, formerly of this city. Mr. Prestholt goes to Marietta, where he opens a new drug store.

—J. C. Hening is now running Crocker's drug store, at Faribault, succeeding C. H. Hawley, who has seceded from the firm and gone on the road for P. D. & Co.

—D. R. Noyes, of Noyes Bros. & Cutler, is at Saratoga exercising his functions as member of the committee to revise the Presbyterian creed.

—J. W. Rowden has gone to Tracy, Minn., to the store of L. J. Hunter & Co., to succeed A. M. Pomroy, who has gone to Dickenson, N. D.

—John Fisher has left Minto, N. D., and in company with his brother, Stephen, of Cando, is opening a new drug store at Velva, N. D.

—E. E. Roebuck, who has of late been running Alexander's Drug store in Hayward, Wis., has returned to this city.

—The business of the Condon Drug Co., Condon, Ore., has been transferred to the Hudson Pharmacy.

—Adolph Merritt, Omaha, Neb., has given a bill of sale.

—A. E. Grout has left Jordan, and is now in Mankato.

—Albert Glotzbach is now working at Wells, Minn.

—H. C. Vitteloe & Son, Harper, Ia., have sold.

ST. LOUIS.

St. Louis, August 18, 1900.

—Druggist Joseph Methudy, of 2759 Russell avenue had a sad experience while performing the offices of the good Samaritan on Wednesday of this week. A man by the name of Tobin fell in an epileptic fit in front of Mr. Methudy's store. The druggist thinking the man had been overcome by the heat, went to his assistance, dragged Tobin into his yard, ministered to his wants and sent for a doctor. When Tobin regained consciousness, he became angered, chased Mr. Methudy, landed him with a rock and used him rather severely until the druggist commenced to get the better of his assailant and friends came to the rescue. Tobin was sent to the observation ward at the city hospital.

—Fire at 410 North Main street, last Sunday, badly damaged the stock of the Rawley Lack and Varnish Co. About the only thing which escaped destruction was a couple of barrels of wood alcohol which went through unscathed. The stock of the McDougall White Lead Co., and the Cleveland Varnish Co., in the same building was also damaged. No. 412, next door, is occupied by the St. Louis house of Dodge & Olcott. The damage was by smoke and water and very light, although manager Walter Filmer thought everything was going sure at one time.

—Fire in the building occupied by Druggist W. W. Abraham, 5633 Easton avenue, Monday morning, almost entirely destroyed the stock. Estimated loss to stock, \$2,000, insured. The damage to the building was \$600. The druggist's family who lived in the flat overhead were forced to flee for their lives.

—Drue H. Johnson, a well dressed young man of 28 years, was arrested on Wednesday of this week on the charge of passing bogus checks on a number of prominent business men. The checks were all for small amounts. One of his victims was Druggist Henry Osdierck, of 902 North Garrison avenue.

—Word was received here Wednesday of the sudden death of Donald L. Cameron, of Rutherford, N. J. He has for years been in attendance at the annual meetings of the American Pharmaceutical Association, and was highly esteemed by the delegates from St. Louis and elsewhere.

—The announcement in the Era of the sad death of the two daughters of Prof. Lowe, of Philadelphia, was received with the most profound regret by members of the profession in this city.

—The silver anniversary of the Alumni Association of the College of Pharmacy, will be held Friday night, September 21, instead of September 18, as previously reported.

—George S. Mephram & Klein, the large manufacturers of paints, this city, have commenced the erection of an extensive new factory in East St. Louis.

—Julius P. Schmidt, formerly with Weible, on South Broadway, is now clerking for Wm. K. Ilhardt.

—Charles Gietner is expected back from Europe in a few days.

Business Record.

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS DIRECTORY can correct their copies from the record and the term "D. D. List," used here, refers to this directory.

We exercise due care to insure the authenticity of items here recorded, but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, THE PHARMACEUTICAL ERA,
New York.

ARKANSAS.—Nelson.—A. L. Owen sold to W. S. Measer.
CALIFORNIA.—Alvarado.—Lincoln Fitzell sold to Dr. W. A. Patterson.

CONNECTICUT.—Windsor Locks.—J. D. Tyler sold to George M. Allen.

FLORIDA.—Webster.—W. J. & E. A. Hughes sold to C. L. Futch & Co.

GEORGIA.—Augusta.—A. C. Wade sold to George O. Griffin.

ILLINOIS.—Chicago.—H. G. Hartmann & Co. succeeded by Englewood Pharmacy.—J. R. Valliteich, of 538 Milwaukee avenue, change address to Addison avenue and N. Halsted street.

Danville.—Carter & Nungesser succeeded by T. H. Carter.

St. Joseph.—Swearingen & Son sold to W. A. Dukes.

INDIANA.—Coal City.—Dalton & Son sold to P. A. Bond.

Indianapolis.—Gustav Lender, 502 N. Noble, sold to Mass Pharmacy.

OWA.—Aurora.—Thomas Bros. sold to Mackin Bros.

KANSAS.—Blue Rapids.—William Coulter, deceased, succeeded by C. Coulter.

MISSOURI.—St. Louis.—B. L. Kissel, deceased. Sheridan.—A. Van Sandt sold to A. L. Rogers.

NEW YORK.—Port Henry.—E. S. Smith succeeded by Sarah J. Smith.

Sag Harbor.—A. E. Pickard sold to B. W. Babcock.

OHIO.—Latty.—Strother Bros. sold to C. W. Gordon.

OREGON.—Gold Hill.—E. J. Eastmann succeeded by Eastman & Co.

PENNSYLVANIA.—Lancaster.—John I. P. Troxel sold to S. E. Meister.

Philadelphia.—Robert C. Cadmus, 2,100 Mt. Vernon, change address to N. E. Cor. 20th and Spring.

RHODE ISLAND.—Providence.—C. O. Danforth succeeded by Danforth's Pharmacy.—Miss Emma Thorpe succeeded by Charles O'Leary.

TEXAS.—Rockwell.—Keys and Long dissolved.

WASHINGTON.—Spokane.—Watson & Gregory succeeded by Watson & Murgittroyd.

VISCONSIN.—Omro.—Milo Kutchens succeeded by Miner Lord.

OBITUARY.

MRS. LUCY A. S. FOWLE, wife of Seth W. Fowle, a pioneer druggist of Boston, died at the age of eighty-three years after only a brief illness at her home, No. 60 Waverly street, Roxbury, Mass., on August 13. She was well known to residents of Boston of half a century ago, where she was born. As a child she lived in Salem, where she attended school, and where she was married. Her husband's drug store was one of the earliest of those at the North Bend, where it was situated at the corner of Prince and Salem streets. He then was only twenty years old. He eventually disposed of his retail business and went into the wholesale business and manufacturing. He died in 1867 and was succeeded by his sons, Seth A. Fowle and Horace S. Fowle, at No. 81 High street, Boston. Besides these two sons, their mother leaves four daughters. The funeral services of Mrs. Fowle took place from her late home in Waverly street. The burial was at Forest Hills Cemetery.

DR. MOSES WARREN KIDDER, of Lincoln, died at the Waltham Hospital on August 15, of appendicitis. He was born in Townsend, September 11, 1828. His education was chiefly obtained under the instruction of his father and from a practical acquaintance with drugs in the wholesale establishment of Reed, Cutler & Co. He attended the Harvard and the Berkshire medical schools, and later he entered into practice with his father in Lowell, where he remained until 1870, during which time he served as city physician, and as a member of the school board in 1861-63. He was a member of the Massachusetts Medical Society and of the Masonic fraternity, and was a prominent Swedenborgian. His services as a chemical expert in law cases were in frequent demand. At a later period he turned his attention to improvements in the methods of manufacturing illuminating gas, upon which he took out many valuable patents. He leaves four sons.

ALBERT BULL, who for a long time conducted a drug store at Middletown, N. Y., died August 8, at the age of seventy-three years. Mr. Bull made a success out of the drug business and dabbling in Wall street transactions became quite a well known operator. His drug store was purchased by Wickham H. Young, who conducts it at present.

HENRY LAURENS RIKER, with the firm of J. L. and D. S. Riker, of 46 Cedar street, New York, died August 13. Mr. Riker was well known in the trade.

FREDERICK DE PUYSTER WHITMARSH, who for fifty years had been connected with C. De P. Field, in the drug importing business, New York City, died August 13.

N. Y. P. A. COMMITTEES.

Felix Hirsman, President of the New York State Pharmaceutical Association, has named the following chairmen of the different committees for the ensuing year: Legislation, Felix Hirsman, New York; transportation, Neil McEachran, Buffalo; new remedies, Charles W. Parsons, New York; pharmacy and queries, Frederic P. Tuthill, Brooklyn; adulterations, G. Michaelis, Albany; commercial interests, Clark Z. Otis, Binghamton; delegates to conventions of State Pharmaceutical Associations, Pennsylvania, B. M. Hyde, Rochester; Ohio, Frederick R. Burdick, Syracuse; Massachusetts, Frank Richardson, Cambridge; Connecticut, A. H. Brundage, M. D., Brooklyn; Virginia, George J. Seabury, New York. The following are the delegates named to the National Wholesale Druggists' Association: Robert K. Smither, Buffalo; chairman; William J. Walker, Albany; Clay Holmes, Elmira; S. H. Carragan, New York; George B. Hubbard, Syracuse; National Association of Retail Druggists, Felix Hirsman, chairman; Thomas Stoddard, Buffalo; George E. Thorp, Syracuse; W. C. Anderson and William Muir, Brooklyn.

PATENTS

Trade-Marks, Designs, Etc.

Issued August 7, 1900.

53,208.—Heinrich L. Diehl, Darmstadt, assignor to F. von Heyden Nachfolger, Radebeul, Germany. Tar ester of fatty acids and making same.

53,239.—Thomas Jespersen, Neenah, Wis. Bleaching by electrolytic chlorin water.

53,378.—Joseph Schneible, New York, N. Y. Apparatus for charging liquids with gas.

53,378.—Ernst Funk, Chicago, Ill. Carbonated beverage.

53,458.—Heinrich Saxl, assignor of one-half to A. A. Adler, San Francisco, Cal. Making superphosphates.

53,487.—Lorenzo M. Hansen, Moorestown, N. J. Water-bag.

53,481.—Frederick W. Evans, assignor to Evans, Grove Everett, St. Louis, Mo. Device for promoting growth of hair.

53,540.—Anton Arlt, Bad Sommerstein, Germany. Vaginal syringe.

53,601.—Rollo W. Browne, Washington, D. C. Hernial truss.

53,637.—Frederick J. Lander, Rochester, N. Y. Syringe.

53,605.—Addison G. Waterhouse and J. S. Forbes, Philadelphia, Pa., assignors to said Forbes. Apparatus for heating and sterilizing fluids.

MANHATTAN PHARMACEUTICAL ASSOCIATION.

There was a very small attendance at the meeting of the Manhattan Pharmaceutical Association Monday evening, August 20, but the eighteen or twenty who were there made the gathering an interesting one.

The siphon question was the principal subject under discussion. It was just 9.10 when President Smith declared the meeting opened. Secretary Swann read the minutes of the June meeting and also those of the May meeting, which were omitted at the last meeting. Both were adopted.

Treasurer Hitchcock reported a balance on hand at the previous meeting of \$438.54 and to this \$43.75 in dues had been added. The expenses for the month were \$15.05, leaving a balance of \$467.24.

Mr. Schaaf, for the Grievance Committee, stated that the committee had called on Carl H. Schultz, maker of mineral waters, August 7, and had been very cordially received. The committee was shown through the Schultz plant and the information was given them that between 40,000 and 50,000 siphons were lost every year. He also said the druggists lost about 15 per cent. of this amount. Mr. Schultz, being asked why the siphons were sold to physicians for 6 cents, replied that this was a custom established by the late Mr. Schultz and he would not like to break it at this late date. The siphons cost the Schultz firm $7\frac{1}{2}$ cents to put up. The following suggestions were offered as a means of increasing the revenue to the druggists: First, that the retail price be raised to 12 cents and that this increase be made by all the associations; second, that a deposit of 10 cents be made and a coupon given for all siphons sold.

It was stated that Mr. Schultz was willing to take up any plan that was feasible and that he seemed greatly interested in the question. He expressed a desire to attend the next meeting. Before action could be taken on the committee's report, the discussion of the subject was taken up. Mr. Porr, another member of the committee, said that something ought to be done and President Smith asked Mr. Schaaf what he would suggest. Mr. Schaaf thought the question ought to be talked upon in other associations and some plan formed.

Mr. Schweinfurth and Mr. Hitchcock thought that united action by all the associations would be the means of accomplishing more than that taken by a single association. Mr. White said in regard to charging 12 cents a siphon, he had been in business twenty years and had never received less than that. He said at one time \$1 deposit was required. Others present had also received 12 cents and some were getting that at present. Mr. White suggested that other companies be visited. Mr. Hirsemann ended the discussion by a motion that the different organizations be communicated with and in this way a discussion would be started and the result of this could be learned by reports from the associations. Mr. Schaaf's report was first adopted, then this motion was carried and the duty of instruction left with the Grievance Committee. President Smith instructed Secretary Swann to invite Mr. Schultz to be present at the next meeting.

Mr. Hitchcock, chairman of the committee to call on the proprietor of a trade paper with reference to getting that paper to desist from its attacks on the Manhattan Association, said the visit had been made and matters were adjusted so that hereafter there will be no further cause for complaint.

President Smith cautioned the members in regard to the law relating to registered bottles, a communication from the Bottling Brewers' Association having been received stating that the association had a number of bottles druggists had unlawfully filled. President Smith stated it was unlawful for a druggist to put anything in a registered bottle. Mr. Faber stated that there were 15,000 registered bottles in the State and that there was no way of telling a registered bottle from one unregistered unless a book was had containing all the names of registered bottles as many bottles did not have the word "Registered" blown in the glass. He did not think the law was constitutional.

Secretary Swann read statistics he had furnished the N. A. R. D. on request of that body. The matter of sending a delegate to the Detroit convention was then brought up and Mr. Hirsemann said if no one else cared to go he would act for the society as he was going for two other organizations, but the dues must be paid in order that the delegate might have a standing on the floor. A rising vote was taken on the question of payment and it was decided in the affirmative. The dues are \$62.50. An appropriation of \$30 was voted Mr. Hirsemann for expenses and Secretary Swann secured \$10 for necessities in discharge of the duties of his office. Fifteen new names were placed on the membership roll and fifteen applications were received.

NECESSITY FOR PURITY IN MEDICINAL CHEMICALS.

The drug and chemical trade of England has of late been deeply interested in an important case coming to public attention, and this interest has extended until it pervades the trade in this country as well. A physician prescribed for one of his patients an effervescent phosphate of soda. Upon taking the medicine alarming symptoms developed in the patient, which led to a thorough investigation, resulting in the discovery of appreciable amounts of arsenic in the phosphate of soda used. The investigation was then farther extended, and particularly by members of the drug trade, and it was found that a considerable proportion of the chemical in question kept in stock at the various stores was contaminated with this dangerous impurity. Since this, chemists have been investigating into the causes of this state of affairs, and the trade journals, as well as the lay press, have had very much to say upon the matter. It has been very definitely ascertained that the source of the arsenic in phosphate of soda is the impure sulphuric acid which some manufacturers use in preparing the last named product. There has been a very general overhauling of the stocks of phosphate of soda in the shops of English chemists and druggists, and the manufacturers are, ostensibly at least, very active in endeavoring to trace and remove the cause.

The moral which may be drawn from this investigation is that purity and reliability should be the prime characteristics of all chemicals intended to be used for medicinal purposes. There is a wide difference between crude, commercial and chemically pure chemicals, and only the latter variety should be employed in the treatment of the sick. Also chemicals constituting all or part of preparations used as beverages, effervescing drinks, etc., should be equally devoid of reason for reproach.

The case referred to above has been followed by legal proceedings against various chemists and druggists who have been supplying an impure preparation of phosphate of soda, for the English law is very strict and holds the dealer primarily responsible for the character of the wares he sells. As a matter of self protection, to say nothing of duty, the druggist should be sure that he gets, not commercial goods, but goods of such a character, chemically pure, as may safely be used by physicians.

The Thomsen Chemical Co., of Baltimore, the largest manufacturers of phosphate of soda in this country, and from whom the majority of the trade procure their supplies of this article, are emphatically stringent upon the point that their product is absolutely free from arsenic and any other metallic poison, and is especially adapted for medicinal use. In preparing it they use only the purest phosphoric acid and filtered sodium carbonate. They make their own sulphuric acid entirely from brimstone, whereby there is no possibility of arsenic being present, and by various operations they render it chemically pure, so that when used in the preparation of phosphate of soda there is no possible chance of dangerous contaminations of the finished product. The chemical and drug trade of this country have been much interested in the English case. They have thoroughly looked into the character of the phosphate of soda and allied products employed here, and the largest and most responsible drug houses are now purchasing their supplies from the Thomsen Chemical Company, showing thus their appreciation of the importance of getting this article pure. The phosphate of soda manufactured by this house is sold at the lowest possible price consistent with the quality which is requisite for medicinal purposes, and druggists buying this brand may be sure that they are getting a pure article, suitable in every way for medicinal purposes.

These remarks apply with equal force to another high grade product manufactured by this house—Epsom salt. This article contains no metallic or other impurity, and answers in every particular the pharmacopoeial requirements. It is guaranteed to be a pure, medicinal magnesium sulphate.

Physicians and pharmacists alike should look carefully into the quality of the medicines they handle, buy only from responsible houses, and insist upon a guarantee that deleterious substances, adulterants, or impurities are totally absent. The various lines of chemicals manufactured by the Baltimore house enjoy wide and valued reputation for their high degree of excellence.

One of the most attractive advertisements in this issue is that of J. C. Ayer Co. on another page. It shows a fac simile in half tone of the Ayer Malarial and Ague Cure package, and included in the advertisement is a coupon which druggists are requested to fill out and send in to J. C. Ayer Co., Lowell, Mass. They say in their advertisement that therapeutically Ayer's Ague Cure has never been equalled, and they call attention to the well known fact of its former intense bitterness which, until recently, greatly interfered with its popularity; they have now corrected this fault, and to-day, while it is the same guaranteed cure for chills and fever, it is acceptable where before it was rejected. They are advertising this change to the consumer, and are pushing it hard. They expect to create a lively demand for it, and have prepared some advertising matter which will assist them in this endeavor. Druggists are requested to send in the coupon mentioned for this matter.

The magazine advertising of Eskay's Food is most attractive and has contributed perhaps as much as the quality of the Food, to its present popularity. We illustrate on another page a sample of one of their advertisements. The druggist should be prepared to supply the demand for it, and should at least become acquainted with the manufacturers, Smith, Kline & French Co., Philadelphia.

—At a meeting of the North Carolina Board of Pharmacy held in Wilmington, Tuesday, July 17, the following named candidates for license to practice pharmacy passed approved examinations: Wm. Louis McKinnon, Red Springs; Ernest Ellwood Missildine, Tryon; Harvey Hooper McKay, Wilmington; Warren Winslow Horne, Fayetteville; Edward Koonce, Richlands; John H. Williamson, Troy; Samuel Mitchell Piercell, Reidsville; Clarence Pascal Harper, Smithfield; Clarence Eustace Houston, Monroe; Jno. G. Ratliff (Ratlif), Wilmington; Geo. Edgar Matthews, Enfield; Bloomfield Horton Kendall, Shelby; Odel Southerland, Hickory; Frank Stevens English, Monroe; Edward J. Jones, Concord; Charles Harvey Cavis, Gastonia; Thos. Arthur Walker, Charlotte; B. Allison, Burlington; Joseph Alphonso White, Davidson; Edgar F. Townsend, Red Springs; Dr. Geo. Davis, Beaufort; J. F. Jarman, Wilmington; Robt. Lee Hamilton, Smithfield; Murdock H. McKinnon, Red Springs; Eugene Sykes, Fayetteville; Thos. Frank Jarratt, Halifax; Jno. Hartford Love, Raleigh; Henry Edgar Williams, Winston; William Alexander Jones, Winston; Wm. Simpson, Secy.

—The Tompkins County, (N. Y.) Druggists Association held its sixteenth annual meeting and first clam bake on Cayuga Lake, Aug. 15. Various points on the lake were visited in the steam yacht Halla, the property of druggist Egbert, which was chartered for the occasion.

CHIROL.—Chirol is a solution of various resins and oils in ether and alcohol, and is intended to yield a readily removable, elastic, yet impermeable and antiseptic varnish on the hands of surgical operators, and to thus replace rubber gloves, etc.—(Apoth. Ztg.). It is applied by simply immersing the hands in the solution contained in a basin, and moving the fingers about, then exposing them simply to the air for two or three minutes when they are dry. The solution is also applicable for sterilizing the entire operative surface. The pellicle formed is not in the least sticky, it is said, and does not peel off or crack.

STATE OF TRADE.

Demand Continues Seasonably Light.

New York, August 21.—Evidence is not wanted to prove that the midsummer vacation period is yet a prominent feature, but it also is apparent that the season is on the wane and in a few weeks business affairs in the wholesale market will undoubtedly resume normal conditions. During the past week the movement into consuming channels has continued of a routine order, but the undertone is steady and indications are favorable to an early revival of activity. Quinine quotations have remained unchanged, but the feeling among holders continues strong, and it is generally expected that manufacturers will find it necessary to advance their prices shortly, owing to increasing firmness in the position of raw material. Shipments of bark from Java continue light, and as the quantity to be offered at the monthly sale in Amsterdam on Thursday next, is very light, it is believed that values will again move upward, and that the improvement will soon be reflected in a higher range of prices for quinine. Meanwhile outside holders are quietly awaiting developments, and are not inclined to sell at less than the figures named by manufacturers.

The opium market has continued easy and for round lots, buyers have been able to obtain supplies at a slight concession from former inside quotations. Foreign markets are weaker and both ordinary and high test varieties are quoted at lower figures. It is claimed however that the decline is offset by an increase in freight rates due to scarcity of berth room, owners of vessels declining to stop at Smyrna, on account of reports that the bubonic plague is prevalent there, and that in consequence they might be quarantined at ports of destination. Cocaine is decidedly higher, manufacturers having advanced their quotations 50 cents per ounce. The improvement is due to light stocks, both here and in Europe, and reports from primary sources of supply that crude material is scarce and very much stronger. Even at the advanced figures manufacturers offer very sparingly and the outlook is favorable to a still higher range of prices in the near future.

In the department of essential oils both anise and cassia are lower owing to competition among speculative holders, together with easier markets abroad. Peppermint is receiving increased attention, and the feeling among dealers is firmer on account of reports from Michigan and Indiana that the crop will be considerably smaller than that of either of the past three seasons. Natural wintergreen is quoted at lower range by some holders, but others refuse to meet the decline. Among the balsams, Canada fir is higher under reduced supplies and increased activity, the latter being partly speculative. Peru is working into a firmer position and the principal holders have advanced their quotations 5 cents per pound. Grain alcohol is higher owing to increased cost of corn, and leading distributors have advanced prices 2 cents per gallon.

Golden seal, serpentaria and senega roots are all tending upward in price, and extreme figures are predicted for the first named. In the seed line, Dutch caraway, celery and decorticated cardamoms are firmer in sympathy with foreign markets. Cacao butter continues to harden under the influences noted last week. Guarana shows a further sharp advance, owing to scarcity. Cod liver oil is moving more freely and for desirable brands values are fully \$1 per barrel higher. Trieste cuttlefish bone is held at advanced figures and holders offer only in a limited way, as indications favor still further improvement.

Fairly Good Business.

Boston, August 18.—Notwithstanding the fact that Boston and the country hereabout has been having rather a rainy week of it, there has been fairly good business among the druggists. This has not assumed any specially large proportions, but it has been steady and of a satisfactory character. No great life is found in the general market. Among the drugs, changes are few and unimportant. Similar dullness in chemicals is found, with no one thing standing out as a feature. Alcohols are rather quiet, with only a moderate demand for them. Indigo alone of the dyestuffs shows any life, and not overmuch of that. Gambler quietly is in some demand. It is said that the crop of hops this season will be smaller than in some years, but of better average quality and the demand for them is likely to be great. Evenly good prices and not much trade tells the story regarding waxes.

Business Quiet with no Sensational Features.

Philadelphia, August 18.—Business is very quiet, with no sensational features, but there is every evidence that it is going to spring into great activity when the fall opens, and the debilitating heat embargo is removed. Quinine is said to be active, and there seems to be no doubt in the minds of the posted ones here, that the foreign manufacturers will advance their prices next week to at least the domestic parity. The holiday season is about over and retailers, wholesalers and manufacturers are reappearing at counter and desk, arrang-

ing stock and sorting papers, laying out comprehensive plans for domestic or foreign trade crusades, so that if affairs are not active on the surface there is business in the air. We have taken everything in sight at the Paris Exposition. The Eastern question bids fair to be settled satisfactorily in the near future, so far as this country is concerned, so that the vast trade in embryo in China will soon be influencing the factory wheels of the country, and of Philadelphia in particular as a manufacturing city. Taken together therefore, the business classes of Philadelphia can be spoken of as a most contented and hopeful lot in spite of the excruciating and collar-melting weather.

Botanicals Advancing.

Baltimore, August 20.—The one notable feature in the drug market here is the upward movement of some botanicals, contrary to the predictions of leading dealers. Thus, mandrake root, helonias dioica, aletris farinosa and hydrastis canadensis are all in strong demand, with prices very firm and advancing, whereas it had been predicted that the supply would be plentiful and values lower. Snake root is somewhat depressed at the moment, although the indications point to an advance. The jobbing business has been fairly active during the past week, with the out-of-town trade of moderate proportions. The manufacturers of pharmaceuticals continue to experience a satisfactory demand for their products, and the year promises to show a considerable increase in the volume of transactions over 1899. The heavy chemical movement does not present any special developments. Retailers have been somewhat more active during the past week.

Hot Weather Makes Good Soda Business.

Detroit, Aug. 18.—Conditions are about the same as last week, the weather being so extremely warm that nobody gets past the soda fountains in the drug stores. The soda supplies keep the average up to "fair." Vacations are in order, and there is enough to do to keep the fellows who are left as busy as anyone cares to be when the thermometer talks in the 90's. Manufacturing chemists say their quiet season has been an unusually busy one.

A Moderate Business in Chicago.

Chicago, August 18.—There has been no material change in the business situation since last week. The weather has been fairly cool until to-day, which has been very warm. Business shows some tendency to anticipate in orders for Fall consumption. The demand for all staple goods and sundries is steady, healthy and strong. In pharmaceuticals among the manufacturers little can be said. Business is fairly good.

Business Steady; Retailers Busy.

St. Paul and Minneapolis, Minn., August 17.—"Business is as steady as an eight-day clock," said a department head of a big St. Paul wholesale drug house to-day. And the gentleman, who is suspected of being a Republican, added: "Even William Jennings Bryan and a short wheat crop can't hurt us." Leaving out the partisan bias (and this may be digested by each reader as seems him best), the foregoing remarks hit off the situation quite happily. Retailers, as a general thing, report a noticeable improvement over last week. They are busier, that is certain; some "about driven to death," in fact. Here and there one is found who says collections are better, customers in many if not most of cases not waiting for the collector, but electing voluntarily to "step up to the captain's office and settle." So warm the weather is and has been for two weeks or more that the energies of the attendants at the soda fountains are taxed almost to their utmost, night and day. Prescription work, as well as pretty much every other branch of the trade, is in satisfactory shape. Quotations of Western products reveal no change.

Country Business of Fair Volume.

St. Louis, August 18.—Country business is of fair volume for the season. There have been a number of drug buyers from the south in the city the past week, attracted by the extremely low excursion rates, but the influx is nothing like what was expected. Southern merchants in all lines are slow to come to market this year, evidently postponing their visits on account of the uncertainty surrounding the outcome of the cotton crop. Since August 1 the weather has been 'ideally' hot, the first sustained period of hot weather we have had this summer. Consequently there have been no complaints from the soda fountain end of the retail business, at least.

MARKET REPORT.

NEW YORK MARKET.

New York, August 21.—A continued steady feeling pervades the general market and the more important changes in prices are in favor of holders, but the demand continues seasonably light and no material increase is looked for until the midsummer vacation period is ended.

OPIUM.—Only small routine sales are reported and very little interest is manifested on the part of the consuming trade. Foreign markets are cabled easier and spot quotations for round lots are slightly lower, but for jobbing quantities, prices remain unchanged at \$3.55@3.75 for 9 per cent. and \$3.65@3.85 for 11 per cent. the outside figures for single pounds.

POWDERED OPIUM.—Continued quiet conditions prevail and the limited wants of the consuming trade are being supplied at prices within the old range of \$4.70@5 for 13 per cent. and \$5.20@5.50 for 16 per cent. as to quantity.

MORPHINE.—Moderate quantities are finding a good steady consuming outlet and quotations are firm on the basis of \$2.50@2.60 for P. and W. in eighths, and \$2.40@2.50 for N. Y. Q. and McK and R. brands.

QUININE.—The market retains a quiet appearance, but the undertone is strong with an early advance in manufacturers prices confidently expected and outside holders are indifferent sellers at the ruling range of 42@45c. for ounces, according to brand.

COCAINE.—Manufacturers have advanced quotations 50c. per oz., and the revised jobbing figures are \$5.75@6 for large crystals, and \$5.50@5.75 for small. The market is very strong in sympathy with crude material and further improvement is expected.

OIL ANISE.—An easier feeling has developed owing to keen competition among speculative holders, and lower foreign markets and jobbers have reduced quotations to \$2@2.10.

OIL CASSIA.—Under similar influences this article also is easier, and the revised quotations for jobbing quantities are \$1.20@1.35 as to grade and size of order.

OIL BERGAMOT.—Values have reacted slightly under a light consuming demand and jobbers are willing sellers at \$2.60@2.80 for finest, and \$2.35@2.60 for good.

SERPENTARIA ROOT.—Diminishing supplies and firmer producing markets have caused an advance in jobbing quotations to 50@55c. for whole, 52@57c. for ground, and 55@60c. for powdered.

ALCOHOL.—Grain is higher owing to increased cost of raw material and jobbers have advanced their quotations to \$2.43@2.45 by the barrel, and \$2.52@2.77 for smaller parcels, according to quantity.

CACAO BUTTER.—The market continues strong in tone under the influence heretofore noted and jobbing quotations show a further advance to 50@53c. by the box, and 55@58c. for less.

CARAWAY SEED.—Dutch is higher abroad owing to scarcity and spot values for jobbing parcels have been marked up to 11@13c. for whole, and 20@25c. for powdered.

GUARANA.—Extreme scarcity both here and in Europe has resulted in a decidedly sharp advance in prices and jobbers are now quoting 80@90c. for whole and 85@95c. for powdered.

BALSAM FIR.—Canada is in very light supply and the market is firmer with jobbing quotations showing an advance to \$2.15@2.90 as to quantity.

CUTTLEFISH BONE.—Mail advices from primary markets confirm previous cable reports of a small yield from the current season's catch, and holders are firmer in their views with only limited quantities obtainable at 25@30c. by the strap, and 34@37c. for broken lots.

MENTHOL.—Holders are somewhat firmer in their views and jobbing prices have been advanced to \$3.05@3.30 per lb. There is no change in the ounce price.

The Lightning Medicine Co. of Muscatine, Iowa, manufacturers of Mull's Lightning Pain Killer and Pioneer Cures, have been kept pretty busy supplying orders for their unique window attraction, a cut of which will be found in the advertising pages of this issue. Dealers say this Old Pioneer and his outfit not only attract the attention of passersby, but it leads to inquiry and sales of the goods. The old Pioneer makes a peculiar proposition, "A dollar draft in every dollar box, cash it if medicines fail." This in itself makes publicity for the druggist, and therefore it's good advertising. The Lightning Medicine Company will send this attraction free carrying charges prepaid, to all who write for it. They say a druggist who will not avail himself of so excellent a piece of advertising just now, is standing in his own light. This display is prepared at great expense to the company.

NEW ADVERTISEMENTS IN THIS WEEK'S ERA.

THE ERA COURSE IN PHARMACY.

The lectures will hereafter be issued in monthly instalments, and the entire work of the Course can be completed within twelve months.

NEW CLASSES FORMED EACH MONTH.

The first instalment of lectures will be issued in October, and the remainder at intervals of thirty days thereafter.

Recitations and examinations are conducted by correspondence directly with each regularly matriculated student.

Especially valuable as a preparation for examination by a board of pharmacy, to those who cannot attend a college of pharmacy, and to all desiring to review their former study of the subjects embraced in the curriculum.

TOTAL EXPENSES FOR FULL COURSE, \$10.00.

For fuller particulars see announcement facing third cover.

Write for new descriptive Prospectus, now ready.
Address, THE PHARMACEUTICAL ERA.

THE BICYCLE RACK BUNCO.

One of our druggist readers relates to us a little personal experience, supplemental to the information given here last week. He states that a druggist bought a bicycle rack, inverted T style, of a hardware dealer in his city in August, 1896. E. S. Calkins claims to have applied for his patent on April 29, 1897, and to have been granted letters patent No. 27,222 on June 15, 1897. Now, through his attorneys, Hey & Parsons, Syracuse, N. Y., he requests the druggist to pay him (Calkins) \$5 for "infringement" and "license to use" said rack, which originally cost but \$1.50. The manufacturer of the rack in question, now belonging to the aforementioned druggist, tried to get a patent before Calkins did, but failed, at least so the hardware man says.

We have utterly failed to find record of any patent to Calkins as claimed, and the attorneys mentioned have not as yet exhibited the courtesy of a reply to letters sent them several weeks ago.

The City Forge & Iron Works, of Dayton, O., state, in a newspaper report, that they have manufactured over 30,000 of the T-shaped racks, and it keeps them busy warning people against Calkins and his agents. They also say that they had made racks fourteen months before he applied for a patent and that there is no infringement on his model.

It rather looks as though Calkins' nice graft was about played out.

THE DANGER OF SELF-MEDICATION.

In a Long Island town a few days ago occurred the death of a young woman after taking tablets of acetanilid prescribed for her by a drug clerk. A doctor who testified at the inquest said death resulted from acetanilid poisoning. In the clerk's behalf several druggists said that acetanilid is in general use, and frequently, even customarily, sold without prescription, in which testimony several physicians likewise concurred. This is the case exactly. Not only acetanilid, but a host of similar articles, have come into popular use, are sold as freely and without any safeguard as are coffee and sugar, and the public is self-prescribing and self-dosing itself to a degree which would startle us all were its real extent known. We carry headache tablets, phenacetine pills, liver regulators, etc., in our pockets, and swallow them promiscuously and indiscriminately as inclination or fancy prompts, ignorant or careless of possible deleterious results. Has a friend a headache? We hand him a migraine wafer. Has he cold feet or a sick stomach? We tell him to take this or that.

This condition of affairs is all wrong. Many

of the popular remedies are potent either for good or evil, and it should not be left to the ignorant laymen to decide. In the case under notice, the clerk cannot be held legally accountable. He but followed the custom of trade and society. It is the custom which needs amendment. The prescribing of remedies for internal use should be left entirely to the medical practitioner, their sale restricted to pharmacists only on prescriptions.

Yes, we know this is an ideal impossible of attainment, but isn't there some way to get a little nearer to it than we are at present?

THE MODEL PHARMACY LAW.

As is generally known, the American Pharmaceutical Association, at its last annual meeting, approved, with a few amendments, of the draft of a pharmacy law drawn up by J. H. Beal, under its direction, the object being to submit this approved law to the various State associations, to the end that wherever and whenever new legislation or amendment of existing statutes should be attempted, such efforts could be directed, by the several States, along parallel or similar lines. A national law being out of the question, it is desirable that all the States have laws as nearly alike as possible, and this "model" law is offered as a means to secure this desirable unification.

The original draft of the proposed law was published in the Era April 26, 1900, p. 442, and the discussion and amendments decided upon were reported in these pages May 17, 1900, p. 533. It is therefore unnecessary to reprint in full the amended measure, but space is given to the following communication which accompanies copies of the law which have been distributed to all members of the A. Ph. A., and to others desiring them:

A GENERAL FORM OF PHARMACY LAW.

As Amended and Approved by the American Pharmaceutical Association, at Richmond, Va., May, 1900.

The history and object of the accompanying draft are sufficiently explained by the introductory remarks and commentary prefixed thereto.

It is earnestly desired by the American Pharmaceutical Association that you will bring the draft to the attention of your State and local associations and Board of Pharmacy at as early a date as possible, and that you will use your best endeavors to explain and to make known its merits to all those who may be interested in or influential in shaping pharmaceutical legislation in your State.

With perhaps one exception, the draft is very conservative in tone, and proposes only such regulations as all intelligent citizens should desire to see surround so important a calling as the compounding and dispensing of drugs and medicines.

It may be that the conditions in your State are such that it would be inadvisable to immediately press the draft upon your Legislature for enactment. If such should be the case, it is expected that you will hold it in reserve until a favorable opportunity offers, as in case an effort should be made from outside sources to amend or repeal your present law.

While the draft as it stands is a consistent whole, and therefore more liable to prove satisfactory if enacted as a whole, it is anticipated that in some States it may be advisable to ask for the enactment of certain sections only at a time, as favorable conditions present themselves. By proceeding in this manner, it should be possible, after a few years of persistent effort, to secure the enactment of the whole draft, or at least of its most important features.

In presenting the draft, or any section thereof, to the Legislature, it should be borne in mind that some modifications will generally be found necessary to meet local conditions or to make it harmonious with the requirements of the State Constitution.

In all such cases, the draft should be changed, under the supervision of competent legal advice, before its introduction as a bill, since every amendment offered during its passage through the Legislature increases the difficulty of enactment, and may even operate to cause its defeat.

The following are some of the provisions likely to require such changes:

In Section One it will be observed that it is made unlawful for any one but a licensed pharmacist to "own" a drug store. This is doubtless the most radical provision in the draft, and was inserted by vote of the association. While the addition of such a provision in the pharmacy law is highly desirable as a measure of public safety, it is likely to meet with much opposition from those who are indifferently informed as to the necessities of the case. Where such opposition seems, therefore, likely to develop, the word "own" had better be omitted, rather than permit its presence to jeopardize the fate of the entire section.

Even with the omission of the word, the section will be found still comprehensive enough to cover practically all important cases.

In calling the attention of pharmacists to Section Two, the fact should be made plain that the enactment of the draft will in no wise affect the status of persons already registered as pharmacists and assistants. These will continue to be registered just as they were before, except that by the second paragraph of Section Six, every licensee is required to take out a renewal of his license, for which a nominal fee is charged. This renewal is, of course, granted without a new examination being required, and is necessary for the reason that where periodical renewals are not provided for, certificates of retired or deceased pharmacists are frequently used as a protection for drug stores conducted by unqualified persons.

In States where re-registration is not already provided for, Section Two will have to be changed to provide that all persons previously registered shall continue on the register for a period of two years.

Probably a great difference of opinion will exist as to the number of poisonous substances which should be included in the provisions of Section Thirteen. On this account the list was purposely made large, since, as a rule, it is less difficult to strike out than to add to the provisions of a bill while passing through the Legislature.

Legislative committees should bear in mind, however, that great harm results every year through the careless dispensing of poisonous substances, both by pharmacists and by dealers in general merchandise, and that the public welfare would be materially advanced by a liberal extension of the existing poison schedules.

The author of the draft will be pleased to receive suggestions or comments upon the law from any person who may be interested in the general subject of pharmaceutical legislation.

J. H. BEAL,
S. A. D. SHEPPARD,

Special Committee of Publication.

Persons interested in this Model Pharmacy Law can procure copies free by addressing J. H. Beal, Scio, Ohio.

TREATMENT OF HEMORRHOIDS.—Aesculus hippocastanum has been recommended in the treatment of painful hemorrhoids and the following formulas have been suggested: (1) Fluid extract of aesculus hippocastanum, 1 fl. ounce; chloroform, 1 fl. dram. Mix. Morning and evening at meal times, ten to fifteen drops of this mixture is to be taken in a glass of wine or a little sweetened water. (2) Fluid extract of aesculus hippocastanum, 6 fl. drams; fluid extract of hamamelis, 2½ fl. drams; oil of peppermint, 2 drops. Mix. Fifteen drops of this mixture may be taken in wine or sweetened water morning and evening at mealtimes.

SOLUTION PEPTONATE OF IRON.—Dissolve in 708 parts of water 16 parts of iron peptonate, then add 100 parts brandy; 75 parts, 90 per cent. alcohol; 100 parts simple syrup; 1 part benedictine essence, and 0.5 part acetic ether. Allow to settle and filter. One hundred parts of the solution contain about 0.4 part of iron.—(Pharm. Central.).

CREOLIN PILLS.—Creolin, 1½ drams; dilute alcohol, 15 minims; extract of licorice and powdered licorice, of each, 1½ drams; gum tragacanth, 15 grains. Make into 100 pills and give one three times a day. Useful in the treatment of intestinal fermentation.—(Ther. Gazette).

COCA WINE.—Mix 50 parts of fluid extract of coca; 580 parts of sherry wine and 100 parts of syrup. Allow to stand for several days and filter. Then mix the filtrate with a solution of isinglass, 0.5 part; in water, 10 parts. Allow this mixture to stand for several days and again filter.—(Pharm. Central.).

OUR LETTER BOX.

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors.

Please be brief and always sign your name.

HE LIKES IT.

Diploma arrived O. K. and am very much pleased with it. I cannot speak in too high terms of commendation of the Era Course, for I believe that it meets the wants of a great many who are interested along that line of work and are unable, for want of time and money, to attend college.

While my name did not appear among those who received prizes, yet I was pleased to find it, in both the junior and senior years, among the honorable mention. The prize to me was only a secondary consideration; the great object sought was the storing away of all the information and knowledge possible during the course, and I am abundantly satisfied with my work. I have recommended the course to some who will be with you next year.

I would be very much pleased, and I believe that I express the feelings of all the students of the senior year, if we could have printed in the Era the grades of all those receiving prizes and honorable mention. It would be very interesting to see how well we have measured up with our colleagues during the past year's work.

Thanking you for all your kindness during my association with you and wishing you continued success in your good work, I remain,

Very truly yours,

J. R. HOLCOMB.

Detroit.

(For the Era.)

THE NAVAL PHARMACIST.

That the Naval Pharmacist has not a higher standing or rank is a direct reflection upon the educational institutions of the country, for, until recently, it was required that a candidate for the position of apothecary in the Navy should possess a diploma from a creditable college of pharmacy. To comply with this requirement meant that the candidate for the position of apothecary should have at least a normal school education besides the time spent in the college of pharmacy, as all creditable colleges require an equivalent of the normal school education previous to entering upon the course of pharmacy. Consequently, the graduate from a college of pharmacy must at least have an average education and in the majority of cases find him to possess more than the average education.

Although the Navy Department exacts this education they do not recognize it as is shown by the fact that an apothecary is only given the rating of a chief petty officer, in none of the branches of which rating is a college education required, and, in the majority of positions of this rate only the fundamental principles of education are essential.

True it is that each must know his branch but in none of them is it necessary to have a previous education, as in all of them one can by length of service work up to chief petty officer rating, the more adaptability shown the sooner will he reach the rating of chief.

Looking at the question from a professional point of view one, again, finds everything in favor of the naval pharmacist. On all, or nearly all, ships the apothecary is expected to do the minor surgical work of cases appearing for treatment, and to treat all minor ailments; of course it is not compulsory, but it is customary, and such ability is expected of the apothecary. Again, in many cases a ship carrying a complement of less than a hundred is not given a surgeon; detailing only an hospital steward in which case he must be able to treat any case that may arise and

under these circumstances many cases occur that demand immediate and skilled attention to save the life of the patient; among the cases that may be cited are; heart failure, injuries from explosions, drowning, poisoning, fractures, and accidents incident to ship life, then also the usual diseases occurring aboard ship. Any and all of these the apothecary must be able to treat. True under these conditions, a ship is not sent on a protracted cruise, seldom being beyond the call of a surgeon for a longer period than two weeks, but, at the same time many cases arise that not only demand the knowledge of the action and uses of drugs but also of the practice of medicine and surgery.

Seeing that these cases (of an apothecary being in charge of the medical branch of a ship) are bound to occur, the surgeons instead of opposing the apothecaries having a higher rank, should favor it as it would be a recognition of the value of the practice of medicine and surgery, as raising the standard of assistants would tend to raise the standing of the surgeons themselves.

Under the new bill passed in 1898 (which though very good is not of sufficient scope) one can enter the service as a landsman and work up to hospital steward and even pharmacist without ever having had a pharmaceutical education. This under existing circumstances is not only an injustice to the pharmacist throughout the country, as it does not recognize the value of a thorough pharmaceutical education.

While I would not advocate not allowing the non-graduate to advance (as some of the best pharmacists are non-graduates), I still hold that the graduate should be recognized and the most just plan I can formulate is:

Create in the hospital corps of the navy the rank of chief pharmacist and acting pharmacist, beside those now existing which should remain the same, this would make the following rates: chief pharmacist, pharmacist, acting pharmacist, hospital steward, hospital apprentice first class, and hospital apprentice. The chief pharmacist to have rank and pay as now received by the chief warrant officers, the acting pharmacist to rank as a warrant officer and to receive pay as follows: \$900 the first three years, \$1,000 the second three years, \$1,200 per year thereafter till promoted to the rank of pharmacist, unless promoted during the first six years when he shall at once receive the emolument of the new rank.

All graduates of a creditable college of pharmacy entering the service should receive the rank of acting pharmacist. All those in the service who are graduates and those who have served more than three years who are not graduates should be appointed acting pharmacists.

Those working up from hospital apprentice should, after having served three years as hospital steward, be appointed acting pharmacists, as vacancies occur, according to seniority.

That there might not at any time be an excess of chief pharmacists, pharmacists or acting pharmacists, they should be limited as follows: twenty-five chief pharmacists, fifty pharmacists and one-hundred acting pharmacists.

They should be governed by the present rules for warrant officers.

X.

TO GIVE A COMMERCIAL COURSE.

The question of combining a systematic business training with the regular course of instruction in pharmacy at the New York College of Pharmacy has been reviewed with much interest during the vacation months and it is safe to say had the subject been broached earlier in the season a course would have been arranged for this session of the college. Dr. George C. Diekmann first brought the matter up and he became interested in it through Prof. Ryan, of the Philadelphia College of Pharmacy. The two met recently and the result was that when Dr. Diekmann returned he at once opened the campaign for the business course, but it was too late for this session of the college. It was stated at the college last week that a prominent man whose name could not be given out had agreed to endow the course so that it was certain to be taken up next year. No plans had been laid out for the line of study, but it was said everything relating to business and a drug store would be taken up.

(Special Correspondence).

INTERNATIONAL CONGRESS OF PHARMACY AT PARIS.

The ninth International Congress of Pharmacy was formally inaugurated the afternoon of August 2 by a general meeting in the Salle des Actes of the Paris School

M. PETIT.

of Pharmacy. M. A. Petit, who presided, was supported by M. Crinon, secretary, and M. Guignard, director of the School of Pharmacy. On the right were the official French delegates, the black coats of Prof. Riche and others being relieved by the general's uniform worn by M. Burcker as inspector of Military Pharmacists, and the naval officers' costumes of M. Bavey (Marine) and M. Pottier (colonial pharmacists). On the left were the foreign delegates, MM. Duyk, Derneville, Ranwez, Vogl, Tschirch, etc., etc., while some 200 to 250 congressists, French and foreign, filled the body of the hall.

M. Petit remarked that they were assembled to continue the series of International Pharmacy Congresses. He noticed that many foreign governments—Austria, Belgium, Mexico, etc., etc., had sent official delegates and that many French and foreign societies were represented and wished them welcome in a well-turned speech.

M. Crinon, secretary of the Congress, gave some interesting details as to its organization, and M. Guignard expressed his pleasure in seeing the gathering assembled in this building, which was the "House of Pharmacy." M. Ranwez, president of the 1897 Congress at Brussels, formally transferred his powers to M. Petit, and said few places could be more suitable than Paris for such a

M. Petit expressed his fears that the "unfortunate accident" which had happened in Italy (the assassination of King Humbert) might possibly prevent the official reception of the congressists by the President of the Republic, the French Prime Minister and the Paris Town Council during the season of official mourning. But it was just possible this part of the programme would still be partially carried out. He could only ask them to inscribe their names for these receptions. The meeting was now over, but he would beg the congressists to accept a little light refreshment at the buffet which had been fitted up in the hall just outside.

Round the buffet the gathering therefore continued in a chatty and informal fashion for half an hour or so. "Really, M. Petit," remarked a thirsty congressist, "we must have this wine inscribed in the new Codex—'Champagne officinalis'—as a sovereign reconstituent." And many other pharmaceutical jokes went round and intro-

CRINON

SALLE DES ACTES.

meeting. M. Derneville, the official representative of the Belgian government, spoke for the foreign delegates and hoped that the Congress would be fruitful of results both to French and foreign pharmacy.

ductions were the order of the day. Here one had time to note a few faces, M. Marty and M. De Mazleres, the two vice-presidents; M. Voiry, the assistant secretary, and M. Labelonye, the treasurer, MM. Riethe, Collin, Julliard, Leidié, etc., etc., from Paris; MM. Collard, Merlie, Ganiel and Loisy, from the South; MM. Bouillard, De Beul, Daels, Dambrim, Heintz, Van Raes, Van Arenbergh, etc., from Belgium; Herr Bellingrodt from Cologne; Herr Schellenz from Cassel and half a dozen other German delegates; Herr Hans Heger (of the Pharmaceutical Post), from Vienna; Prof. Tschirch from Switzerland, Mr. Altan, of Bucharest, etc., etc.

The most unfortunate feature of the International Pharmacy Congress of 1900 was the practical abstention of the two great Anglo-Saxon countries. As M. Petit, the chairman of the Congress, remarked at the closing meeting, they had been much disappointed in this respect. None of the delegates promised by the British Pharmaceutical Society had been able to attend. We may add that of the four United States pharmacists inscribed on the membership list, none was actually present at the meetings, and the English speaking portion of the Congress was thus reduced to one person (Mr. Wrenn, Mayor of Taunton, England,) and a few journalists.

Not that this state of things has been by any means the rule here this year. In the numberless scientific congresses held in Paris in July and August, the Anglo-

TIKHOMIROV.

Saxon element was by no means lacking. Just to cite one instance, we may mention the gigantic Medical Congress, held at the same time as the Pharmacy Congress. In fact, the Therapeutic and Materia Medica Section was sitting in the amphitheatre of the Paris School of Pharmacy while the pharmacists occupied four of the other rooms. Here 10 per cent. of the 6,000 members hailed from England or the United States and eminent men like Dr. Lauder Brunton read long and important papers in English, while an American delegate reviewed at some length the position of the medical profession in the United States.

The Members of the Pharmaceutical Congress were almost exclusively drawn from Continental Europe, the exceptions being a Chilean delegate, M. Concha, and one or two Egyptians. The last Congress having been held at Brussels, it was only natural that the Belgians should be numerous. MM. Bouillard, Daels, De Beul, Dambrin, Duyk (secretary of the 1897 Congress) Helntz, Pottier, Van Raes and Van Arenbergh were all present, besides M. Derneville, president of the Royal Society of Pharmacy of Brussels, and official delegate of the Belgian Government, and Prof. Ranwez, of Louvain, president of the 1897 Congress. Germany was fairly well represented by Herr Bellingrodt, of Cologne; Herr Schellenz, of Cassel, and Prof. Schneegans, of Strasburg. Austria had two distinguished representatives, the venerable Councillor Vogl and Dr. Hans Heger, of the Pharmaceutische Post of Vienna. Roumania was officially repre-

sented by M. Anton Altan. The Scandinavians were comparatively numerous, MM. Reimens and Ludwig Albert from Denmark, M. Stormer from Norway, MM. Eriksen, Borganstann, Kattbey and Waller from Sweden. Turkey was represented by M. Ibrahim Romano, Russia by Prof. Tikhomirov (the Moscow savant who presided over the Pharmacy Section when the International Congress of Medicine was held in that city), Prof. Davidoff, of Warsaw, and others. Switzerland had but one delegate, but M. Tschirch, of Berne, is a host in himself. Of the French delegates we need not give a list, as so many of their names occur in the following account of the various meetings. The Swiss, Belgian, Roumanian, German and Austrian delegates took an active part in the proceedings and it only lacked a Remington and a Newsholme to make the Congress a most representative, if not a large, gathering of international pharmacy.

The Organization and Work

of the Congress reflected much credit on all concerned. All the important papers (and many of the purely scientific communications) were printed beforehand and distributed to members of the various sections. The discussions were often of an interesting character, and there was a general tendency, even in the hottest debates, to "hear all sides." M. Petit presided over the general meetings with much tact, and his unfailing good humor disarmed his bitterest opponents, while M. Crinon's superhuman exertions as General Secretary gained him a

HEGER

popularity which was as hearty as it was spontaneous. M. de Mazières, ever active and courteous, arranged the fetes and outings to every one's satisfaction; and so the list might be indefinitely continued. All worked well and harmoniously; party feeling, if not extinguished, was temporarily kept under, and probably few of the foreign guests suspected how diametrically opposed were the views of some of their French hosts. Even the weather seemed to have been specially arranged by the ever watchful committee. At any rate, the days devoted to outdoor functions were invariably and delightfully bright and sunny; while fresh breezes and welcome showers rendered the meetings far more enjoyable than during the stifling heat of the Chemical Congress week.

The Four Sections

were respectively devoted to (I.) General Pharmacy and Pharmaceutical Chemistry; (II.) Biological Chemistry, Bacteriology, Hygiene and Hydrology; (IV.) Professional Interests. As a rule, they had sessions every morning, while at the afternoon General Meeting the questions raised and motions passed in the Sections were submitted to the approval of the whole Congress.

The International Pharmacopœia

was the first subject on the notice paper in the First Section. Prof. Bourquelot, of the Paris School of Pharmacy, had been deputed to draw up a report on this sub-

VERNE

ject, and we hope to publish his interesting paper in extenso very shortly. The First Section immediately voted the formation of a select International Committee to examine the matter and present definite conclusions before the close of the Congress. M. M. Bourquelot, Duyk, of Brussels; Altan, of Bucharest; Tschirch, of Berne; Schneegans, of Strasburg; Heger, of Vienna, and Minovici were nominated. They drew up conclusions which were unanimously adopted by the Congress; and which, it is to be hoped, mark a new era in this important matter.

It was decided to draw up a table which would show up in strong relief the differences existing in the composition of certain active medicaments which figure under the same name in the Pharmacopœias of different countries. This tabulated statement is to be addressed to the Pharmacopœia Revision Committees of all countries, together with a circular asking them to keep it before them when revising for a new edition. They will also be requested to bear in mind the desirability of uniformity of dosage of alkaloids, etc., in active galenicals. The same list and circular will be addressed to the various Academies of Medicine and Societies of Pharmacy.

The following was also voted:

"That the Belgian Government, which has taken the matter in hand, be asked to arrange a conference at which the principal countries interested (i. e., Austria, Belgium, France, Germany, Great Britain, Italy, Russia, Switzerland and the United States) shall each be represented by at least two delegates holding the official mandate of their respective Governments. (The other nations shall be invited to send representatives if they desire). That the Belgian Government ask, in consequence, the other Governments to name these delegates. Once the delegates nominated, a date shall be fixed which will allow the various delegates to complete their study of the subject before the meeting of the conference."

The Belgian delegates present at the Congress remarked that, though highly flattered, they were not in a position to present this motion officially to their Government. They suggested that the French Government should make the communication to the Belgian Government through the usual diplomatic channels, and this idea was adopted in principle.

The question of the International Pharmacopœia having thus received an apparently practical solution, it was decided that M. Duyk's paper on the unification of the methods of dosage of alkaloids, etc., really formed part of the same question, and could be treated at a later date.

Pharmaceutical Education

is another stock subject at International Congresses. M. Voiry, one of the assistant secretaries of the Congresses, had drawn up a succinct report on the French pharmaceutical curriculum and its defects, while M. Jacob had studied the question of preliminary examinations in all the countries of Northern Europe, and also presented his conclusions in a printed paper.

The Congress voted that the French system of omitting Latin from the pharmaceutical educational programme was a wrong one; that it was desirable that the preliminary examination should be of a severe character

(like the French B. A. diploma examination, which implies a good all round education); that only properly equipped pharmacies should be allowed to take apprentices, or "stagiaires," so as to afford some assurance that the young fellows would really learn their business; that another stiff examination of a pronounced pharmaceutical type should be asked before the "stagiaire" could be inscribed as a regular student; that pharmacy inspectors should have the right to question and examine these apprentices; that hygiene and pharmaceutical legislation should be taught in schools of pharmacy, as well as practical pharmacy manipulations (so little of the latter being done behind the counter in these days of put-up goods); that schools of pharmacy should be separate and independent of schools of medicine, and have the right to confer the degree of Doctor.

Apprenticeship Abroad.

"Should years of probation passed in a foreign country be allowed to count as "stage" in France and elsewhere?" was the question raised by M. René Bertault. The Congress voted that the obligatory period at home should certainly be shortened when time had been passed abroad; to what degree, each country could best judge for itself.

The System of Limitation

of the number of pharmacies, which exists in Germany, Russia, etc., was considered desirable. M. Huguet's idea was that it might be carried out in France—if the law could be passed—by gradually buying out each superfluous pharmacy as its owner died or retired; of course the first step would be to make it illegal to open any new pharmacies.

The Inspection of Pharmacies

was a subject which gave rise to a long and interesting discussion of a thoroughly international character. German and Roumanian delegates expressed themselves satisfied with the existing system, although many failed to see why doctors and chemists should aid in an inspection which pharmacists alone were quite capable of carrying out. The Belgian delegates explained that in their country the two inspectors are both pharmacists, and two more pharmacists are to be appointed. The inspection used to be carried out by doctors. M. Daels related how in these days he had protested and refused to allow the inspector to take a sample. "You are an M. D., and never studied pharmacy," said he. "I protest and refuse. Prosecute me if you like." Since then the tables have been turned, and the pharmacists appointed as inspectors not only visit drug stores kept by pharmacists, but also those held by doctors. Let us hope the latter receive the inspectors otherwise than did M. Daels!

M. Reimers explained that in Denmark the local doctor accompanied the inspector to the pharmacy, but this was more or less a formality, for the Danish inspector spends at least a day—sometimes two—in visiting the establishment from loft to cellar, and no local M. D. could, of course, spare this time from his rounds.

In France the inspection, nominally carried out by professors of the schools of pharmacy, etc., is more a friendly visit than a real examination. A French delegate told an amusing story of an apprentice in a French pro-

vincial pharmacy who received the visit of a gentleman who remarked, "I am the Inspector." "Certainly, sir," replied the mistaken but obliging youth (whose only idea of an Inspector was in connection with the gas meter), and he at once produced the gas book. The gentleman, who seemed a trifle short-sighted, turned, over a few leaves with an absent-minded air. "Very good, indeed, very neatly kept," he muttered. "Give my compliments to Mr. X. and tell him I called. Good morning." And he left.

This rather highly colored tale is characteristic enough in its way. M. Crinon's motion (adopted by the Congress), to have official pharmacy inspectors drawn from the ranks of retired pharmacists or professors of pharmacy, and appointed by the Government from a list presented by the local Pharmacists' Committee, would probably, if put into practice, improve matters considerably in this country, and possibly elsewhere.

The Monopoly of Scientific Names

as trade marks was discussed by M. Petit in his report; and the Congress endorsed his conclusions that "No scientific or commercial definition, given to a simple or compound drug, can by itself constitute a trade mark, or become private property for the profit of its author."

College and Drug Store.

A long and keen debate took place on the question as to whether the three years probation or "stage" in a pharmacy (exacted of all youths desirous of entering a French school of pharmacy), would not be more profitably spent after, instead of before, the three years' college course. This subject, not particularly interesting, perhaps, on the other side of the Atlantic, was discussed with an eagerness which denoted its importance, and speeches by men like Professors Bourquelot, Prunier, Schneegans, Perrot, Louis Planchon, gave weight and eloquence to either side of the discussion. Finally, after a telling speech by M. Bourquelot, it was voted that things had better remain as they are.

Other Questions

of professional interest were Prof. Dupuy's query: "Is pharmacy a liberal or commercial profession?"

The Congress's diplomatic reply was that it was both, and that care should be taken not to let the scientific element be swamped by the commercial side. The Lyons pharmacists asked why not do away with shop fronts and street entrances and put pharmacists in private rooms, so as to do away with the "shop keeping" reproach? The Congress voted this was impracticable. The Belgian pharmacists (who suffer much from "popular pharmacies," financed by benefit societies) asked if a minimum official tariff could not be drawn up for these working people. The Congress agreed it was desirable, but that the price should be higher than charged to the indigents in poorhouses, etc.

The Unification of Analyses

was the great subject of discussion in the Third Section.

M. Grimbert read a paper on the unification of methods of culture in bacteriology. The Congress voted that, seeing the confusion which reigns on this subject, it seems impossible at present to fix a rational and universal method. Pharmacists-bacteriologists are invited to study the question and present propositions next Congress. In the meantime the methods indicated by M. Grimbert were recommended.

M. Henri Martin raised a similar question—the unification of methods of analyses of gastric juice, and the Congress gave a similar reply, regretting the confusion which exists on this point also.

Urine Analysts

was treated by four savants. M. Vieillard severely criticized urologists for not adopting some definite and universal method for interpreting results. But the Congress considered "the ideal was yet to be sought for," and could only suggest that "the idea of proportion should be preponderant."

M. Galbrun's paper on the unification of methods for detecting and dosing albuminoids brought forth some interesting remarks from M. Leldié, who, it is understood, will prepare a report on the subject for next Congress. M. Moréigne's paper on nitrogen in urea may also be noted.

After hearing M. Dufau's remarks on the unification of methods of dosing sugar in urine, the Congress passed resolutions similar to those proposed by M. Patein and duly voted at the Applied Chemistry Congress recently.

Among various other matters in this section was the report on

Enamelled Cooking Utensils

by M. Barillé, army pharmacist. Their advantage, says he, is more apparent than real. They require to be handled with care and heated very gradually; the enamel is not solid enough in most cases. He considers (the Congress voted his conclusions) that those lined with stannic enamel should alone be allowed to be sold, and that the attention of health councils should be drawn to this matter.

Materia Medica

M. Bavay (French naval pharmacist) read two papers, one on "The Influence of Culture on the Activity of Medicinal Plants," and the other on "The Nature of the Secretions of Parasitic Worms;" while M. Jadin treated "The Localization of the Active Principle in Medicinal Plants." It was considered by the Congress that the question of the influence of culture might well be studied. Tobacco is dosed by its contents in nicotine, quinine bark by its proportion of alkaloid, why should not belladonna and digitals be similarly treated? M. Bavay asks. The Congress recommended the matter to the notice of pharmacologists, that more complete results might be presented at a future Congress.

In the same way, after hearing M. Jadin, it was voted "that our knowledge of the active principles of vegetable drugs is in some cases incomplete, and that the subject is worthy of attention."

Numberless Communications.

many of much interest, were read in this section. M. Goris spoke on "Aconites," and the "Localization of Alkaloids." With M. Relmers, he had edited the late Prof. Gustave Planchon's account of the materia medica collections at the School of Pharmacy. They are also preparing a work on "Quinquinas," and ask the help of pharmacologists. Prof. Louis Planchon, of Montpellier, described the poppy culture in Asia Minor, and showed the tools used for extracting opium. Prof. Claude Verne, of Grenoble, is just back from a voyage round the world. He has been to British India and Java to study quinine culture with a view to introducing this industry into the French colonies (Tonkin, etc.) He

PERROT.

LELDIE.

DEMAZIERES.

passed through America on his way home, and is preparing a report on

The United States Universities

for the French Government. He says that *Materia Medica* is, in his opinion, excellently taught in the United States, while here in France, he remarked, chemistry seems to take the lead in the pharmaceutical curriculum. He read a paper on the "Culture of Quinine" in the Dutch and English East India colonies. M. Eug. Collin pointed out how the true *ko-sam* (fruit of *Bruccea Sumatrana*) can be distinguished from the false. M. G. Dethan read a paper on the *Hygrophilla Spinosa*; M. Perrot had studied *Xylophia Ethiopica*, and M. Maheu the morphology of the *Menispermæ*. Prof. Tschirch presented three papers, one on rhubarb and its cathartic principles, another on the chemical composition of Aleurone seeds, and the third announced his discovery of twelve new acids in the resins of the *Conifere* group.

Two Russian professors took part in the work of this section. M. Pöehl treated of Cryoscopic research for the precision of the value of pharmaceuticals.

Prof. Tikhomirov, of Moscow,

had studied the testa of the Russian mustard (*Brassica juncea* Hooker) comparing it with *B. Nigra*. He also gave some curious details on the manner in which the Chinese merchants test musk pods. When Prof. Tikhomirov was at Shanghai with M. Völckel, pharmacist of that city, he was present at a musk sale, and he offered to the inspection of his fellow congressists the instrument used by the merchants.

Pharmacy, Etc.

In the First Section the papers were even more numerous, and their enumeration would be a lengthy one. We may just mention Prof. Prunier's contribution "On Testing Glycerophosphates;" the notes on hydrates of carbon in *nux vomica*, hemlock, clover, asparagus, and other seeds by Prof. Bourquelot and his assistants; on fresh kola nuts by Dr. Carles; on Emodines, by Prof. Tschirch; on sandalwood oil, by M. Guerhet; on the oxydant ferments of corchorus leaves, by M. Khouri, Egyptian pharmacist; on toxicological subjects, by M. M. Leprince, Pagel, on narcotic extracts, by M. Altan; on aloines, by M. Leger, etc., etc.

THE OUTINGS AND FETES.

The assassination of the King of Italy having occurred just before the opening of the Congress, State mourning necessitated the adjournment of all the fetes of an official character until the royal funeral had taken place. The pharmacists' own programme was, of course, not interfered with. On Saturday morning, Aug. 4, an excursion was made to

The Pasteur Institute at Garches.

where the horses that produce the serum are kept, and the serum is prepared and bottled. Here the Congress was received by Dr. Martin, who showed them over the establishment, delivering a little lecture on the principal points of interest. A couple of horses were bled in the presence of the visitors, and the whole process explained, including the

Preparation of Dry Serum.

in flakes, which has now been carried on here for the last four years. The serums are evaporated in vacuo at a temperature of 37° centigrade in the presence of sulphuric acid; 10 cubic centimetres of liquid giving one gram of dry extract. These dry serums have several advantages, one of which is the diminution of foreign customs duties (usually levied by weight) which is secured by this highly concentrated form of extract; they are, in consequence, often preferred for foreign shipment. To use the serum, one simply adds sterilized water in the quantity indicated in the glass tube in which the extract is put up.

This visit terminated, the Congressists walked through the Park of St. Cloud, a pleasant stroll of a mile or so, to the "Pavillon Bleu" restaurant, not far from the Seine. Here some 180 delegates sat down to lunch, at somewhat close quarters, it is true, but with hearty appetites and great good humor. Dr. Martin was among the guests; he had during the morning offered criticisms on the way pharmacists sometimes handle serum. But he explained

PELLETIER-CAVENTOU MONUMENT.

he was a sincere friend of the profession. "For my own part," said he, "I have always considered the pharmacist as the man who concentrates the different branches of science; and to my mind, he should thus preserve a condition in society which becomes more and more important." Various other speeches were made.

After lunch there was another walk of a mile or so through the park to the Sèvres Porcelain Works, where the different processes of manufacture and decoration were duly explained. The Congressists then embarked on the steamer specially chartered to carry them back to Paris; light refreshments were served on board, and a pleasant trip along the Seine and through the Exhibition—which is never prettier than when viewed from the river—pleasantly ended a pleasant day. Sunday was observed as a day of rest, Monday as a day of hard work, Tuesday morning was devoted to the ceremony of

Unveiling the Pelletier-Caventou Monument.

The general appearance of this statue is already familiar to our readers. It had been placed on a lofty pedestal—the architect, M. Lisch, by the way, is a collateral descendant of Caventou—at the intersection of the Boulevard St. Michel (the main artery of the quartier Latin) and the rue Denfert-Rochereau, a mere stone's throw from the School of Pharmacy. This was the only ceremony of the Congress which had anything of an official character. The professors of the school, all in their robes of black and crimson, and their mace-bearer, M. Guignard, the Director, in his green-embroidered suit as member of the Academy of Sciences, a large number of military and naval pharmacists in full uniform, and a few ladies in summer toilettes, made up a picturesque group under the awning of crimson and gold opposite the statue, their costumes being thrown into relief by the background of foreign delegates in the evening dress customary in France on such ceremonial occasions. A barrier had been erected to keep off the crowd, and a squad of policemen to preserve order. In spite of the wooden pavement, the constant rumble of traffic somewhat interfered with the possibility of hearing the speeches. They were, as a rule, short, and sometimes eloquent. Prof. Moissan, as Chairman of the Organizing Committee for this statue, traced the life of Pelletier and Caventou—we may possibly publish this biography later on if space permits. M. E. Lepelletier, whose blue and red sash marked him as a representative of the Paris Municipal Council, told a pretty legend about Pizarro and the discovery of quinine,

expressed the pleasure the Municipality had in accepting Sculptor Lormier's handsome work, and dwelt on the fact that the victories of scientists are more glorious and above all more durable than those of warriors. M. De Mazieres asked why this was the first statue ever erected to a pharmacist in a public square in Paris. Was their profession poorer than others in great men? Not at all; they could quote the names of Scheele, Priestley, Davy, Baumé, Robiquet, Soubeiran, Pelouze, etc., as a proof to the contrary. The pharmacist's only fault was exaggerated modesty. Cloistered at home by the necessities of his profession, he took his retired place as a matter of course. But why not let the public know that, by his large and varied knowledge, he is no ordinary shop-keeper, but a man of learning and science, capable of rendering them many services. This statue would teach this lesson to passers by, that these pharmacists had, by their scientific knowledge and their personal disinterestedness, merited the title of Benefactors of Humanity.

M. Pellisse read an eloquent speech in the same strain, written by M. Riethe, and asked pharmacists not to forget they were the successors of such worthy and dignified men and to try and live up to the high example thus set before them.

M. Guignard traced the career of the two savants as professors of the Paris School of Pharmacy.

An interesting feature of the proceedings was the presence of Dr. Eugene Caventou, of the Academy of Medicine, son of one of the savants to whom the monument was erected.

The Closing Meeting

of the Congress was held on Wednesday afternoon at the Congress Palace in the Exhibition. M. Petit, in a capital speech, thanked all foreign and provincial delegates and expressed his satisfaction at the thorough work and pleasant relations which had distinguished the meeting.

M. Crinon, as general secretary, read a complete report of the proceedings and seemed quite taken aback at the ringing cheers which greeted him on its conclusion as a compliment to his relentless exertions. MM. Ranwez, Altan and other foreign delegates thanked the French Congress for its hospitality and echoed M. Petit's hopes of meeting again later on. No city or date was, however, fixed for

The Next Meeting.

this matter being left to the discretion of the committee. Possibly it will be in Germany or Austria.

The Banquet

took place in the Palmarium or large greenhouses of the Jardin D'Acclimation, just outside Paris, the same evening. It was of the pleasant social nature that distinguished the Congress. The toasts were numerous, but mostly spontaneous and personal, and there was a marked absence of formal speeches. Prof. Tikhomirov spoke for Russia, M. Wrenn for England, M. Duyk for Belgium, etc., etc. The veteran pharmacist-poet, M. Julliard, had as usual, a neat little compliment in verse to recite, which had great success. After the banquet many of the Congressists dropped in

At the Elysee Palace

where President Loubet had consented to receive members of the Congresses present in Paris. A large number of Congressists were also present at the fete offered by the President of the Republic, on Friday afternoon, August 10th. The Shah of Persia and other notabilities were present, and the entertainment was unique in its way, a representation of Ancient and Modern Dances by the artists of the Opera, with descriptive recitations by M. Mounet, Mmes Bartet and Brandes, of the Comedie Francaise. A large number of members of the Medical, Dental and other Congresses were invited, and the varied costumes of the foreigners who attended the Students Congress, gave a picturesque aspect to this huge "garden party" of some 5,000 guests.

LIQUID FUMIGANT.—The following formula for a liquid fumigant to be used as a disinfectant for rooms occupied by phthisical patients is recommended by a writer in *Bul. de Pharm.*: solution of formaldehyde, 40 per cent., 60 parts; creosote, 15 parts; oil of turpentine, 32 parts; menthol, 1 part. Mix. To use let fall, drop by drop, on a hot metallic plate. About half a teaspoonful suffices for an ordinary bedroom.

"Yes, Genevieve, I am bound for China, and I shall not return until I have smelled powder."
 "But why go to China to smell powder, Harold, dear? I use lovely heliotrope."

EMULSIONS AND EMULSIFYING AGENTS.*

By A. E. HISS, Ph. G.

Emulsions are mixtures of oily or resinous substances with gummy or albuminous bodies in which the oil or resin assumes the form of small globules. Milk is usually described as the type of emulsions, the globules of fat being suspended in an albuminous medium. This, however, is not a fair analogy, because the fat of milk is enclosed in a tough albuminous envelope which is difficult to break and which interferes with the examination of milk for its proportion of butter fat. The amount of oil present in an emulsion may be determined by the direct agitation of the milk with the oil solvent. Furthermore, the oily matter does not separate, or at least not so much, from a well-made emulsion as does the cream from milk.

The method of preparing an emulsion varies according to the substance to be emulsified and the substance used as an emulsifying agent; and the same substance may be emulsified in more than one way with the same emulsifying agent. The substance most frequently prescribed and dispensed in the emulsion form is cod liver oil.

Continental Method of Making Emulsions.

What may be termed the "classic" method of emulsifying this and other fixed oils is by the use of powdered acacia according to the so-called "continental" process. If 16 fluid ounces of a 50 per cent. emulsion are desired, 2 avoirdupois ounces of the acacia should be placed in a capacious mortar, 8 fluid ounces of oil added, the whole triturated until well mixed and all the lumps of acacia have been reduced; then add all at once 3 fluid ounces of water and stir briskly and continuously until the emulsion is well formed, which will not take over two minutes. The other ingredients may then be incorporated.

Considerable care must be exercised in making an acacia emulsion, but such excessive care as is usually advised I do not find to be necessary. There are some, for instance, who may object to the use of 2 ounces of acacia and 8 fluid ounces of oil. These would say that each of the ingredients should be accurately weighed and that exactly four times as much oil as gum should be

*Read at the meeting of the Illinois Pharmaceutical Association at Chicago. In the Era's report of the meeting the name of the author of this paper was inadvertently spelled Hitt.

used. There are also some who may say that 4 fluid ounces of water should be used to form the emulsion. I find, however, that any quantity of water between 3 and 4 fluid ounces will make a satisfactory emulsion.

What is really the most important of all is that a good grade of acacia be used. Powdered acacia may be unsatisfactory for emulsifying purposes either because it is adulterated, or because too great heat was used in drying the gum, or possibly because the gum arabic is not really an acacia at all but one of its many substitutes. I have had but indifferent success with granulated acacia which is frequently recommended for emulsifying purposes.

The Proper Proportions.

Most of our books on pharmacy err when they advise that one-half as much water as of oil and gum taken together should be used for making the emulsion. It is better to say that one and one-half times as much water as gum should be used, for it is necessary to maintain a definite relation between the gum and the water. If too much water is used, the mucilaginous solution may be too thin and thus be incapable of enveloping the oil globules.

It will be observed that I have directed in my formula one-fourth as much gum as oil. This is usually the best proportion for fixed oils. One-eighth or even as little as one-sixteenth as much gum as oil may be used, but the mixture may separate too much. If, on the other hand, one-half as much gum as oil be used, the emulsion is liable to be too viscid.

The English Process.

There is another method of emulsifying fixed oils with acacia, the so-called "English" process, in which oil and water are added alternately in small amounts to the gum, triturating thoroughly after each addition. This process is not so convenient or certain as the continental process, which gives constant success, when properly followed out, in the hands of even the veriest tyro.

Separation and Its Prevention.

What is meant by separation in a well-made emulsion is not separation into oil, water, etc., but into an upper creamy and a lower watery layer. Such a separation does not indicate any fault or error in the making of the emulsion; in fact, practically every emulsion will separate, sooner or later, into the two layers. It may have been observed by some of those present that the proprietary emulsions have little or none of the watery layer; this is due to the presence of some powdered tragacanth, which I consider an advantage. About the proper proportion to use is 1 avoirdupois ounce of acacia and 30 grains of tragacanth for 8 fluidounces of oil.

Flask Method for Volatile Oils.

While fixed-oil emulsions are best prepared in a mortar, volatile-oil emulsions, such as emulsion of oil of turpentine, are best made by agitation in a bottle, using powdered tragacanth, or, still better, a mixture of acacia and tragacanth. The usual oil-of-turpentine emulsion contains $\frac{1}{2}$ fluid ounce of oil in 4 fluid ounces of emulsion. The oil is introduced into the bottle, the latter agitated so as to distribute the oil over its interior surface, the gums are added, the whole is well agitated to break up the gummy lumps, then there are added, all at once, at least 2 fluid ounces of water. Now agitate thoroughly until the oil is emulsified, and finally incorporate the syrup and the rest of the water.

About 15 grains each of acacia and tragacanth are required for $\frac{1}{2}$ fluid ounce of oil, providing both gums are of the best quality. If tragacanth only be employed, from 20 to 40 grains, according to quality, are required. In using powdered tragacanth as an emulsifier, it is even more necessary to use a pure gum than when using powdered acacia.

I have the best success with a mixture of the two gums. Tragacanth alone is somewhat uncertain and is liable to make an extremely viscid product; acacia alone makes an emulsion which separates readily into creamy and watery layers, the latter greatly preponderating. This is not due to any inherent defect of the acacia, but to the fact that there being but a small amount of oil in the mixture, there is necessary but a small proportion of gum. Practically the same separa-

tion takes place in a fixed-oil emulsion if but a small proportion of gum be present.

A mixture of acacia and tragacanth is satisfactory because the tragacanth has extreme affinity for water, and hence it not only assists the emulsifying action of the acacia, but binds the whole into a homogeneous mixture. It is on account of this extreme affinity of tragacanth for water that it is necessary to add a large quantity of water at once to the gummy mixture; a small amount of water simply makes a solid mass which almost defies disintegration.

There are other excellent emulsifying agents, such as saccharated casein, condensed milk, egg yolk, glycerin, mucilage of Irish moss, and extract of malt.

Saccharated Casein.

Saccharated casein was first recommended by Leger, a French pharmacist, about 1887. It is prepared by separating the cream from milk by warming slightly, adding ammonia water, allowing the mixture to stand for twenty-four hours, drawing off the lower turbid liquid, precipitating the casein by adding acetic acid, washing the precipitate until tasteless, adding some sugar, then a small amount of sodium bicarbonate, drying the mixture in a warm place, and finally adding enough powdered sugar so that the product contains 10 per cent. of dry casein. The mixture contains 0.5 per cent. of the alkali and is soluble in water.

In making an emulsion of cod liver oil triturate 4 avoirdupois ounces of saccharated casein with 4 fluid ounces of water until well mixed, then gradually add 8 fluid ounces of oil, triturating thoroughly after each addition until the oil is thoroughly emulsified. If at any time the mixture becomes too dense, it may be thinned with a small amount of water.

Relative Size of Oil Globules.

When an acacia emulsion is viewed under the microscope, the oil globules are seen to be quite small—smaller than when any other emulsifying agent is used, with the exception of saccharated casein. The latter, therefore, is or should be the preferred emulsifier for cod liver oil and other fixed oils where fine subdivision of the oil is the desideratum.

Comparing saccharated casein and tragacanth as emulsifying agents, the saccharated casein emulsion separates considerably, while the tragacanth emulsion separates but little or not all. On the other hand, the oil globules of the former are very small, of the latter very large. If acacia and tragacanth be used together in an emulsion, the oil globules will be moderately large, the more tragacanth present, the larger the globules. In fact, when using tragacanth only, the globules are visible with the naked eye.

Use of Condensed Milk.

The sugary brands of condensed milk also are satisfactory emulsifiers for fixed oils. Six avoirdupois ounces will emulsify 8 fluid ounces of cod liver oil, the oil to be added to the milk in divided portions, triturating thoroughly after each addition until the oil is emulsified, occasionally adding a small amount of water as the mixture becomes too dense.

The product is very white, does not separate, and the oil globules are as small as in the acacia emulsion.

Egg-Yolk and Glycerin.

Egg-yolk is also an excellent emulsifying agent, particularly for fixed oils. Glycerin, or a mixture of equal volumes of egg-yolk and glycerin is also excellent. Three fluid ounces of the latter and two of the former are required to emulsify eight fluid ounces of cod liver oil.

Mucilage of Irish Moss.

Mucilage of Irish moss was at one time in great vogue as an emulsifying agent, but it was speedily on the wane, because it is inferior to the emulsifying agents so far enumerated. It yields a white emulsion which does not separate much, but the oil globules are very large.

Extract of Malt Emulsions.

Extract of malt of the thick variety is also an excellent emulsifying agent for fixed oils. The proper way to make an extract of malt emulsion of cod-liver oil is to heat the extract of malt on a water bath, and to

quickly and thoroughly incorporate the oil by trituration in a capacious mortar. When made with cold extract the emulsion is almost certain to separate into oil and extract. If a large amount of emulsion is to be made, the mortar or other vessel used should also be warmed.

Extract of malt disguises the taste of cod liver oil better than any other emulsifying agent. In fact, when this is used, no additional corrective is necessary. Saccharated casein, condensed milk, glycerin and egg-yolk also favorably modify the taste of cod liver oil considerably.

Cod Liver Oil Disguisers.

The different agents I have found useful for covering the taste of cod liver oil are the aromatic oils, such as wintergreen, sassafras, lemon, anise, bitter almond and others; also wines, brandy and rum. The latter are very good, and when used no addition of syrup is necessary. A few drops of chloroform also materially assist in covering taste of cod liver oil.

Some Unsatisfactory Agents.

There are other emulsifying agents, such as mucilage of flaxseed, gelatin, mucilage of acacia, mucilage of dextrin, tincture of soap bark, saponin, etc.; but these are of little or no value and need not be considered here. In fact, a mixture of oil with tincture of soap bark or saponin is not, properly speaking, an emulsion.

Sometimes alkalies (solution of potassa, lime water.)

are wrongfully added to fixed oils with the view of making an "emulsion," but the product is not an emulsion, but a soap; the change is a chemical, not a physical, one.

Emulsions of Substances Other Than Oils.

Other substances besides fixed and volatile oils are made into emulsions, such as terebene, chloroform, ether, balsam of Peru, balsam of copaiba, etc. The latter two may be emulsified like the fixed oils, the former two like the volatile oils.

The United States Pharmacopœia gives a formula for emulsion of chloroform which is unnecessarily involved. This emulsion may be prepared like the turpentine emulsion described above as made with tragacanth.

Terebene, chloroform, and the volatile oils may be emulsified like the fixed oils if they be first mixed with about 3 times their volume of some bland fixed oil, such as olive or sweet almond oil.

Proprietary Emulsifiers.

Of late years there have appeared on the market a number of special proprietary emulsifying agents. These are to be used in the proportion of $\frac{1}{2}$ to 1 avoirdupois ounce to 8 fluid ounces of cod liver or other fixed oil, the emulsion to be made in a bottle by agitation. Such a preparation may be made by mixing equal parts of powdered acacia, powdered tragacanth, corn starch and powdered white sugar.

Pharmaceutical Celebrities.

PETER ROSS LANCE.

While the readers of the Era will recognize the excellence of the facial portrait of Peter Ross Lance in the above cut, it must be admitted that the artist has failed to do full justice to the figure of that gentleman or to

give adequate expression to the faultlessness of attire which is a marked characteristic of his appearance. Nevertheless, the face is the all-important feature which the Era seeks to perpetuate in these illustrations, and the expression which Senator Chauncey M. Depew has striven so hard to counterfelt has been most successfully reproduced by our artist in the present instance.

Mr. Lance is probably more widely known to the drug trade of the United States than any other pharmaceutical representative. This is not due to the length of time that he has been before the trade, although he has for some years been the acknowledged dean of the fraternity, but is rather to be attributed to those traits which have impressed his personality upon the large number of pharmacists whom he has met during his travels and by whom he is always pleasantly remembered.

Mr. Lance entered upon a business career very early in life, and like most of the successful men in his line, was at one time a retail druggist. He has during his business experience been closely associated with such eminent scientists as William Gilmour, of Cincinnati, and Frank S. Henry, of Cleveland, and each in his way has contributed his share to pharmaceutical progress, though neither has, perhaps, added much to the list of pharmacopœial preparations.

Mr. Lance's connection with the house of Wm. R. Warner & Co. has extended over a long period of years, and has been creditable alike to the house and to himself. His abilities are not merely those of a very successful salesman, but he is in all respects a representative. His natural diplomacy would have qualified him for high political honors had he chosen to enter that field, but it has been by no means lost in the pursuit he has followed. If he ever thinks ill of anyone the fact is carefully concealed, and whether for this reason or because of his other manifold attractions, no one is ever heard to speak ill of him. Life may not be one long crimson sunset to Mr. Lance, but if it isn't he at least has the appearance and manner of a man who is pleased with the world as he finds it, and he certainly has made it a pleasanter place for those who know him than they would have found it without his acquaintance.

HOW TO CONDUCT THE PRESCRIPTION COUNTER.*

In the art of practical pharmacy, the subject of how to conduct the prescription counter and the skillful compounding of physicians' prescriptions is one of the most important duties.

It requires first, thorough training by a practical, experienced preceptor, accompanied by skillfulness, accuracy, cautiousness, presence of mind, and the exercise of good judgement.

The essential of being carefully trained is the most important, as no person should venture upon so great and responsible a vocation as that of the prescription pharmacist, unless he be specially fitted for the position, and a master of his profession as well.

Skill can only be attained by constant practice; and accuracy must be observed at all times. In other professions accuracy is of course required, but in no other profession is the old saying, "Be sure you're right, then go ahead," as true as in the compounding of prescriptions.

Cautiousness in guarding against errors should always be remembered. Every human being is liable to err; men in other professions and trades can sometimes make mistakes without disastrous results, but with the pharmacist in the act of dispensing physicians' prescriptions where there are greater chances for error, and no means of checking consequences, mistakes must positively not occur.

Presence of mind is of vital importance; every pharmacist in compounding prescriptions has human life intrusted to him, and absence of mind for a moment even, may be the means of destroying life or impairing health.

The exercise of good judgment is very important in locating and arranging prescription counters, and in fact, all our work and manipulations. The location of the prescription counter depends very largely upon the arrangement of the store and the advantages of light, air, room, water supply and the rest, but in every instance **EXCLUDE THE PUBLIC**, as it is very often the case, that their curiosity is aroused to know what is going on behind the prescription counter, and if convenient for them to do so, will enter and in talking to the compounder in the performance of his duties, will cause abstraction of mind, divided attention, and consequent liability to mistake and unfortunate results.

Of course it is not agreeable to be obliged to order a friend or customer from behind the counter and case, but as great responsibility rests upon us, it is really our duty to do so, for here the fate of human life is frequently decided. It is absolutely necessary that the prescription counter be isolated from the public, and the compounder be left entirely alone with his work. The arrangement of the prescription case should be carefully studied and planned, in order to make it as convenient as possible.

The use of uniform shelf-ware here, is not to be commended, as in order to guard against fatal mistakes and errors, the substances, when practical, should be left in the original container, and grouped in such a manner that they can be easily found.

Caution would advise that the most poisonous substances should be kept in separate compartments such as poison cases or drawers, but where none such are used, they may be grouped together in one corner of the prescription case.

The convenient arrangement of all the utensils in use, will aid greatly in the rapid performance of the work.

See that the graduates, mortars, spatulas and pill-tiles are kept in their proper places, always clean and ready for use, and every time you use them, see that they are returned to their places scrupulously clean. Never leave your utensils in disorder where used, nor the dispensing bottles standing on the prescription counter after using, as though they had to take care of themselves. There is no part of the store where cleanliness is as essential as here, and it should always be kept in

such condition that when your friend the physician calls, you can invite him to inspect a clean, orderly, professional, self-respecting prescription counter; it is a commendable pride.

Examine your prescription scales frequently; keep them at all times in perfect working order, test them and satisfy yourself that they are correct. It is advisable to use two sets of prescription scales, one an ordinary set of box prescription scales for weighing large quantities, and the other a set of fine prescription balances in a glass case away from the dust, for fine, delicate weighing, where great accuracy is required.

Keep a full set of metric weights and measures, and familiarize yourself with this system so thoroughly that if any questions are asked by your physician or customers upon them, you will be prepared to give full and correct information.

Inspect your stock frequently and use no syrups that are mouldy or fermented, decomposed medicated waters, rancid ointments, or essential oils, or chemicals or drugs that have become worthless by age or improper keeping. The best of drugs are none too good for the prescription counter.

Always keep on hand a good supply of the different sizes of corks, prescription vials, pill and powder boxes, powder papers, ointment jars and labels of the best quality and appearance. Here is a poor place to practice economy.

Try to make your package look as neat as possible; display skill and even taste in your work, as it will have a tendency to impress your customers with your thoroughness and professional address.

Never leave anything half-done or slovenly performed; whatever you undertake to do, do it well and in a workmanlike manner.

Read your pharmaceutical journals and keep posted on the new remedies as they come out from time to time. Invite your physicians to your store, call their attention to your prescription case and let them make it their headquarters. Try to obtain their good-will by good treatment. Prepare your own line of elixirs and call your physicians' attention to them and explain the reliability of your own preparation; convince them of your skill and ability in this line and prove to them the advantage of using home-made preparations. Show them that you are their assistant in pharmaceutical matters and a pharmacist in every sense of the word.

See that your physician has a United States or National Dispensary in his office and encourage him to use it, and call his attention to the National Formulary and United States Pharmacopoeia products. If your physician is a graduate of some foreign school of medicine, obtain a pharmacopoeia of that country, call your physician's attention to it, and if there are any special preparations which he has been accustomed to using, or wishes to use, let him know that you can prepare them for him.

Keep a good, well selected pharmaceutical library at hand and make frequent and constant use of it; also invite your physician to use it whenever he wishes to do so.

Advertise your prescription counter and let the people know that you are a practical up-to-date pharmacist, a master of your profession and perfectly competent to compound any prescription entrusted to your care.

The cutting of prices on prescriptions is a very foolish procedure. It will bring no more trade, and although we should not overcharge yet we should take into consideration that we must be paid for our time and skill as well as for the drugs. The physician receives pay for his knowledge in writing the prescription, and why should not the pharmacist be paid as well for skill in compounding it. If you follow out the line of these suggestions I am sure your prescription counter will keep you busy and net you a handsome profit, if you only attend to it as a professional pharmacist should.

PREVENTIVE AGAINST INSECT BITES.—A solution of quinine sulphate in glycerin has been recommended by Mense as the best preventive against insect bites. It has not been established whether this action is due to the bitter taste of the quinine or its toxic action on the insects.—(Am. Apoth. Zeit.).

*Paper read by B. O. Kyseth, Lanesboro, Minn., before the Minnesota Pharmaceutical Association. Contributed by the author to the Era for publication.

YOUR OWN PREPARATIONS: HOW TO SELL THEM.*

By J. T. PEPPER.

Making and selling your own preparations is getting to be a bigger part of the drug business every day. This idea is growing among the druggists. Druggists want money-making ideas; they want to do business for gain—not for glory; they want so to extend the range of their business that they may increase their profits. In this article an endeavor will be made to give descriptions of some business ideas that will help make money for those druggists who are willing to adopt and modify these ideas in a practical manner so as to suit their own particular cases and surroundings.

At the outset the fact should not be lost sight of that in making your own preparations you should make them of the very best drugs and chemicals that you can obtain. Put your own preparations in what you consider are the nicest and best-shaped bottles you can secure. Have all your labels and wrappers neatly and tastily printed so that you are pleased and satisfied with them. Try and have everything connected with the making and dressing of your own preparations so well done that you will feel inspired with a sense of gratification and satisfaction every time that you try to make a sale of one of them. This very feeling will assist you to make a sale. It will help you to feel pleased with yourself and your own success and also assist you in making a pleased and satisfied customer.

In order to be a successful salesman it is absolutely necessary for one to know all about the goods he is selling. If a druggist desires to be successful in selling his own preparations, it is just as necessary for him to know all about them. Be conversant with the various ingredients which enter into their formulas. For instance, if it is a vegetable drug, be able to tell the name of the plant from which it is obtained, the country that it comes from, what part of the plant is used and what are its medicinal properties. Be able fully to explain the processes of manufacture by means of which the virtues of the various drugs are extracted. The people think there are great mysteries connected with the drug business, and if you can sometimes impress them with the magnitude of your knowledge concerning drugs and your own preparations they will the more readily buy your own preparations in preference to regular "patents." A thorough knowledge of your own preparations begets confidence in them, and unless you have unbounded confidence in your own preparations you cannot make them a success.

Mr. Russel Sage, the dean of American financiers, and who is worth \$100,000,000, says that "opportunities are disgusted with men who don't recognize them." Every druggist may recognize this magnificent opportunity of manufacturing a line of his own preparations and selling them to his customers with much profit to his business and satisfaction to himself. Making a line of your own preparations and introducing them to the public is one of the very best opportunities offered to the druggist of to-day. Many wise and practical druggists have already recognized this magnificent money-making opportunity and are now on the prosperous highway to success and profit. If, in one year, you sell \$1,000 worth of your own preparations, it will cost you to produce them about \$250 and the \$750 will be your profit.

It is necessary to resort to different methods in order to introduce your preparations to the public. I will discuss them as follows: Newspaper advertising, circulars, folders and booklets, window displays, store displays, and personal talks.

With respect to newspaper advertising, this is too expensive for the majority of retail druggists. It is possible that it could be made to pay magnificently if pharmacists only knew how to do newspaper advertising wisely and judiciously, but I do not think many druggists have learned the art of advertising. It has to be learned just the same as the pharmacist's profession. It requires an apprenticeship similar to that of the drug business. It may be wise for the pharmacist to do some newspaper advertising in connection with his other ef-

forts in advertising, but I think that I would advise only a careful expenditure in this direction. I think that I would rely more on the careful and systematic distribution of circulars, folders and booklets upon efforts of advertising by window and store displays, and upon personal talks with customers.

Newspaper advertising looks like a short cut to attain the same results, but to me it does not seem so sure. You can reach so many more people so much more quickly by the aid of the newspaper than you can by any other way that it looks like the best and quickest method to adopt. But the difficulty is to reach the people intelligently by your newspaper advertising and make them purchasers of your medicines. If you will just think for a short time, I have no doubt you can recall the failures of many concerns who exploited some patent medicine and did a great deal more newspaper advertising than any retailer can ever expect to do. Is it not wise to profit by the dearly-bought experience of others?

Of course, if druggists desire to do some newspaper advertising and want to do it wisely and well, they can employ the services of an expert writer of advertising, but this is too expensive for the average retailer. A cheaper method, and one from which the druggist can obtain a great amount of valuable assistance, is to thoroughly read and digest the advertising suggestions given in the drug journals.

Circulars, Folders and Booklets.—These are all good. A thorough and systematic distribution of any one of these will help the sale of your own preparations. Be careful about the printed matter that you distribute. Let its information be a straightforward, business talk, and full of practical, good, common sense, and let it be written in so plain a style that every man, woman or child can easily understand it. First impressions do the business for most of us and no matter what we do subsequently they are bound to retain their influence. These first impressions should be the very best.

The most commonly adopted way of getting any of these publications into the hands of possible customers is by a house-to-house distribution. You can get boys to do this, accompanied by one of your clerks to see that the boys do not miss any houses or waste your advertising matter by throwing them into the houses two or three at a time or a dozen or so in a vacant lot; for boys like to get their work done quickly. A better method is to have two of the boys from your own store do the distribution from house to house. Sending advertising matter through the mails is also a good way of reaching the people, but to do this to any great extent is too expensive for most retail druggists.

If you put up any kind of a pill of your own, a good way to advertise and introduce it is to put about three pills in an envelope, together with a circular descriptive of the pills and of other preparations of your own manufacture. Have advertising matter printed on the outside of the envelope about the pills, samples of which you have enclosed. Distribute these envelopes from house to house and see how it will help you.

Window Displays.—Too much emphasis cannot be laid on the necessity of the druggist making good use of his window space. It is the best place he can display his own preparations to the public gaze. So much has been written concerning window displays, however, that it is unnecessary to comment further on the subject here.

Store Displays.—From experience I have learned that it is wise to keep your preparations before the public as much as possible by every available and legitimate means. If you do this continually in your store and window you will find that it will not be long before the public has become familiar with your preparations. People will not only call for them, but, when they consult you as to what is the best medicine for them to take for a certain complaint, it will be an easy matter to introduce your own preparations, for, having seen them displayed so many times in such conspicuous ways and places in your drug store, they will already be well acquainted with them and will the more readily accept them now on your own recommendation.

Making store displays of your own preparations will be found to be a valuable assistance in helping you to make sales. You can remove all the patents from one of your patent medicine cases and fill it up with your own

*Reprinted from the Bulletin of Pharmacy.

preparations; or else remove the contents of one of your counter show cases and fill the whole case up with one of your own preparations, such as your headache powders, for instance, having a card in the case describing them.

You can display fifty cent and dollar preparations in rows on top of your show cases. Smaller articles can be displayed on racks or stands or cards of your own manufacture. You know that the patent medicine people frequently give the druggist these display stands, racks and cards so that the druggist will display the goods on top of his show case. Why not do the same with your own preparations? Keep them always prominently displayed where your customers can see them.

Personal Talks with Customers.—Yourself and your clerks can talk about the virtues and advantages of your own preparations whenever you get a good chance, and this is one of the very best kinds of advertising. Personal conversation along this line can be made very effective. You should be careful, not over-anxious, nor too persistent, in your efforts to sell your own preparations, but be sincere and in earnest and generally the fact that you believe in what you are saying will impress the customer sufficiently to carry your point. The way to do this is to adhere strictly to the truth. There are more good things to be said for an honestly made preparation of your own than you will have time or need to say; therefore, the plain truth alone is quite sufficient.

CURING OF VANILLA.—Precise details of the various processes for curing the vanilla fruit and preparing it for the market are given by J. C. Sawyer in a Jamaican official publication says *Pharm. Journ.* The odor of the vanilla does not exist in the fruit as it is gathered, but is developed by a process of fermentation in the curing. Four methods are given: (1) The Guiana process: the beans are placed on ashes until they begin to shrivel; they are then wiped, rubbed over with olive oil, tied at their lower end, and dried in open air. (2) The Peruvian process: the beans are dipped into boiling water, tied at the end and hung in the open air to dry for twenty days. They are then smeared over with castor oil, and after a few days tied up into bundles. (3) Mexican process: the beans are placed in heaps protected from the sun and rain in a shed for a few days until they begin to shrivel. They are then "sweated" by exposing them to the sun or to stove heat (60° C. the maximum), whereby they acquire a fine chestnut brown color. The depth of color is proportional to the success of the operation. Finally, they are dried by exposure to the sun during a period of two months, and tied in small bundles for the market. (4) Reunion process: the beans are soaked in hot water, as by the Peruvian process, quickly dried in the sun for a few days, and then exposed for about a month to a current of hot air circulating in a zinc roofed shed which serves as a drying closet. When the beans can be easily twisted around the finger without cracking they are put through the "smoothing process," which consists in passing each bean between the fingers several times to impart lustre and suppleness, owing to the oil which exudes as the fermentation proceeds. Three commercial sorts are recognized: (1) Fine vanilla, 8 to 11 inches long, very dark brown or nearly black, unctuous, glossy, clean looking, and longitudinally furrowed. These soon become frosted with white crystals. (2) Woody vanilla, 6 to 8 inches long, lighter in color, more or less spotted with grey, not glossy. These are generally the product of unripe pods. They frost, or "giore" as it is technically called, little, if at all. (3) Vanillons, of which there are two kinds, one obtained from short but ripe fruits, an excellent variety which frosts well, the other from unripe fruits, whose perfume is simply absorbed from fine beans by long contact.

REVIVER FOR BLACK LEATHER.—Dissolve 41 parts of gum arabic in 50 parts of water and to the solution add 60 parts of black ink, 25 parts of alcohol and 22 parts of brown sugar. According to *Neueste Erfindungen und Erfahrungen* this preparation is said to be excellent for black leather articles which have become dull and worn.

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the *Era*. Copies of these may be obtained at ten cents each.

Remedy for Warts.—(Chemist.) See this journal August 16, 1900, page 181.

Jones' Drug and Baking Powder Mixer and Sifter.—(Sister.) Address Wilmot Castle Co., 26 Elm street, Rochester, N. Y. Advertisements of this machine have frequently appeared in this journal.

Mixture of Chloral and Potassium Bromide.—(G. S.) We cannot suggest a better formula for the administration of chloral and potassium bromide than that of the National Formulary under the title "*Mistura Chlorali et Potassii Bromidi Composita*."

Coloring Tomato Ketchup.—(C. T. L.) An expert says if you will use enough tomatoes in making your ketchup you will need no additional coloring or dye. We have also been informed that cochineal or a non-poisonous aniline dye might be used for the purpose.

Color Change in Wood Alcohol.—(W. J. M.) asks what causes wood alcohol to change slightly yellow after standing in the store for a week or so.

Wood alcohol should not become colored by exposure to air and light and any such change indicates the presence of empyreumatic substances left in the alcohol in the process of purification.

Glue for Letter-Heads, Etc.—(T. J. C.) Try the following: Glue, 4 pounds; glycerin, 2 pounds; linseed oil, ½ pound; sugar, ¼ pound, aniline, q. s. The glue is softened by soaking it in a little cold water, then dissolved together with the sugar in the glycerin by aid of heat over a water bath. To the solution add the dye and afterward the oil well stirred in. Use hot. Another composition of a somewhat similar nature is prepared as follows: Glue, 1 pound, glycerin, 4 ounces; glucose syrup, about 1 ounce; tannin, 48 grains. Give the compositions an hour or more in which to dry or set before cutting or handling the pads.

Healing Salve.—(M. W. P.) (1) Melt ½ ounce of carbolic acid and, while warm, add 1 ounce of camphor and ½ dram oil of sassafras. Then melt 1½ ounces of yellow wax and add it to 1 pound of petrolatum, melting them together; while cooling but still liquid add the solution of camphor in carbolic acid, etc., stirring occasionally until cold. (2) Extract of arnica (solid), 2 drams; lard, 1½ ounces; yellow wax, 1½ ounces; hot water, sufficient. Dissolve the extract of arnica in the hot water and thoroughly incorporate it with the lard and beeswax previously melted together. (3) Simple ointment, 15 parts; boric acid, 1 part.

Cleaning Horses and Cattle.—(W. H. R.) asks for a remedy to remove manure stains from the hair of horses and cattle without injuring the skin or growth of hair.

This question was submitted to an experienced horseman who says nothing is better than to wash the parts of the animal affected with warm water and soft soap, afterward drying and "polishing" the hair by rubbing with a piece of soft chamois skin or flannel. If any of the *Era's* readers has a better method we should be pleased to have him send it in for publication in these columns.

Fungous Growth in Diluted Phosphoric Acid.—(G.) The sediment or deposit noted in the sample of diluted phosphoric acid is due to a fungous growth and an acid so contaminated should be thrown away. Just how much the presence of this growth detracts from the medicinal value of the acid we cannot state. It is far better and safer to prepare this acid in small quantities as needed than to run any risk by employing an acid which is not as it should be. This growth of vegetative organism is not peculiar to diluted phosphoric acid but may be found in other aqueous solutions, as dilute solutions of citric acid and the alkaloids.

To Remove Mildew.—(Chemist.) Mildew is the hardest of stains to remove and cannot be taken out of linen unless the effort is made soon after it appears. A very fresh light stain may be treated successfully by covering it with table salt wet with lemon juice and placing it on the grass in the sun. According to the Era Formulary the following is the best remedy: Mix soft soap with powdered starch, half as much common salt, and the juice of a lemon. Spread this mixture thickly on both sides of the mildewed linen and then lay the fabric on the grass in the sun. Repeat the operation two or three times a day, leaving the cloth out over night as is done in bleaching.

Application for Pimples.—(Chemist.) If you would consult the indexes to previous volumes of the Era you would find many references to formulas for preparations of this character. Here are several which contain no "greasy" substances: (1) Carbolic acid, 15 drops; borax, 1 dram; tannin, $\frac{1}{2}$ dram; glycerin, $\frac{1}{4}$ fluid ounce; alcohol, 1 fluid ounce; rose water, $2\frac{1}{2}$ fluid ounces. Make a solution and apply night and morning. (2) Thymol, 10 grains; boric acid, 2 drams; distilled extract of witch hazel, 1 fluid ounce; rose water, 4 fluid ounces. (3) Crystallized alum, 1 ounce; salt, 1 ounce; sublimed sulphur, 1 ounce; sugar candy, 2 drams; elder flower water, 3 ounces; distilled water, 3 ounces; brandy, 10 ounces. A "shake" mixture.

Carminative for Babies.—(I. B. L.) An old-time remedy containing asafoetida and used for flatulent diarrhoea and colic in infants is Dewee's carminative, a formula for which may be found in the National Formulary. A preparation used for a similar purpose is "Hall's Infant Colic Mixture," made as follows: Tincture of asafoetida, 15 drops; tincture of cinnamon, $\frac{1}{2}$ ounce; sodium carbonate, 1 grain; aromatic syrup of rhubarb, 3 drams; water, $1\frac{1}{2}$ fluid ounces. Mix. Dose, one teaspoonful. Another formula is: Tincture of asafoetida, $\frac{1}{2}$ dram; sodium bicarbonate, 4 grains; aromatic syrup rhubarb, $\frac{1}{2}$ fluid ounce; anised cordial, N. F., 2 fluid drams; water, enough to make, 1 fluid ounce. Mix. Dose, one teaspoonful.

Liquid Diastase.—(J.) Some years ago the following formula for a liquid preparation of diastase was published in the *Pharmaceutische Post*: Diastase, 5 grams; wine, 1,000 grams. This mixture is allowed to stand 24 hours and then filtered. A small wine glassful contains 0.2 grams of diastase, enough, it is claimed, to transform 40 grams of starch or 80 grams if the temperature is high enough and the starch is in the form of paste. A formula for an elixir containing diastase is given in the National Formulary under the title "Compound Digestive Elixir." In the preparation of this elixir it is directed to use the best commercial variety of diastase, capable of converting the largest amount of starch into dextrin and glucose.

Indefinite Inquiries.—(W. S. H.) writes: "Please advise me what I can use in the following to cause it to evaporate quickly, at the same time being inexpensive: Carnauba wax, soap, shellac, water, borax."

In this query W. S. H. leaves us very much in the dark, as he does not give his formula nor tell what he expects to do with the preparation. It may be intended for a floor wax, a shoe dressing or a polish for wood for all we know, but in the absence of definite information we cannot very well afford to "guess" at what he wants. The editor must have inquiries put to him in an intel-

ligent manner, if possible, embracing all of the information and details of the subject concerning which information is wanted, else he cannot render the best assistance. If W. S. H. will repeat his query, give us his formula and tell us what kind of a preparation he expects to make and how he wants to use it, we shall be glad to assist him.

Making Dilute Nitrohydrochloric Acid.—(F.) wants to know if there is any difference between dilute nitrohydrochloric acid prepared by mixing dilute acids and that made by mixing C. P. acids.

Mixtures of very dilute nitric and hydrochloric acids do not produce nitrohydrochloric acid in a pharmacopoeial sense. The value of the latter preparation depends upon the chlorine and chlorinated products it contains and the reaction producing them properly occurs only when the nitric and hydrochloric acids are concentrated as directed by the Pharmacopoeia. In a mixture of moderately dilute nitric and hydrochloric acids a reaction occurs very slowly, and only to a slight extent or not at all if the acids are very dilute. It is for these reasons the Pharmacopoeia directs that the strong acids shall be mixed before dilution; otherwise the desired reaction would not take place and the resulting preparation would be simply a mixture containing nitric and hydrochloric acids. The Dispensary will give you some information on these reactions.

Titration.—(Perplexed) asks "what is titration (not trituration)?" He says he is unable to find the word in any dictionary. "Titration" is defined by the Standard Dictionary as "the process of causing a given reaction, as a color test or a precipitate, between a solution containing a known amount of a substance and a solution of previously determined value so that the proportion of the desired ingredient may be determined; volumetric analysis." The Century Dictionary gives a similar definition. To "titrate" a solution means to test it volumetrically for the amount of desired ingredient or substance it contains. The term "titer" is used to designate the strength of a volumetric solution in active reagent per cubic centimeter or liter. Both words are derived from the French "titre," meaning "standard of fineness." The Pharmacopoeia gives many formulas for preparing "test" or "volumetric solutions," a work you should consult. Other books which may be recommended are Schimpf's "Text Book of Volumetric Analysis for Pharmacists" and Sutton's "Hand Book of Volumetric Analysis." See also Era Course in Pharmacy.

Keeping Qualities of Diluted Nitrohydrochloric Acid and Solution of Hydrogen Peroxide.—(F.) asks "how long under usual circumstances is it safe to depend on the strength of a sample of diluted nitromuriatic (nitrohydrochloric) acid, or of a solution of hydrogen peroxide?"

No direct reply naming the length of time these preparations will retain their original strengths can be given. Diluted nitrohydrochloric acid, however, may be kept some time if the proper conditions be observed, that is if it be kept cool and in a dark place. These precautions are very necessary on account of the liability of the preparation to lose chlorine by heat and to have its chlorine converted into hydrochloric acid by the action of light and the decomposition of water. According to Squibb, solution of hydrogen peroxide is subject to continuous decomposition under all known conditions. This decomposition is greatest in warm weather and from the agitation of transportation, so that a ten volume, for instance, transported to any considerable distance in warm weather would reach its destination with a loss of about one-third of its strength. In cold weather, without transportation, the loss is continuous though slight. This tendency to decomposition is fully recognized by the Pharmacopoeia, which specifically states that the solution will gradually diminish in strength even when carefully kept, and for this reason it should be either freshly made when wanted or be kept on hand only in such quantity as will probably be consumed within a short time. This discussion may be summed up in the statement that all solutions of hydrogen peroxide begin to lose strength soon after they are made and continue

to lose at an indefinite rate in proportion to the heat and agitation to which they may have been exposed. The value of a given sample, therefore, can only be determined by assay.

Elixir Calisaya, Iron and Strychnine.—(G. S.) wants "an elixir of calisaya, iron and strychnine which shall represent 40 grains of calisaya to the ounce of finished elixir."

We know of no specific formula for an elixir representing 40 grains of calisaya to the fluid ounce. Such an elixir may be made, however, by first preparing a detannated fluid extract of calisaya for use in the following formula:

Detannated fluid extract of calisaya 1½ fl. ounces.
Aromatic spirit, U. S. P. 2½ fl. ounces.
Syrup 6 fl. ounces.
Purified talcum 2 drams.
Water, enough to make 16 fl. ounces.

Mix the liquids and allow to stand 48 hours, then incorporate the purified talcum and filter through a wetted filter, returning the first portions of the filtrate until it runs through clear. Then take of

Phosphate of iron 256 grains.
Sulphate of strychnine 1½ grains.
Boiling water 1 fl. ounce.

In the boiling water dissolve the phosphate of iron, then add the sulphate of strychnine, and lastly enough of the above elixir to make 16 fluid ounces. Besides the calisaya each fluidram of the finished elixir will contain about 2 grains of phosphate of iron and 1/100 grain of sulphate of strychnine. A similar formula may be devised in which an elixir made directly from the cinchona alkaloids is employed. See "Compound Elixir of Quinine" of the National Formulary.

Composition for Fire Extinguishers.—(P.) As is well known, the effect of these apparatus is that the liquid contained in the extinguisher is caused to evaporate quickly by the fire, whereby a large quantity of gas free from oxygen is generated, which displaces the air, thus extinguishing the fire. Here are several formulas:

(1) Water, 1,000 parts; borax, 40 to 60 parts; soda (anhydrous), 80 to 120 parts; sodium hydrate, 150 to 200 parts; ammonium carbonate, 75 to 100 parts; ammonium chloride, 200 to 250 parts.

(2) Make the following solutions: (a) Ammonium chloride, 200 parts; water, 20,000 parts. (b) Alum calcined and pulverized, 350 parts; water, 10,000 parts. (c) Ammonium sulphate, in powder, 3,000 parts; water, 500 parts. (d) Sodium chloride, 2,000 parts; water, 40,000 parts. (e) Sodium carbonate, 350 parts; water, 5,000 parts. (f) Liquid water-glass, 4,500 parts. Mix the solutions in the order named, and to the mixture add 20,000 parts of water.

(3) Solution for hand grenades: Fill thin, spherical bottles of blue glass with a solution of calcium chloride, sal ammoniac or borax.

(4) A good fire extinguisher that may be conveniently kept in ordinary one-headed barrels around buildings is prepared as follows: Sixty pounds salt, 30 pounds alum and 10 pounds sal soda are dissolved in 13 gallons of water. This preparation acts by generating carbonic acid gas and by forming a non-fusible crust over the burning timbers as soon as it is thrown into the fire. In preparing the solution all materials should be pulverized, and the water should not be above luke-warm. By heating the mixture to hasten the solution a considerable part of its fire-extinguishing properties would be lost. Sulphate of ammonia is also an excellent fire extinguisher, because it will melt at a low degree of heat and produce a crust over the burning materials. At higher temperatures it will be decomposed and give off vapors of superior fire-extinguishing properties. It is advisable to also have handy any substance that may be used to choke the fire. A material far better adapted than water to smother an incipient fire is ordinary sand. For instance, if oily waste or other material saturated with oil should catch fire a few handfuls of sand will do more to extinguish the fire than several pails full of water. Another advantage of sand is that it will do no damage

itself like water to materials it is thrown upon. It is necessary to often change the water kept in barrels for fire extinguishing. This is avoided by using sand instead.

(5) The Techno-Chemical Receipt Book gives the following formula for "cartridges" for extinguishing fire: Make the shells of parchment paper or sheet lead and fill them with 4 parts of a salt obtained by mixing 343 parts of sulphate of aluminum and 142 parts of sodium sulphate with 432 parts of water, and 1 part of sodium sulphide, separated from the 4 parts of the salt by a disk of the parchment paper. The cartridge is broken and its entire contents poured into the water to be used for extinguishing the fire.

Solution of Hypophosphites Compound without Sugar.—(Quinine.) Formula No. 225 of the National Formulary produces a preparation of the character you name. Here are some others:

(1) Calcium hypophosphite	64	grains.
Sodium hypophosphite	16	grains.
Potassium hypophosphite	64	grains.
Solution of ferric hypophosphite		
N. F.	192	minims.
Manganese hypophosphite	16	grains.
Quinine	16	grains.
Strychnine	1/4	grain.
Dilute hypophosphorous acid.		
N. F.	16	fl. ounce.
Potassium citrate	20	grains.
Citric acid	8	grains.
Glycerin	2	ounces.
Alcohol	2	ounces.
Oil bitter almond	4	minims.
Water, enough to make	16	fl. ounces.

Dissolve the manganese hypophosphite with the potassium citrate and citric acid in 1 fluid ounce of water, and add the solution of ferric hypophosphite. Dissolve the remaining hypophosphites in 5 fluid ounces of water, and the alkaloids in the dilute hypophosphorous acid, glycerin and the alcohol in which the bitter almond oil has been dissolved. Mix these solutions with the manganese and iron solution first formed and add enough water to make the whole measure 16 fluid ounces. Filter.

(2) Calcium hypophosphite	384	grains.
Sodium hypophosphite	128	grains.
Potassium hypophosphite	64	grains.
Iron phosphate, soluble	64	grains.
Hypophosphorous acid, diluted	3	fl. ounces.
Water, enough to make	16	fl. ounces.

Triturate the hypophosphites to fine powder and dissolve in 12 fluid ounces of water; dissolve the iron salt in 1 fluid ounce of hot water and add to previous solution; then add the acid, and after standing twenty-four hours, filter, adding enough water through the filter to make 16 fluid ounces of product.

JAPAN WAX is afforded by several species of *Rhus*, the most important being *R. succedanea*, which flourishes especially in the western provinces of Japan. The wax is contained in the berries between the kernel and the other coat. These are gathered, sun-dried and stored in straw until mature, when they are crushed by a wooden hammer in a wooden funnel-shaped trough and winnowed to separate the chaffy husk. The sifted and fanned powder is steamed in hempen sacks laid on bamboo wickerwork placed over a cauldron. The sacks are then subjected to force in wooden wedge presses and the escaping wax is moulded for the market. Sometimes the flow of wax is hastened by the application of a little oil of perilla *ocimoides*. This crude wax forms a coarse, greenish, tallow like mass, constitutes about 15 per cent. of the weight of the berries and is used in making candles. For special purposes it is refined by melting, pressing through strong cotton sacks and dropping into cold water. The resulting thin flakes are bleached by exposure to the sun in shallow baskets. It is frequently turned and sprinkled with water, and, if necessary, it is remelted. For export the wax is now often cast into large cubes weighing one picul (133 1-3 pounds), instead of the conventional saucer shaped cakes, 4-4½ inches in diameter and 1 inch in thickness. It is extensively employed for making candles and wax matches; its melting point is 42° to 55° C.—(Bulletin of the Botany Dept., Jamaica through Pharm. Journ.).

News and Trade Department.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of
Era Readers.

FOREIGN.

China.

The Government at Washington, it has been averred, has addressed to the other powers a note asking for an international conference to decide on the policy to be adopted in China.

The reports of the fighting at Peking state that the allies have surrounded the Chinese troops in the inner city; the Empress, who was represented as a fugitive pursued by the Japanese Cavalry, is reported later to have returned, fearing sudden outbreaks.

Some fear is shown concerning the country around Canton, where there are threatened outbreaks.

Field-Marshal Count von Waldersee, accompanied by his staff, has sailed for China; he has taken with him a body of men to establish a system of wireless telegraphy.

The Japanese Consul at Amoy has reported continued devastation in that neighborhood by mobs; outbreaks are also reported at Swatow and some of the coast cities; also in the southern and central provinces.

Orders have been issued by the War Department at Washington, diverting from China to Manila a large body of men sent to reinforce General Chaffee.

Li Hung Chang's appeals for peace negotiations on the part of this Government were rejected, at a cabinet meeting, on the grounds that no recognized government exists there.

The death of Yuan Shih Kai, the anti-foreign Governor of Shan-Tung Province, has been reported.

The Viceroy of Chang-Chih-Tung has declared that he will resist any attempt to extort territory or interfere with the armies of the Viceroys.

It is reported that a large body of armed Chinese, well entrenched and under their ablest generals, are southward and westward of Peking.

Two more towns have been occupied by the Russians, who have refused to suspend hostilities, as requested by the Chinese.

South Africa.

General Ian Hamilton captured two Krupp guns from the Boers at Olfant's Nek, Transvaal, on August 17.

Nearly seven hundred Boers have surrendered to General Rundle at Harrismith, Orange River Colony.

Three Boer Generals, it is reported, have joined forces, 8,000 men in all, at Machadodorp, on the Delagoa Bay Railway.

General Roberts has reported that General De Wet, finding it impossible to unite with General Botha, has turned back with a remnant of his command, and is endeavoring to find his way back to the Orange Free State.

Lord Roberts reports the execution of Lieutenant Cordua, at Pretoria, for conspiracy and violation of his parole.

General Baden-Powell has defeated the Boers at Warm Baths, north of Pretoria, releasing a hundred prisoners.

Lord Roberts has taken the field again and his headquarters are at Wonderfontein, 112 miles east of Pretoria, on the Delagoa Bay Railway.

General Buller, on August 23, fell into a Boer trap, leaving about one hundred men, killed and wounded.

Lord Roberts has conferred with Generals Buller, French and Pole-Carew concerning the immediate advance of the British Army.

Other Foreign News.

King Oscar of Sweden has agreed to act as arbitrator of the claims for compensation for losses sustained by British and German subjects and American citizens in Samoa.

It is announced in Berlin that Queen Wilhelmina of

Holland is engaged to Prince Frederick Adolf of Mecklenburg-Schwerin.

Schekib Bey, an official of the Turkish Foreign Office, has been appointed Turkish Minister to the United States, to succeed Ali Ferrouh Bey.

Professor Friedrich William Nietzsche, the philosopher, died at Wilmers last week. He was born in 1844 and became hopelessly insane in 1889.

DOMESTIC.

Politics.

William M. Johnson of New Jersey has been appointed to succeed Perry Heath as First Assistant Postmaster General.

The Republicans of Delaware have endorsed the administration of President McKinley, and nominated Martin B. Burris for Governor.

The Tennessee Prohibitionists have nominated R. S. Chaves for Governor.

The Governor of Iowa has appointed Congressman J. P. Dolliver to the United States Senate, to fill the vacancy caused by the death of Senator Gear.

Louis G. Bomrich, of Kenosha, has been nominated for Governor by the Democrats of Wisconsin.

William J. Bryan on August 23 accepted the nominations of the Populists and the National Monetary League, at Topeka.

The Prohibitionists of Wisconsin have nominated a full ticket, with J. B. Smith, of Madison, for Governor.

Other Domestic News.

The total population of Chicago for 1900 by final reports is 1,698,515. The population for 1890 was 1,000,850, which shows an increase of 54 per cent.

The total population of St. Paul is 163,632 an increase over 1890 of 22.89 per cent. The population of Minneapolis is 202,718, an increase of 23.05 per cent. over 1890.

The population of Philadelphia, announced last week, is 1,293,097 an increase since 1890 of 244,733, or 23.57 per cent. The increase from 1880 to 1890 was 23.57 per cent.

The census report for Omaha, Nebraska, results in a count of 102,555 against 140,450 in 1890, showing a decrease of 37,897, or 25.98 per cent.

Successful tests were made of the Gathmann torpedo gun at Bethlehem, Penn.

Chancellor MacCracken has announced that New York University will establish a school of commerce, accounts and finance, in the fall.

Governor General Wood was given a banquet in Santiago on August 25, in which both political parties joined. Governor Wood, in his speech, urged the people to sink political differences and send their best men to the Constitutional Convention.

The Chautauqua Grape Crop.

Unless something unforeseen happens the yield of Concord grapes from the Chautauqua Grape Belt will be above the average in quantity with large and well formed clusters.

The condition of the Chautauqua grape crop is of moment to the whole country, for this is the country's vineyard for Concord grapes. For several years Ohio vineyards have suffered from the rot which destroyed New Jersey grapes, and in both these states the vineyards have been, or are being torn up and replaced with other fruit.

Right in the center of the Chautauqua Grape Belt the Welch Grape Juice Factory is located. Though the company owns factories at Vineland, N. J., and Watkins, N. Y., this is the only factory used. Since moving to Westfield two years ago, the capacity of the factory has been doubled. The grapes pressed for Welch's Grape Juice are the finest grown in the 25,000 acres of grapes in the Chautauqua Grape Belt. Welch's is the "pressed on the spot" grape juice. No stale or mouldy grapes are used, the pick of the vineyards are bought and someone else buys the "seconds" for shipment. The Welch Grape Juice Company found out that the best grapes when shipped to New Jersey did not make the best grape juice. Welch's is the best grape juice.

THE DRUG NEWS.

NOTES TO MEMBERS OF THE NATIONAL ASSOCIATION OF RETAIL DRUGGISTS.

BULLETIN No. 9.

Office of the Secretary.

Chicago, August 10, 1900.

The Executive Committee announces with satisfaction the completion of the association's plans for restoring favorable conditions for handling proprietaries. The vexatious delays antecedent to this condition of readiness to put into execution the plans agreed upon have been useful in giving the committee a knowledge, otherwise unattainable, of the interdependence of the several branches of the drug trade, and the imperative necessity of concert of action, if the interests of all are to be served.

As outlined in Bulletin No. 8, each of sixty-four proprietary manufacturers has selected for himself a definite list of wholesale agents through whom his goods are to be distributed. A revised list of the firms mentioned is as follows:

The J. C. Ayer Co., Lowell, Mass.; C. I. Hood & Co., Lowell, Mass.; Lydia E. Pinkham Medicine Co., Lynn, Mass.; F. E. Greene, Boston, Mass.; World's Dispensary Medical Association, Buffalo, N. Y.; Dr. D. Jayne & Son, Philadelphia, Pa.; The Piso Company, Warren, Pa.; California Fig Syrup Co., San Francisco, Cal.; The Centaur Co., New York City; The Peruna Drug Mfg. Co., Columbus, O.; Dr. Kilmer & Co., Binghamton, N. Y.; Dr. Miles Medical Co., Elkhart, Ind.; J. W. Campion & Co., Philadelphia, Pa.; Kickapoo Indian Medicine Co., New Haven, Conn.; J. M. Grosvenor & Co., Boston, Mass.; Sterling Remedy Co., Chicago and New York; Dr. Seth Arnold Medical Corporation, Woonsocket, R. I.; The Athlophoros Co., New Haven, Conn.; Battle & Co., St. Louis, Mo.; Brown Medicine Co., Erie, Pa.; N. K. Brown Medicine Co., Burlington, Vt.; Chamberlain Medicine Co., Des Moines, Ia.; Chattanooga Medicine Co., Chattanooga, Tenn.; Crab Orchard Water Co., Louisville, Ky.; E. C. DeWitt & Co., Chicago, Ill.; Ely Brothers, New York City; M. M. Fenner, Fredonia, N. Y.; William Fosgate, Auburn, N. Y.; Seth W. Fowle & Sons, Boston, Mass.; Garfield Tea Co., Brooklyn, N. Y.; Gilpin, Langdon & Co., Baltimore, Md.; Graefenberg Co., New York City; G. G. Green, Woodbury, N. J.; J. H. Guild, Rupert, Vt.; W. T. Hanson Co., Schenectady, N. Y.; Henry, Johnson & Lord Co., Burlington, Vt.; Henry Pharmacal Co., Louisville, Ky.; W. H. Hill Co., Detroit, Mich.; Hiscox Chemical Works, Long Island City, N. Y.; T. H. Jackson & Co., Quincy, Ill.; Lawrence-Williams Co., Cleveland, O.; Norman Lichty Manufacturing Co., Des Moines, Ia.; Lightning Medicine Co., Muscatine, Ia.; Eli Lilly & Co., Indianapolis, Ind.; Magee Emulsion Co., Troy, N. Y.; Meade & Baker Carbolic Mouth Wash Co., Richmond, Va.; Merchant's Gargling Oil Co., Lockport, N. Y.; J. S. Merrell Drug Co., St. Louis, Mo.; Wm. S. Merrell Chemical Co., Cincinnati, O.; Morgan Drug Co., Brooklyn, N. Y.; Omega Chemical Co., New York City; Pabst Brewing Co., Milwaukee, Wis.; Paris Medicine Co., St. Louis, Mo.; J. J. Pike & Co., Chelsea, Mass.; E. C. Powers, Boston, Mass.; Radway & Co., New York City; D. Ransom, Son & Co., Buffalo, N. Y.; S. T. W. Sanford & Sons, Long Island City, N. Y.; J. H. Schenck & Son, Philadelphia, Pa.; R. Schiffman, M. D., St. Paul, Minn.; J. Harrison Whitehurst Co., Baltimore, Md.; I. O. Woodruff & Co., New York City; Orator F. Woodward, LeRoy, N. Y.; Woodward Chemical Co., Limited, Toronto & Buffalo.

Each of the proprietors mentioned has issued a new price list embodying the condition that his wholesale agents are not to sell goods to those whom he recognizes as aggressive cutters or brokers, or those who supply this class of trade. Agents who violate this condition, or who the several proprietors have the reason to believe have violated it, will be refused additional supplies. The proprietors announce that they will consider as aggressive cutters those who are designated as such by 75 per cent. of the drug trade of any given locality.

Eighty-eight per cent., numerically, of the jobbing drug firms of the United States, doing ninety-nine per cent. in volume of the jobbing drug business have accepted the agency of the manufacturers on the foregoing terms.

Attention is here directed to the resolution adopted by the Executive Committee in approval of the policy

announced by the proprietors for the distribution of their products, as follows:

"Retailers, in exchange for this concession on the part of manufacturers to limit the distribution of goods, and on the part of jobbers to refuse all orders from aggressive cutters and brokers, are not to substitute when standard proprietary articles are called for, but in each case will give the customer what is called for without argument."

Importance of Local Associations.

Because proprietary goods are handled in many localities under conditions that render their sales profitless, the success of this arrangement for improving existing conditions is of paramount importance. In order that the plans adopted may certainly succeed, the forming of local associations in every populous community and the strengthening of those that already exist, is imperative. Druggists not now affiliated with the N. A. R. D. should write at once to the secretary for blanks to be used in uniting their organization with the 175 now composing the national body.

Co-Operation Indispensable.

The various druggists' associations of the country, through their executive officers, should be prepared to supply all needed information and co-operate with the National Executive Committee in every way calculated to increase the association's effectiveness and to accomplish desired ends. Whenever the aggressive cutters of any locality are receiving supplies all the facts should be submitted to the National Executive Committee at whose hands the matter will receive prompt attention.

Unanimity of Action Imperative.

Druggists doing business in communities where price demoralization does not now exist cannot fail to recognize their obligation to their less fortunate fellow druggists now subject to the bondage of profitless business conditions. Besides this obligation there rests upon them the duty of forestalling similar bad conditions for themselves, a misfortune liable to overtake them at any time. Sound business policy demands not only that the power of the aggressive cutter for harm be destroyed, but that his operations be confined to present limitations. To accomplish these objects the combined efforts of the drug trade of the whole country are needed.

Protective Reciprocity.

One of the ways in which the retail trade may augment the association's power is for each of its members to attest unmistakably his appreciation of the favorable attitude of those proprietors and jobbers whose co-operation we receive. An understanding of this fact, manifested in practical ways, will be of the greatest advantage. Experience has demonstrated already the power which may in this way be exerted.

Results Not Instantaneous.

That price cutting on proprietaries will cease at once should not be expected. In anticipation of the difficulty of obtaining supplies, many cutters have undoubtedly provided themselves with large stocks which must necessarily be exhausted. While there are probably few retailers who are so heedless of the rights of their fellow retailers as to obtain supplies for cutters, there are doubtless some of whom this is to be expected, and these avenues of supply must be closed. Experience has taught that proprietors and jobbers are only human, and it is not impossible that some of these may have to be disciplined. It is believed that proper treatment of such cases, as they present themselves, will reduce to the minimum this obstacle to success.

Judgment Should Await Facts.

Members of the association are warned to receive with caution private and public statements of cutters and their abettors to the effect that the conditions of the plan are being disregarded by some members of the drug trade. In most cases these charges are wholly groundless, being made for the purpose of destroying confidence.

Before being accepted the charges should receive investigation; to this end the assistance of the Executive Committee is proffered.

Success Now In Hands of its Beneficiaries.

The National Association and its executive officers have worked faithfully to bring to the drug trade better business conditions; the measure of success which will result from these labors will depend upon the use that is made of the advantages already gained. The success of the N. A. R. D. plans is now in the hands of those who will be its beneficiaries. Will the retail drug trade prove itself equal to the needs of the hour, thereby making evident its worthiness of the benefits offered? The answer must be prompt and in language not to be misunderstood.

Membership Dues.

Treasurer Heller requests that attention be directed to the Constitutional provision that associations in arrears for membership dues are not entitled to representation in the annual convention. Aside from this consideration, the duty of placing in the hands of the Executive Committee as promptly as possible the means with which to push forward the association's work should be constantly recognized.

ANNUAL CONVENTION IN DETROIT.

As has been announced already, the association's annual convention will be held in Detroit, September 12-14. As questions vitally affecting the association's welfare are to be considered, it is greatly desired that the affiliated societies send as delegates clear-headed, conservative business men, and that appointees shall be those who will certainly attend. Previous to the meeting blanks for submitting the credentials of delegates will be sent to the officers of each of the affiliated societies.

The several Passenger Associations have granted the concession of one- and a third fares for the round trip, to all who hold certificates from the agent from whom tickets are purchased at the starting point. All ticket offices will be notified of such action and authorized to issue certificates in connection with tickets purchased not earlier than Saturday, September 8th. Return tickets will be good till Wednesday, September 13th, inclusive. Full fare will be paid for the trip to Detroit, but only one-third fare will be charged for the return ticket upon presentation of the certificate properly endorsed. Further information may be obtained of John W. Lowe, Chairman Transportation Committee, New Haven, Conn.

The headquarters of the association will be the Russell House, and all meetings are to be held in this hotel. The Local Entertainment Committee announces that it has secured the following rates at the leading hotels:

Russell House—American plan, \$3.00 to \$5.00 per day; two or more in room, \$2.50. European plan, \$1.50 up. Cadillac Hotel—American plan, \$2.50 to \$3.50 per day. Wayne Hotel—American plan, \$2.50 to \$3.50 per day; European plan, \$1.00 to \$2.50 per day. Griswold Hotel—European plan, \$1.00 to \$2.50 per day. Griswold Hotel—American plan, \$1.00 to \$3.00 per day. Metropole Hotel—European plan, \$1.00 up, per day; men only.

In order to avoid delay, instructions and inquiries concerning accommodations (which should be addressed to Local Secretary Chas. F. Mann, 845 Third avenue, Detroit) should state exactly what is wanted. The Detroit druggists and manufacturers have arranged several enjoyable entertainments. The outlook is bright for a largely attended meeting.

Fraternally yours,

153-155 La Salle street. THOS. V. WOOTEN, secretary.

New York and Vicinity.

HALF A CENTURY A DRUGGIST.

It is not every pharmacist who can look back over the record of business years until he has passed fifty, then count these all spent in one place. Such, however, is the proud claim of Dr. P. W. Ray, the venerable colored druggist of Brooklyn, who, on Friday, August 24, celebrated the semi-centennial of his business life in the drug store he owns at the northeast corner of South Second and Hooper streets, Williamsburg. And there is no one prouder of this enviable period than the doctor himself. He has, though close to seventy-six years of age, the additional enjoyment of being possessed of his full faculties and he is as spry and chipper as his faithful clerk, P. R. Morse, who has been with him now over twenty years. It is decidedly interesting to hear him tell of the days of 1850 when Brooklyn was an infant and Williamsburg thrived as a separate city of some 65,000 population, but it is better to hear him tell of his early trials in getting together his store and attending to the valuable medical practice he had established, for Dr. Ray is an M. D. of considerable skill as well as a thorough up-to-date pharmacist. To begin with, Hooper street was known as Eleventh street when the subject of this sketch first located in the store at South Second street, which was about one-fourth the size of the one given in the picture, which, however, is the same store. Dr. Ray located on the spot because he thought Hooper street would be the business section, as there were no streets going from Grand street to Broadway above Union avenue and people used to cross lots from Keap street to Broadway. He was mistaken, however; still his business thrived and patients kept increasing so that at one time he had as many as seventy families who employed him by the year. For this practice he was required to keep three horses and two wagons. Where his stables once stood, there is now a fine family house. His duties took him to Jamaica, Newtown and Flushing

and many other places nearby. This kept him away from his drug store, but he had engaged a clerk named Powell who attended to affairs. He left, after working a short time, however, to go to Europe and study medicine, and on his return Dr. Ray secured him a position as assistant in the Freedmen's Hospital. This was just after the Civil War. Dr. Ray also had as his assistants his two brothers, one from the Middle West, who was afterwards made purser on the man of war "Quall," and died off the coast of Africa; and the other from California. In all Dr. Ray has had about eight clerks; three of these studied medicine with Dr. Ray as preceptor and five became pharmacists under his painstaking tutorage. All received appointments as hospital stewards or surgeons in the army through the influence of Dr. Ray with the then Secretary of War Stanton.

Dr. Ray for a time had an active practice among the German population and in this way he became very familiar with the language, of which he still retains a smattering.

Dr. Ray was born April 19, 1825, at 20 Beekman street, New York, and his early life was spent and his education obtained in this city. His first pharmaceutical work was as apprentice for Dr. James McCune Smith, who had been educated in Edinburg, Scotland, and was one of the foremost practitioners of the time. Dr. Ray was then fourteen years of age and he stayed six years in Dr. Smith's employ, attending meanwhile the lectures at the New York College of Pharmacy, which was then located in a garret, with rafters for the ceiling, at Broadway and Reade street. Lawrence F. Reade was professor of chemistry and Benjamin F. McCready was professor of materia medica. Finishing with Smith, Dr. Ray attended Bowdoin College, Brunswick, Me., for some time and he afterwards went to Castleton College, Vermont, where he was graduated as a physician, receiving his degree in 1849. He migrated to Boston, where he became assistant to Dr. Warren in the Massachusetts General Hospital, where he remained nine months. He then went to Charlestown, Mass., where he was given charge over a smallpox hospital. He came to New York shortly after-

DR. P. W. RAY'S DRUG STORE, BROOKLYN, N. Y.

ward and opened his drug store on South Second street, where its enlargement stands to-day. In this venture Dr. Ray was backed by Dr. W. C. Roberts, then professor in obstetrics in Manhattan, as well as by his preceptor, Dr. Smith. His store at first was not much larger than a packing case, and he utilized it as a sleeping car in the night. The store was enlarged soon after and again a short time ago to its present size.

Dr. Ray says in his time the physician used the simplest of methods. There were no capsules or tablets or fluid extracts, but he managed to get along. The best remedy extant of the patent medicine variety at that time was Porter's Cough Syrup, Pills and Bitters. The patent trade was light, however.

During the cholera scare in this city in 1853 Dr. Ray was one of the physicians who assisted at the hospitals and he met with considerable success in the treatment of the malady. His advice would be sought and he would prescribe for thirty-five or forty patients daily.

Dr. Ray is a quiet, homelike man, who enjoys a good dinner about as well as any of the joys of life. He has been a widower for ten years. His only son died quite young, but he has a daughter, the wife of Rev. Owen M. Waller, pastor of St. Luke's P. E. Church, Washington, D. C. Dr. Ray likes being connected with his fellow men socially, hence he is a member of a number of orders. He is a thirty-third degree Mason, treasurer and a trustee of the Kings County Pharmaceutical Society and the Brooklyn College of Pharmacy, member of the American Pharmaceutical and New York State Pharmaceutical Associations, and has served on the Executive Committee of the latter body for the last five years. There is so much to say about him that it cannot be conveniently squeezed into a short article, and even to lengthen it there is a possibility that something of importance might not be noticed.

Dr. Ray is quite proud of the fact that he has compounded nearly 100,000 prescriptions. He also likes to talk of his family tree, which he can trace back three complete centuries. He has an uncle and great-grandmother buried in Trinity churchyard. He has also some of his bottles labeled with the labels in use when he first began business. On Friday he sat in his office receiving congratulations in every mail and by telegraph, looking and feeling fully as young as when he opened the doors for business fifty years ago.

UGLY RUMORS ABOUT HANOVER RUBBER COMPANY.

Some nasty rumors about the manner in which the Hanover Vulcanite Company, of Hanover, Germany, has been sending its goods to the American agent, George Borgfeldt & Company, are going the rounds of the trade. The stories are to the effect that the company has been sending its products, which consist of rubber goods, surgical instruments, gutta percha, tissue, etc., into this port at under valuation and the fact has only recently become known. It is said the Government sent a special representative to Germany to investigate and the report he made caused the Chief Appraiser of this port, Wilbur F. Wakeman, to raise the valuation of the Hanover Co.'s products about 20 per cent. Mr. Wakeman stated that the values "had been raised considerably" and that the case was "before the Board of General Appraisers" for final settlement." No one in the Appraisers' stores at Christopher street could be found who would talk on the subject and a visit to the office of George Borgfeldt & Company gave about the same result. At the latter place Mr. Lehman, who has charge of the "rubber goods" department on the sixth floor, would not talk until he had called the attorney for the firm, Mr. McKeever, and then neither of them would say anything except that the case was before the Board of General Appraisers and would be made public when the board rendered its decision. It is expected that the board will act in a few days.

ANOTHER JUDGMENT AGAINST CROSHER.

Still another judgment has been added to the already long list hanging over the head of the well-known drug swindler, Henry P. Crosher, and this latter one has been secured by Hyman Spektarsky, address not given, who is so anxious to get \$103 owing him by Mr. Crosher that he secured an execution. It is to be hoped that Mr. Spektarsky will secure his money, as like all others of Crosher's debts, this one is unquestionably an honest one, but the possibilities are so much greater than the probabilities that the matter is beyond consideration.

ALLEGED POISONING BY ACETANILID.

An interesting case has developed at Glen Cove, N. Y., through inquiry into the death of a young woman named Freda Ebel, of Sea Cliff, who is said to have come to her death after taking tablets containing acetanilid prescribed by Benjamin Voelbel, a Sea Cliff drug clerk. Dr. William J. Burns, who assisted at the autopsy, is authority for the statement that death was due to poisoning from acetanilid, but his testimony was not borne out by that given by Dr. George McLoughlin, of Christ Hospital, Jersey City; Dr. Wahlig, of Sea Cliff; Dr. Stark, of Mt. Sinai Hospital, and a number of druggists from this city who testified to the general use of the drug and its frequent sale without prescriptions. Justice Cox, before whom the hearing was conducted, reserved decision.

ATTACHMENT AGAINST QUININE COMPANY.

An attachment for \$3,800 against the Bedford Quinine Co., in the suit of Ira E. Daying, has been placed in the hands of the sheriff. A copy of the attachment was also served on a third person, who is said to have money of the defendant's on hand. It is not known who the Bedford Quinine Co. is, but it does not make quinine.

FORGED HIS FATHER'S NAME.

The authorities at Poughkeepsie are looking for Stanton D. Cowl, son of George G. Cowl, a reputable importing druggist of 100 William street, this city, on the charge of cashing a worthless check for \$60 drawn on his father.

NOTES.

—Among the druggists and others who called on the trade last week were: R. M. Hamner, of the firm of Hamner & Ballard, Memphis, Tenn.; J. T. Douglas, of J. T. Douglas & Bro., Bennettsville, S. C.; W. I. Lewis, Short Hills, N. J.; W. H. Hull, New Haven, Conn.; L. J. Schlesinger, Yonkers; N. C. Ralston, Richland, Ga.; S. A. D. Sheppard, Boston; John Patton, York, Pa.; W. S. Thompson, Washington; C. W. Snow, of C. W. Snow & Co., Syracuse; F. B. Rickey, Muncie, Ind.; E. Lehman, Memphis, Tenn.; F. A. Seaman, Perth Amboy, N. J.; Kinjiro Shimamura, Japan; James Cooper, Red Bank, N. J.; W. H. Walter, Philadelphia; A. Hood, Kansas City, Mo.; George P. Rogers, Huntington, L. I.; A. C. Bayles, Port Washington, N. Y.; John Paddock, Islip, L. I.; J. K. Williams, Hartford, Conn.; Thomas Clarke, Jacksonville, Fla.; C. H. Case, Jefferson, O.; C. R. Lush, Hempstead, L. I.; Mr. Doster, Greenville Drug Co., Greenville, S. C.; M. F. Becker, representing H. P. Wasson & Co., Indianapolis, Ind., and Miss C. Kavanaugh, Covington, Ky.

—E. C. Fowell, with Schieffelin & Co., and A. D., or better known as "Deacon," Roche, with W. R. Warner & Co., have returned from a two months' trip in Europe. While away they visited London and Paris and have many interesting tales to tell of the Exposition, which they declare is disappointing and not to be compared with the World's Fair at Chicago.

—William Muir, the well-known figure in pharmaceutical affairs and member of the new All-State Board of Pharmacy, who has been spending the summer in the Catskill Mountains, returned to the city Monday just in time to get into the hot weather and he immediately left for Patchogue, L. I., where he will remain for two weeks.

—Dr. Rudolph Gies, one of the faculty of the New York College of Pharmacy, sang the offertory solo at the Methodist Church, Richfield Springs, N. Y., Sunday, August 19. Dr. Gies has a rich baritone voice and his singing is greatly enjoyed. He is a member of the choir of the North Presbyterian Church, this city.

—Notice has been given members of the trade that the entire stock of drugs, etc., of Milton T. Shapley, bankrupt, formerly a druggist at Church Hill, Maryland, would be sold at public auction in the above-named place on Saturday, September 1, at 12 o'clock noon, by Edwin H. Brown, as trustee.

—Charles S. Erb, president of the Alumni Association of the New York College of Pharmacy, will be married to Miss Anna Conway, of Philadelphia, at that place on Wednesday evening, September 19. Mr. Erb's wedding

will be witnessed by members of the family and immediate relatives only.

—The drug store of Isaac Meyers, corner Seventy-ninth street and Lexington avenue, was recently closed by S. Blumberg, druggist, Seventy-ninth street and Third avenue. Mr. Meyers claims exemption from any judgment against him as he states he is not responsible for the closing of the store.

—Dr. B. T. Whitmore, head of the scientific department of the local branch of Parke, Davis & Co., has returned from a pleasant vacation in Europe. On the occasion of the regular concert aboard ship coming over Dr. Whitmore was made chairman.

—The well-kept drug store of Samuel Drancourt at Park avenue and Eighty-first street is being thoroughly overhauled. When the carpenters and painters have finished the store interior will have undergone a change that will greatly enhance its appearance.

—The shock caused by the announcement of Dr. Diekmann's wedding has not yet passed away and it is just possible that the doctor will be entertained by his numerous friends before many days pass.

—Stella's pharmacy has recently been opened at 360 Broome street under the management of Salvador C. Tromba, who was formerly in the Olliffe drug store at 6 Bowery.

—The members of the Apothecaries' Bicycle Club enjoyed a run to Yonkers, Thursday, August 23, and to-day they have gone to Pompton, N. J.

—Theodore G. Hall, of Chicago, is in town. Mr. Hall was formerly with Thomas McInnerney, at Thirty-fifth street and Indian avenue, Chicago.

—P. J. Rock, formerly with W. L. Cliffe, druggist at 2778 Kensington avenue, Philadelphia, has taken up his residence in this city.

—John B. Mill, druggist, 1392 Bedford avenue and 630 Classon avenue, Brooklyn, has returned from a vacation at Saugerties, N. Y.

—Eugene Ward, president of the class of '99 of the New York College of Pharmacy, is on a five week's trip through Canada.

—J. H. Morey, druggist at 104th street and Broadway, has returned from a pleasant vacation in the White Mountains.

—"Commodore" W. H. Tompkins, with Schieffelin & Co., is enjoying a vacation of a week at Boston, Mass.

—Fred Zimmerman has resigned his position with R. Lucke, Amsterdam avenue and Eighteenth street.

—Louis Montanaro, employed by Frank Avignone, 59 MacDougal street, has recently been married.

—George C. Roux, with the Hasselbach Pharmacy, is on a two weeks vacation at Patchogue, L. I.

—Reginald Royston, an English pharmacist, lately come to this country, is in search of a position.

—"Commodore" Tompkins, with Schieffelin and Company, is enjoying this week at Boston.

—C. C. Spelden, with A. Klipstein & Co., has returned from a vacation at Block Island.

—William R. Warner, of William R. Warner & Co., has returned from a trip to Europe.

—A new drug store will shortly be opened at Broadway and 102d street by S. Wasself.

—C. W. Snow, of C. W. Snow & Co., Syracuse, N. Y., was in town last week.

—E. H. Nickerson, has just moved into his new drug store at Foxcroft, Me. The store is excellently arranged and the woodwork, with the exception of the prescription case, is finished in white and ornamented with gold leaf. The prescription counter is of quartered oak. Mr. Nickerson was formerly in the firm of Buck & Nickerson. On February 6, last, he withdrew and started in business for himself, the old firm continuing under the name of Wm. Buck & Co.

—ALBERT C. ANTHONY, a veteran druggist of Buffalo, N. Y., died August 10. Mr. Anthony was a charter member and an ex-president of the Erie County Pharmaceutical Association. He was also a member of the Empire State Drug Company.

IN AND ABOUT BOSTON.

A Woman Chemist Elected to an Important Public Office.

Boston, August 25.—Miss Marion Cowan, who, with her sister, conducts a drug store at the corner of Ocean street (the fashionable part of Lynn) and Lewis street, has been honored by the Lynn Board of Health, which has just elected her city chemist. She is one of the few practical practising chemists in New England and has successfully passed the examinations of the State Board of Pharmacy, not alone in Massachusetts, but in New York, Connecticut and Maine, ranking high in each instance. At the Massachusetts College of Pharmacy she was class poet at the commencement exercises in 1898. She also passed the Maine Commission of Pharmacy in June of that year and stood highest in her class, with one exception. When she took the examination before the State Board of Pharmacy of New York, with almost 100 others, she was informed that she had the highest average of anybody. Miss Cowan is a woman of charming personality and this has in no small measure helped to build up the excellent drug trade she has established in Lynn, to which city she went in 1893. The salary attached to the new office is \$900.

A Massachusetts Druggist Secures a Bride and a Good Business Position.

Boston, August 25.—John H. Oxnard, formerly of Beverly, but now of Springfield, has been visiting his old friends in the first-named city. His vacation this year is of more than ordinary importance to him because of his recent marriage at North Beverly to Miss Bessie Belle Wood, of that place. Mr. Oxnard is to have charge as manager of Henry L. Green's drug store in Springfield, recently purchased from W. D. Draper. Mr. Green, like Mr. Oxnard, hails from Beverly. He began business there, coming from Portsmouth, N. H., where he was born. After spending several years in Beverly he moved to Worcester, where he now has a large store. Eventually he came into ownership of another pharmacy, in Providence, R. I. He will be kept busy at all three stores, going from city to city, but will make his home at Springfield. Mr. Green intends to run a strictly union drug store for he is in sympathy with the objects of the union and will have every employee who can do so belong to the organization. The force of clerks will be increased from time to time as the improvements are completed, until perhaps fifteen are regularly kept at work. The store is kept open day and night, and the front windows even have been removed during the hot weather so that the clerks are at all hours present to care for the wants of customers. This is much like the old Tremont street store of the Theo. Metcalf Company, which never has had a lock or keyhole on its front door, showing that someone always is present at that place.

Mr. Green is making marked changes in his recent purchase and plans to have one of the best-fitted stores in New England. The front of the store will be replaced by large plate glass windows which will give it a much lighter and more attractive appearance. The furnishings will be new and the store will be up-to-date in all ways.

NOTES.

—At North Adams a crusade has been started by the State Board of Health against the sale of brandy drops to children, the age limit being placed at sixteen years. Five local dealers, proprietors of small stores, were arrested, and in court all pleaded guilty. All the cases were placed on file, on payment of costs for the same. The complaints were sworn to by an agent of the State Board. He had a "boy" visit several drug stores, as well, but the druggists were "on" and refused to sell the candy. That secured contained more than 1 per cent. of alcohol. For some time past the State Board has been watching general shopkeepers and druggists to prevent violation of the law in this matter. Agents have secured a number of convictions in Malden, Medford, Fall River, New Bedford, Lawrence, Lowell, Salem and Lynn. The law governing these sales was passed in 1891, and provides that "no person shall sell to any child under sixteen

years of age any candy or other article including liquor or syrup containing more than 1 per cent. of alcohol." The penalty for conviction is a fine of not less than \$50 nor more than \$100 for each offense. Under the strict interpretation of the law, the clerk who sells the goods, rather than the proprietor of the store where the sale takes place, is fined, and there is some chance of having the law amended so that the proprietor shall be prosecuted instead of his clerk.

—The drug store of Edmund Fugere at Spencer has been closed by George Harris, inspector for the State Board of Pharmacy. This was done because it has been run recently without a registered pharmacist present, as required by law. Mr. Fugere has owned the store only a few weeks and since taking it has met with many difficulties. Officers noticed that the place had no registered clerk and so notified the State Board. Mr. Harris, accompanied by a sheriff, made an investigation and found that neither Mr. Fugere nor his clerk, Louis H. Fontaine, is a registered druggist. Mr. Fugere said that his registered clerk had left and that he had not been able to get a new one.

—Manchester-by-the-Sea, that fashionable summer resort in Essex County (where is situated the swell Essex County Club, one of the finest and most exclusive clubs anywhere about) has much gaiety all through the summer season. For many affairs, subscriptions for tickets are left in the hands of A. Lee & Sons, and also A. L. Green, who have drug stores which are very popular with the fashionable set, which patronizes both stores about equally.

—Walter A. De Merritt, a druggist in Brookline, is a petitioner in bankruptcy. His total liabilities are \$1,875 and of this amount \$400 is due the North Adams Savings Bank. The balance Mr. De Merritt owes in small amounts to various firms and individuals for merchandise and personal expenses. His assets, including stock in trade, amount to \$1,556.

—Howard Hershruoder, clerk at the Waverly Drug Co., Roxbury, has returned from a two weeks' vacation to New York. William A. Gobie, of the same store, has gone to Mount Ivy, N. Y., for three weeks. On his return he will study dentistry at Tufts.

—Vieter Moreau, formerly a clerk at E. V. Bouchard's drug store at East Brookfield, has left that place in order to take a position as shipping clerk for the Lincoln Shoe Company at Worcester. His place at the drug store has been given to Felix Balcom.

—Henry B. Merchant, a Clinton druggist, has just met with a loss in the death of his brother Albert Merchant, who died in San Francisco. The body was brought East, and Mr. Merchant had it buried at his old home at Hallowell, Me.

—Included in this week's exports from the Port of Boston have been drugs and chemicals, \$3,096; india rubber manufactures, \$6,293; tobacco, \$3,291; spirits, \$10,365.

—Albert E. Webber, Boston, formerly a druggist at Springfield, is a petitioner in bankruptcy with liabilities of about \$1,850 and no assets.

—Joseph R. Wood has sold his store in Brookline to F. Vanton, and taken a position as salesman with H. B. Claflin, Providence, R. I.

—F. W. K. Baker, formerly salesman with John Wyeth & Bro., is traveling for Hance Bros. & White in Boston and vicinity.

Important to Mothers.

The manufacturers of Castoria have been compelled to spend hundreds of thousands of dollars to familiarize the public with the signature of Chas. H. Fletcher. This has been necessitated by reason of pirates counterfeiting the Castoria trade-mark. This counterfeiting is a crime not only against the proprietors of Castoria, but against the growing generation. All persons should be careful to see that Castoria bears the signature of Chas. H. Fletcher, if they would guard the health of their children. Parents, and mothers in particular, ought to carefully examine the Castoria advertisements which have been appearing in this paper, and to remember that the wrapper of every bottle of genuine Castoria bears the facsimile signature of Chas. H. Fletcher, under whose supervision it has been manufactured continuously for over thirty years.—Phila. Bulletin.

PHILADELPHIA.

Eloping Druggist Brought Back.

Philadelphia, Aug. 25.—Howard M. Wilkinson, of Dover, Del., who eloped two weeks ago with his wife's sister, returned to his native city on Friday. He was apprehended in Atlanta, Ga., and brought home on a requisition of the Governor and held in \$300, the charge being wife desertion; \$100 is the full fine as imposed by the Delaware statutes. Wilkinson secured a lawyer and succeeded at once in getting a friend to go on his bail, the name of the latter not being made public.

Wilkinson's affairs, so the lawyer for the creditors states, are so badly mixed up that there is no possibility of an amicable settlement. The fittings and goods in the drug store have been advertised for sale at auction, and all his other belongings have been attached for the benefit of his creditors, many of whom are in this city. It is said that before Wilkinson stands trial there is probability of a reconciliation taking place between him and his wife. His wife's sister, it is further hinted, is at present under restraint in an asylum for the mentally afflicted.

Fishermens' Luck.

Philadelphia, Aug. 25.—D. E. Bransome and Ed. Weaver have been away on a little fishing trip as guests of the Lancaster Fishing Club of Lancaster, Pa. H. N. Snyder, the well known druggist of Lancaster, is the president, treasurer and secretary of this unique organization, which consists of a number of prominent Lancaster business men. The fishing headquarters are located at Safe Harbor, one of the most picturesque bits on the Susquehanna. The place is called "Safe Harbor" because it is one of the most unsafe and dangerous spots on the entire river. Jagged hidden rocks confront the unwary and inexperienced fisherman, and a treacherous current sweeps him violently southward over them. The guide in the boat containing Messrs. Weaver and Snyder lost control of the unwieldy tub while shooting an extra hazardous rapid, and the occupants of the craft narrowly escaped a ducking, which might have resulted seriously. Large catches of the gamey bass were reported by the fishermen. Not the least enjoyable feature of the trip was a ten-mile early morning ride through one of the most beautiful sections of Lancaster county.

NOTES.

—Lit Brothers, proprietors of one of Philadelphia's large department stores, located nominally at Eighth and Market streets, but extending north and eastward at a tremendous pace, are about to embark in the drug business. Inquiry at the establishment reveals the fact that the concern will not compound prescriptions, merely handling a full line of patents, with of course stock of the important sundries, soaps, fancy articles, rubber goods, etc. The firm would not say just what they intended to do in the matter of patent prices. The store will be on the first floor near the Market street front, and is under the management of Frank Heckler, a well known Philadelphia druggist, formerly at Sixth and Dickinson streets. The store will be open for business about the first of September.

—The Philadelphia College of Pharmacy has established an "Employment Bureau." Any young man desiring a job in town while attending the course at the college can enter his name on the "employment" books of the institution, and feel pretty sure that he will secure a position with one of the best Philadelphia dispensers. Druggists who know of this arrangement, when in need of a clerk, make at once for these books—pick out a likely applicant, and correspond with him direct. Let the young man state his full qualifications, what college course he will attend during the coming winter, what stipend he expects to receive, how old he is, where he intends to board, and any other details likely to be inquired for. There is no charge.

—Your correspondent has interviewed a number of the leading druggists of the town, seeking an expression of opinion on the recent poisoning cases and the censure of the Coroner which has resulted therefrom. The drug-

gists visited all sympathize with their fellow-dispensers who have thus been dragged before the public. There is no law to prevent the sale of certain poisons or medicines which could be used for murderous or suicidal purposes, but the druggists referred to never under any circumstances sell dangerous compounds to children or other irresponsibles, and so keep a safe distance from business wrecking notoriety and the annoyance of a Coroner's censure.

—G. H. Trupp, of Elght and Popular streets, was married last week to Mrs. Caroline Reine. The wedding was strictly private, the happy couple leaving immediately for a trip to Niagara Falls.

—C. Cooper, formerly employed by H. N. Snyder, of Lancaster, will occupy a position as clerk in Samuel S. Ely's drug store, 4,828 Baltimore avenue. Mr. Cooper is attending the P. C. P.

—G. H. Hulsinger, Second and Brown streets, has recently invested in one of the latest autos, and has made a number of record trips between Camden and Atlantic City.

—A. H. Zullinger, Fortieth and Locust streets, has been putting in an extensive vacation at Chambersburg, Pa.

—C. P. Landis, Allegheny and Kensington avenues, is spending a few weeks at the seaside.

—J. M. Stoeber, of Broad Street Station pharmacy, leaves in a few days for Colorado.

—A. Hoch, 538 East Thompson street, is away on a fishing trip.

BALTIMORE.

Retailers and the N. A. R. D.

Baltimore, August 25.—Interest among the retail druggists of this city in N. A. R. D. affairs is at present at a rather low ebb, as an attempt to hold a meeting of the local organization last Wednesday plainly showed. Only a corporal's guard responded to the call of the president, a count of noses revealing the fact that there was no quorum present. The old reliables, among them John O. Beck, Dr. A. J. Corning, H. P. Hynson and Charles H. Mayer, were on hand, but the rank and file loomed up conspicuously by their absence. Delegates to the next annual meeting of the N. A. R. D. were to have been elected, but the slim attendance left the association without power to transact business of any kind. The only thing done was the issuance of instructions by the Board of Directors to the treasurer to forward the per capita tax of all members who have paid their dues to the national treasury. But as only about forty out of a total of 215 names on the roll have transmitted their dues the actual state of affairs is less encouraging than the bare statement would indicate. Association matters here are by no means promising, a spirit of indifference having taken possession of the Baltimore pharmacists. This is attributed to a growing lack of confidence in the accomplishment of tangible results by the national body. The latter, observant druggists contend, has given little encouragement to effort to improve the position and apparently evinced little interest in the aims of the local body. The support of measures designed for the betterment of the trade has not, in the opinion of those who have watched every phase of the situation, been such as the Baltimore druggists had been led to expect, and as a consequence enthusiasm in the national movement has greatly diminished. Furthermore, it is said, the Baltimore retailers lack confidence in the efficiency of the plan in accordance with which aggressive measures are to be adopted whenever seventy-five per cent. of the druggists in any place decide that a druggist is a cutter. It is felt here that the N. A. R. D. has not given the endeavors of the local retailers to obtain explicit pledges from the jobbers the endorsement and backing which they deserved. There is a growing belief here that the salvation of the retailer lies in self-reliance, in co-operative effort and in direct dealing, as far as this may be possible. In other words, it is argued that since the prospects of a compact between the retailers and jobbers with a view to eliminating the cutter are very remote, the retailer is

required by considerations of self-interest to take measures for his own protection. All members of the trade, however, doubtless join in the hope that a better understanding between the two branches will be reached and complete concert of action secured.

The Commercial Protective League.

Baltimore, August 24.—Matters connected with the Commercial Protective League, formed at the last annual meeting of the Maryland Pharmaceutical Association for the purpose of bringing about closer relations between the several branches of the drug trade—the retailer, the wholesaler and the manufacturer—are moving on apace. In accordance with the action taken at the Maryland Association meeting the four members of the committee named by the president and which will practically transact all the business of the league, have selected as the fifth Owen C. Smith, who will act as secretary-treasurer and chief of the executive office. Mr. Smith is well qualified for the post. It has been found by experience that the great majority of druggists are unable to leave their stores to attend frequent meetings. This suggested the idea of investing the Commercial League Committee with full executive authority in order to avoid the absence of quorums and other delays in the transaction of business. The committee will be ready to receive suggestions from the general membership relative to everything of advantage to the association and the trade. All such communications will be answered and queries asking for advice will elicit replies.

NOTES.

—The Maryland College of Pharmacy has sent to the University of Havana for its pharmaceutical department a full set of all the text books written by members of the college faculty. The books make quite an impressive collection and constitute a valuable gift.

—H. M. Wilkinson, of the Dover, Del., druggist who eloped with his young sister-in-law and was arrested in Atlanta on the charge of wilful desertion, has returned to Dover without a requisition and secured his release on bail.

—J. D. Stottemeyer, of Hancock, Md., was among the druggists who visited Baltimore last week.

PITTSBURG.

WESTERN PENNSYLVANIA RETAIL DRUGGISTS' BALL GAME.

Pittsburg, August 20.—The initial game of the Association was an inspiring one and has served to arouse the members to a pitch of fraternal enthusiasm which savors of Oliver Twistism, in that they "want more." The day set for the game, Thursday, July 26, was a perfect one. Fully 1,000 druggists and their friends assembled at Exposition Park and enjoyed the game from the start to finish, which took about three hours. All sorts of contrivances, such as bells, megaphones, etc., were brought by the druggists to encourage their friends and dismay the enemy, and as genuine Al rooters the local druggists can claim first rank. The fast play of Watson and Weaver and the fine pitching of Coombs, who struck out eight men in four innings, received their meed of admiration from both sides. The Allegheny druggists scored five runs before they made a hit. The score is appended:

Pittsburg.		Allegheny.	
Schafer, r. f.....	0	Delp, c.....	3
Forst, 3d b. & p.....	0	Heckel, 2d b.....	2
Hughes, 2d b.....	0	Coombs, s. s. & p.....	4
Bundy, l. f. & c.....	1	Weaver, 1st b.....	4
Aul, 1st b.....	1	Baggs, c. f.....	2
Hellerbach, s. s.....	1	Watson, p. & s. s.....	3
Calhoun, c.....	0	Spang, r. f.....	1
Rectenwald, c. f.....	3	Urban, l. f.....	1
Ehlein, p. & l. f.....	1	Steele, 3d b.....	4

Umpires—Reinecke and Barrett.

The uniforms were unique and various from ball suits to bicycle, golf suits and tennis. All colors of the rainbow predominated and Rectenwald, of the defeated Pittsburgs, was arrayed in the proverbial coat of many colors. After the game the players, umpires and Secretary Gar-

ber were driven to Johnny Newell's, where a fine supper was served. This supper, the ball grounds, score cards and all the appurtenances of the game were at the expense of the wholesalers who were present.

The Allegheny doctors have challenged the winning team, the Allegheny druggists, who have also received a challenge from New Castle druggists. While Captain Heckel feels that his team is a winner, he finds that it will be extremely difficult to accept challenges from out-of-town druggists, as the acceptance will necessitate a longer absence from the city than can be taken by the boys.

Umpires Reinecke and Barrett so impressed all by the firmness of their decisions that no appeals were made.

NOTES.

—Clerk Otto Oppenheimer, with E. J. Schlabach, of Canton, O., who has seen service in the Philippines, had an exciting experience recently which made his adventures in that locality of the United States possessions seem mildly tame. With a bravado acquired by a continual chase after Aguinaldo, Mr. Oppenheimer undertook to ride a blooded horse belonging to Druggist G. G. Dunlap. John Glipin's ride paled in comparison. The blood for which the horse was famed was up and Otto knew that he was "it." A mad ride over the Canton streets with extra cavortings before the President's home terminated finally in an exhausted steed and a sadder and wiser drug clerk who hasn't heard, as yet, the end of his attempt at riding a thoroughbred.

—Albert Soffel, who served as a pharmacist in the navy for the past three and a half years, returned to his home on Mt. Washington recently on a leave of absence. His ship is the Ranger, now stationed on the Pacific Coast. His first assignment was on the Wilmington, on which he served during the Cuban War. He then went to the South Sea on the Badger, and recently has been on the Ranger with a surveying party off the Pacific Coast. Mr. Soffel may resign, as his permit will allow him to do, and go into the drug business in Pittsburg.

—Among near-by-town druggists who are spending vacations are M. Rush Means, of Punxsutawney, among the Canadian lakes; W. F. Beyer, of the same place, is with a party of campers at the head of the Susquehanna; H. F. Thomas and family, of Greensburg, in the Alleghenies at Ligonier, Pa.; E. B. Henderson, of Brookville, is at the Thousand Islands; Ben Craig, of Brookville, at Chataqua Lake, N. Y.; K. A. Reed and Mrs. Reed, of Gallitzin, at Atlantic City; W. D. Davis, Philippi, W. Va., at Atlantic City.

—William McCloskey, of Curwinsville, Clearfield County, died on July 24 at the West Penn Hospital, this city, and his death attracted unusual attention in the West End. Mr. McCloskey had been employed for some time in Montgomery's drug store on Wabash avenue, West End. It was stated that death had been caused by excessive exertion in a game of base ball some time ago. At the drug store, however, it was stated that there was nothing abnormal in the case.

—The store of W. A. Showalter, Latrobe, Pa., was recently in danger of fire, which was averted by the coolness of Will Eberhart, the clerk. A mixture containing a large percentage of alcohol was spilled on the prescription counter. It came in contact with a Bunsen burner and was at once ignited. A vessel containing a large quantity of sponges which were being soaked out, was emptied on the fire, which was at once extinguished.

—Lawrence Rentz, of Bowling Green, O., filed a suit in Common Pleas Court against J. D. Bolles, a druggist of that city for \$5,000 damages. Mr. Rentz alleges that Dr. Bolles sold him a "quinine sandwich," June 19, 1900, in which carbolic acid was carelessly placed instead of syrup, thereby endangering his life and causing him much suffering.

—R. C. Hall & Co. and H. G. Clark, both leading drug firms of Franklin, Pa., recently had the novel experience of exchanging clerks, and now it is expected that a cut rate war may result. George Little, with Hall & Co., went to Clark's pharmacy and Charles Phipps emigrated to Hall's from Clark's.

—John K. Lewis, for a number of years clerk for Daugherty Bros. at their Indiana and Jeannette stores, has purchased the store of M. R. Cooke at the latter place, refitting and renovating it thoroughly. C. A. Davis will have charge of his prescription department.

—The drug store of the Rhodes Drug Company, of New Castle, Pa., was closed by the sheriff on executions of Scott Palsley, a druggist, amounting to about \$1,700. The members of the firm, against whom writs are issued, are Edward Stilling, A. A. Rhodes and F. F. Campbell.

—The officers arrested many of the druggists at Cumberland, Md., on August 14, whom they charge with selling soda, mineral water and cigars on Sunday contrary to law. One dealer was arrested for selling ice cream on Sunday. The arrests caused a general protest.

—Miss Ethel Condick, who has been seeing considerable service in the store of Rankin & Condick, Brockwayville, N. Y., has been visiting the family of Druggist A. C. Robertson, of this city.

—The Wheeling Association of Retail Druggists had a meeting recently to take action on the fact that there are a number of local druggists not in the Association.

—The retailers report an unusually fine soda water trade. The dealers in nearby towns have set up some handsome fountains and are coining money.

—John Munden, prescription clerk at Heckel's store, Western and Grant avenues, Allegheny, has gone on a vacation trip to resorts in Michigan.

—Tony Rogers has his old position as night clerk at the Park Pharmacy. S. M. Birch, formerly on the night force, will take the day position.

—Louis Franke & Co. have purchased the drug store of H. W. Bolar at Johnstown, Pa. Mr. Bolar intends traveling for a year or more.

—R. C. Hall, of Franklin, is a guest of the Hon. Joseph G. Sibley, at the latter's handsome summer home on Lake Champlain.

—The Walther-Robertson Drug Company bought out the Bell Pharmacy on Wylie avenue. John Golden is the manager.

—Charles H. Maxwell has secured a position as chief clerk at the pharmacy of J. L. Goehring, West Newton, Penna.

—Reed's pharmacy is now the name of R. A. McCartney's store of Butler, Pa., lately bought by Mr. Reed.

—S. W. Hall, formerly of Corry, Pa., purchased the Standard drug store at 711 State street, Erie, Pa.

—Bob Clark has left the Park Pharmacy to accept a position at the Crystal Pharmacy.

—Miss Reed, of W. J. Gilmore & Co.'s clerical force, spent her vacation at Galeton, Pa.

—George W. Richards, of Duquesne, Pa., is now at Atlantic City.

—Miller & Shaler have opened a new store at Elk Lick, Pa.

—J. S. Foster, of Petrolia, Pa., was a Pittsburg visitor recently.

—Howard Jackson, a Wilkesburg druggist, is now in Europe.

DETROIT.

Detroit, August 25.

—At the regular meeting of the Detroit Drug Clerks' Association on Thursday evening, August 23, W. G. Leacock was elected secretary in place of A. M. Edwards, Jr., who has become president; Charles E. Abraham was elected chairman of the Entertainment Committee vice Joseph Hackett, who has become a proprietor, and W. D. Brooks was selected on the Membership Committee. —Earl Allen, representing John Wyeth & Son; H. S. Blitz, representing J. Ellwood Lee, and M. Mandeville, representing Johnson & Johnson, are among the travelers who are working their Detroit trade at present.

—Joseph Hackett, for some time with Hurd & Gray, Detroit, has purchased S. K. Harvey's drug store, corner Antoine and Watson streets. Mr. Harvey has decided to retire from the drug business.

—Nelson, Baker & Co., manufacturing chemists of De-

troit, will give an excursion to Bois d'Arc on Wednesday, August 29.

—Thomas Hilder, clerk for Hurd & Gray, Detroit, has accepted a position in the East and will go September 1.

CHICAGO.

Pioneers Among Chicago Druggists.

Chicago, Aug. 26.—To day's most remarkable group of early Chicago settlers is found in the six surviving passengers of the ancient brig Illinois, which arrived at the point in Chicago's harbor now marked by the north pier, from Buffalo, May 25, 1835. The brig was commanded by Captain "Bob" Wagstaff, a swashbuckling sea dog of old sailing days, and on that voyage carried some twenty-five or thirty passengers, westward bound to better their fortunes, besides a cargo of freight in the form of merchandise for frontier trade and household goods for pioneers.

The six survivors of that historic voyage, so far as can be ascertained, are Fernando Jones, Edwin O. Gale, William H. Gale, George Sinclair, William H. Sinclair and Mrs. Emeline Sinclair Linscott.

Those names are familiar at pioneers' reunions, at banquets of old-timers, at old settlers' picnics.

Fernando Jones is Chicago's best known old settler. The Gale Brothers are residents of Oak Park and vicinity. William H. Gale is now living the life of a farmer at Mont Claire; Edwin O. Gale is still active in business, being one of the most prominent druggists of this city, and occasionally he reads historic papers and pleasing original poems of local flavor at gatherings of old timers. His home is in Oak Park.

In a recent interview for a local paper (the Times-Herald) Edwin O. Gale said:

"The old brig came to anchor about half a mile from shore, opposite where the north pier now is. The mouth of the river then was about opposite the foot of Madison street, a huge sandbar diverting it toward the south. The only bridge across the river was at Dearborn street. There being no harbor we landed by means of mackinaw boats and lighters. It has been claimed that on a voyage the previous year the brig succeeded in entering the river, but this is denied by local historians.

"My father, Abram Gale, and my mother were Massachusetts people, the former having been born in Warwick and the latter in Newburyport. They were married in Boston and lived there for a time. They were living in New York when they decided to try their fortunes in Chicago.

"My mother was the first milliner in Chicago, and she was successful in that business. With the family arrived three children—Georgiana, the eldest, who was married to Benjamin C. Welch, one of the pioneer carriage makers, being now dead; I was three years and eighteen days old when the brig arrived, having been born May 7, 1832; William H. was born July 28, 1834, so that he was a mere babe when the vessel arrived."

Edwin O. Gale is the author of a poem on the supposed return to Chicago, May 26, 1890, of the brig Illinois, Captain Wagstaff, after an absence of fifty-five years. This poem was read before the Pioneer Society at a banquet at the Auditorium. The phantom captain in the poem exclaims:

If I am Cap. Wagstaff, which I will not deny,
For you say that I am, and declare you don't lie,
I suppose that I am, but I swan I don't know,
For I can't understand how Chicago's changed so.
Why, the last time I anchored in sight of the fort
I believe it the time I some of you brought;
My brig's anchor I cast just outside in the lake,
For the creek was so crooked we couldn't make;
And the Indians swam out till the old lake did seem
Like a mighty big bowl of blueberries and cream.
And so now when I see what I've seen here to-day,
See such wonderful changes since I've been away,
Why, I cannot no, cannot—believe I am Jack,
Or that is Chicago; I'm on the wrong tack.

Son of Chicago Druggist a Musical Star.

Chicago, Aug. 26.—Reuben Manley, son of H. H. Manley, the druggist, is a new juvenile star in the musical firmament, who enjoys the distinction of having had more flattering offers made him by managers at the age of

his career than can be credited to almost any other artist of his years in the country. He is a Chicago choir boy, a product of fashionable St. James of the north shore, and is a living refutation of the claim that no genuine vocal training or success can be achieved without New York assistance. He entered the choir when a child of ten, and the cultured of St. James were not slow to appreciate the musicianly qualities of their young soloist, and he began to sing for them in their own homes. Mrs. Edward Ryerson was the first to stamp the lad with her approval in this way, and he has since more than justified her ample faith in him. He sang at the Ryerson home every Sunday evening all last winter, later appearing on several occasions at the home of Mrs. Emmons Blaine and other society leaders. An illustration of the boy's quiet and forceful character is afforded by the triumph he scored at St. Peter's Cathedral when that parish invited St. James to take charge of a festival service at which Rossini's "Stabat Mater" was to be presented. He had never sung in "Stabat Mater," and when requested to attempt the "Inflammatus" he replied in true laconic boy fashion that he "guessed" he'd try. And he did cover himself with glory in his rendition of the wondrous solo.

NOTES.

—Peter Van Schaack, who returned last week from Europe, has just received a duplicate copy of old Chief Pokagon's book, "The Queen of the Woods." It is a duplicate of the copy which was presented to Mrs. McKinley, and of one which Mr. Van Schaack presented to Wilhelmina, Queen of Holland. The old chief was known as the "Longfellow of the Indians" on account of his abilities as a poet and writer. He died a year or so ago, and his son, Chief Charles Pokagon, as an act of filial duty, has published this book, the manuscript of which he found among his father's effects. Among the curiosities which Mr. Van Schaack brought back from foreign lands is a Dutch watch chain, made of steel and brass. It is strong enough to hold a yearling calf. Another oddity is a large milk can of hammered brass. It will be used as a loving cup, and will be filled with beer and passed around at the meeting of the Chicago Holland Society at the Union League Club next Thursday evening.

—The jobbers, manufacturers and others who contributed to the fund for the entertainment of the druggists at the recent meeting of the Illinois Pharmaceutical Association, are in receipt of a letter from President Gale, the tenor of which is shown by the following extract:

The association wishes to thank you, not only for your generous contribution to the expense fund of this meeting, but also for your hearty co-operation and support in bringing the druggists and their friends in the jobbing and manufacturing lines into closer touch and good fellowship. The association feels that the work accomplished along these lines was one of the most gratifying results of the meeting, and too much credit cannot be given to those who contributed so largely to this end. It is hoped you may be able to make such use of this list as will augment and foster this good feeling to the benefit of all concerned.

—President Patton, of the American Pharmaceutical Association, has appointed Albert E. Ebert and Henry Biroth, of Chicago, and Paul G. Schuh, Cairo, Ill., Robert M. Dadd, Milwaukee, Wis., and Thos. Layton, St. Louis, as a committee to represent the association at the annual meeting of the N. W. D. A. to be held in Chicago Sep. 17. He has also appointed the following gentlemen as the Committee on National Legislation of the A. Ph. A.: Albert E. Ebert, Chicago; Albert B. Lyons, Detroit; William S. Thompson, Washington; C. B. Lowe, Philadelphia, and H. P. Hynson, Baltimore.

—Good times have come to Pullman, Ill. In proof of this let the reader note the following interview with a Pullman druggist: "Yes, times are good out here," said D. R. Peck, manager of J. H. Wilcox's drug store. "The men are well paid, and there seems to be the utmost satisfaction among them at the way things are going. They will be even better off after Sept. 1, from what I hear, for increases in the force are contemplated after that date, I am informed."

—S. E. Bishop, a well known and highly esteemed druggist of the north side, died this week after a long illness. The deceased was a bachelor, and had lived in Chicago

A HANDSOME FOUNTAIN.

One of the finest, if not the very finest soda water fountains in Chicago, is that which has been recently installed by George R. Baker in his enlarged store in the Ashland Block, at Clark and Randolph streets. The fountain was especially constructed for Mr. Baker by the Liquid Carbonic Acid Manufacturing Company. It is of onyx and marble with nickel trimmings. At the back of the fountain are three large plate glass mirrors trimmed in hand carved mahogany. The syrup tanks, two in number, are revolving, surmounted by white glass globes electrically lighted. The fountain is in charge of Herman Ensinger, an efficient soda water man of long experience and ingenious methods. The soda menu which Mr. Baker has issued contains a cut of the fountain, the several soda clerks being seen behind the counter and Mr. Baker standing outside to the left. The frontispiece of the booklet contains a photographic reproduction of the features of Mr. Baker. Over 300 different soft drinks are named, many of them being the invention of Mr. Ensinger.

The counter is twenty-one feet long, with marble top and spacious interior. The arrangement and management of this soda water business are second to none in the city considering the amount of space available.

many years. His death is a real loss to the profession. Mr. Bishop's store was at Rush and Illinois streets.

—"That slot directory," said Albert E. Ebert to-day, "is the best thing in the way of a slot machine I ever had in my store. People seem to take pleasure in using it. It takes in from twenty-five to thirty cents a day in pennies, and is no trouble at all and no expense.

—Fred M. Schmidt says that he did not attend the Herrick inquest in the capacity of expert in chemistry, or in any other capacity; and that he has not said anything to anybody about the properties of antimony, as reported in a local paper.

—It is reported that drug clerks are scarce in Chicago, and that a good r. p. or assistant is hard to find out of employment.

—W. H. Clough, South Side salesman for Peter Van Schaack & Sons, has gone on a week's trip to the Dells in Wisconsin.

—C. W. Marschau, a druggist at Forty-third and State streets, has gone to the Dells, Wis., on a few week's vacation.

—The red, white and blue adorns many drug store windows in honor of the G. A. R., which will be here next week.

—Henry Biroth, the well known druggist, is now in the East on a pleasure trip with his daughter and son-in-law.

—S. Ruby has bought the drug store formerly owned by E. V. Klinckowstroem, at 296 West Division street.

—To-day was the last Saturday of this year on which Chicago jobbing houses will close at 1:00 P. M.

ST. LOUIS.

A Novel Order.

St. Louis, August 25.—A member of one of the St. Louis wholesale drug houses says he has received orders for grind stones, callopes and elephants in his time, but that his first order for a widow was received this week. In proof of the unusual statement he showed your correspondent a stamp photo of a druggist in a Missouri town, and on the back under the name of the lone pharmacist was the legend: "Am fifty years old. Hand this to some good widow. Want to marry." The photo was enclosed in an order for a good assortment of drugs. If any one can fill the widow order, the Era correspondent will cheerfully furnish the name of the druggist making the inquiry.

Good Suggestion.

St. Louis, August 25.—The suggestion has been made in connection with the approaching silver jubilee of the Alumni Association of the College of Pharmacy that it would be an excellent thing in addition to the banquet to celebrate the occasion by establishing a permanent fund by subscription from the members, the interest on which would go each year for a permanent alumni prize for the best record by a senior in all studies or some particular branch, or for the founding of a scholarship to be given some worthy but needy applicant for matriculation each year.

NOTES.

—E. W. Bindschadler, secretary of the J. S. Merrell Drug Co., leaves Monday for the G. A. R. reunion at Chicago. Mr. Knott, of the city department, has returned from Alexandria, Minn.

—H. C. Brenner, the druggist of Sixth and Washington avenue, will open a drug store corner of Kossuth and St. Louis avenues next week. Ed. A. Bauer will have the management of the store.

—The St. Joseph Drug Co., of St. Joseph, Mo., has filed notice with the Secretary of State of an increase of capital stock from \$8,000 to \$15,000.

—Will Fabrenkrog, manager of the Albright pharmacy, Kirkwood, Mo., was married on Wednesday to a fair daughter of Bunker Hill, Ill.

—A. E. Suppiger, proprietor of the Arcade pharmacy, has returned from his trip to Colorado feeling much recruited in health.

—Druggist George W. Smith, of Boyle and La Clede avenues, is visiting his old home, Potosi, Mo.

—A. Vogelsang, Glasgow and St. Louis avenue, leaves to-morrow for a week's vacation in Chicago.

—Harry Honetsky, clerk for O. C. Ruge, leaves to-morrow on his vacation.

—J. W. Saxon, Beman, Mo., contemplates re-entering the drug business.

—Charles Milne succeeds E. A. Bauer as head clerk for Martin J. Noll.

Something to Make Druggists Think.

Attention is called to the inducements offered to druggists in the way of big profits and rapid sales by handling the well known Evans' Ale and Stout. The energetic and persistent manner in which the Evans' brewings are kept before the public together with their old and well maintained high reputation, should attract progressive druggists to make a special feature of such a good new-customer making side line. Evans' Ale and Evans' Stout have been pronounced by the special Food Commission of the United States, as most pure and healthful products. For years the medical faculty of the entire country have recommended the Evans' brewings, and they are used constantly in the United States Marine Hospital service. If you want more facts write to C. H. Evans & Sons, Hudson, New York.

STATE OF TRADE.

No Indication of Stagnation.

New York, Aug. 28.—Extremely warm weather has continued to retard general business, but there is no indication of stagnation, and wholesale dealers in drugs and chemicals are apparently satisfied with prevailing conditions and also with the outlook for the approaching Autumn and Winter season. The market retains a decidedly steady undertone and during the past week nearly all important changes in values have been in favor of holders. The quinine situation continues firm and the position of the raw material is stronger. At the monthly bark sale in Amsterdam on Thursday last values improved as expected, and the average unit price was about 10 per cent. higher than that of the July sale. Cables to representatives of German manufacturers also brought instructions to advance their quotations 2c. per ounce, so that domestic and leading foreign brands are quoted on the same basis. Whether American makers will follow the action of their German competitors remains to be developed, but it is believed in usually well-informed circles that they will shortly find it necessary to mark up quotations.

There has been no material change in opium and the market has continued to reflect an easy undertone with indications that concessions are necessary to attract attention of buyers. Primary markets are without improvement, and conditions abroad as well as here are rather unfavorable to holders. Manufacturers of santonin have advanced quotations 10 cents per pound on account of stronger foreign markets for crude material. Thymol has moved up sharply in price owing to scarcity and a fairly good demand from the consuming trade. Domestic refiners of camphor have advanced their prices $\frac{1}{2}$ cent per pound and the tendency is toward a still higher basis owing to the stronger position of both crude and refined in foreign markets.

In the department of essential oils general business is of limited volume but fair for this season of the year. Anise is easy under a slow demand and rather free offers to sell. Cassia is firmer, with round lots held at an advance of fully 5 cents per pound over previous quotations. Sweet almond is 2 cents per pound higher owing to a corresponding improvement in foreign markets. Cubeb oil has hardened in price under the influence of a further advance in values of berries and the available spot stock has recently gone under closer control.

German ergot is slightly easier with round lots quoted at a shade under previous prices, but it is believed in some quarters that the market is being manipulated for the purpose of securing supplies. Canada balsam fir has been quite active and values are decidedly stronger owing to scarcity. Small flake manna is firmer, reports from producing markets indicating that the yield from the new crop will be smaller than usual. Coca leaves are very firm and a higher range of prices is quoted for both Truxillo and Huanuco. Recent advices from primary sources on the west coast of South America are to the effect that very few leaves are coming from interior producing districts and it is expected that there will be a material shortage. Grains of paradise are in more plentiful supply and holders have modified their views regarding values. Cubeb berries are again higher under the influences noted in previous reports.

Among the roots, golden seal, serpentaria and senega continue to show increasing strength. All are a shade higher in price and it is expected that extreme figures will be realized for senega before the season is over. Canella alba bark is scarce and firmer. Short buchu leaves have again been advanced and a stronger market is noted for marjoram.

A Fairly Good Week.

Boston, August 25.—The week among the trade has shown fairly good business without any marked impetus, and yet with nobody at all quiet. Salesmen going out from Boston to various places within easy travelling distance say that some of their customers are finding business pretty good, and that others think they are not doing anything. Boston is such a wide-spread district that trade is affected by the character of the neighborhood and in places where people are staying at home all summer business certainly goes on smoothly, and with fair activity. The general drug and chemical business is of fair proportion, without any one line showing special activity. Prices have changed but little. Opium shows some falling off, while quinine holds firm. Nitrate of soda is in fair demand. No changes worthy of note in alcohols or cologne spirits have taken place. There is a fair demand for a few things among the dyestuffs, but business is expected to be far better a bit later, when the fall trade begins in earnest.

A Steady Volume, up to the Average.

Philadelphia, August 25.—A steady volume of business was maintained this week, up to the average for this time

of the year, but there was an entire absence of snap or vitality in the business atmosphere, although there was not the least complaint. City salesmen report it somewhat duller than last week. There is no interest whatever noticed as to the fate of the more important staples. Quinine is admittedly very strong, but there seems to be no disposition to buy on the part of those concerned. One large concern in manufacturing heavy chemicals states that it is greatly interested in nitrate of soda, and wants to know where the world's supply will come from when the South American beds are exhausted, so it seems that Professor Crookes is not the only one worrying over this matter. The market for this article is stiffening in spite of the plentiful supply ashore and afloat. The boom in roots and other botanicals is being felt here, but the manufacturing houses here are careful providers and this is not much of a speculative emporium.

The city retailer appears satisfied and is already dreaming of hot waves for 1901 and future additions to his soda fountain.

Still Busy in Chicago.

Chicago, August 25.—The trade has had a fairly busy week and there is perhaps a perceptible quickening in some quarters at the approach of Fall. The demand for staple goods remains good and sundries are reported to be quite active. The manufacturers are again in the field for business after their regular summer vacations and will push sales with vigor. It is believed that politics this year will have little effect on the volume of business, which is expected to be larger than ever before. The outlook is for an excellent Fall business in all branches of the drug trade.

Much Better Prescription Trade.

Detroit, August 25.—Summer cholera and soda fountains have kept Detroit druggists reasonably busy during the closing week, and the retailers report a much better prescription trade than for several preceding weeks. Manufacturers are more than pleased with their August trade. They say "It is the same old story from the West—that of good times—that keeps us so busy this Summer."

An Increase in the Northwest.

St. Paul and Minneapolis, Minn., August 24.—Drug jobbers report something of an increase in business as compared with last week. The partial lull always experienced at this season has apparently reached its high (or rather low) water mark and there is evidence that the tide is beginning to turn the other way. Collections continue better than in previous years during the dull season. Retailers are divided in their answers to the Era's queries, but the majority say they have found the past week pretty dull. This is due to the absence of more people than ever this summer at the urban lakes. The minority retailers claim that they have had nothing to complain of the past week; that their general trade has been very satisfactory, with a little more going on behind the prescription counter than last week. Seldom have prices been stationary so long in these cities. Not the slightest change has been made in the values of Western products for some six weeks.

Trade of Good Volume.

St. Louis, August 25.—Trade continues without material change and is of good volume for the season. Local retail trade is fair. The number of local druggists who are taking or preparing to take their vacations afar from home would indicate that the business has not been so badly off as it has been said to be, but the exodus is not so heavy as last year. Wholesalers report early orders for holiday goods as highly satisfactory.

"Stringtown on the Pike" in Book Form.

The success of Prof. John Uri Lloyd's serial story, "Stringtown on the Pike," now running in the "Bookman," has been firmly established and the publishers, Dodd, Mead & Co., of this city, announce its early publication in book form. The first edition will consist of 10,000 copies and will appear about October 1.

Wine of Cardui Advertising.

Nelson Chesman & Co. are placing attractive Wine of Cardui advertising in 5,000 of the best American newspapers for The Chattanooga Medicine Company. This advertising enables The Chattanooga Medicine Company to promise better orders than ever for Wine of Cardui this fall. A very striking series of ads. is being used. The copy is carefully prepared and the typography is at once unique and simple. Wide white margins with heavy faced type and strong borders are utilized to good effect.

MARKET REPORT.

NEW YORK MARKET.

New York, August 28.—Weather conditions have not been favorable to increased activity and the demand has continued seasonably light, but the market retains a steady undertone with the more important changes in prices in favor of holders.

OPIUM.—Under the influence of the easier feeling noted last week, jobbers have reduced quotations to \$3.45@3.55 for 9 per cent. and \$3.55@3.65 for 11 per cent. as to quantity, the outside figures for single pounds.

POWDERED OPIUM.—There is no improvement in demand and quotations are lower in sympathy with the sum. The revised figures are \$4.50@4.65 for 13 per cent. and \$5.10@5.25 for 16 per cent.

MORPHINE.—Moderate quantities continue to find a good consuming outlet and values remain steady on the old basis of \$2.50@2.60 for P. & W. in eighths, and \$2.40@2.50 for N. Y. Q. and McK. & R.

QUININE.—German manufacturers have advanced quotations 2c. per oz. and all leading brands are now quoted on the basis of 44@45c. in ounces.

SANTONIN.—Manufacturers' quotations are 10c. higher and the revised jobbing range is \$4.45@4.65 by the lb. and 34@35c. per oz.

THYMOL.—Scarcity here and abroad has caused a sharp advance in prices and jobbers now quote \$5.75@5.25 per lb. and 45@50c. per oz.

CAMPHOR.—Stronger markets abroad for both crude and refined have caused local refiners to advance their prices and jobbers have marked up quotations to 60@60½c. in bbls. 60½@61c. in cases, and 67@71c. for less.

BALSAM FIR.—Canada continues in light supply and values are again higher, jobbers now quoting \$2.90@3.05, as to quantity.

ESSENTIAL OILS.—Small lots are moving fairly on consuming orders for leading descriptions and general market conditions are of a satisfactory character. Anise shows a further decline to \$1.85@2.00 and the feeling among large holders is rather weak. Cassia is stronger and jobbers have advanced quotations to 95c.@\$1.05 by the can and \$1.20@1.35 for less. Cubeb oil is firmer in sympathy with the berries and the revised jobbing range is \$1.25@1.50. Lemon has been marked up to \$1.40@1.65 for best and \$1.20@1.50 for second quality. Sweet almond true is higher abroad and spot jobbing quotations show an advance to 65@75c.

SERPENTARIA ROOT.—Stocks continue light and the market is firmer with jobbing prices advanced to 50@55c. for prime whole, 32@57c. for ground and 55@60c. for powdered.

CACAO BUTTER.—A continued strong market is reported and quotations for Huyler's and Maillard's have been further advanced to 51@52c. by the box and 55@60c. for broken lots.

CANTHARIDES.—There is no quotable change in Spanish, but values of the Russian variety show an advance to 70@80c. for whole and 80@90c. for powdered.

COCA LEAVES.—Primary markets are decidedly stronger and spot quotations for jobbing parcels have been marked up to 40@45c. for whole Truxillo and 50@55c. for Huanuco. Ground 5c. and powdered 10c. additional.

GRAINS OF PARADISE.—The market is better supplied and jobbing quotations have been reduced to 50@55c. for whole and 55@55c. for powdered.

CUBE BERRIES.—Values continue to improve both here and abroad and jobbers have advanced quotations to 25@30c. for whole and 30@35c. for powdered.

CANELA ALBA.—Owing to scarcity jobbers have advanced quotations to 25@30c. for whole and 30@35c. for powdered.

BUCHU LEAVES.—Short are in reduced supply and firmer with jobbing parcels held at 33@38c. for whole, 36@41c. for ground, and 38@43c. for powdered.

CARAWAY SEED.—Dutch is scarce and higher and spot values for small lots show an advance to 12@15c. for whole and 16@20c. for powdered.

CANNABIS INDICA.—Owing to light stocks and firmness abroad quotations for jobbing parcels have been advanced to 45@50c. for whole and 50@60c. for powdered.

CARBOLIC ACID.—Foreign markets continue strong and jobbers have advanced quotations to 32@37c. in lbs. and 29@34c. in 5-lb. bottles.

GUARANA.—Supplies are very light and the market is firmer, with jobbers quoting 75@85c. for whole and 85@95c. for powdered.

GINGER.—African is scarce and higher, the revised jobbing range being 12@15c. for whole and 17@20c. for powdered.

THE ERA COURSE IN PHARMACY.

The lectures will hereafter be issued in monthly instalments, and the entire work of the Course can be completed within twelve months.

NEW CLASSES FORMED EACH MONTH.

The first instalment of lectures will be issued in October, and the remainder at intervals of thirty days thereafter.

Recitations and examinations are conducted by correspondence directly with each regularly matriculated student.

Especially valuable as a preparation for examination by a board of pharmacy, to those who cannot attend a college of pharmacy, and to all desiring to review their former study of the subjects embraced in the curriculum.

TOTAL EXPENSES FOR FULL COURSE, \$10.00.

For fuller particulars see announcement facing third cover.

Write for new descriptive Prospectus, now ready.
Address, **THE PHARMACEUTICAL ERA.**

WHAT IS A DRUGGIST?

Apropos of the interest just now manifested in the desirability of providing a commercial training for students of pharmacy, a recent incident may be related.

In an evening symposium of a few retail druggists there was accidentally propounded the query, "What are the constituent parts of a druggist?" Brown told what the druggist should be, a combination of business ability, perseverance, endurance, courtesy, up-to-dateness. Smith, in describing the druggist as he really is, admitted that he possesses all these characteristics save that of business ability and business training. And then the discussion raged. Brown could combat Smith's position with only the rather poor argument that the ability to figure profit and loss does not constitute an entire commercial training, and that farther than this is not needed for a druggist following, not a commercial calling, but a profession. But the sentiment of the gathering was strongly with Smith, and a similar sentiment in similar degree we are sure would be found to exist in any gathering of practicing pharmacists.

The demand for a good business training of pharmacists is here to stay and must be met. Every one who enters the drug business does so to make a living and some profit, and he can do neither unless he has some, the more the better, knowledge of business forms and procedure.

FORMALDEHYDE AS A MILK PRESERVATIVE.

New Jersey's State Dairy Commissioner is making it interesting for those people who put formaldehyde in milk to preserve it. He has already collected four hundred dollars in fines and there are thirty or forty cases pending. In one case the milk had been doctored by three persons, the farmer, the middleman and the retailer. Such an embalmed product would be a nice thing to give a tender infant, wouldn't it? Formaldehyde during the past two or three years has almost entirely supplanted all other milk preservatives, and is the chief or only active ingredient of the many secret proprietary preparations sold for this employment. But boards of health, sanitary authorities generally, physicians and chemists are one in the belief that it is a dangerous, poisonous product and that its use in foods, in any proportion whatever, should be sternly punished. Formaldehyde has a legitimate and wide field of usefulness, but this is not in food products.

THE UNIVERSAL PHARMACOPOEIA.

As attractive and apparently as evanescent as the old alchemists' dream of the philosopher's stone or the elixir of life has been the modern pharmacist's dream of an universal pharmacopoeia. We say apparently evanescent, for a half century has passed since the alluring proposition was first definitely formulated, and in the intervening period it has appeared only to disappear with a regularity which could be predicted to a certainty. But though nothing has been accomplished in the form of a definite volume, the time has not been entirely wasted. Physicians and pharmacists, and to a very slight extent, the people, have been thinking of the matter and have become more and more impressed with the desirability of, and necessity for, such an uniform formulary of active medicaments. We have all begun to want such a book, which was not the case fifty, forty, twenty or even ten years ago. Hence, wanting it we'll get it, and we will be much surprised if the next ten years does not see the accomplishment of the project. The excellent paper by Prof. Bourquelot, read at the recent International Pharmaceutical Congress and published in translation on another page of this issue, is worth reading by all interested in the movement, and every pharmacist is or ought to be interested in it.

THE EDUCATIONAL DEVELOPMENT OF WOMEN.

The conditions are gradually changing as regards the admission of women into active professional life. In the United States they have already become an important factor in many callings, and the field of their future advancement is practically unlimited. This development has been the theme for many writers on sociological questions for a number of years past, and they all arrive at the same conclusion—that a woman may, if she tries, make her name and presence felt in any of the walks of life. To be sure, her advancement in professional life has been less rapid than in literature, but she is now "getting there," and more, she is recognized. In medicine and pharmacy she has a special aptitude, and wherever she may be or whatever she may become she is sure to make her presence felt.

In speaking of the attitude of the people in general toward women's development it has been stated by Waggener that twenty-five years ago the ability of a woman to master subjects thought necessary for a man's education was disputed. It was seriously questioned at the time whether the "female" mind could untangle the intricacies of pure mathematics, could appreciate the abstruse speculations of metaphysics, or could follow, step by step, the inductions of a scientific investigation. It was contended in the educational discussions of that day that one of two alternatives was necessary if young women were admitted to colleges and universities manned and equipped to prepare young

men for the intellectual conflicts of life. It was asserted that either the standard of scholarship would be lowered, or that the young woman would be left hopelessly behind, and the experiment prove, as far as they were concerned, a dismal failure. This prediction has, on trial, proved absolutely groundless. Whatever may be the distinction between a "male" and a "female" mind it is not of such a character as to prevent young women from holding their own in intellectual competition with young men.

The teaching of actual experience is that the scholarship of all of our higher institutions of learning has been raised, and in many cases the presence of young women in the classes has been the stimulus and the inspiration. Since her advent into pharmacy, medicine, law, and other learned professions she has become master of her position, and has already taken her place alongside that of her brother in the struggle for existence. She means to be successful, and we doff our hat to her.

ANOTHER "WICKED TRUST."

There recently appeared in one of the Chicago daily papers the following advertisement:

SODA DISPENSERS IN FAVOR ORGANIZING
a union address, with suggestions, Y D 7, —.

This set the reporters scurrying around town for interviews, and the next day's papers contained talks with clerks, illustrations, comic and serio-comic, and predictions of dire results if the contemplated labor union or trust became an actuality. The regular drug clerks and the proprietors were not badly scared, and even those favoring the project could not see just what good would come of it. Said one soda dispenser: "The last resort of a trade union is a strike, but suppose we should go on strike, what difference would it make to the drug store proprietors? Every drug clerk would dispense soda until a non-union man had learned the business. A druggist could take any ordinarily bright, energetic young fellow and teach him all there was to know within a few days." Therefore the promoters of the scheme have not yet been able to figure out just how the proposed union would benefit the down-trodden soda dispenser, but they think it might result ultimately in a tie-up of all the soda water fountains. This is a hideous contingency to face. The girls who are fond of soda water after the matinee would be thrown into a terrible state of uncertainty during labor troubles and would expect almost at any time, on going for a glass of soda, to find that the white-frocked young man at the fountain had departed and that only flies and policemen were left in charge. In case of rioting, the soda dispensers might avail themselves of the charged tubes of mineral water in the basement and meet the police with a volley of sizzling vichy, followed by a rapid and continuous fusillade of sarsaparilla, ginger ale, root beer and egg lemonade. But don't be unduly alarmed, girls. It hasn't happened yet.

OUR LETTER BOX.

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors.

Please be brief and always sign your name.

THE BICYCLE RACK GAME.

New York, August 30.

The Editor Pharmaceutical Era:—We were quite interested in the article published in your edition of Aug. 30, entitled "The Bicycle Rack Bunco."

Some three or more years ago we conceived the idea of supplying our friends in the retail drug trade with bicycle racks, and contracted for a limited number, to ascertain whether they would be popular or otherwise, with a concern in Buffalo, who submitted to us, among many others, designs and prices.

Shortly after we began the distribution of these racks we were visited by Mr. E. S. Calkins, of Syracuse, N. Y., who claimed patent rights upon the style of rack we were using. As the retail druggists took kindly to our idea regarding the distribution of the racks, and we had about exhausted the supply first contracted for, we placed several subsequent orders with this man Calkins, who later turned over our orders to a concern in Syracuse, known as the National Supply Co., who manufactured for us the last lot we distributed.

As so many other manufacturers had taken up the idea, we abandoned it from that time, but have, during the last two or three months been receiving letters from various parts of the country, a specimen of which we enclose for your perusal, together with copies of letters we addressed to the attorneys in Syracuse, as well as Mr. Calkins. Our experience has been the same as yours, however, no reply has been vouchsafed in either instance.

I trust you will give this matter all the publicity possible and assure those of our retail friends, who secured racks through us, that we are willing to stand back of them and guarantee them against any loss or injury to their business or selves in the use of the racks.

Yours very truly,

POND'S EXTRACT CO.,

F. S. BRUEN, Treasurer.

MORE PLEASED DIPLOMA WINNERS.

On returning home last Saturday from my vacation, I was delighted to find my diploma. I wish to return you sincere thanks. I am well pleased with it and with the Era Course in Pharmacy.

Philadelphia, Pa.

M. J. MEERS.

I acknowledge the receipt of the Era diploma, for which please accept my thanks. I feel greatly benefited by the Era Course of instruction, and hope that everyone has also been helped by it. I wish you continued success for the future.

Hagerstown, Md.

CHAS. NORFORD.

I received my diploma for the Era Course in Pharmacy yesterday and am very much pleased with it. I desire to thank you for the same, it is a nice one and I shall always greatly prize it. It has taken considerable hard studying to get it, but I feel fully repaid for all the time I have put in studying and I think anyone else who might take the course will never regret it as I think it a very fine course of study. Again thanking you I remain,

Memphis, Mo.

HENRY T. SWIFT.

The greatly prized diploma was received a few days ago. Please accept sincere thanks for the same. It is everything I would wish it to be, and words fail to express how I appreciate it. You are of course well aware

of the fact that a diploma affords its recipient a life long pleasure—such, I feel confident it will be for me. Thanking you again for your kindness. Yours respectfully,
Dallas, Texas. SISTER JULIANA FLEMING.

Please accept my sincere thanks for my diploma, which I received a few days ago. I think the Era Course in Pharmacy one of the most excellent studies a student of pharmacy can take. OTTO LANDWEHR.
Carlstadt, N. J.

SOAPSTONE.

By EDWARD W. PARKER.

Soapstone, or talc, is found in nearly every State along the Atlantic slope, the principal deposits being in New York and North Carolina, though it is also quarried in New Hampshire, Vermont, Massachusetts, New Jersey, Pennsylvania, Maryland, Virginia and Georgia. It has also been reported in some of the Western States, particularly in California, Arizona, South Dakota, Arkansas, and Texas. Prior to 1896 all the commercial product in the United States was reported from States east of the Mississippi River. In 1896, however, 150 tons of what may be classed with the soapstone product was quarried on Santa Catalina Island, a part of Los Angeles County, California. This material is included in the soapstone product for want of better classification. It is in reality a variety of verd antique, which, while an "impure" quality of serpentine, is more highly prized than the pure. The California product possesses some peculiar and interesting characteristics. It is sufficiently hard to take a high polish, and can be turned on a lathe into cups and other articles, the sides being worked down until they are as thin as rather delicate porcelain. The product from this quarry in 1897 was about 20 per cent. less than in 1896, but the difference was made up by the output of 30 tons of soapstone quarried in Shasta County, and which was ground for use in the manufacture of paper pulp.

The soapstone deposits of the Eastern States show widely varying qualities. In some places, notably at Gouverneur, Saint Lawrence County, New York, it occurs in a foliated or fibrous form, which makes it valuable as a filler or makeweight in the manufacture of medium grades of paper. This variety is known as fibrous talc. The soapstone of Maryland, Pennsylvania and New Jersey is also extensively used in paper manufacture. The entire product is ground. New Hampshire, Virginia, and North Carolina furnish soapstone suitable for sawing and manufacture into sinks, washtubs, griddles, slate pensils, etc. North Carolina also produces a very pure white soapstone or talc, which is used as the principal ingredient in complexion powders. Discoveries of soapstone deposits in Ohio (Seneca County) were reported in 1897, but careful investigation showed the reports to be without foundation.

OCHEER, UMBER, AND SIENNA.

Ocher is an impure hydrated oxide of iron or silicate of alumina colored by iron. Its color is usually yellow, but sometimes red or brown. The common form of ocher used commercially as a pigment is yellow in color, but of a great variety of shades, beauty, and opacity. Umber and sienna differ in composition from ocher in that manganese is present in addition to oxide of iron. Raw umber is used by painters as a brown color. Burnt umber is of somewhat richer and redder tinge than the raw, and is very popular. Sienna may be said to come between the other two. Used raw it is of a brownish-yellow hue. When burnt a redder tinge is developed, which makes a pigment of a rich russet brown.

These pigments are notable not only for their stability of color, but because they may be used with either oil or water as a vehicle for painting, in frescoing, and in the manufacture of wall paper and other colored papers.

THE INTERNATIONAL PHARMACOPOEIA.*

By PROF. BOURQUELOT,

Of the Superior School of Pharmacy, Paris

In the preface of the French Pharmacopœia of 1866, the great chemist Dumas, speaking in the name of the committee, expresses the wish that the various nations should agree to adopt a universal pharmaceutical formulary. The principal reason he puts forward is that all countries "are in constant

BOURQUELOT.

communication and that every day they exchange travelers by thousands." The idea developed and sustained by Dumas was immediately appreciated, and the following year one of the principal questions submitted to the consideration of the "Second International Congress of Pharmaceutical Associations and Societies," (which met at Paris, like the Congress of to-day, during an exhibition,) was the question of the Universal Pharmacopœia. The question was put as follows:

"Study of the method of composing a universal codex or legal formulary for the official medicaments of which the uniformity of composition is desirable in all the pharmacies of the civilized world."

Mialhe², who was charged to draw up a report on the subject, took up and developed Dumas' ideas expressing himself as follows:

"At a time when the new means of locomotion render communications between the various nations of the earth both rapid and easy, one feels, (for all these men suffering from the same ills,) the necessity of a treatment based on medicaments and preparations which have, throughout all civilized nations, one and the same interpretation; so that a medical prescription may be identically executed, be it in Paris, London, Vienna, Berlin, etc., or in the American States, with the same facility for the pharmacist, and the same security for the patient." And he concludes, "In order to obtain these advantages, it is necessary that all the civilized nations should adopt and recognize as legal, a pharmaceutical codex, identical in language, essential formulæ, and system of weights and measures."

The conclusions of Mialhe's report were warmly supported by most members present at the Congress, by Boudet, of Paris; by Dittich, of Prague; by Flückiger, of Berne; by Margraff, of Berlin; by Tisell, of London, etc. Boudet especially, more precisely defining what must be understood by "Universal Pharmacopœia," was careful to point out that a legal universal pharmacopœia would not in any way abolish the special pharmacopœia of each country; it would contain the formulæ of medicaments which could be used in all nations, it would have the advantage of guaranteeing to doctors and patients the uniformity of medicaments throughout the civilized world.

As to the work necessitated for drawing up such a pharmacopœia, it would consist in establishing an understanding between the pharmacists of all countries for the selection and the composition of the medicaments which should therein figure.

At the close of this discussion, the following propositions were voted nem con, except the first paragraph, where one unfavorable vote was cast (that of the United States).

*Report presented to the International Congress of Pharmacy, Paris, Aug. 3, 1900.

²This was the former proprietor of the pharmacy which is now owned by M. Petit, chairman of the 1900 Congress.

(1) Adoption of a universal codex of which the subtitle (proposed by Mialhe, after discussion,) should be "Collection of universally adopted formulæ."

(2) Adoption of the Latin language for editing the volume.

(3) Adoption of the Metric System.

The question of an International Pharmacopœia was thus clearly put by the Second International Congress of Pharmacy.

And where are we to-day?

Committees have sat, reports have been drawn up, the pharmacists of the majority of civilized lands, reunited in Congress, have not ceased to express the wishes embodied in the 1867 project. Yet, one must confess, the project has not yet reached the period of realization. The pharmacopœia committees, as Dr. Heger remarked at the Moscow Congress, have not even taken into account the work of those who have drawn up reports.

And yet, the reasons brought forward by the members of the 1867 Congress, are they not now even more striking than they were thirty-three years ago? To convince one's self of this it will suffice to compare, for the improvements effected in analytic methods render this possible, the composition of a few galenical medicaments used under the same name in different countries.

Here, first of all, are the facts regarding some active extracts, of which Kordes established the alkaloid values in 1888. We allude, let it be understood, to medicaments prepared according to the indications of the pharmacopœias actually in force, and, as far as possible, with the same raw product. The differences of composition are thus mostly due to differences of preparation.

Example No. 1.—Extract of Belladonna Leaves.

French Pharmacopœia, total alkaloids	0.53 p. 100.
German Pharmacopœia, total alkaloids	1.20 p. 100.
U. S. Pharmacopœia, total alkaloids	4.05 p. 100.

The first of these is an extract of the juice of fresh leaves, the second a hydroalcoholic extract of fresh-leaves, and the third an alcoholic extract of dry leaves.

Example No. 2.—Extract of Henbane Leaves.

French Pharmacopœia, total alkaloids	0.05 p. 100.
German Pharmacopœia, total alkaloids	0.62 p. 100.
U. S. Pharmacopœia, total alkaloids	0.94 p. 100.

(Same observation as for belladonna leaves, so far as the preparation is concerned.)

Example No. 3.—Extract of Nux Vomica.

German Pharmacopœia, total alkaloids	12.74 p. 100.
French Pharmacopœia, total alkaloids	13.25 p. 100.
U. S. Pharmacopœia, total alkaloids	15 p. 100.
Swiss Pharmacopœia, total alkaloids	15 p. 100.

These are all alcoholic extracts, and in the last two countries the strength in alkaloids is fixed by the Pharmacopœia.

Similar differences may be observed in all the other toxic extracts (aconite, stramonium, hemlock, etc.), and one notices that these differences are by no means negligible, for the proportion of alkaloids in an extract may, according to the mode of its preparation, vary from simple to double, triple, and even more.

These observations are applicable to active tinctures.

In France the tincture of nux vomica is obtained by treating one part of nux vomica by five parts of alcohol, while in Germany, Austria, Italy and Switzerland the same quantity of medicament is treated with ten parts of alcohol, so that in these latter countries, this tincture is about half as active as in France. And the U. S. tincture (which is an extract tincture) is again different.

TSCHIRCH.

Tincture of digitalis is, in France, 1 per 5, while in Austria, Italy and Switzerland it is 1 per 10, and in the United States 1 per 6.6.

Syrup of iodide of iron contains in Switzerland twice, in Germany ten times, in the United States twenty times as much iodide as in France.

In the same way tincture of Ipecacuanha, if we only consider the mode of preparation, should be five times more active in France than in Switzerland or Germany.

Is it not evident that above all nowadays, when the journeys of which Dumas spoke have become more and more frequent, when patients travel at every moment—and this often in search of health—from one country to another, that such a diversity in the composition of very active medicaments implies the greatest inconveniences, not to say the greatest danger?

Why, then, do our ideas progress so slowly? Is it not because the patients, i. e. the public (without whose help it is often difficult to draw the attention of governments) do not realize the risks they run? It is not pharmacists who need to be convinced. They are, as congresses have amply demonstrated, all convinced already; it is the doctors in the academies; it is the authorized ministers. And I think a table illustrating the facts which I have summarized, regarding the heroic medicaments, the only ones which our Belgian confreres have (and with reason) included in their project³—I think, I repeat, that such a table would put an end to much indifference on the subject.

We can still do something more ourselves. At the Moscow International Congress, in the Pharmacognosy Section presided over by our learned confrere, Prof. Tikhomirov, we asked by what practical means we could (while waiting for the governments to take action) remedy this diversity of composition of international medicaments. Motions were voted of which you will find traces in Prof. Tschirch's project. But besides this, we engaged ourselves to plead before the Pharmaceutical Committees of our respective countries, the cause of unification of methods of preparation of active international medicaments.

So far as I am concerned, I have kept my promise. I have pleaded before the Paris Society of Pharmacy, and this body, during the preparatory work which it has carried out in view of the next edition of the French Pharmacopœia, has shown its appreciation of the justice of the cause by substituting for the old formulæ, when this could conveniently be done, the formulæ adopted by several neighboring nations. This, for instance, was done in the case of the tinctures of very active substances, so that these tinctures, already identical in Germany, Austria, Italy and Switzerland, should not longer be, as they are at present, twice as active in France. I have

maintained these resolutions before the Official Committee and I think I may say they are adopted.

We have thus made one step towards the realization of the unification of the formulæ of international medicaments, and prepared minds for the adoption of the more radical modifications necessitated by the drawing up of an international pharmacopœia, even be it limited to heroic medicaments.

In conclusion I propose to the Congress the following motions:

(1) That a table should be drawn up emphasizing the differences in composition of the principal active medicaments inscribed under the same name in different pharmacopœias.

(2) That this table be addressed to the Official Committees with a circular inviting them to take into account as far as possible, when revising for a new edition of the pharmacopœias, the motions voted by International Congresses of Pharmacy in favor of the unification of formulæ of preparation of active galenic medicaments.

(3) That henceforth pharmacopœias should indicate what are the preparations common to pharmacopœias in neighboring countries ("pays limitrophes"), either by a note added to the article devoted to each of these preparations or by a special table.

[As a postscript to the above interesting document, we may add a brief summary of Prof. Tschirch's proposition. "Considering," remarked the Swiss savant, "that the negotiations for drawing up an International Pharmacopœia, so as to establish a uniform dosage for heroic preparations, have never come to anything in International Pharmaceutical Congresses, and this (1) because all countries are never represented, (2) and those which are present are represented but by hazard; (3) because, also, the propositions are never studied long enough beforehand, and (4) finally, the delegates, having no official mandate from their governments, cannot make definite decisions.

The International Paris Congress of 1900 decides to communicate with the Belgian Government, who lately took the matter in hand, as follows:"

The rest of the document was practically given in our report of the Congress. It consists of a proposition for a conference of official delegates, who should have ample time to study the subject beforehand and full authority to vote. As Prof. Tschirch remarked in conclusion: "It is not at an improvised meeting of delegates, unfamiliar with the question, that we can resolve the problem. A carefully drawn up project discussed in a conference (prepared long beforehand) of official delegates of governments and of associations interested can alone lead us to the result that everyone so ardently desires."]

HOW ARE WE TO INCREASE OUR TRADE AND PROFIT.*

By J. C. BURTON.

"How are we to increase our trade and profit" is the very difficult subject which has been assigned to me. In order to increase the profits of an entire industry it is either necessary to cheapen the cost of production or else to increase the selling price of the article produced, or in other words, to in some way increase the ratio between the cost of production and the cost to the consumer. To do this in the drug business would certainly work an injustice to some one, however we may reason, and would therefore be wrong. The question given me therefore must be in some way limited. To increase the profits on the entire drug business of the world is practically an impossibility, but while this is true, an individual druggist may often legitimately increase his trade and thereby honestly enlarge his profits. In fact this is always the reward of the man who is best qualified to take his place and hold his own in the great world of competition. In all of life's manifold pursuits there is an unavoidable competition constantly going on between every man and every other of his craft. The competition may be perfectly friendly but never-the-less it must always go on, and the survival of the fittest is

³A communication from the Belgian Academy of Medicine had reached the French Academy of Medicine, of which M. Bourquelot is a member, a few days before the Congress, on this subject.

*Major portion of a paper read before the Oklahoma Pharmaceutical Association and reprinted from the proceedings.

a law that is rarely broken. In law, in medicine, and even in the ministry the law holds good. He who is of greatest parts, of broadest resources, of best general and specific fitness is the man who almost invariably receives the greatest reward, both in popular applause and in actual hard cash. But all this is as true in business as it is in the profession, and the drug business no less than any other. A man in the drug business, as well as every other business should be competent and thoroughly understand his particular business. While it is true in some cases unqualified men have in a haphazard way increased their business and made them profitable, on the other hand if a man is enterprising, speculative, and not afraid of his work, his competency in the work he has chosen will disclose to him avenues of success that are closed to many of his competitors, and in this respect the competent man should and does have a tremendous advantage over others who do not enjoy a liberal knowledge of the business. It is an exceedingly important factor in the drug business to establish a reputation for being competent. When this fact is permanently settled in the minds of the people of the community in which you are doing business, your trade increases. The mere stereotyped expression in an advertisement "Prescriptions carefully compounded" has not the weight towards convincing those whom you desire as patrons that you are competent. But when it is clearly demonstrated to them that you are capable of successfully performing the duties of the business you have chosen, capable of grasping the opportunities as they present themselves, and of accomplishing good results when others have failed, you have established a confidence which will result in greatly increasing your trade. The thing therefore to ascertain is what constitutes the highest and best qualifications for a druggist.

First:—Love for his business. No man can ever succeed in increasing his business and making it profitable unless he has a fondness for that particular business, and I know of no other business that furnishes so wide a field of beauty and admiration as the drug business. Take the great and very interesting chemical changes produced by the action and reaction of one chemical upon another; this furnishes an inexhaustible field of research, love, beauty and admiration for one who loves the drug business.

Second:—Thorough preparation. In preparing ourselves for the drug business we have to consider not only how to make ourselves the best pharmacists and pill-venders, but also how to be learned, wise, discreet, self-contained, capable of dealing practically with all kinds of people, and also of enjoying a little of the higher intellectual life. The success of a druggist depends quite as much on knowing how to meet and handle men as knowing how to dispense drugs. A druggist's success is not dependent wholly on college education, nor do we mean to discourage at all those who have not been able to secure it, but it is a preliminary which it is advisable always to try and obtain, and observation shows that there is an increasing desire to obtain it, because the thorough pharmacist of to-day, who has become a man of considerable scientific attainment, is of good social standing and occupies a position of responsibility and confidence in the estimation of the public.

Self help, Independence and courage. One of the secrets of success is the capacity to help one's self. The life story of nearly every successful pharmacist reveals always the same fact—they depended upon no man, but put their own shoulders to the wheel and pushed. Innumerable druggists, I am sorry to say, are wasting their lives because they are living daily upon some great expectation. It is a great pity that druggists are not taught to be independent, and waste their lives in waiting for an opportunity to step into some one else's good fortune. Every druggist should be able to find something to do and make a success of his business by self-help. The practice of pharmacy should be made real life, and we should learn to appreciate the independence of it to be successful. Another secret of success is courage. A druggist should have a certain bold initiative, of course we should discriminate between courage and over-confidence. Learn how to do things. Put your whole energy into your business and at all times observe little things. Find out

the ways of progress. Courage, self-help and independence are the foes of difficulty. A few men are apparently born lucky. But the great majority of them are born to win success in the struggle of self independence and courage. I don't believe any man falls into success; some succeed by superior talents, others by the influence of friends, but the majority succeed by the dint of hard work, having the spirit of courage and self independence.

In order to increase our business and enlarge our profits we must make up our minds to do for ourselves, to learn something useful, to get some new idea each day, to learn personal courage and independence, to train ourselves in observation and not wait for others.

Concentration of business. This is another matter to which I wish to call your attention. It is the matter of the concentration of our business. I might say in this connection the tendency of the times is toward centralization, toward specialties. Not only is this true in the business world, but in the professional world as well. Our physicians have their specialties, and this is in a great measure true in business. Take the dealers in the various kinds of merchandise. The numbers of exclusive lines of merchandise handled at present are much more numerous than they used to be. I believe this is progress in the right direction, and the needs of our people better served by reason of it. I believe the druggist should have the sole and exclusive control of all pharmaceutical preparations. The druggist in the sale of nearly all toilet articles, such as perfume, face powders, and extracts of various kinds, comes in competition with the groceryman, the dry goods man, and other dealers in merchandise. These articles should properly be handled by druggists. The things that are Caesar's should be rendered unto Caesar, and the things that belong to the groceryman and the dry goods man should be rendered unto the grocery man and Jew. These lines of goods handled exclusively by the druggist add their mite to the profit of the business, leaving out of consideration the superior quality of these articles handled by the druggist. These are simple illustrations of infringements on our business. Perhaps more friendly relations with our neighbors, if no other remedy is applied, would help eliminate this evil. There are those who overstep the legal bounds in infringing on our domain. In such cases it is our duty as good citizens to see that the law is enforced.

We can increase our trade and profit by assisting our doctors in the adoption of some means to counteract the growing heresy and skepticism about the practice of medicine. The seductive advertisement of quacks and the patent medicine venders create this condition in the public mind. They improve every opportunity to bring themselves and their wares to favorable notice. The doctor does not. The religious and secular press team with such literature, and our drug stores dispense cords of it, and we behold the humiliating spectacle of an unsuspecting clergy consenting to become the mouth-piece for heralding the alleged virtues of the many patent and proprietary nostrums that flood the land. Everywhere the hand of quacking with paint and paste is getting in its work. There is no disguising of the fact that the people are running after strange gods. For the physician himself to expostulate and find fault would only make matters worse. The question then naturally arises, "What can be done to counteract the evil?" It is easy to find fault, and those doing so should always propose something better, and the proposition to be valuable must be practical. As such we submit that the medical profession with our assistance must educate the people in their own interests. "How?" First, by popular lectures. Second, by printed matter. As to the first method, we confess that we cannot at all times get the ear of the masses. But we can attract them through others. For instance, through college classes, through teachers' institutes, county pharmaceutical associations, etc. Let us organize county associations and hold joint session with the teachers' institute for one day, and let it be addressed by some member of the medical profession of acknowledged skill and ability in a lecture on some popular subject, together with a paper of two on some branch of pharmacy. These lectures and papers would become the occasion of popular gatherings of the people. In a little while everybody would be convinced

that the regular medical profession, working in perfect harmony with the qualified pharmacist, in point of scientific attainments, is without a rival, and justly wants the confidence and patronage of the public. The school teachers of the county, the county officers, the lawyers, the people of culture and refinement, that naturally drift into our county centres are thus educated, brought face to face with the fact that we are the true investigators the exponents of all that is new and useful in pharmaceutical and medical science.

Let us now consider that silent yet most potent of all means of educating the public—printer's ink. A power that has been so abused that the medical profession shrink from its use. Hence it is our duty to come to their assistance and get this matter before the public in such a manner as to offend none and interest all. We can take for instance the duties of patients to physicians and arrange it in short paragraphs on wrapping paper, have it so interspersed with items of wit and wisdom and useful recipes as to interest the general reader. The arrangement of the printed matter should be such that the sheet may be torn into halves or quarters without marring the text, thus enabling the dispenser to obtain a wrapper adapted to any size bottle or package, and have the sense complete on both sides. The people best supplied with books and papers will pay but little attention to a mere wrapper. Should they notice it, no criticism could be offered for the wrapping paper would so closely resemble the leaf of a medical journal that the uninformed would never think of its being anything else. On the other hand, the illiterate who have few or no books or papers eagerly grasp at everything of the kind. They are the victims of the patent medicine man, and of all others are most in need of orthodox teaching. It is here that we have the best field for missionary work, which no false notion of professional dignity should deter the doctor from cultivating.

The medical profession is justly entitled to the privilege of informing the public of their duties toward them. If done at the proper time and place, we elevate rather than lower the professional dignity.

A FEW INCOMPATIBILITIES IN MEDICINAL TABLETS.*

BY JOSEPH R. WOOD, M. A., Ph. G.

Of the three kinds of incompatibility—Physiological, Physical and Chemical—the latter two are the ones on which this paper will touch.

In order to clearly understand the difference between incompatibility in tablets, and in the other solid forms as well as liquid, it is quite necessary to have knowledge of the processes by which tablets are made, and the physical condition of their ingredients at the time they assume the form of tablets.

There is a quite general and perhaps natural idea that compressed tablets are made from moist material, moisture apparently being thought necessary to insure the cohesion of the particles. The fact is, however, quite the reverse, with very few exceptions it is imperative that the granulation be absolutely dry.

In the next place, it is essential that the material when ready for compression, should consist of granules of nearly uniform size, having not more than a small percentage of fine powder associated with them. This is rendered necessary on account of the mechanical construction of the compressing machines, which up to the present time, have not been so devised as to feed fine powder into the dies in such a manner as to insure a resulting tablet of uniform weight, obviously a necessity. Upon the proper preparation of this granulation depends the quick solution or disintegration, as well as uniformity and physical appearance of the finished tablets.

As these granules must be absolutely dry before compression, and this state of dryness be attained in most cases by means of a greater or less amount of heat, it is plain that many medicaments should at once be eliminated from compressed tablets.

Oils in general can be incorporated into compressed tablets only in very small proportions. One-quarter of a minim to six grains (about four per cent.) is about the maximum under most favorable conditions; that is, when the other ingredients of the tablet are of an absorbent nature. Preparations of drugs dependent upon volatile principles for action are at best of little value in tablet form.

To illustrate, we could take many well known formulas, for example, "Camphor, Hyoscyamus and Valerian," containing Camphor 1 gr., Exts. of Hyoscyamus and Valerian, each one-half grain.

We have here a large proportion of camphor, which is very volatile, and Ext. Valerian which is dependent for its virtues upon a volatile oil and a volatile acid, and yet the granulation for this tablet must be dry before compression.

The camphor presents no great difficulty, for, in a properly made tablet, it is added in a powder of medium, uniform fineness, to a granulation of the other ingredients. But we still have the Ext. Valerian to consider. Dependent as it is entirely upon volatile constituents for medicinal action, it must yet be freed from moisture. In doing this, the extract is rendered practically inert. Dried either with or without heat, its active principles evaporate as rapidly or faster than the moisture.

The remedy for this defect lies rather with the physician than the pharmacist. However, the latter suggests that if in this case the extract were replaced by say one-half the quantity of Ammonium or Sodium Valerianate, a tablet of full therapeutic value would be produced, and one which would possess unimpaired all the virtues of its ingredients.

Again, we may examine "Cough No. 3," containing Tr. Sanguinaria 3 min., Morphine Acetate, 1-16 gr., Wine Antimony, 5 min., Syr. Wild Cherry, q. s.

It may be of interest to cite rather in detail the method employed in making this tablet to show how such seeming impossibilities are made possible. Of course it is obvious that no Syrup of Wild Cherry can be made into tablet form and at the same time contain Hydrocyanic Acid, and yet tablets are easily made to give the therapeutic effect of the formula, and to all appearances, to eye, nose and mouth, have characteristics of Wild Cherry.

The first step is to exhaust the necessary quantity of Wild Cherry Bark. This infusion is evaporated on water bath to consistency of soft extract (of course rendering it valueless, by driving off HCN, so far as sedative properties are concerned). Our Tincture Sanguinaria is also deprived of its alcohol by distillation, and subsequently evaporated to soft extract by gentle heat. This is uninjured, if the process is properly carried out. As Wine of Antimony is out of our province, the requisite amount of Tartar Emetic is used, of course with full value. This, with the Morphine Acetate is triturated thoroughly with the sugar used as the base of the tablet, and the mixture incorporated with the soft extracts from our Wild Cherry and Sanguinaria. We now have a damp mass suitable to force through a sieve to form the granulation. The latter is then dried at low temperature and the material is ready for compression, except that we have not yet brought our Wild Cherry to life. This is but the work of a moment, however; for the equivalent of this ingredient as regards HCN is quickly added in the form of Oil of Bitter Almonds.

So, in this tablet and similar ones, a kind of substitution is enforced to produce a tablet of therapeutic value.

The various "Damiana Compound" tablets would be well-nigh useless were they dependent for action upon the Extract of Damiana. The volatile oil is of necessity mostly dissipated in drying, but fortunately with a small portion remaining to impart an agreeable odor, the impaired ingredient in this class of tablets is ably reinforced by such potent drugs as Nux, Cantharides and Phosphorus, to which, rather than the Damiana, the practitioner must look for his results.

Turning to chemical incompatibilities:—

Chlorate of Potash, dangerous of course with any organic body, is strangely enough almost equally dangerous when compressed with Ammonium Chloride. The

*Read before the Washington County Medical Society and reprinted from Claffin's Druggist.

tablets are the more to be guarded against because of their liability to explode violently without apparent cause, long after they have been made, and are resting quietly in their container on the shelf. Separate administration of the two salts is of course the remedy.

In the "Emmenagogue Improved" tablets, Extract of Cotton Root is exhibited. The pharmacist raises the question whether the astringent principle contained therein, does not precipitate the alkaloidal principles of the Ergotin, thereby at least reducing if not destroying its value.

It has been claimed that Morphine and its salts are partly changed, on prolonged contact with Sugar of Milk, to Pseudo-Morphine, and to so far lessen its value. How far this is true, I cannot say.

"Heart Stimulants" containing Nitroglycerin and Strychnine Sulphate, in combination present an interesting point. If you should turn back in your price lists of Hypodermic Tablets some six or more years, you would find in some, if not all of them, the following formula:

Nitroglycerin and Strychnine:

Nitroglycerin, $\frac{1}{100}$ gr.

Strych. (Sulphate) $\frac{1}{150}$ gr.

Some still adhere to this formula (in print). Most lists to-day give

Nitroglycerin, $\frac{1}{100}$ gr.

Strych. (Nitrate) $\frac{1}{150}$ gr.

When Nitroglycerin and Strychnine Sulphate are brought into contact with each other, a chemical reaction takes place. Just what, I am not prepared to state. A yellow color is invariably produced in a moulded tablet. If you see a white moulded tablet containing Nitroglycerin and a salt of Strychnine, you may rest assured it is not the Sulphate. It seems possible that the sulphate acts upon the Nitroglycerin liberating free Nitric Acid, which in turn acts upon the Strychnine, producing the characteristic color reaction in light tint. Whether any appreciable change in therapeutic value occurs as a result of this reaction, I do not know.

In moulded tablets we have practically the same conditions to deal with as in the compressed variety except that the condition of the solid ingredients must invariably be that of an impalpable powder. The tablet must be freed from moisture after assuming its form. This of course, renders still more difficult the exact dosage of volatile ingredients. Thus Camphor cannot be made definite in dosage. It is usually incorporated in alcoholic solution with the other solid ingredients the whole mass then being moulded and subsequently dried out. An indefinite amount must evaporate, depending upon the amount contained, the amount of moisture used in moulding, the heat employed in drying, etc.

By way of note, a word here may be said regarding pills of the friable or pulverous kind. All solid ingredients of these must likewise be in impalpable powder, except such as may be dissolved in a small amount of some bland fixed oil, or glycerin, which are used as excipients. Consequently they are subject to practically the same rules governing admissible constituents as are compressed tablets.

From the cases mentioned, it will be seen that chemical incompatibility in tablets is, except in a few instances, the same as in powder or liquid form.

Physical incompatibility in a tablet may in most cases merely be measured, so to speak, by its capacity (or perhaps more accurately, incapacity) in a dry state also by considering whether or not a volatile product lost in their manufacture is an article of commerce in its isolated state. If so, it may frequently be replaced by adding as much as may have been volatilized to the granulation in compressed tablets; to the tablets themselves in moulded ones.

To illustrate this point, take the case of a tablet containing a large amount of Capsicum or Ginger. The volatile portion is partly dissipated in drying, but, as this volatile portion, in the form of oleo-resin, is a commercial article, the loss may be replaced and the full value of the drug be attained in the finished tablet. Take, on the other hand one containing Damiana: once the volatile portion is lost, we cannot replace it, for it is not a commercial article.

Aside then from chemical incompatibility, formulas calling for more than very small quantities of volatile ingredients, as well as those calling for drugs dependent upon such for action should be avoided, if decided results are to be expected.

ON SOME ORGANO-THERAPEUTIC PREPARATIONS.*

By J. C. McWALTER, D.P.H., L.R.C.S., Etc.

Somehow organotherapy savors so much of quackery that there must be an initial prejudice against giving it even a fair trial. Considered as a system of therapeutics, it is apparently based on that much-abused dictum of the homeopaths, *similia similibus curantur*, except that the text is tortured so as to mean that the remedy for a disordered condition existing in an organ in the human subject must be sought for in the corresponding healthy organ of a lower animal.

Though this proposition is so simple as to seem absurd for a therapeutic canon, yet there is nothing in it contrary to sound reason. The whole system, indeed, appears in danger of falling into disrepute, except with regard to a few remedies, but this is rather due to the blind empiricism of the prescribers of these remedies, and the unscientific methods of the makers of them, than to any inherent defect in the theory or the system itself.

Now serum therapy depends for its application on a theory which is not unlike that which justifies organotherapy. In the former the constitution of the blood stream is sought to be modified by the addition of a product similar in character, but less in intensity, to that which would be produced by certain micro-organisms in the blood itself. The dominant idea in organotherapy is to add to the blood the secretion normally produced by the gland or organ which, in the given case, has its function disturbed.

"All the glands," said Brown-Sequard in 1869, "whether they have excretory ducts or not pour into the blood certain active principles, and where such internal secretion is absent, either from disease or extirpation of the gland, the result is ill health."

Some years after, having still further pursued his researches, he wrote: "We hold that each tissue, and even every cell in the organisms, has the power of producing a ferment or special product, which, circulating in the blood, has the power of influencing, through the intervention of that liquid, all the other cells of the body with which they come in relation, through the mechanism of the nervous system."

From 1889 to 1895 he demonstrated the physiological functions of the internal secretions of many of the glands of the organism, and also of some tissues.

Opothropy, or rather organotherapy, is founded on the belief that the function of a living gland which is suppressed or altered can be supplied by the introduction into the organism of some preparation of a like tissue prepared from a healthy animal.

In such a case we may use either the tissue corresponding to the unhealthy one, or a preparation of this tissue with certain vehicles or excipients with some active principle derived from the tissue.

This method of medication then utilizes the various organs of healthy animals in various galenic preparations, whereby these active principles are elaborated or preserved. For a long time pharmacy has employed pepsin (the soluble ferment extracted from the stomach of the pig, sheep or calf) and pancreatin (a complex product, which plays the part of a triple ferment, extracted from the pancreas). Now these should rightly be considered organotherapeutic products, because they are secreted by the glands of the organism and being the best known, most carefully studied, and most clearly defined of such ferments, have long been accorded a place with such definite ferments as papain, diastase, emulsin and others, which play an important part in active pharmaceutical preparations.

Among the various glands and organs which have

*Paper presented to the Annual Meeting of the British Medical Association at Ipswich.—(Br. and Col. Dr.)

been employed for the organotherapeutic method are the testicle, ovaries, the prostate, the mammary glands, the parotid, the supra-renals, the kidney, the thyroids, the thymus, the liver, the spleen, the tonsils, the pancreas, the cerebral substance, the medullary substance, the pituitary body, the ciliary bodies and the vitreous humour, bone marrow, muscles, lymphatic glands. Of these, the thyroid extracts only have taken front rank as therapeutic organs.

Choice of Organs.—The organs should be those from oxen or sheep, and only perfectly healthy organs from sound animals should be selected. The system of veterinary inspection in some districts will be almost sufficient to secure this. It is necessary, however, to examine each organ separately. Any one that is cystic, hypertrophied, or presents the appearance of anything abnormal, should be immediately rejected.

The choice of the species of the animal varies with the organs which we may wish to employ. Thus, for the thyroid body the sheep is preferred, for the supra-renal capsules and the thymus the calf, and for the liver preparations the pig. Where genital organs and their adnexa are utilized, they must be from healthy adult animals of full sexual activity.

The French workers, Gilbert and Carnot, have called attention to the physiological preparation of the animals.

These authors hold that if we employ a gland for its particular function, the animal should be able to assist, so as to exalt that function to its highest degree. They also think we should put, as it were, a tension on the gland, and that we should so develop it that it may be charged to the highest degree with the active principle at the moment of the death of the animal.

Finally, these authors hold that it is of advantage to combine preparations of these organs or their extracts, as, for instance, pancreas and spleen, liver and spleen, pancreas and liver, etc.

Certain precautions should always be taken in the manipulation of these extracts. The active principles are biological rather than chemical, and not only must the most rigid antiseptic precautions be taken, but the active principle must be sought to be extracted while the gland is still hot from the animal.

Fat and connective tissue must be removed; in fact, everything but the organ itself. It may then be lightly washed with water recently boiled, and plunged into sterilized glycerine, for fluid preparations, or dried at a temperature between 35° and 40° F. if a dry preparation be desired. For these operations the hands of the operator should be thoroughly cleansed with soap and water, and then rinsed with some of Van Sweiten's liquor, and then in freshly boiled water.

To cut the organ into small pieces, we may use either an aseptic knife or scissors. To make the instrument aseptic it is kept for some time in an antiseptic solution, of which the formula is:

Borax	10 parts
Cyanide of mercury.....	2 "
Distilled water to.....	1,000 "

Steel instruments will not oxidize this even after a long time, and softening of the cutting edge is avoided, which inevitably happens if they are passed through flame.

Capsules, mortars, etc., which would not bear this treatment, must be made aseptic by lighted alcohol, while earthenware vessels which would not bear heat must be well washed in corrosive solution 1—1,000, and then rinsed with recently boiled water.

Finally, the finished products should be carefully preserved in aseptic stoppered bottles.

The following preparations are used:

Corpora lutea sicca.—The troubles arising during pregnancy are sometimes said to be due to auto-intoxication, arising from functional insufficiency of the corpora lutea. These bodies, taken from animals and carefully dried and powdered, have been given in doses of about 1 grain twice a day to pregnant patients complaining of vomiting, nausea, suffocative attacks, palpitation of the heart, and hyperæmia. The symptoms of vomiting subsided, while the other troublesome symptoms rapidly subsided, and completely disappeared in a short time.

Glandula Prostata Siccata.—Prostatic gland substance, dried and powdered, has been used with considerable success in hypertrophy of the prostate. Oppenheimer has

also used it in chronic prostatorrhœa, and found it to induce rapid and permanent cure, provided that no gonococci were present. A glycerine extract of the fresh gland would seem to be the most active preparation.

Glandula suprarenalis.—The fresh glycerine extract of the suprarenals seems to be the most reliable preparation. Its success in Addison's disease far exceeds that of any remedy hitherto tried, while Stochtzner reported considerable improvement in rachitis from its use. According to Merck, he concludes that:

1. The suprarenal substance produces excellent results upon the general condition, restlessness, sensitiveness, vasomotor excitability, and especially craniotabes. These symptoms are frequently visibly improved in one or two weeks.

2. The cutting of teeth, and the power of sitting, standing and walking are also assisted perceptibly by this treatment. The softness of the thorax also improves with marked rapidity.

3. The influence on the epiphyseal swellings and the deformity of the thorax is less marked.

4. Even where the cases are complicated with bronchitis, pneumonia, etc., the improvement is most marked.

Extractum Materia Keratogena.—The extract of the rudimentary horn tissue of calves has been used by Zelendi (quoted by Merck) for two years with great success in the treatment of syphilis. This has been made with far greater scientific care than the majority of such preparations, being obtained by treating the fresh horny tissue with physiological salt solution. Such a solution seems to give more active results with animal remedies than any other solvent, except perhaps glycerine, but unfortunately it does not keep very well. The cases treated were of primary, secondary, and tertiary syphilis of all ages, and when from 1 to 3 cc. were injected into the lumbar region and the injections repeated at intervals of from one to eight days, improvement was generally manifested after the first injection. There were no unpleasant accessory symptoms of any note, eruptions and lesions of the skin and the mucous membranes disappeared, ulcerated syphilides dry up, and scabs become detached. The local treatment is limited to ablutions of boiled water or boric acid solution, or to cauterization with silver nitrate. From 10 to 30 injections seem to produce a permanent recovery.

Extractum Placentum Siccum.—Iscovert records a distinct improvement of all reflex symptoms proceeding from the genital organs in chronic metritis and abnormal processes from the genital organs in chronic metritis and abnormal processes of involution of the uterus post partum with the aid of tablets made from dried placenta.

Glandula Thymi.—Beard has shown in the Lancet that the thymus gland is that element in the embryonic system where leucocytes are first found, that is, from epithelia, as has now been proved. From the thymus gland the leucocytes wander into the blood and other organs, and at certain centres form the foundations for the several lymphatic approaches of the body. As the latter develops the function of the thymus gland recedes. Macalister has tried the gland extract in a case of pseudo hypertrophy myopathia with decided success. Tablets of the dried gland have hitherto been used, but an extract of the fresh organ made with glycerine and physiological salt solution would probably be more active.

Regarding tests for organo-therapeutic preparations, the most notable advance has been made by Posner, who employs for the purpose of the differentiation of the various glandular substances Ehrlich Bionde's triple stain, which marks out the nucleic and nucleo-albuminic properties of the majority of these preparations. They also give most of the reactions for albumen with ferrocyanide of potassium and alcohol. The bulk are partially soluble in glycerine and coagulable by heat, and on gentle warming with solution of potash a characteristic odor is evolved. If a portion of a dried preparation is tested with water, some chloroform added, and the mixture allowed to stand for a day, chlorine gas is evolved.

Cerebrum.—The results obtained by the administration of brain substance have been on the whole disappointing. This is probably due to the fact that it has been mostly used in dried or tablet form, which involves a mode of desiccation that must disorganize the complex constituents on which its efficacy would depend. The better and

more rational method would seem to be to make an emulsion of the brain substance, while still hot from the animal, in a sterilized mortar, with fresh lard and tragacanth, flavored with oil of almonds, something like pancreatic emulsion. That an emulsion of brain substance is of considerable efficacy is shown by Wassermann (quoted by Merck), who has shown that 1 cubic centimetre of an emulsion containing an equivalent of about a third part of brain substance of various animal species suffices to completely neutralize the effects of a tenfold lethal dose of tetanus poison. This discovery was put to the test on a tetanus patient, who was saved by repeated injections of 5 cc.m. of fresh brain substance in 15 cc. of physiological salt solution. Widál also discovered that with the aid of brain substance it is possible to render morphia and strychnia innocuous. This is stated, however, to be due not to any specific property, but to a merely mechanical occlusion.

Glandula parotis.—The parotid gland substance has been used with good effect in ovarian troubles. Dr. Bell reports that he has tried it in sixty cases, and that complete recovery took place in many, while in others the necessity of an operation was avoided. The glands of rams and ewes are utilized, and a powder may be prepared by drying them, of which one part is equal to two of the fresh gland. A more active solution can be produced by maceration of the gland, still warm from the animal, in sterilized glycerine, or in saline solution.

Lien.—The results of the use of splenic extracts have hitherto been disappointing. Dr. Wood, who used it successfully in Graves' disease, found that the requisite doses gave rise to dyspepsia and vomiting, while subcutaneous injections resulted in local inflammation and suppuration. The usual preparation has been a powder (*lien siccatus pulverisatus*), of which one part corresponds to five parts of fresh spleen. Such a substance must necessarily contain an excess of inert or irritating interstitial tissue, and probably an aseptically expressed juice prepared in glycerine and salt would be more active.

Mamma.—It is said that the mammary gland yields to the blood an internal secretion, which, when deficient, usually results in hypertrophy or disordered function of the uterus. If the secretion be supplied vicariously from the glands of healthy animals it can restore the uterus to its normal condition. Hence remarkable results have been obtained by the use of 5 grains to 10 grains of a powder which is equivalent to 8 or 9 parts of the fresh mammary gland substance of the cow. In cases of uterine fibromata the tumor formation was reduced, and in cases of menorrhagia the general condition of the patients improved and the pains subsided. A preparation called *opomammium*, made by treating the fresh glands with saline solution seems to be of even greater efficacy.

Pulmones.—Extracts of lung tissue are made from the parenchymatous tissue of robust young sheep. In cases of chronic bronchitis, attended by emphysema and even tuberculosis, its use was followed by considerable improvement; subcutaneous injections of preserved pulmonary juice were given in doses of about a drachm, or even with a little water on an empty stomach. The dried preparations are probably inert.

Glandula Bronchialis.—Some physiologists think that the bronchial glands secrete a substance capable of resisting the entrance of bacilli into the inner air passages. Hence it had been hoped that the infected and diseased organism might have its resisting powers increased by the artificial introduction of the glandular substance. Results have hitherto been disappointing, as fever and emaciation were produced by its use. If the fresh glands were treated with physiological salt solution and sterilized glycerine, and the resultant fluid submitted to dialysis, it is likely that a preparation would be obtained free from the albumen which causes the pyrexia.

Hepar.—Notwithstanding the remarkable results which have followed the use of preparations of fresh liver juice, it has not attained very great use in therapeutics. A glycerine extract has been found to keep an animal alive for several days after ablation of its liver. In diabetes, when used hypodermically, the quantity of sugar materially decreased, without any change in the dietary. In cirrhosis 3 or 4 ounces of fresh liver given daily has resulted in marked diuresis and general improvement. The liver contains a product that controls hemorrhage,

and the aqueous extract has been used in phthisical hæmoptyses with success. Although this extract is very active, it requires to be made fresh on each occasion. The most active and stable solution would appear to be an extract obtained by macerating the liver hot from the animal in sterilized glycerine and salt solution, and keeping the solution aseptic.

STOCK KEEPING.*

By W. B. WHEELER.

"Keeping Stock" means the whole business of the druggist, the "IT" of the profession. Without stock, properly kept, one is soon without trade, business or store, and usually looking for a job he can't hold down long. But I don't believe a kind hearted committee intended to impose so broad a burden on so slender a member, and, therefore, I will not attempt to go into all the details of the drug business as I have learned it, for that would require subdividing the subject into many classifications.

It has been well said that, "When a man finds the easiest thing for him to do and adopts that as his life's work, he becomes a success in life." The druggist whose heart is in his business; the bent of whose mind is in his profession; whose trend of thought is of constant study of his work, enlarging his knowledge of the business, learning the needs of his trade and supplying them—that druggist has found the "easiest thing for him to do," and is doing it, and is a success in life.

And to my mind, "keeping stock" is the easiest, and hardest, and by all means the all important part of the business of the drug store man. Easiest because it is of all absorbing interest, involving his best thought, his closest study; hardest because it occupies so great a portion of his time.

It requires a close study and the anticipation of the wants and needs of the trade and keeping what your customers call for to build up and maintain the reputation that anything and everything in the drug store line can always be found at "Old Pharmacologist's Store." This is not "keeping stock," it's getting stock—buying goods. And there one's judgment has to be called into use, for the purchase of the proper quantities may be called a fine art. It would never do to buy paregoric by the bucketful when there is a shortage in the crop of babies, and, when the grain yield is full, machine oil should be ordered in larger quantities than pints. But these articles being staples, not much harm comes from improvident buying, for conditions may change to suit the trade, infantile stomach ache may become rampant and one can always make a hurry order of what he is short of.

This is an age of inventions. One class of boosters for the drug trade are constantly inventing or discovering new diseases, new ills of the human flesh, while another class is following in close pursuit with remedies to fit the disease, the advertisements of which furnish thrilling accounts; giving interesting reading matter for the papers of the magical cures—adding fame to the statesmen of the country in the publication of their pictures, together with the glad news to their constituents that the awful malady has found a cure. And it devolves upon the stockkeeper to see that at least a bottle or two is always on hand when called for. In this age of progression the druggist must be up to date, along with the procession, and as near as possible to the band wagon.

Of course buying stock is one thing and keeping stock is another; yet the two cannot be separated, at least cannot live happily apart. Buying stock is a matter of judgment only acquired by continual study of trade conditions, perpetual posting of new remedies and the latest appliances and methods of treatments—the early morning work of the druggist who is strictly up to the day and date. Keeping stock is the work of the artistic element in the druggist's make-up, for there is the thing that appeals to the eye of the customer, that invites him into the store. There is nothing so pleasing, in the mind of the druggist, as a perfectly appointed drug store. Nowhere can one display the talent of the artist as in the arrange-

*Read before the 1900 meeting of the Oklahoma Pharmaceutical Association.

ment of the thousand and more things that constitute a drug store. And yet two dissimilar elements must be combined in the ensemble: The general effect of the appearance, and the convenience of the salesman. While our places must always be inviting, articles must be so arranged that the clerk can find everything asked for immediately. A customer is always pleased to find that his favorite nostrum is well known to the druggist—is a very popular remedy, and to please the customer is the first duty of a business man.

And then, you know, the sign "If you don't see what you want, ask for it," has no place in the drug store. It would be superfluous where there are so many things "out of sight."

In keeping stock, it must be well kept. There should never be an accumulation of "old" goods—"old looking" goods. With the same system of a good housekeeper a good stockkeeper looks after the cleanliness of his store. No dust should be allowed to accumulate; spots of dirt must be eradicated—everything kept looking clean, and new, and fresh, and inviting. There is no wear on a stock if you are careful, but you had better throw away that which looks old than disgrace your store with its dirty appearance.

The stockkeeper must keep the buyer informed of what he wants—must never violate the rule of "do it now," in entering in the order book the things needed and required, and when all this is done, it seems to me all is performed that goes to make a drug store what it should be to the success the profession deserves.

And now in conclusion permit me to express the hope that the storekeeper of this Association will ever be faithful in the duties his position imposes and in all the walks of life he may so conduct himself that, when his own stock is taken by Saint Peter, he may be found so thoroughly equipped that he will be given a golden harp and a high seat within the pearly gates as his reward for faithfulness to duty, in preparing to alleviate the sufferings of all mankind while on this earthly sphere; may the stars of the twilight and the dawning of the day be bright for him and peace and comfort and contentment be his—for I am a stockkeeper myself.

THE CRYOLITE OF GREENLAND.*

In 1850 the Danish Government held, in Copenhagen, an exhibition of Eskimo tools and products from their distant colony in Greenland. Among the implements shown were a number of stone sinkers, which the natives had used for their nets, some of which sinkers were made from a white, translucent mineral. Dr. Hartman, a scientist, noticed these, and having secured a specimen, analyzed it and found it to be the rare and valuable mineral cryolite.

During the following year the Danish Government made investigations, and discovered a large deposit near Ivigtuk, on the west coast of Greenland in latitude $62^{\circ} 13'$. Strangely enough, the Eskimos had chosen the ground above the deposit for a fishing village, and the fact that they used blocks of cryolite for the foundations of their tents probably led to its discovery. Fourteen years later Dr. Julius Thompson commenced mining, and the industry has steadily grown in importance ever since.

In the early days of the cryolite industry the greater part of the output was used for the production of aluminum. Bauxite soon supplanted it in that line, and then it was found that from no other material could alum and sodium carbonate be made so cheaply and so pure. The Pennsylvania Salt Company accordingly contracted for the whole output for that purpose and mining on a large scale began. About this time some experiments were made with cryolite in the endeavor to make from it a transparent glass. They failed, but a beautiful opaque porcelain-like substance was the result; far cheaper than and as beautiful as china. By merely melting a mixture of cryolite, sand, and zinc oxide this material is formed, and ware of any desired shape can be stamped from it. It is so tough that cups and plates made from it can be thrown down violently without breaking.

Very lately cryolite has been used once more in the manufacture of aluminum. By means of a powerful cur-

rent it is melted, and the corundum, Al_2O_3 , which forms the source of the metal, is dissolved and decomposed within it.

It can be easily seen how great an economic value cryolite possesses and of what importance it is in the arts; and as the Greenland deposit is the only one in the world at which it occurs in workable quantities, the Ivigtuk mines have naturally become of great importance.

Arliissuk Fiord, which leads from the ocean to the mines, is a narrow strait between snow-covered granite mountains. The inland ice reaches almost to it, and bergs and pack ice close it to navigation for nine months of the year. It is so deep that vessels in the harbor can fasten their bows to the rocky walls and get no soundings from the stern.

The cryolite occurs in a great vein of grey gneiss, penetrating the granite. The form of the deposit is rather peculiar. It is neither a dike nor a stratum, but seems to be an immense bed, possibly great veins, penetrating the gneiss at an angle of about 45° , and extending far below sea level. The deposit consists of two parts. First, an inner bed or vein, about 500 by 1,000 feet in section, containing nearly pure cryolite. It is from this vein that most of the cryolite is obtained. Whole shipments have been taken out at a depth of about 100 feet, averaging 99½ per cent. of the pure mineral. The cryolite of this vein was reported, before the mine had been much worked, to be white only for ten or fifteen feet from the surface, and many theories were presented to account for the fact, one of which claimed that two intruding dikes, on either side of the vein, had by their heat bleached out the cryolite between. The labor was in vain, for the pit has now been sunk more than 100 feet, and the cryolite grows whiter and purer as the mines increase in depth.

The limits of this vein are generally very sharply defined. Surrounding it is another peripheral bed, which gradually merges into the gneiss. The cryolite here is not nearly so pure as that of the central portion, and with it occur the most important ores and minerals of the mine, as well as the various compounds resulting from the alteration of the cryolite.

Between these two veins there is sometimes an intermediate portion, in which the cryolite seems to act as a matrix to the minerals of the outer zone, instead of forming the mass.

The mines are all open workings and have been carried far below the water line. If the pits should be left unprotected during the long winters the water and snow would soon fill them, and by spring there would be thousands of tons of ice to remove. This difficulty is overcome in a simple but ingenious manner. At the end of the working season the mines are flooded, and the little lake thus formed freezes over and ice is formed of a thickness never exceeding five feet. When warm weather comes again, it is only necessary to pump out the pits, clear away the little ice which remains, and start to work again.

The product of the mines, amounting to many thousands of tons a year, is all shipped to the contractors by means of a small fleet, which plies between Philadelphia and Ivigtuk. Even in the middle of summer the ocean near the Greenland shores is full of icebergs, and navigation is difficult and dangerous. It happens every few years that some unfortunate vessel, delayed by adverse winds at Ivigtuk, is caught in the pack ice and forced either to return to the mines or winter in the ice.

As a mineral, cryolite is notable as being one of the few fluorine compounds found in nature. It is a fluoride of sodium and aluminum, with the formula $AlF_3 \cdot 3NaF$; specific gravity of 2.95–96, and hardness of 2.5 in Dana's scale. It crystallizes in the monoclinic system, the crystals generally simple, but sometimes very complicated. The pure mineral is subtranslucent and has a peculiar property of increasing in transparency when wet. At Ivigtuk the crystals are found in cavities within the mass. They are usually small, and well-formed specimens are very rare. Cryolite has been found at only three places: Ivigtuk, the Urals, and at the base of Pike's Peak, in Colorado.

The inner bed of the Greenland mine contains several very interesting minerals which have resulted directly

*H. S. Canby, in the Yale Scientific Monthly.

from the alteration of the cryolite. Of these, the commonest and most important is pachnolite, a fluoride in which some of the sodium of cryolite has been replaced by calcium.

HIGHER COMMERCIAL EDUCATION IN EUROPE.

The very great progress the natural sciences, technology, and transportation have made in recent years has given to the commercial profession an importance which could not be foreseen in former years. More than ever before has it become the merchant's duty to act as middleman between producer and consumer. In ever widening circles he has to bring the products of agriculture and industry to their proper markets. By means of increased taxation to which commercial enterprises are subject they support ever more strongly the State in the discharge of its civilizing efforts. Direct exchange between producer and consumer has almost wholly ceased, and the percentage of the population devoted to commercial pursuits has increased considerably in every civilized country.

It seems worthy of mention that at present the governments everywhere in Europe are urged strongly by commercial men to establish more higher commercial schools and support them exclusively from State funds. It is argued that the State provides higher technological, industrial, agricultural, forestry, and mining academies for leaders in technical pursuits, agriculture, etc., while for the mercantile branch no such institution exists. The merchants feel that the education of their assistants is not of such a high order as that of the members of other callings, and they attribute it to the want of institutions of a high order. At present the commercial branch is entirely dependent for the best preparation of its members upon higher schools established by local authority or private enterprise—institutions which charge high tuition fees, hence are attended by wealthy young men only. This opinion has found expression in legislation and parliaments, where it was argued that much greater demands are made now than formerly, owing to freer commercial movement all over the civilized world, and it would therefore seem wise if the State authorities paid more attention to proper preparation of men who might become leaders in commerce, as the State prepares leaders in every other field of human exertion.

Moved by these considerations, several European governments have of late years bestowed much attention upon commercial training of young men, and the results thus far obtained give assurance that the further development of schools for that purpose will be commensurate with the demands of the times.

In Germany particularly the commercial secondary schools have developed, with the aid of provincial and State support, till at last a university has opened its doors for higher commercial education. On February 22, 1898, the University of Leipzig received an addition to its various courses in the shape of a higher commercial course. The particulars may be found on page 1,498 of the Annual Report of the Commissioner of Education, 1896-97. Another independent commercial university is to be opened in Rhenish Prussia, and still another at Magdeburg. These higher seats of learning are to be distinguished from other commercial schools by their making knowledge of commercial practice a condition of admission and confining themselves to the domain of commercial sciences exclusively. It is intended to require professional consuls to be graduates of such commercial universities in future. In Italy the State subsidizes the higher commercial school at Venice, reserving the privilege of having its consuls and consular agents prepared at that school. In Belgium the Government chooses its consuls from the graduates of the higher commercial schools at Antwerp.

White Rose Tooth Powder.

Prepared chalk.....	2,000 parts
Cuttle bone.....	1,000 parts
Orris root.....	500 parts
Castile soap.....	250 parts
Milk sugar.....	250 parts
Oil of rose geranium.....	40 parts
Oil of patchouly.....	10 parts

NEW REMEDIES.*

LIPPIA DULCIS VAR. MEXICANA.—A Mexican verben. Anticatarrhal. Dose, 2 to 4 cc. of the tincture.

LIQUOR ANTHRACIS.—An alcoholic solution of coal tar with tincture of quillaja. Disinfectant. Used in the treatment of eczema.

LOSOPHAN.—Trilodkresol; a substitute for iodoform. Used in eczema.

LUPETAZIN.—Dimethylpiperazin (dipropylendiamin). Similar to piperazin in action and application.

MENTHOL.—An alcoholic solution of hydrogen peroxide with 1 per cent. of menthol. Used in the treatment of wounds.

MUSIN.—A purgative evacuant from tamarinds.

NAPHTHOFORMIN.—Condensation product of naphthol and formaldehyde. Used in dermatology.

NAPHTHOL.—Alcoholic solution hydrogen peroxide with 2 per cent. naphthol. Used in the treatment of wounds.

OCULIN.—Organo-therapeutic preparation prepared from eyes of oxen.

OLEO-CREOSOTE.—An alcoholic ether of creosote. Given in phthisis.

ORGANOSOL.—An alcoholic solution of colloidal silver.

OSSALIN.—From ox marrow. Ointment vehicle.

PHESIN.—A sulfo-derivative of phenacetine; antipyretic. Dose, 0.5 gram.

PICROL.—Potassium diiodoresorcinmono-sulfonate. Antipyretic.

PULMONIN.—Extract prepared from the lungs of the calf. Used in lung diseases.

RESORCINOL.—Mixture of resorcin and iodoform.

SALACTOL.—A mixture of salicylate and lactate of sodium dissolved in a 1 per cent. solution of hydrogen peroxide. Given in diphtheria.

SALICYLAMID.—Antineuralgic and antirheumatic. Dose, 0.15 gram, hourly.

SALLIGALLOL.—A 33 1-3 per cent. solution disalicylate of pyrogallol acid in acetone.

SALITANNOL.—Condensation product of salicylic and gallic acids. Antiseptic.

SALITHYMOL.—A thymol ether of salicylic acid. Antiseptic.

STERIFORM CHLORIDE AND IODIDE.—Mixtures of formaldehyde, pepsin, milk, sugar and ammonium chloride or iodide. Antiseptic.

STYRACOL.—Cinnamic ester of guaiacol (guaiacolum cinnamyllicum). Given in phthisis and in catarrh of the stomach and intestines. Dose, 1 gram.

TANNOSAL.—Tannic acid ester of creosote. Used in phthisis. Dose, 2 to 5 grams per day.

TERRALIN.—An ointment base consisting of a mixture of gypsum, kaolin, silicic acid, lanolin, glycerin, etc. **THIORESORCIN.**—Sulphur derivative of resorcin. Substitute for iodoform.

THYMOBROMAL.—Mixture of bromal hydrate, extract of thyme and extract of chestnut. Sedative.

THYMOFORM.—Condensation product of thymol and formaldehyde. Iodoform substitute.

TRIPHENIN.—Homologue of phenacetin; prepared by heating parphenetidin with propionic acid. Antipyretic and antineuralgic. Dose, 0.5 gram.

URSAL.—Compound of urea and salicylic acid. Given in gout and rheumatic ailments. Dose, the same as sodium salicylate.

VALERYDIN.—Valeryl-paraphenetidin. Dose, 0.5 to 1 gram in migraine, neuralgia and hysteria.

BARBER'S ITCH.—(1) Tannic acid, precipitated sulphur, of each 45 grains; zinc oxide, 1½ drams; powdered starch, 4 drams; vaseline, 1 ounce. Mix. To be used twice daily. (2) Carbolic acid, 5 to 10 grains; powdered tannic acid, ½ dram; glycerite of tannin, ¼ dram; precipitated sulphur, ¼ to 2 drams; ointment of rose water, 1 ounce. Mix. To be thoroughly applied early in the evening and left on as much of the time as possible. This ointment may be strengthened in chronic cases by the addition of 1 to 2 drams of ointment of red oxide of mercury.—(Journ. Am. Med. Assoc.).

*Translated from Gehe & Co.'s (Dresden) Report.

PHARMACY.

BLEACHING GLUE.—Glue can be bleached by adding oxalic acid and zinc oxide (1 per cent. of each) to the glue first made into a pulp with water and heat, the addition being made while the mass is hot. Blood albumen may be similarly bleached, but the degree of heat should not be above 122° F. or the albumen will coagulate.—(Nat. Dr.).

SURGICAL EPILATION WITHOUT A RAZOR.—Queirol has found calcium sulphide extremely useful in removing hair from the field of surgical operations, according to the Sem. Med. (Jour. Am. Med. Assoc.) It is applied in a thin layer like a paste and rinsed off with tepid water in five minutes, rubbing lightly with a cloth. The hairs wash off with it, leaving the surface smooth, without irritation or inconvenience of any kind, except the rather unpleasant odor of the sulphide, which can be disguised if wished. The hair soon starts to grow again.

NEW STRYCHNINE COMPOUNDS.—Trowbridge (Archiv. der Pharm., Ch. and Dr.) has reported upon a number of new compounds of strychnine, prepared by the addition of various organic haloid compounds. Strychnine bromethyl-bromide, $C_{21}H_{22}NO_2N(C_2H_4Br)Br$, forms crystals melting at 270°; the corresponding bromethyl-chloride forms well-defined gold and mercury double salts which have been analyzed and amply confirm the above formula. A compound with trimethylene bromide was also obtained. This body $2C_{21}H_{22}N_2O_2 \cdot C_3H_6Br_2$, melts at 297°. It contains four molecules of water of crystallization.

THE GERMAN PHARMACOPEIA, fourth edition, has doubtless made its appearance by this time, as our German exchanges note that it was to be published during the month of August. From an advance notice of the work we learn the new edition will contain 628 articles, twenty-six new articles having been added and ten dropped from the preceding edition. The added articles are: *adeps lanæ anhydricus*, *adeps lanæ cum aqua*, *æther pro narcosi*, *alcohol absolutus*, *arecollinum hydrobromicum*, *baryum chloratum*, *bismutum subgallicum*, *bromo-formicum*, *cautschuc*, *coffeino-natriumsalicylicum*, *gelatina alba*, *hydrargyrum salicylicum*, *hydrastininum hydrochloricum*, *mel*, *methylsulphonalum*, *oleum camphoratum forte*, *oleum chloroformil*, *oleum santali*, *pillule ferri carbonici Blandii*, *pyrazolonum phenyldimethyllicum salicylicum*, *semen erucæ*, *serum anti-diphthericum*, *tela depurata*, *tuberculinum Kochi*, *unguentum adipis lanæ*, *vinum chinæ*.

CULTIVATION OF VANILLA, SAFFRON AND COWHAGE IN INDIA.—In the annual report for 1899 of the Agricultural and Horticultural Society of India, whose headquarters are at Calcutta, it is stated that experiments in the cultivation of vanilla were taken up last year. Young plants a year or two old were put down at the roots of mango trees in the rains of 1897; last year one of these flowered in April, and the flowers, nineteen in number, were fertilized, the pods ripening in December. All pods were gathered as they became ripe and were sun-dried in flannel, developing by the end of the month the characteristic aroma and color, but, owing probably to the sudden stoppage of the rains, the majority of the pods were somewhat poor. In relation to the cowhage question, the cultivation of the Florida velvet bean was also continued last year, but it in no way proved superior, as regards quality or produce of beans, to the indigenous species (cowhage) growing in its natural state close by. As a fertilizer it was not tested, as the plantation was swamped early in the rains and all plants died. Fifty roots of saffron (*crocus sativus*) were received from Mr. H. Prasad, of Chunar, in August, for experiment. The bulbs were planted immediately and within two weeks seven flowers were produced, but none since then. The growth is strong, and it is hoped to continue experiments with the bulbs next season. (Ch. and Dr.).

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Percentage Solutions (J. F. D.) See this journal Aug. 31, 1899, page 303. A table of the more common percentage solutions is given on page 46 of the Era Dose Book.

Grease Paints (T. R.) See this journal May 10, 1900, page 502. We know of no book entirely devoted to the manufacture of these preparations, though the Era Formulary contains a number of formulas.

Iodol and Ointment of Oxide of Zinc (E. N. B.) No reaction occurs when iodol is mixed with ointment of oxide of zinc. The color of the resulting mixture depends upon proportions of the ingredients used.

Manufacture of Tablets (P. H. H.) The most effectual method to disguise the taste of tablets containing cascara sagrada, wahoo, or other bitter or nauseous substances is to coat them with sugar or chocolate. See this journal July 6 and December 21, last year, pages 18 and 835, respectively.

"Extract of Vanilla" from Vanillin and Coumarin (G. A. M.) See "compound tincture of vanillin" in the National Formulary; also formula in this journal August 23, 1900, page 210. In the States having pure food and drug laws it would be unlawful to retail preparations of this character labelled as "extract of vanilla."

Salacetin (P. H. H.) Salacetin is manufactured by Bell & Co., 68 Murray street, this city. It is put up in tablet form and claimed by the manufacturer to be "analgesic, sedative, antipyretic, antifermentive, antiseptic and antilithic" in its action. The dose is said to be 5 to 15 grains. We cannot give the formula.

Kalagua (P. H. H.) According to "Drug Topics," published by McKesson & Robbins of this city, kalagua is a new vegetable remedy for tuberculosis. It is prepared from a South American plant which is said to be eaten by cattle afflicted with tuberculosis. The drug, it is said, has been tried by several specialists with generally good results. It is supplied in pill form, each pill containing one decigram of the extract of the plant; two pills are given three times a day. Kalagua is claimed to not only cure tuberculosis, but also to render the system immune to it.

Preparation of Ointment of Zinc Oxide (G.) writes: "In making ointment of zinc oxide in quantity lots in hot weather would it be objectionable to add white wax? If not, what per cent. of the wax would be permitted?"

We do not know that the addition of a small quantity of white wax to ointment of zinc oxide would prove very objectionable, but an ointment so made would not be the official preparation. However, the addition of 3 to 5 per cent. of wax has been recommended, and Caspari states (Treatise on Pharmacy) that in summer benzoinated lard (with which ointment of zinc oxide is made) should contain 5 per cent. of white wax, in place of a like quantity of lard, to render it firmer. Some years ago Menard presented the following formula for ointment of zinc oxide which he claimed to have been received with much favorable comment on account of the smoothness, whiteness and firmness of the product during hot weather, etc. Triturate $3\frac{1}{2}$ drams of Hubback's oxide of zinc to a smooth paste with 2 drams of white vaseline. Melt 1 dram of white wax and $10\frac{1}{2}$ drams of dehydrated lard together, stirring until nearly cold, when add the zinc oxide and vaseline to complete the ointment.

Unfermented Grape Juice (F. A. D. W.) Unfermented wine, or grape juice, may be prepared by expressing the juice of ripe grapes and heating it in bottles to a temperature of from 60° to 70° C. for fifteen minutes, the heat rendering the yeast cells and other fermenting agents inactive. The juice can then be kept in well closed bottles for several years without fermenting. To obtain the juice clear it must be filtered, an operation which is easily carried out, as the heating will have coagulated the mucilaginous substances causing turbidity. Filtration may be carried out immediately after heating the juice, or after some time; but in any case the filtered juice must be again heated in bottles to the same temperature originally applied, and then it will keep clear in well closed bottles for several years.

Violet Cold Cream (Violet.) A "violet" cold cream may be readily made by perfuming any of the so-called "cold creams" with ionone, extract of orris or essence of violet. Try one of the following: (1) white wax, 6 parts; fresh tallow, 4 parts; spermaceti, 2 parts; oil of sweet almond, 6 parts. Melt together and while still hot, add with constant stirring, one part of sodium carbonate dissolved in seventy-nine parts of hot water. Stir until cold. Perfume to the taste with ionone or essence of violet. (2) white petrolatum, 6 ounces; spermaceti, 3 ounces; white wax, 3 ounces; rose water, 6½ fl. ounces; borax, 40 grains; violet extract (essence), 2 fl. drams. Melt the spermaceti and wax, add the petrolatum, then incorporate the water in which the borax has previously been dissolved, and finally add the violet extract.

Calcium Carbide (T. M.) An outline of the processes of manufacturing calcium carbide was published in this journal last year. See Era July 20, page 88. Rothwell in "Mineral Industry" for 1900, states the production in 1897 to have been 1,925 short tons, valued at \$134,750, and he still further says it was probably larger in 1898, and still more so in 1899, but statistics for these years could not be obtained. The market price at Niagara Falls for calcium carbide is \$75.00 per short ton, f. o. b., in ton lots. Manufacturing rights have been claimed by various patentees in foreign countries, and carbide patents have been a subject of much litigation. In Germany it is said the manufacture of carbide is now legally open to all who desire to engage in it without payment of any royalty. In Great Britain litigation was begun last year by the holders of the Willson patent rights against other companies, but so far as we can learn the cases have never been decided.

Preserving Fruits and Vegetables (J. G. C.) We print a formula for a preparation said to preserve fruit, vegetables, etc., in the natural state, but the use of these compounds is not advisable. Salicylic acid is a preservative by reason of its antiseptic properties, and the addition of such a substance to any product designed for food is objectionable. Not only salicylic acid, but other antiseptics as well, are very likely to interfere with the processes of digestion, which are fermentative in character. Here is the formula: Boracic acid, 1 part; salicylic acid, 1 part; sodium carbonate, 1 part; white sugar, 16 parts; water, 32 parts. Mix and dissolve. Of this syrup add 1 part to 6 parts of water to make the preserving liquid. A variation of this formula, sometimes recommended, is: Salicylic acid, 1 part; sodium carbonate, 1 part; alum, 1 part; sugar, 1 part. Dissolve in 128 parts of water to make a stock solution. Add 1 part of the solution to 8 parts of water to make the preserving liquid.

Seiler's Antiseptic Solution.—(L. W. B.) The following is the formula usually given as "Seiler's":

Sodium bicarbonate	1 ounce
Sodium borate	1 ounce
Sodium benzoate	20 grains
Sodium salicylate	20 grains
Eucalyptol	10 grains
Thymol	10 grains
Menthol	5 grains
Oil gaultheria	6 drops
Glycerin	8½ ounces
Alcohol	2 ounces
Water, q. s. to make	16 pints

Dissolve the salts in 8 pints of water, and the eucalyptol, thymol, menthol and the oil of wintergreen

in the alcohol. Mix the two solutions, add the glycerin and enough water to complete the measure, allow to stand 24 hours and filter.

A majority of the manufacturers make tablets for preparing this antiseptic solution. See the lists of the various pharmaceutical manufacturers in the Era Blue Book.

Rubber Cement (L. W. B.) We have frequently published formulas of this character. Here are two of them:

(1) Caoutchouc, cut in fine pieces.....	100 parts
Rosin	15 parts
Shellac	10 parts
Carbon disulphide, q. s., to dissolve	
Mix and make a solution—or:	
Caoutchouc	1 part
Mastic	7 parts
Chloroform	50 parts

Mix and let stand until dissolved (which will require several weeks).

(2) Caoutchouc	62 parts
Chloroform	250 parts
Mix and dissolve. Then take	
Caoutchouc	60 parts
Rosin	24 parts
Oil of turpentine.....	250 parts

Mix and dissolve. When complete solution has taken place in both cases, mix the two solutions and agitate until homogeneous. Use cold, and apply a portion of the cement to each surface to be joined. This cement has been especially recommended for mending rubber overshoes, etc.

Price of Urotropin Tablets (E. J. W.) writes: "I come to you for enlightenment. About a month ago I had a call for two boxes of urotropin tablets (7½ grains). Not having them in stock I got them from a neighboring druggist. He was not sure of the price, so I looked in the Era Blue Book and found them listed at 35 cents per box. He accordingly charged 50 cents each, or \$1 for the two boxes. So far, everything seemed to be all right, but now the druggist who so kindly helped me out sends in his bill for \$1.50, or 75 cents for each box, claiming that that amount is what the tablets cost him. The revenue stamps on the boxes amount to 1½ cents, making the retail price 75 cents. Now, I want to know 'where I am at?' Did I not charge enough, is the price in the Blue Book right, or is Mr. —, the druggist, right?"
